With a few chilling exceptions, all the dissatisfied owners said they received prompt and polite service from the local GM dealers. Warranty repairs were paid for with little fuss. But what GM does not pay for is the large amounts of time needed to haul the buses to the garage or pick them up after highway breakdowns; nor is there compensation for the always-present frustration. Ben Stanski, with 10 of the 1969 models, of the Berkshire Gray Line, Pittsfield, Mass., has been constantly bedeviled by burned-out clutches. Some have gone at 3,000 miles, when they should have lasted 25,000 or more. But the main irk is getting the buses started in the morning during the winter. "Here they are," said Stanski, "brand new buses. And a crew has been having to come in at 4 a.m. to work on them so they start up. If we let the buses sit until the regular drivers come in, the kids would never get picked up."

One person who conceivably should have no trouble making his voice heard by GM is a mechanic for the Pontiac, Mich., School District, in the very town where GM makes its buses. The mechanic said that along with radiator, electrical and tail pipe problems, he is plagued with brake troubles. The buses on which many children of GM employees ride every day have had no accidents yet due to brake failure, but this may be due to the mechanic's diligence. "If I keep adjusting them every month, they're O.K. When the brakes are the least bit out of adjustment, which happens frequently, they are hard. When you put your foot on them, you think you have plenty of pedal left. But the only problem is you can't stop. So I adjust them every month."

The most recurring complaint of the 39 owners was the tail pipe hanger. This device is on the rear underside of the bus and keeps the exhaust pipe secure. When it is not strong enough, the pipe will jangle until it snaps. The poisonous exhaust fumes are then leaked forward under the passenger compartment. Most states consider a weak pipe hanger a safety hazard and inspectors will flunk any bus that has one. Two months ago, a Washington GM representative admitted to a reporter that the hangers on the '69 buses were too weak to hold the pipe safely. "The factory made them just too flimsy," he said. When Martin Caserio was asked at the December press conference about this problem, he said a weak pipe hanger was certainly a bother, "but it was not safety related." When a pipe broke, said Caserio, the bus driver would surely be alert enough to hear the thing clattering along the ground and have repairs made before any harm might be done to occupants.

From the response of the 39 owners on the GM list, and the many other mysteriously excluded from the list, a fair conclusion is that something is inherently wrong with the 1969 GM school bus. Too many owners in too many places reported too many breakdowns for the problem to be passed off as "one of those things, sorry about that."

Last week, after General Motors had reached the same conclusion and ordered a recall of 4,269 new buses for "possible brake defects," a GM public relations man said that his company had made a survey of 850 buses in December and January and discovered that one bus—only one—had defective brakes. Evidently, though strangely, GM used a different list of owners from the one supplied the press, or else they would have found many more than "one" owner with brake problems—starting with their neighbor in Pontiac, Mich., and including the Beirns Bus Service, the Community Charter Bus Co., Stanton, Calif., the Schaunburg Trans. Co., Roselle, Ill., the Guasti School, Guasti, Calif., Morris Hills School District, Rockaway, N.J., the anonymous GM dealer, a private owner in Olean, N.Y., and others. Although none of these had the numbing scare of Mrs. Warren McConnell of Springfield, Va. —last fall, one of her '69 GM buses had total brake failure and ran into a pasture to stop—they all said their brakes had given, or are giving, them serious trouble.

Since the GM recall involves only brakes, questions are raised about other complaints of owners. First, the tail pipe hangers. In a letter to Virginia H. Knauer, special assistant to President Nixon for consumer affairs, on Feb. 11, Martin Caserio admitted that some 300 out of 850 1969 buses had their hangers replaced. Yet, in the recall, this defective part was not mentioned.

A second major complaint not mentioned in the recall involves clutches Caserio's Feb. 11 letter acknowledges that in some cases "clutch durability (is) unsatisfactory." But rather than admitting the clutches are mechanically flawed, and then recalling them, the GM vice president repeats the standard implication that clutch trouble is usually caused either by foot-happy drivers or by lack of maintenance. But when the anonymous GM dealer has five of seven clutches burn out, even though he adjusts them "every day;" or when a Fullington Tenn., owner has had to replace four out of six clutches—including one that didn't last 1,000 miles; or when an El Centro, Calif., owner has to adjust his clutches every 600 to 1,000 miles; when complaints like these are regularly heard, something more than foot-happy drivers are to blame.

Last December, GM president Edward Cole said that if his company's survey showed that a recall was necessary, well, a recall it would be. As Martin Caserio said during his press conference, "We'll step up to our responsibility." This is indeed praise-worthy, but the concept of a recall—an outrageous idea in itself, but which a cowed public now accepts calmly—raised fundemental questions. Where was GM's responsibility when their product was being made? Why wasn't it stepped up to then? This is the third consecutive year a recall has been made on GM's school buses, so the notion that something might be wrong in design or in the assembly line must have occurred to some at GM.

Even when a recall is made, the question comes up about retribution for other things besides free labor and parts: such as time spent hauling broken buses in from the roadside waiting at the garage, the mental worry of driving children on vehicles that may be unreliable, the time lost to one's family because the bus needs to be tinkered with or carted to the garage.

[From the Washington Post, Mar. 2, 1970]

THE MARK—OR IS IT THE MOCK?—OF EXCELLENCE

(By Colman McCarthy)

For the third consecutive year, General Motors has ordered a recall on its school buses. That the world's largest maker of motor vehicles seems not only to make a habit of selling defective goods but, in effect, calmly admits that it does after the victimized owners and the press force the issue, doubtlessly puzzles the general public. But to many GM school bus owners, the recall ritual is no puzzle at all. "In 1967," said Tom Jones of Superior Sales, Omaha, Nebr., and who has new GM buses in his shop constantly, "there was a major model change—in style and engineering. That's where the trouble started." Other owners around the nation agree, saying that buses built earlier than 1967 have never been problems.

What actually happened mechanically between the 1966 model and those made since is unknown to anyone outside of GM. But with a plain ruler and average eyesight, a few facts can be learned. First, the front bumper on the '66 bus—if a local vehicle is respresentative—is ¼-inch thick; on the '69, it is ⅛-inch thick. Thus, in three years, the bumper's thickness is cut in half. A second discovery is that behind the front bumpers of earlier year models is a piece of steel extending from the frame in each direction for about one foot. This reinforces the bumper. On the '69 model, however, this piece of reinforcing steel is gone. A third difference was discovered by Thomas Gist of Sykesville, Md., a harried owner of two defective buses. Wondering why this year's models "ride as if they had solid rubber wheels, like back in the '20s," Gist measured the leaf springs that support the body of the '69 bus. They are seven inches shorter.

How much money GM saves on these simple reductions is known only to the people in the GM budget office and the officials to whom the savings are reported. But it does not appear that GM's pride in production is hurt. The Associated Press recently reported: "A General Motors executive said yesterday that bumpers on GM cars provide 100 per cent protection from any damage—provided the speed of the car doesn't exceed 2.8 miles an hour."

A more serious question is raised by the trimming of the bumper and springs on the '69 bus, since lives and safety are involved. If GM cuts back on parts that a layman can detect, what may it have done to parts hidden under the hood and in the chassis? This is the real worry; and since recalls have been made three straight years—this year for brakes—it is also a frightening worry.

In a simpler day, long before the term *free enterprise system* replaced the term *corporate greed*, a consumer with a complaint—on shoes, say—had only to visit the local shoemaker to get justice. "Here," he would say "these shoes are falling apart." The shoemaker, being both ethical and aware word would spread through the village about his sloppy work, quickly replaced or repaired the shoes. The exchange was pleasant; what's more the shoemaker was *there;* he had a familiar face; he breathed and the only separation between the consumer and him was a door.

Things have changed since yesterday's shoemaker and today's car-maker. The agony of seeking relief or redress from GM, with its 750,000 employees is the same as seeking it from any large bureaucracy where more than one hand works on the final product and where job security is a main concern of the employees. The vice presidents at the top are protected from the consumer's complaints at the bottom by the mass of workers in between; the latter will catch it first if the brass learns the consumers are mad. So the vice presidents measure the company's success not by the consumer's voice—the way the shoemaker did—but by sales reports, profit charts and the smiles of stockholders. If tens of thousands of cars are sold every year, the high-ups conclude that the public must be happy, or else why are sales still up? When sales aren't up, or when management thinks they can be better, a decision is inevitably made in favor of more chrome, more horses, more gismos.

Meanwhile, the consumer with a defective vehicle can stay trapped. Since no one in the huge corporation takes single responsibility for errors and since it is futile to switch to the competitor's brand—it is just as poorly made—what can he do?

Occasionally, a consumer hits luck, John Donovan happened to catch a reporter's ear one day and told about the endless problems of his three new GM school buses. The story that eventually appeared in The Washington Post led not only to a national recall of 4,000 buses, but also to special treatment for Donovan's three. Over the Christmas holidays, two GM engineers were flown in from Detroit and gave the buses a two-week overhaul, complete and meticulous.

Incredibly, since getting the buses back in early January, Donovan has hauled them into his local GM garage *eight* separate times: the wheels wobbled on two buses (an alarmed motorist spotted this one time), a horn and a governor broke on two, five quarts of oil were needed in one bus's rear end after being out of the shop only one day, the brakes needed adjustment on one, another—loaded with children—wouldn't start one afternoon, and finally one bus failed D.C. inspection.

As if that weren't enough, Donovan received a bill last week from the Firestone Tire Company for $349.62—even though in December, Kimball Firestone, Harvey's grandson, personally promised Donovan 18 new tires—at no cost—to replace some defective ones. With new tires on his buses that he was told were given free of charge, will Donovan pay Firestone? "Sure. The same day GM pays me for the hundreds of hours of work and bother their three lemons have caused me."

The ordeal of John Donovan and the other luckless owners with '69 GM school buses is reminiscent of the English folk tale about a faulty watch. "I can't understand it," said the watchmaker when confronted by the owner. "I make all my watches with the best butter in town."

BLACK PERSPECTIVE ON CRIME PROBLEMS

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. PEPPER. Mr. Speaker, this is a transcript of a television broadcast in the important series "Black Perspective on the News." At the invitation of the capable producer, Lionel Monagas, I was pleased to be interviewed at station WHYY-TV, Philadelphia, for the Eastern Educational Network. The three journalists who made up the panel of interviewers were introduced by Warren Dean, who not only was the program host but joined the panelists in a thoughtful examination of work being done by the House Select Committee on Crime.

The introductory statement was made by Mr. Dean:

WELCOME TO "BLACK PERSPECTIVE" ON THE NEWS, WARREN DEAN, HOST

Tonight, our subject is "Crime", a national issue, and some of the efforts being taken to reduce the incidents of criminal acts. Our special guest is Congressman Claude Pepper, from Miami, Florida. He is the Chairman of the Select Committee on Crime of the United States House of Representatives.

On our panel of Journalists, we have Acel Moore, from the Philadelphia Inquirer; Pamala Haynes, from the Philadelphia Tribune, and Claude Lewis, of the Philadelphia Evening Bulletin.

The Select Committee on Crime, empowered to probe all aspects and elements of crime in the United States, has held hearings in Washington, D.C.; Boston; Omaha and Lincoln, Nebraska; San Francisco; Miami; Baltimore; New York City; Columbia, South Carolina, and recently, here in Philadelphia.

Congressman Pepper, just what does the Committee expect to do with all the information amassed from the hearings and other investigations?

Mr. PEPPER. Mr. Dean, at the end of this year, which is the end of the 91st Congress, we will make recommendations to the House of Representatives as to what we think the Congress can do and should do to try to reduce crime in the United States.

We can also, as Members of the House of Representatives, introduce legislation to implement our recommendations. Also, as Members of the House, we can report our recommendations and findings to the Executive Branches of the government. Then, we hope we can also stimulate public opinion to an awareness of the problems of crime.

Miss HAYNES. Congressman Pepper, crime and violence have been investigated over and over again in the last few years, and usually the recommendations of these committees are filed and forgotten. Are these investigations really necessary?

Congressman PEPPER. Our Select Committee is in a different category from a Presidential Commission. When a Presidential Commission ordinarily completes its very excellent inquiry and files a very commendable report, it gets a good press at the time, but too often, the report goes on the shelves and stays there. Sometimes someone has the iniative to pick it up and do something about it. President Johnson, you recall, initiated the Omnibus Crime and Safe Streets Act in 1967 and 1968, based to a considerable degree on the findings of the Crime Commission. But little has been done about some of the Presidential Commission Reports. But we are Members of the House of Representatives, and we can be heard in the House. We can bring these recommendations to the attention of the appropriate legislative committees, produce knowledgeable witnesses to support our recommendations and offer legislation to implement our recommendations.

Mr. MOORE. Congressman Pepper, whenever we hear discussions of crime, I think the Americans generally tend to think about black people and poor people. For, is it not in fact a crime—and I call it a crime—to consign people to poor housing, poor schools, poor spirit, as has been done in the United States and by some Congressmen, as well as other government officials?

Congressman PEPPER. There is undoubtedly a social responsibility which should be borne for the commission of crime. The environment out of which a boy or girl comes undoubtedly influences the future conduct of that individual. You cannot escape the fact that the kind of education he has—whether he is a school dropout or not, whether he lives in a community where he didn't have a wholesome environment; whether he learned a trade or a skill by

which he could earn a decent livelihood; whether or not he grew up in a satisfactory home—all those things to a large degree determine what is going to be the character and the performance of the individual.

We have recently visited the correctional institutions in five States, all the way from the Middle West to Pennsylvania. We found that when young men get to the correctional institution, that means that the family, the school, the community, and the church—and this was said to me by a Priest, in discussing the matter—and the church—has failed in respect to that boy or girl. And they get there already a long way down the road to crime. So all the heads of these correctional institutions recommend that our Committee recommend a program way back in the community and in the public schools to try to keep them from ever coming to the correctional institutions.

Mr. LEWIS. I am also concerned about the attitudes of Congressmen. You've seen many examples, I think, of poor attitudes in Congress and even in the White House, and I'm wondering what your Committee is going to do about it.

Congressman PEPPER. Members of Congress who ignore these environmental influences related to the commission of crime are simply blind to reality. It is another contradiction for them to shout about crime—that we need more police—or that we need to be more severe in dealing with the perpetrators of crime—and yet ignore these influences which form criminals. As I say, all those who condone or tolerate those conditions have a certain degree of moral responsibility of what comes out of such an unwholesome environment.

Mr. DEAN. What is the makeup of your Select Committee? Do you have sociologists or criminologists?

Congressman PEPPER. No, by the determination of The Speaker, all of the Members of our Committee are lawyers. There are four Democrats and three Republicans. I'm from the South and Chairman of the Committee as the introducer of the Resolution setting up the Committee; Mrs. Griffiths, a Member of the Ways and Means Committee of the House, from Michigan, is the ranking Democrat. Your very able Representative in the House from Philadelphia, Mr. Robert Nix, is the next one on the Committee, along with Mr. Waldie, of California. There are three Republican Members.

Mr. DEAN. How can you seriously attempt to find out the causes of crime—or the root causes of crime—without having those who would really know the conditions which breed it all? Lawyers are not particularly knowledgeable in that area, are they?

Congressman PEPPER. In the first place, Mr. Dean, it is the function and the necessity of a lawyer to learn the facts. Every case that he has presents the necessity for acquainting himself with the facts of that particular case, and sometimes those facts are involved. He may go from a medical case to a case in chemistry, or something like that. So, we are all lawyers; we have, by virtue of our profession, inquiring minds. But the important aspect of it is, we have a very able staff. We have a staff of twenty-five or thirty. They are knowledgeable, competent people; they help us in the research and in the preparation of hearings, and in the conduct of hearings. We are also able to draw upon technical knowledge from witnesses and from consultants.

Mr. MOORE. Congressman Pepper, you know, I often wonder if the country could really afford a program that would really reduce crime. I think crime has become so much of our economy—so many people are employed directly and indirectly—because of crime. Do you think this factor is considered? Do you think that we can really afford such massive Federal funding?

Congressman PEPPER. Mr. Moore, I have been in the Congress—in the Senate and in the House together—for a period of 22 years now—and it's been my observation that the Government of the United States can do anything that it really wants to do. If we want to fight a war, we don't stop to ask how many billions or hundreds of billions of dollars it's going to cost to fight. I've never heard about our stopping moving munitions up or moving men up because we didn't have enough money to do so. It's the same way about projects. If we undertake the Moon Project—a twenty-five or thirty billion dollar project—we never stopped that until we got a man on the moon. We just went on and did it, because we committed ourselves to it. Now it's the same with——

Mr. MOORE. Does the Government really want to solve this?

Congressman PEPPER. No. The United States public has not yet—and I say it with regret—it is not yet ready to accept the responsibility for the massive effort required to make an all out attack upon crime in this country. It would cost many, many billions of dollars. In fact, I think The Presidential Commission on Violence estimated it cost about twenty billion dollars. But, twenty billion dollars is a small investment. We were told a good many years ago by the F.B.I., I believe, that crime is costing this country forty to fifty billion dollars a year, and we are spending only about five billion dollars a year to combat it—so, you see, it's a losing fight that we are now waging.

Mr. DEAN. Congressman, I understand you have been through several institutions. What percentage of criminals are black?

Congressman PEPPER. The black population is only about twenty percent of the country—but I would say that a disproportionate amount of the men and women who commit crime are black. And I think that is because they have too often been denied the opportunities they should have had—in childhood, in their youth, and in adult life—to develop the skills which would enable them to earn the kind of a livelihood, which perhaps would have prevented them from getting into the area of crime. As I go through the prisons—I noted that a large number of the prisoners who were there—are black people. I don't mean anything like all of them. I'd say half—probably 40 percent—maybe—thirty or forty percent—are black people.

Mr. DEAN. Would you say then, that racism in this country—and we know that it exists—would you say that that plays a major role in the way that the prison population is made up?

Congressman PEPPER. Yes, it does. Just recently, I have spent a day in my home City of Miami—at the invitation of the black leaders of my community—hearing witnesses who told about the cause of the riots that we had there in the middle of June and the riot that we had in 1968 during the Republican Convention there. Most of the community leaders—in describing what happened—related the conduct of those who initiated the violence that ended in the riots—to their deprivations in the lack of adequate training in schools—or skills in some sort of trades—or vocations—the lack of a proper home environment. The Vice Mayor of Miami, who is a black lady, said that in one case she knew, 21 people were living in one 1-room apartment. She told of other families in where the family had to divide—live in three different places—the children in one place, more children in another, and the mother and father in another place. The family had to divide up—in three different places—in order to find a place to stay. Now, those things are conductive to the turbulence in the spirit of a child which leads to violence.

Mr. DEAN. I'm concerned about the conditions in the penal institutions, themselves. I think Senator Dodd pointed out sometime ago that approximately eighty-nine cents out of every dollar spent on the penal system went for things like bars, and whips, and cells and administration—and very little went toward rehabilitation. What can be done about that—and when will something be done?

Congressman PEPPER. Well, we have recently completed the tour of five States—Minnesota, Indiana, Michigan, Connecticut and Pennsylvania—over at Harrisburg—looking at the institution there. We found at Red Wing, Minnesota, the best example we have discovered of humane, wise, compassionate treatment of boys, who were just as bad as others—they were in there for murder, bank robbery—all sorts of offenses. Yet they didn't have bars on the doors or windows. They had no guards on the campus. Boys could run away whenever they wanted to. They actually allowed the boys who constitute a group—nine or ten boys—to make recommendations as to when the members of their group would be released from that institution. One of my colleagues on the Committee and I attended one of their sessions—they met for an hour and a half every evening—at which time the decision was made that one of the boys had come to the point where he can be safely released. By putting that system of confidence and trust into effect, not massive control—but wise and delicate direction, that institution has hardly any run-a-way rate. Their rate of recidivism is down to nineteen percent; whereas, in other institutions of the country—the rate goes as high as sevent-five percent. At Red Wing, they don't spent any money on bars or punishment procedures or anything like that. It is a little difficult for other institutions to understand such a system—to be daring enough to undertake it—and it does require particularly trained personnel. One of the things that we are proposing to do is to provide Federal funds to train people who can operate a system like that. It works.

Mr. LEWIS. The legislature of one of the western states has voted what's been called "A Shoot To Kill Law". It means that anyone who feels that his life or property is in danger can legally shoot their alleged attacker. Did you run into much of this vigilante-type of feeling in your travels?

Congressman PEPPER. No. We didn't happen to encounter that. I suspect it does exist, but we didn't encounter it.

Mr. MOORE. Congressman Pepper, you stated earlier that the public is not ready, not willing to do whatever is necessary. You didn't explain what must the public do? If you're saying that the citizens——

Congressman PEPPER. Well, every one of us who really believes that more can be done than is being done should keep on trying to educate the public. We must urge the need for spending more money, training more people to do more things.

For example, when we started the Omnibus Crime Bill in 1968—the first appropriation was sixty-odd million dollars. Well, you can't do very much with that, in a big country like this, to help the States and local communities to do something about crime. The next year, we got it up to three hundred and seventy-five million. Then I went, on behalf of our Committee, before the Judiciary Committee of the House and recommended that for the 1971 fiscal year, we authorize a billion dollars. That was too little—in a country as big as ours—two hundred million people—with as much crime as we have. I knew that that would hardly make a dent on the problem—but I recommended it and all of us did that we could to arouse public interest. Finally, the Judiciary Committee of the House has now authorized six hundred and fifty million dollars for 1971 and to aid the States, the Counties, and the Cities under the Law Enforcement Assistance Administration—through

the Department of Justice. It also recommended a billion dollars in fiscal 1972, and one and a half billion dollars in fiscal 1973. The House of Representatives has already appropriated four hundred and eighty million dollars for fiscal 1971.

Miss HAYNES. With all of this money, are you not just treating the symptom, rather than the disease?

Congressman PEPPER. Yes, to a large degree, we are. It depends on how we spend the money. But we got a provision in the House bill this time—when it was passed recently—that twenty-five percent of the amount of money appropriated to the Omnibus Crime Bill would be devoted to the correctional problem in the country.

The Chief Justice of the United States, in speaking in New York recently, said that we had a recidivism—or repeater—rate of about seventy-five percent in this country. What an abysmal failure for our correctional institutions if three out of every four, who go through those institutions, on being released—commit more crimes. We are just "spinning our wheels". Now, if we can put into effect really corrective measures, we are reducing crime.

Mr. LEWIS. Congressman, would you say that there must be a link between organized crime, public officials and police for crime to really flourish in the city or state?

Congressman PEPPER. Well, there is undoubtedly a corrupting influence by organized crime upon public authority. It could not exist so successfully as it does. But it is not a simple matter. We found out from our recent hearing in New York on Heroin and Organized Crime that about twelve to fifteen of the leading gangsters—the leading members of organized crime in this country—bring in most of the heroin that is imported into the United States. The difficulty is to get those people up at the top. They keep themselves so well isolated; they have so many layers between them and the perpetration of the crime, that it's hard to reach them. And so, we are striving to find legislation which will enable the government to get to them.

One of the measures that we are proposing is to grant immunity to a witness who is called upon to testify before a Grand Jury or a Congressional Committee, so that he can't claim the Fifth Amendment. We had in our New York Hearing two men whom we had good reason to believe were connected with organized crime's involvement in the heroin traffic. Both of them refused to testify to anything except their names—they took the Fifth Amendment. Now, under this provision that I'm talking about—granting immunity to them—they couldn't claim that they would be criminally prosecuted if they testified—and if they don't testify—they can be sent to jail. But I tell you, the United States Government cannot combat organized crime—which makes seven billion dollars a year on illicit gambling alone, with only twenty-five or fifty million dollars annually.

Mr. DEAN. Are you saying, Congressman, that it's a matter of national priority? Are you saying that the United States Government cannot stop the big people who are dealing with heroin? Is it a matter of whether we want to stop them, or not?

Congressman PEPPER. I doubt that almost any expenditure would stop it all. The coastline of the United States is so long, the many ways of coming into this country are so numerous, that some of it would get in.

We had a case where the gangsters bought out a cannery in Southern Spain. They bought a lot of canned fish from an ordinary factory that produces canned fish—kind of like tuna—and regularly exported it to the United States. They bought a quantity of fish with a lot of empty cans and seals. They took this to their canning plant in Southern Spain, and they filled up sixty cases of those cans with heroin instead of canned fish—and it came in that way. Well, that's typical of the ingenuity with which they bring it in.

Miss HAYNES. Congressman, I've become increasingly concerned about the atmosphere in America relative to crime. And I think it's not unnatural to see the public, aroused about the volume of crime, turning to an easy out. They see an easy, inexpensive expedient, and they don't take too much thought about the serious Constitutional consequences of doing that.

But, they would do far better if they would provide more court rooms, and more judges and more administrative assistants to judges, and assure that there would be a speedier trial for the people that are charged; better correctional institutions; better education and training, and home environment for the children coming up, they'd get better results at less expense.

Mr. DEAN. It's been suggested that a lot of this attitude—this preventive detention, the "No knock" clauses—gained popularity under the current Administration in Washington I wonder what your feeling is about that?

Congressman PEPPER. Yes, the Administration has obviously taken what we generally call "the hard line". They have encouraged the point of view that what we need is to be tougher than we have been in the past.

But, as Mr. Justice Tom Clark testified before our Committee—he said this matter is somewhat like a city water system. It doesn't make any difference how much water you have in the reservoir. The amount that goes to the consumers depends upon the quantity that goes through the pipes. In this case, we mean the court system, arrests, the correctional systems, and the efficiency of the courts. All these have a great deal to do with crime. Improvements in these areas probably would be a far more effective than just "a hard line" of denying people what are generally considered to be their constitutional rights.

Miss HAYNES. What do you intend to recommend, Congressman, in the way of rehabilitation programs, when you finally submit your recommendations?

Congressman PEPPER. I would think that we would probably recommend a program under the educational programs of the Federal Government—under which there would be in the high schools—even in the grammar schools—assistance given to boys and girls who indicate some sort of an anti-social attitude or some sort of incapacity to keep up academically with their fellow students. We need to try to do something to help those boys and girls. We need a great deal of emphasis on the preventive aspect.

Then, try to get a humane, efficient, competent system of juvenile justice. We are working now on recommending that kind of a program to the Congress. And then, when they get past the court, there comes the last chance to save about fifty percent of them. About fifty percent who go into those institutions will go on to state prisons at a later time. You're way down the road to the hardened criminal.

The last chance is then to really rehabilitate—that is, to give a new point of view. In Red Wing, Minnesota, of which I spoke, some of those boys for the first time in their lives have had aroused within them a sense of responsibility and concern for their fellowman.

Mr. DEAN. Our thanks to you, Congressman, and we're out of time now.

We've been talking to Congressman Claude Pepper, who is Chairman of the Select Committee on Crime in the United States House of Representatives. Our thanks also to Journalists Acel Moore, of the Philadelphia Inquirer; Pamala Haynes of the Philadelphia Tribune; and Claude Lewis of the Philadelphia Evening Bulletin.

This is Warren Dean. Thank you, and good evening.

A LETTER FROM A GOOD NEIGHBOR

HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. GONZALEZ. Mr. Speaker, not too long ago a friend of mine, a distinguished and successful businessman of San Antonio, Tex., Mr. W. B. Mathews, sent me a copy of a letter that was most welcome and inspiring.

I consider it worthy of the consideration of my colleagues:

DEAR FELLOW CITIZEN: Here is a message all of us need. It comes from a Canadian neighbor, who apparently appreciates our country's achievements and what we stand for far more than some of our own people.

"Permit me, a Canadian, to express a long overdue 'thank you America'—not only for putting men on the moon, but for almost 200 years of contributing to the betterment of mankind. For the airplane, radio, cotton gin, phonograph, elevator, movie machine, typewriter, polio vaccine, safety razor, ballpoint pen and zipper.

"No other land in all the world has, in so brief a history, contributed so much and asked so little—only that we live together in peace and freedom.

"From the days of Washington and Lincoln, you have demonstrated the creativity, invention and progress of free men living in a free society—where ideas and aspirations may be promoted to the extent of man's willingness to work and build a better mousetrap' with commensurate rewards.

"Thank you for upholding the principles and rights of freedom and liberty; for the American Constitution and Bill of Rights and for protecting those rights even when it results in the burning of your flag and the murder of your President.

"Thank you for those who helped defend freedom on foreign soil in two world wars—a debt we have been able to pay in a small measure by way of some 10,000 Canadian volunteers who stand and fight with you in Vietnam; for the foreign aid you give even when your hand is bitten and your motives impugned; for keeping dignity in the face of insults from nations still wet behind the ears; for your patience with those who seek to steal the world and enslave its people; for keeping your cool even when the Trojan horse mounts the steps of the White House to insolently spew forth its treason. Thank you for keeping alive the concept of individual liberty and faith in God in a world wallowing in humanistic collectivism.

"For these reasons and so much more, I say: 'Thank you America and God bless you.'

"PATRICA YOUNG.

"VANCOUVER, BRITISH COLUMBIA."

If Patricia Young has expressed what you believe, but haven't been able to put in words, I hope you will write her a hearty "thank you," as I have. I also hope, you will want to circulate her message far and wide among your friends, business acquaintances, public officials and the news media. Let's get America rolling again!

Sincerely,

W. B. MATHEWS,
President, Canada Dry Bottling Co. of San Antonio.

WHO WANTS TO DRIVE ISRAEL INTO THE SEA?

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. HAMILTON. Mr. Speaker, considering the recent course of events with regard to the American proposal for peace in the Middle East, the following correspondence may be of interest to my colleagues:

JULY 7, 1970.

Hon. WILLIAM P. ROGERS,
Secretary of State, U.S. Department of State, Washington, D.C.

DEAR MR. SECRETARY: I was highly disturbed by President Nixon's comment of July 1 that it is the intention of the Arab states to drive Israel into the sea.

This seems to me to be a most unfortunate statement. My understanding is that the U.A.R., Jordan, and Lebanon have each supported the United Nations' resolution of November 1967 as the basis of settlement. I know there are major differences to be resolved, but it does not advance a peaceful settlement for the President to misstate so grossly the Arab position.

Upon calling the Department of State to determine if this statement reflected the President's interpretation of Mideast events, I was told that it was an "oversimplified" discussion of the situation.

I regard the use of the term "oversimplified" as a wildly inaccurate euphemism that does not adequately portray the potentially damaging impact the President's comment may have on prospects for a peaceful resolution of the conflict.

Sincerely,

LEE H. HAMILTON,
Member of Congress.

DEPARTMENT OF STATE,
Washington, July 24, 1970.

Hon. LEE H. HAMILTON,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN HAMILTON: The Secretary has asked me to reply to your letter of July 7 in which you commented on the statement of the President in his July television interview that it is the intention of the Arab states to drive Israel into the sea.

When the President spoke about the Middle East situation in his July 1 television interview, he was emphasizing U.S. policy with particular reference to the greater, more direct and increasingly provocative Soviet military involvement in the area, particularly in Egypt. The President's remarks were intended to bulwark the U.S. political initiative outlined by Secretary Rogers on June 25.

When the President stated that it was the intention of the Arab states to drive Israel into the sea, he was not referring to the Arab moderate states but to certain Arab radical nations and movements whose actions and rhetoric have contributed to the belief that if Israel faltered its existence would be in jeopardy. That, of course, is why we believe it is so important to displace the hate and mistrust of the past 22 years with a just and lasting peace based on the principles contained in the UN Security Council Resolution of November 1967. If the very existence of Israel is not still an open question among some Arab states and movements, then it might be asked why they refuse to accept the provisions of the Security Council Resolution.

A look at the record supports this conclusion, particularly with regard to Syria. Syria has consistently refused to accept the Security Council Resolution which, among other equally important points, calls for: "Termination of all claims or states of belligerency and respect for and acknowledgment of the sovereignty, territorial integrity and political independence of every state in the area and their right to live in peace within secure and recognized boundaries free from threats or acts of force." Syria also refuses, as called for in the resolution, to accept the Secretary General's Special Representative, Ambassador Jarring, who was mandated to "promote agreement and assist efforts to achieve a peaceful settlement in accordance with the provisions and principles of the resolution." Syria has also been an active supporter of irregular Arab forces—certain radical elements of the fedayeen—whose avowed purpose is to alter fundamentally the nature of the state of Israel.

I am also enclosing for your information the relevant portion of the Assistant Secretary Sisco's interview July 12 on "Meet the Press" dealing with the question you have raised in your letter.

I hope the above explanation and the enclosed material will be helpful to you.

Sincerely,

DAVID M. ABSHIRE,
Assistant Secretary for Congressional Relations.

EXCERPT FROM MR. SISCO'S INTERVIEW ON "MEET THE PRESS" JULY 12, 1970

Question: Mr. Sisco, if you were trying to get the Arabs into a very delicate negotiating process, how is it going to help by calling them aggressive and saying they want to drive Israel into the sea?

Mr. Sisco. Mr. Valeriani, what was being referred to there was simply this: Let's look at the record for just a moment. You have Syria that has never accepted the Security Council resolution, has been unwilling to meet with Jarring and has never talked in terms of political solution.

You have the Palestinians, a variety of groups with a variety of opinions but none have come out explicitly for a political solution based on coexistence with Israel.

You have also, as the background, a recent speech by President Nasser which talked in terms of wresting control over the Suez Canal, which would afford an opportunity for pursuing the war of attrition further against Israel.

You have the Egyptian spokesmen in the last two weeks basically repeating this same line.

It is important, Mr. Valeriani, for all concerned to know that we are very anxious to achieve a political solution, that we are quite flexible politically; we have put forward some new propositions, but it is also equally important for all to know that we are keenly aware that the context at which we are pursuing this political initiative, and that the political initiatve offers a new opportunty in a very difficult situation.

PEOPLE HELPING PEOPLE

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. MORSE. Mr. Speaker, last month the Veterans' Agents Association of the Commonwealth of Massachusetts held their annual convention in Lenox, Mass. Deputy Commissioner Joseph P. Mayo of the Department of Veterans' Services gave the following address to this convention, and I am privileged to share his remarks with my colleagues. Having once served as Deputy Administrator of the Veterans Administration, I know well the vital contributions made by scores of veterans' agents throughout our Nation, and Deputy Commissioner Mayo's heartfelt and stirring speech, delivered after over 23 years of service to our veterans, well typifies the dedication and devoted spirit of those agents who work so selflessly.

The speech follows:

PEOPLE HELPING PEOPLE

Mr. Speaker, Mr. Mayor, Members Of The Head Table, Representatives From The Veterans' Administration, Boston and Providence, Fellow Staff Members From 100 Cambridge Street, Veterans' Agents, And Guests —I was at poolside this afternoon and I, too, waved as the plane flew over head. The plane was not even out of sight when Teddy Handerek jumped into the pool and informed me that I would be at this distinguished Head Table this evening. Teddy wants me to reimburse him for the cost of the plane fare—I might just do that because now I have been afforded this wonderful opportunity to address you.

As you all know, I have been with this Department for twenty-three years—nine of which were as Deputy Commissioner—and this may well be the last time that I will have the opportunity to address you as a Deputy.

I want you to know, with all the sincerity of my heart, that there is one word which stands out in my mind. Which stands out in my mind again. As I look over the sea of faces, that one word is fellowship and fellowship is *people helping people*. May I steal words from the Immortal Scottish Poet, Robert Burns, "Man's Inhumanity To Man." Which is the very antithesis of what I mean. The very antithesis of what I mean, people helping people.

My dear friends, as we sit here and break bread I would mention that on many occasions *we* have stated that Veterans are *very special people*. I want you to know that, as long as I live, I will say that Veterans' Agents *and* the Representatives of the Veterans' Administration *are very special people* and I will never forget the truly wonderful friendship that has been branded onto my heart.

Friends come and go but true friends are made in an atmosphere of *Love for Your Fellow Man*. And all of you have shown the love for your fellow man. For you have chosen to walk that unselfish road of life that winds and twists, sometimes smooth and sometimes rough and sometimes smooth into a mire. But, because of your tenacity and your love for mankind, you go on until the road smoothens out. You have chosen to walk this road of life *untired* with your spirits held *high*, your shoulders *bent* with burden and your brow wet from helping those very special people, *Veterans*.

It is on this road of life that you will find the true measure of a man. It is on this road of life that you will find you don't measure a man by his height. You don't measure a man by his girth nor do you measure a man by his weight. But, you measure a man from inside out.

TOWARD SAVING THE ENVIRONMENT: A COMPREHENSIVE PROGRAM

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. CHARLES H. WILSON. Mr. Speaker, the issue of our deteriorating environment is one whose importance is

increasing daily. The urgency of bringing pollution under control cannot be underestimated. Having long prided ourselves on our unmatched technological and industrial capabilities, it is not now an easy task to integrate this basic aspect of our national character with a new and vital commitment to merge our productivity with an equally strong program to rescue our environment. In short, this effort requires a rather profound reeducation of both the business community and the citizenry in general.

Communication, rhetoric, and public persuasion all play significant roles in reorienting our society away from ecological suicide, toward a policy of preserving what resources are intact and rebuilding what is not ruined beyond hope. April 22, 1970, was this year designated as Earth Day. Thousands of our citizens and Government leaders participated in programs designed to raise the level of public ecological awareness. This awareness is increasing daily, to the point where citizens are no longer content to hear concern merely voiced; people everywhere want action.

I concur with the growing alarm over the ruinous levels of pollution which blight the landscape nearly everywhere. Accordingly, I have introduced a number of measures which I think will significantly contribute to the vital project of rescuing the environment. However, antipollution is, in my view, one area where we probably cannot do too much. Therefore, I am today introducing eight additional measures which, taken as a whole, constitute a broad and balanced attack on our pollution problems and on our inadequate protection of natural resources. I believe these measures will help us to realize a three-pronged goal of providing both adequate power and adequate protection for our citizens, conserving our environment now and in the future, and preparing our governmental structure to properly cope with ecological matters as our technology continues to advance.

Because the great number of environmental programs which will hopefully be enacted in the near future must be administered by agencies and departments of the executive branch, I am sponsoring a bill to reorganize that branch of the Government by transferring functions of various agencies which relate to the evaluation of the effects of certain activities on the environment to the Environmental Quality Council. This measure would also set forth a badly needed declaration of national environmental policy. Proper coordination of all ecological activities has so far been sadly lacking. This bill will be effective in bringing together all of the information relating to the environment and monitoring the various ecological programs in progress. This centralization will greatly assist in sorting out the maze of environmental programs and information and also serve to point out the proper directions in which we should move with future legislation.

I am also sponsoring a measure which would create a Council of Conservation Advisers, to be composed of three members selected by the President and confirmed by the other body. This policy-making body will analyze and interpret existing policies which affect our natural resources, evaluate Government policies and programs relating to the environment, and formulate national policy for the promotion of proper utilization of natural resources with careful regard for conservation and the environment. The Council would be responsible for an annual report.

This bill would further provide for the establishment of a 16-member Joint Conservation Committee to study conservation methods and programs while also acting as a guide to various committees of Congress which deal with conservation activities derived from the Council's programs.

Mr. Speaker, earlier in my presentation I discussed the need for reeducation of our citizenry on the matter of reversing the current tide of ecological destruction. In accordance with that view, I am sponsoring the Environmental Quality Education Act, which calls for the Commissioner of Education to make grants and enter into contracts with various educational and private agencies and institutions so that new and improved curriculums, which will encourage understanding of environmental policies, can be developed. Community education programs would also be devised which would concentrate on preserving and enhancing our ecological balance, along with the quality of our environment.

An Advisory Committee on Environmental Quality Education is also called for in this bill. The committee would be composed of 21 members, each of whom would possess knowledge of education, information media, and of man as a consumer, producer, and citizen of his environment. Progress against environmental destruction will proceed only as rapidly as public knowledge and awareness become prevalent among the population. Education, therefore, plays a very important role in the antipollution effort.

Pesticides, long considered a boon to mankind in terms of increasing growth and production, are now recognized as possessing mixed benefits for our people and our resources. Greater research is very badly needed to determine the overall effects of the great variety of pesticides which are being used, often with too little research or caution, in many areas across the country. For this reason, I am including in this environmental package the Safe Pesticides Act, which would require the Secretary of Health, Education, and Welfare to conduct a thorough study and investigation of the effects of the use of all the various pesticides currently available. We must move to determine the chemical effects on man, animals, and other life forms.

The continuing increases in our population will also demand that we carefully plan for an adequate electrical power supply to meet the needs of our heated, airconditioned, well fed and cleanly laundered populace. The continual fear of "blackouts" and "brownouts" surely points out the need to increase power supplies in an orderly, well-coordinated fashion designed to fill the needs while at the same time preserving our Nation's natural resources. The Electric Power Coordination Act would provide for the establishment of coordinating agencies on State and national levels. These agencies would be responsible for promulgating service standards and long range goals. They would also safeguard the environment by overseeing the construction of new facilities.

Atomic energy, being a relatively new source of power, can also be hazardous if not carefully regulated. I believe it would be beneficial, therefore, to amend the Atomic Energy Act of 1954 to allow a State to impose radiation standards which are more restrictive than those imposed by the Commission. States which wish to stiffen the protection of their populations against radiation hazards should not be prevented from doing so.

Another concern which is becoming increasingly urgent is that of controlling our booming population. The figures for the future indicate that, here and particularly abroad, a great deal must be done to cut down the birth rate and protect our world from the strangulation of severe overpopulation. With the importance of this project in mind, I am sponsoring legislation to establish a Commission on Population Growth and the American Future. This Commission would examine the impact of population growth in a variety of areas.

Finally, I am sponsoring a resolution which would greatly assist us in planning for the future in an orderly and conservationist manner. A Select Committee on Technology and the Human Environment would be given the responsibility to study the extent of future technological changes, their effects on man's environment and the ramifications of private investments in future technological advances. Necessary powers would be authorized for this 24-member group.

Mr. Speaker, it is my sincere hope that the aforementioned selection of measures designed to promote ecological conservation and a better environment will see action in the near future. I am persuaded that a broad and balanced approach to the antipollution effort will help to undo much of the past environmental ruin and preserve our surroundings in a coordinated and responsible manner. By effectively waging many ecological battles today, I believe we may win the environmental war tomorrow.

PROTECTIONISM AGAINST CONSUMERS

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. CORMAN. Mr. Speaker, the House Ways and Means Committee, after lengthy public hearings on tariff and trade, is presently writing a trade bill that can only be characterized as "protectionist" in nature.

This action has stirred a controversy not only in our own country, but among

foreign countries who trade with us. Repudiation of our "free trade" policies, which have successfully prevailed throughout the administrations of Roosevelt, Truman, Eisenhower, Kennedy, and Johnson, would have ominous effects on the American economy, our labor market, and not in the least, would strike hardest on the consumer.

An editorial in the July 19 edition of the Los Angeles Times speaks to this subject. I would like to share it with my colleagues for it is certainly "food for thought."

The editorial follows:

PROTECTIONISM VS. CONSUMERS

Thanks to politics as usual on the part of Congress, the Nixon Administration and their counterparts in other countries, the world finds itself on the verge of a potentially disastrous trade war.

The situation has been building for a long time. But it erupted into crisis proportions last week when the House Ways and Means Committee adopted a whole series of protectionist proposals.

As marked up by the committee, the trade bill would impose mandatory quotas on imports of shoes and textiles other than cotton. It would also freeze the current system of oil import quotas into law, and create machinery for the imposition of quotas on many other products.

If enacted into law, the measure as it stands would constitute the most abject surrender to protectionist forces since the Smoot-Hawley tariff law, which helped to plunge the world into depression in the 1930s.

Other major trading countries are threatening to retaliate against American-made goods—a step which, if it materializes, would generate U.S. counter-retaliation, and the world would soon find itself in a trade war which would hurt everybody concerned.

Representatives of the United States and our major trading partners will convene in Geneva late this month for an emergency discussion of the situation.

While Japan and the Common Market countries, in particular, must shoulder much of the responsibility for the dangerous drift toward protectionism, a great deal of the blame should be placed squarely at the door of President Nixon.

The Administration's posture has been basically on the side of the free trade policies which have prevailed for 37 years.

Mr. Nixon, however, has taken the position that textiles are a special case—that the domestic industry is being unreasonably injured by a rising tide of imports, and therefore deserves protection.

The statistics do not bear him out. Suspicion thus is inevitably bred that the President is less interested in the economics of the case than in the political points to be won in the South, where so much of the textile industry is concentrated.

In any event, the refusal of the Japanese to accept a meaningful system of voluntary quotas on textile imports led the Administration last month to throw its "reluctant" support behind legislation to impose formal quotas.

The trouble is that it is not much easier to be a little bit protectionist than a little bit pregnant. Once textile quotas had presidential support, the usually responsible House Ways and Means Committee turned a more sympathetic ear to other protection-minded industries.

The move toward protectionism will be very hard to stop either in the House or Senate, now that it has picked up momentum—unless the American people themselves show an unaccustomed awareness of their stake in the matter.

The fact is that trade barriers are against the overall public interest in two important ways:

If we impose quotas on other people's exports to this country, they will naturally impose quotas on our exports to theirs. Since the United States is a net exporting nation, this game of tit-for-tat eliminates more jobs than it saves. This is particularly true in California, where agricultural and industrial exports are so important to the economy.

Imposition of quotas on imports reduces competition, and therefore results in higher prices and a narrower range of choice for the consumer. When domestic industries ask for protection in the form of quotas or tariffs on foreign goods, they are in effect asking for a subsidy at consumer expense.

It is quite literally true, then, that the protectionist trade bill which is emerging from the House Ways and Means Committee is an anti-consumer bill of potentially massive proportions.

Consumer groups should understand this point and act on it—by pressuring lawmakers to vote against the protectionists, and by urging President Nixon to veto the trade bill unless the quotas are removed.

Finally, voters in California and elsewhere should remember next November which lawmakers voted for the consumer and which did not.

THE BUSINESS OF AMERICA IS BUSINESS

HON. LOWELL P. WEICKER, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. WEICKER. Mr. Speaker, a very prominent American, Calvin Coolidge once said:

The business of America is business.

Today, as never before, the business of business must be America.

The following is a speech delivered by Dan W. Lufkin, chairman of Donaldson, Lufkin & Jenrett, Inc., at the April 22 Earth Day proceedings at Harvard Business School.

As a member of the National Steering Committee for Earth Day, and as a leader of one of the outstanding forward thinking and innovation investment banking houses in Wall Street, he is strategically placed to analyze the problems and opportunities of corporate commitment in today's environmental controversy.

Not only is he posing the hard question for businessmen to answer as they stand on the bridge between technology and human beings, but his urgent call should be read by Members of Congress, as it is our responsibility to provide effective leadership.

The speech follows:

THE BUSINESS OF AMERICA IS BUSINESS

Ladies and Gentlemen, Participants in the Teach-In, Friends: Today belongs to the youth of America. Like the child in the ancient legend, they have had the courage to tell us that the emperor is naked. They have stood by the side of the road as we paraded the wonders of our civilization, and they have told us we have been cheated. Instead of glittering success, they see grim failure. Instead of praise for what we have built, they blame us for what we have destroyed. Instead of seeing the magnificence of our technology, they have taken the measure of our inhumanity.

Never before has the perspective of an entire generation and all its youth been so in conflict. And in these conflicting views of our society, there is a grim challenge to all of us—namely, end the conflicts or end everything. End the conflict between black and white. End the conflict between rich and poor. End the conflict between young and old. And as we are here to discuss today, end the conflict between man and his environment.

Whether or not we know it consciously, this doomsday sense on the issue of the environment is what has brought us here today. And this is the reason why I have worked so hard to see this day a success. This meeting, and thousands like it across the country, in a way more real than metaphoric, must be where the peace negotiations begin.

I am not suggesting that our speakers are antagonists; or that their love for their country, their appreciations of nature and their concern for ecological balance differ in intensity or sincerity. But in a very real sense, they do symbolize the two sides of the environmental conflict—the side of *Man the Technologist*, superimposing on nature a home of his own creation, and the side of *Man the Natural Being* trying desperately to preserve the integrity of creation itself.

My sole qualification to arbitrate this issue is a burning conviction that, however agonizing the process, the differences between these two sides—those who speak for man's conscience and those who represent his commerce—must be resolved. Frankly, I believe that the involvement of business in the salvation of our environment will have far-reaching and perhaps even disturbing consequences. I think every one of us here will be personally affected to a degree scarcely comprehensible today, before the fact.

But let me begin by commenting on the reactions of both sides to this situation. As part of my steering-committee activities, I called on a number of key members of the business community. One interview sticks in my mind, a meeting with an officer of a major utilities association in New York. I asked this gentleman how his membership planned to deal with the students and others who would approach them during the teach-in. And he replied: "Oh, our members will participate—definitely—some may even give a nice lunch, a tour of the plant and perhaps a ride in an electric car."

The presence of Charles Luce on this platform testifies that not all utilities executives feel this way about Earth Day and its implications. But as I talk with you now, I find myself wondering how well those electric car operators are faring in the face of today's reality. Not very well, I imagine.

Nor do they deserve to be let off too lightly. To suppose that Earth Day is an incident best handled by the public relations department is the surest evidence of the corporate shortsightedness which has led us to a need for Earth Day in the first place. To underestimate the concern of the public, and especially of your generation, with the environmental crisis is to kindle the fires of tomorrow's disaster. Yet too many members of the business community apparently believe that this crisis can be solved by a tree-planting ceremony on the home office front lawn. In my own visits to business regarding Earth Day, over one-half the time I was ushered into the public relations department and visited with the public relations director.

On the other side of the barricades, I've heard, and no doubt you've heard, equally myopic philosophizing. "Earth Day is a cop-out, a ruse to divert attention from the war." You've heard that. And, "Earth Day is a WASP issue, a middle-class cleanup campaign that doesn't do a thing for blacks." You've heard that, too. All in all, the comments from both sides indicate to me that neither side commands a monopoly on intelligence.

Meanwhile, the facts make liars out of the footdraggers, whoever they may be.

According to a study done at Carnegie-Mellon University, roughly 25 percent of all respiratory disease is associated with air pollution. During the past ten years, a disease called pulmonary emphysema has become the fastest growing cause of death among city dwellers, and 70 percent of us live in cities. In New York City, the death rate of this clogged-lung disease has increased by 500 percent since 1960, and Paul Erhlick estimates it will increase another 500 percent in the next five years. In 1968, the life expectancy of the average American actually *declined*, from 70.5 years to 70.2 years. *Time* magazine noted that "the Apollo 10 astronauts could see Los Angeles as a cancerous smudge from 25,000 miles in outer space." And it is a fact that, in Los Angeles, public-school gym classes are cancelled regularly lest the children, when they exercise, breathe too deeply.

In his play, *A Season in the Sun*, the late Wolcott Gibbs made a comic climax of the scene in which the hero, as a hurricane approaches his summer home, goes to the bookshelf to look up "hurricane" in the dictionary. In a sense, we're doing the same thing. But the word we're looking up is "humanicide." And I think we've found the definition. Now what do we do, before it's too late, to put our knowledge to use?

Since I myself first became interested in—and then horrified by—what we're doing to ourselves and our environment, I've learned a good deal about the legal and the economic aspects of the environmental crisis. If we had enough time today, I would like to trace for you the history of our so-called environmental protection laws—starting with the first one of consequence put on the books in 1889 and continuing through the Water Quality Improvement Act of 1970. Or we could review together the projections now being made by the econometricians of the cost to clean up our waterways and our atmosphere; and spend time assessing the proposals, from taxes on future junk to fines to direct increases in consumer prices, by which cleanup costs can be transferred to society as a whole.

The legal history of our unconcern and then our concern with the environment is fascinating. The costs of cleanup will rightly preoccupy leadership in the future. These problems, indeed, will preoccupy *you* as you move on into your careers. If I bypass these issues now, it's not because they're unimportant. Rather, it's because I'm sure that most of you are already thoroughly versed in the costs and legal mechanics by which environmental cleanup will have to begin to be implemented. After all this is the Harvard Business School!

So first today I want to warn you against the argument advanced by some leading industrialists; namely that if we forego short-term profit we may have no long-term future; in the market economy, we will be eaten if we don't advance avariciously on all fours. I disagree with this thinking 100 percent, and this is not an ivory tower planner talking. With others, I have built a business from a $100,000 equity investment in 1960 to a Company with a net worth of $28 million as of last year end. In that journey there were many days of no profit, forget short-term profit.

While we must have broad environmental legislation which prescribes uniform treatment—both carrot and stick—for industry, industry must do its part even, *and most probably*, at the cost of short-term profit. I do not believe that the rightful public anxiety over the environmental crisis will stand for any other course. Nor do I believe it should.

This being the case, I suspect that the crisis of the environment and the related crisis, as they pertain to the business community, are going to alter that community permanently. Let me take this thought the next step in a familiar context, that of the old argument about the social responsibility of the business organization. In my day here it was called "Business Responsibilities in American Society," although the subject matter was far removed from what I am advocating today. Then we all decided that, yet, the organization does have definite social responsibilities . . . that, in the pursuit of these, short-term profits can be held down in favor of longer-term investments in the betterment of society . . . and that this strategy in truth is the best possible management strategy for a business to adopt, because it constitutes insurance of a better future for all.

In my judgment, the urgent threat to survival posed by our depredations against the environment has brought the future right to our doorstep. As President Nixon has said, "it is now or never". Our whole notion of redirecting *some* of our resources into socially valuable projects but keeping *most* of our resources in making money irrespective of the consequences will no longer wash. The trick will be to direct *most* of our resources to rendering society more humane and more livable *and* making money in so doing. What I am really suggesting is a reordering of business priorities, of taking the quality of life issue out of the public relations department and putting it right smack on the President's desk, as top priority! In all areas, and in all forms, quality of life must weigh equally with Adam Smith's market mechanism in the allocation of resources.

Does this mean the death of the profit-system and of free enterprise capitalism? In a thousand speeches before a thousand Rotary Clubs, it perhaps will. But in this speech, it obviously doesn't. I do think that the mishandling of the issue by some businessmen will compound the woes of transition. But I also think we're headed for a type of redefinition, not an abolition, of the concept of profit—one that will assess corporate gains and losses not only in terms of dollars but also in terms of social benefits realized or not realized.

At this point, I can almost read the minds of some of you who are thinking: Well and good. But how do you convert social benefit gains into measurable indicators? How do you quantify benevolence?

The assumption that you can measure business performance only by money standards—and its counterpart that you can't assess social beneficience in money terms—is like the assumption that the bumble bee can't fly. No matter what the aerodynamic engineers prove on the drawingboard, it damn well does fly. And the quantification of social gains, despite the abstract logic of some theoreticians, is proceeding apace. As evidence, let me refer you to an article by Robert Beyer in the March, 1969, *Journal of Accountancy*. Mr. Beyer is managing partner of Touche, Ross, Bailey & Smart in New York. Needless to add, his other management credentials are impeccable. In his article, "The Modern Management Approach to a Program of Social Improvement", Mr. Beyer explains what's being done today in Detroit to quantify the results of the city's welfare programs. Among many other insightful comments, the article includes this one:

"The *degree* to which basic human needs are reduced, and the *time* it takes for reduction to occur, is the acid test of a social program's success. Continuing measurement, reliably controlled in the best accounting tradition, provides a valuable instrument of continuing evaluation. The absence of this ingredient is responsible for the failure of more social improvement programs in the past than any other single factor."

It can be done and I interpret Mr. Beyer's remark as a direct rebuke to the doubters. Broadly, he's suggesting that if we apply the same skill and control to managing social improvement that we're applying to managing businesses, we will be able to measure quantitatively the effect of our involvement.

There are those in business today, in the ranks of top management, who object to business involvement in not-for-money-profit social endeavors, or profit endeavors with a socially responsible overtone. They feel sincerely that such endeavors are primarily the concern of government. I disagree. It seems to me that future historians will see much of the American 20th century in terms of brilliant theoretical proposals on the part of government, but of correspondingly dismal administrative realities. I hold with Peter Drucker that the job of government is to propose directions for society and to legislate the rewards and penalties into being. But it's the role of enterprise to act, to manage, to innovate and to bring about social change. This, after all, is what businessmen are good at doing. As a matter of past historical fact, one of the reasons big government arose in the first place was because private enterprise—lacking the motivation of survival—shirked for so long its environmental and social responsibilities.

Now, we have no choice but to assume these responsibilities and we do have the primal motivation of survival. Far from wishing the government to do an incompetent job with them, I'm willing to hope that we recapture from government all kinds of business-related endeavors and make money in so doing. In sum, not only do I hope as a businessman for the lion's share of the work to be done on our environment, but I favor also the "reprivatization"—another phrase of Drucker's—of the postal services, the lending agencies and other unwieldy factories of government administration.

What will business life be like after the millennium of a new definition of profit? Will businessmen be forced to say, like the old wizard in the *Lord of the Rings*, "the Third Age of the world is ended, and the new age is begun; and though much has been saved, much must now pass away"? I don't think we're quite ready to put aside our energy and initiative or to say goodby to the American Dream. But I do think that our business life, which has changed so much over the past decade, will change even more over the next. I think in many respects it will be even more satisfying to be in business than it has been. Echoing the comments of another sage, John Maynard Keynes, "I look forward, therefore, in days not so very remote, to the greatest change which has ever occurred in the material environment of life for human beings in the aggregate. . . . The critical difference will be realized when prosperity has become so general that the nature of one's duty to one's neighbor is changed."

Ladies and gentlemen, I think the nature of our duty has changed indeed. With Keynes—Keynes the man—I feel that "it will remain reasonable to be economically purposive for others after it has ceased to be reasonable for oneself." This, I think, is to become the major motif of business. It must, if we, our system, and our way of life are to survive.

LEAD POISONING: CHILD KILLER

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. HAWKINS. Mr. Speaker, the large number of lead poisoning cases reported in recent months has attracted the attention of concerned public officials

and organizations throughout the United States.

Such poisonings occur among young children, almost always between the ages of 1 and 6, who eat crumbling plaster or paint chips heavy in lead content that they find on the floor or peel off the walls of older mostly slum dwellings. Because the symptoms of lead poisoning are so similar to symptoms of other diseases, such as the common cold, and flu, medical authorities often mistake lead poisoning for other ailments.

Progress is being made, however, not only in diagnosis and treatment, but in the awareness of officialdom and the public. Many citizen groups such as the VITA–D.C. Committee on Lead Poisoning, are engaged in an effort to disseminate information to residents of the inner city where older dwellings abound and to educate them to the hazard to their children of lead poisoning. The importance of these efforts cannot be minimized.

Legislation introduced in the Congress was the subject of recent hearings held by the subcommittee on housing of the House Banking and Currency Committee.

Most significant was the testimony presented by Dr. Hazel Swann, a volunteer with Volunteers for International Technical Assistance (VITA). Accompanying Dr. Swann was Mrs. Romana Parker whose son was the District of Columbia's first recorded lead paint poisoning casualty.

Dr. Swann's statement is a clear delineation of the problem as well as offering sound recommendations for its ultimate solution.

The statement follows:

STATEMENT BY THE VITA-D.C. COMMITTEE ON LEAD POISONING

PRESENTED TO THE SUBCOMMITTEE ON HOUSING, CHAIRED BY THE HONORABLE WILLIAM A. BARRETT, CHAIRMAN

Mr. Chairman, members of the Committee, we thank you for this opportunity to address you. Our message is an urgent one that affects potentially thousands of children living in slum housing in the District of Columbia, as well as children in many other parts of the nation.

My name is Dr. Hazel Swann. I'm a volunteer with the VITA-D.C. Office. VITA, or Volunteers for International Technical Assistance, along with a number of D.C. community organizations has formed the VITA-D.C. Committee on Lead Poisoning. I am here representing that broad group, on behalf of our children.

The lady with me is Mrs. Romana Parker, of the North East section of the District of Columbia. Mrs. Parker is the mother of a child, Ricky Parker, whose tragic death in June of this year was a result of lead poisoning.

Ricky Parker was pretty much of a normal three year old. Maybe big for his age, but normal otherwise. Except that he had a habit of sitting on the steps in his house and cramming bits of things into his mouth that he shouldn't eat.

He lived at 229 F Street, N.E. with his mother, Mrs. Romana Parker, and two other children—a sister 21 and a brother 18. His father is ill and in a veteran's hospital.

On June 22, very early, he died. He was dead when his mother reached the hospital.

An autopsy showed he died of lead poisoning. Ricky Parker became the first recorded lead poisoning death in the District, according to health department officials. He was not the first child to die of the disease. The autospy showed that Ricky had lead in his knees; bits of paint chips in his colon; and plaster chips and paint chips in his stomach.

His mother said he had been eating paint wherever he could find it in the house for a year, but never showed any adverse signs of lead poisoning. Every time she would catch him, she would make him quit. She patched the walls in the old house with plaster wherever she would find him picking at flaking paint. She said he couldn't stop eating paint and that just before he died, it almost became a mania with him trying to find paint and plaster that he could eat.

Why did Ricky have to die? Lead poisoning is a completely preventable disease that attacks children living in slums. Its victims are most often children between the ages or 1 and 6 who eat bits of crumbling plaster or peeling paint that is heavy in lead content. No one knows for sure just how many children suffer from the disease, but every year children die from it. No one knows how many children die or are irreparably damaged by lead poisoning because the District Government only began in April of this year to require doctors to report cases of lead poisoning. This is the first substantive effort at any kind of legislation to deal with the problem of lead poisoning in the District.

The infant who drops his bottle into a pile of chipped paint on the floor or the toddler who crams bits of broken plaster or putty into his mouth is susceptible to lead poisoning. It has been estimated that one child in 15 between the ages of one and six who lives in slum housing has more lead in his system than is safe.

Parents must know how to detect lead poisoning in their children early before the case is too severe to prevent irreparable damage. That is sometimes hard to do because the early symptoms are vague and could indicate several other types of diseases or illnesses in children. But, if a child who is exposed to old paint, putty or plaster shows these symptoms, medical help should be obtained for him.

Symptoms may be very mild or quite severe. In the very young child, symptoms may appear shortly after exposure to the lead.

Mild symptoms include headache, irritability, inability to sleep, stomach ache, weakness, loss of weight, vomiting, or loss of appetite. In severe cases, the symptoms may include dizziness, staggering, paralysis, pains in joints, convulsions, or blindness.

As you can see, the early symptoms of lead poisoning can be and are easily mistaken for other, less virulent diseases. In terms of medical costs and possible loss of life, it is easier to prevent the disease by removing all old, peeling paint, plaster, and putty from walls within four feet of the floor. These precautions may help prevent the often permanent damages of lead poisoning. May I emphasize that ignorance is widespread. Reportedly Ricky for some time, was treated for Anemia, not Lead Poisoning.

The VITA–D.C. Committee on Lead Poisoning came into being several months ago. It was originally composed of representatives from two social organizations, two VITA-Volunteers and the VITA–D.C. staff. There are now about ten participating community organizations. The goal of the committee has been to launch an informational campaign, directed to the parents of children living in D.C. slum housing; better described as the D.C. Lead Belt.

A simple informational pamphlet was designed by the committee, and through the efforts of the participating community organizations, over 25,000 pamphlets have been distributed. Approximately half were distributed on a door to door basis. Others were distributed through 52 child care centers, and 12 inner-city schools. Well over 400 persons have been involved in this effort. This is not enough! While we were working, Ricky Parker died of Lead Poisoning!

We are aware of a recent blood testing campaign conducted on a number of children in the District. This is a worthwhile beginning, but it is still only a small step toward a curative measure. Until children can be treated and returned to a home free from the presence of lead, doctors, parents, and helpless children will be caught in a vicious cycle of band-aid remedies, in which the real cause is never stopped. In short, Prevention must be emphasized.

What is to be done first? A massive information/educational campaign must be mounted. It should be directed towards the populations most vulnerable to the disease (slum dwellers), and those persons most involved with the problem, i.e., community health clinics, landlords, MDs, community organizations, etc.

HEW could mount an effective series of public service announcements that would utilize community organization people in the delivery of the message.

Appeals to the news media for research and coverage should be made. Specific appeals should be made to the most popular radio stations in said areas. Persons forced to reside in slum housing should be made very knowledgeable of the high potential danger of peeling paint and crumbling plaster.

OEO could activate distribution of informational materials to Community Action Programs located in areas that have a high concentration of slum housing.

All headstart and childcare centers in lead-belt areas should receive informational materials. All school systems in these areas should be alerted to the problems through informational materials, that could be passed onto the Parent-Teachers Associations, etc.

In addition to the recommended massive informational/educational campaign, we strongly recommend that any national legislation dealing with lead poisoning in children place the greater emphasis on preventive rather than curative approaches. Detection and treatment programs only would see children returning to the same infectious environment, each time coming closer to death or permanent physical damage, such as blindness or mental retardation.

We realize that many people see problems with such legislation—Is the present landlord responsible? What kind of feasible system of removal is available? What are the effective means of enforcement? These are not major problems to those of us who are truly concerned. Landlords are legally responsible for the maintenance of the property they own. Removal of paint from a row-house can be accomplished at far less cost than medical treatment for one child. We know the problem can be solved with adequate funds and legislation. As representatives of the community, our greatest concern is that whatever legislation is enacted be stringently enforced. Too often, the community of the poor has been disillusioned with paper legislation in which there is no strong enforcement provision. Our participating organizations are located in the problem areas and can assure their assistance in the enforcement of whatever provisions are enacted to end the death of small children by lead poisoning.

THE NEGRO IN WORLD HISTORY

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. DIGGS. Mr. Speaker, under unanimous consent I include the following article from Tuesday magazine, June 1970:

THE NEGRO IN WORLD HISTORY

DR. ERNEST E. JUST

A modest, withdrawn man who avoided politics, it would have seemed uncommonly strange to Dr. Ernest Everett Just had he known that after his death he was to become a central figure in a battle which was as much ideological as it was scientific, a battle which pitted scientists from one side of the Iron Curtain against those from the other. But, although during his lifetime Dr. Just had shunned both publicity and controversy except for those quiet, scholarly arguments which might follow from his frequent publications in the scientific journals, it happened. And the quiet, single-minded Dr. Just no doubt would have found it ludicrous to attempt to explain science in terms of politics or politics in terms of science.

Dr. Just was a biologist, one of America's most brilliant and original experimental biologists, a man whose person and work were respected throughout the world's scientific community. But as with most scientists—and especially those of the first half of this century who were black—he was little known outside his tight little community of fellow researchers. What brought him to wider attention after his death was not, finally, the body of his more than 40 years of brilliant work, but the conclusions laymen were to draw from his final book, *The Biology of the Cell Surface*. To say he came to wider attention even then is, perhaps, to overstate the case: He came to the attention of the political polemicists who were fighting the Cold War with words and who were willing to seize on anything at hand to score debating points.

The book Dr. Just published shortly before his death in 1941 represented an attack upon the traditional biology and especially upon the gene theory. And it was an attack somewhat similar to—although Dr. Just's research was entirely independent of—the theories of the Russian scientists, Michurin and Lysenko. Such a coincidence would not usually, in a science so remote to most laymen as biology, have created a furor except that there was much more to it, from a Marxist point of view, than a theory of physical science. The Marxists chose to view the theories of Michurin and Lysenko as theories which bulwarked their views of the world, history and social organization as well—subjects far removed from the biology of the cell surface. And, in the world of the Cold War, Westerners chose to believe that these theories must, perforce, be wrong.

The core of the argument was the traditional view, first put forth by Gregor Mendel, that hereditary characteristics are transmitted from one generation to another only through the genes attached to the chromosome within the nucleus of the cell and that those characteristics cannot be modified by environment. The Russian Tromfin Lysenko's theories ran directly counter to Mendel's. He maintained that basic physiological changes in individuals may result from their environment and that they may then transmit those changes to the next generation: in short, that heredity may be affected by environment. From the Communist point of view Lysenko's theories assumed an importance beyond the field of biology because they seemed to support in the physical sciences what Marxists already believed in the social sciences—that a carefully controlled environment can lead to specific changes in man's condition and in man himself.

Now it would seem strange that a non-political black American scientist should become embroiled in such an abstract international political argument with ramifications far outside the field in which he spent his life—and, in fact, Dr. Just didn't. It was only after his death that laymen discovered in his last book that he had insisted that the idea that only the nucleus of the cell affected heredity and the rest of the cell did not was false. And he did not directly support Lysenko's theories, although he arrived at many of the same conclusions.

". . . a conception which assumes that either the individual alone or only the outside world is real, has no biological basis," he wrote. "The interdependence between individual and outside world is a postulate which has its sanction not from any abstract philosophical principle, but is true because of the biological basis here set forth [in *Biology of the Cell Surface*]. The best system of philosophy, then, is that which recognizes living thing and outside world as one interdependent continuum."

It was a long, but direct, path which brought Ernest Everett Just to a position as a figure of posthumous international controversy from his beginnings in Charleston, S.C. He was born August 14, 1883, the son of Charles Frazier and Mary Matthews Just. His father was a wharf builder who constructed some of Charleston's largest piers before he died when Ernest was four. His mother supported her three children after their father's death by working in the nearby phosphate fields and by teaching in a school she established with money she got by selling some property. Just went to his mother's school and from there to the Industrial School of Orangeburg, now South Carolina State College.

After he left the industrial school, young Just decided to go North to study, found a job on the Clyde Line (a coastal boat service) and worked his way to New York where he arrived, he later said, "with $5 and two pairs of shoes, one very worn and the other serviceable." He worked in New York long enough to get money to put himself into Kimball Academy in Meriden, New Hampshire. At Kimball he supported himself with scholarships and with odd jobs, washing dishes, shining shoes and so forth. He completed the four-year course in three years and found time as well to win a prize two years in a row for extemporaneous speaking, become president of the debating society and editor of the school paper.

In later years he told his children that while he was washing dishes one day at Kimball he had a sudden feeling that he must go home. He took off his apron, walked off the campus, stopped in New York long enough to pick up his brother, Hunter, who was working in the city, and made for Charleston. He arrived late at night and knocked several times on his door without getting an answer. Finally a neighbor called from a house next door: "Ernest, is that you?" Yes, he said, it was. "We've been trying to reach you for three days," the neighbor said. "Your mother was buried this morning."

From Kimball, Just went to Dartmouth College. There he seems to have been something of a renaissance man in the sense that his interests were wide-ranging and his grades were extraordinary. During his freshman year he made the highest mark ever by a Dartmouth student in Greek. He thought seriously of specializing in Greek and writing on a phase of the language which interested him when he discovered that a German scholar already had done such work and Just abandoned the project. He was a Rufus Choate scholar for two years at Dartmouth and was elected to the scholastic honor society, Phi Beta Kappa. He won his degree in 1907 with the only magna cum laude honors given that year. He graduated with special honors in both zoology and history—the first Dartmouth student ever to take special honors in two fields—and with honors in botany and sociology.

Bishop Wilbur P. Thirkield, president of Howard University from 1906 to 1912, wrote years later of how he had hired Ernest Just in 1907 as an instructor in English at a salary of $400 a year because: "I sensed the need of exalting English in the curriculum." The next year Bishop Thirkield was planning a new science hall for the university and asked Just to switch from English to biology. "Having gained the warm admiration of his students in English," the Bishop wrote, "Instructor Just was not favorable to the change. He has since told me how incensed he became over my insistence that he take the instructorship in biology on the plea that while I could secure teachers of English, Just was the only well-equipped man of the colored group whom I could secure for biology."

How right he was, the Bishop could not have known. During his first year of studying biology at Dartmouth Just had discovered how little, comparatively speaking, was known of the development of the egg. The subject intrigued him and he decided to make it his specialty. In 1909 he began graduate work at the Marine Biological Laboratory in Woods Hole, Mass., where he was to spend most of his summers for the next 30 years, and marine eggs became the center of his research. He wrote the first of some 50 papers he produced on the subject in 1912 and, after graduate work at the University of Chicago, won his Doctor of Philosophy degree in biology there in 1916.

Meanwhile, in 1912, he had married Ethel Highwarden, of Columbus, Ohio, a graduate of Ohio State University who was teaching at Dunbar High School in Washington, D.C. The couple had three children: Margaret, now Dr. Margaret Just Butcher, distinguished professor of American Literature at Federal City College in Washington; Highwarden, now a school principal in Cordle, Ga.; and Maribel, now Mrs. Maribel Butler, an employee of the Bureau of Census in Washington. And despite his own hardships at the time, Dr. Just while still in college had managed to put his brother, Hunter, and sister, Inez, through school as well. Both are still living. Inez, now Mrs. Inez Harris, went through Freedman's Nursing School in Washington, later established her own practical nursing school, and now lives in retirement in Los Angeles.

Even before he won his doctorate degree, Dr. Just had become so widely known that in 1915 he was awarded the first Spingarn Medal, awarded by Dr. J. E. Spingarn, first chairman of the board of directors of the National Association for the Advancement of Colored People to "the man or woman of African descent and American citizenship who shall have made the highest achievement during the preceding year or years in any honorable field of human endeavor." He won specifically for his work in physiology and for improving the standards of Negro medical schools. He had by this time become head of Howard's Department of Zoology and a professor of physiology at Howard Medical College and, still making less than $1,000 a year, found the $100 prize a considerable addition to his salary. Yet, when he won the medal, he wrote the NAACP that he was sorry he had to appear before an audience to go through the ceremony because he felt such publicity was incompatible with scientific endeavor. And when New York Governor Charles S. Whitman gave him the medal, Dr. Just said only, "Thank you."

By 1920, and lasting until 1931, he had become a Julius Rosenwald Fellow in Biology of the National Research Council and was so highly regarded for his work that the Rosenwald Foundation gave Howard an $80,000, five-year grant with the stipulation that should Dr. Just leave or die within the period of the grant the gift would automatically be cancelled. It was not an idle thought. By the late '20s Dr. Just's fame had spread throughout the world's scientific community and there were many lures put before him. He was a special lecturer at the Congress of Zoologists in Padua, Italy, in 1930. For three consecutive years he did

research at the Kaiser Wilhelm Institute for Biology in Berlin and later worked several times at the Sorbonne in Paris and the Biological Station in Naples. Once, while in Naples for six months' study financed by the Rosenwald Foundation, he was a guest of the Prince of Monaco and conducted experiments in the Prince's private laboratory.

As well, he became a vice-president of the American Society of Zoologists, was an associate editor of the *Biological Bulletin*, the *Journal of Morphology*, *Physiological Zoology*, the *Collaborator Protoplasm* of Berlin and *Cytologia* of Tokyo. In the early 1930s he was one of only four American blacks listed in the *International Who's Who*. The others were W. E. B. DuBois, James Weldon Johnson and Countee Cullen.

His fame and the stringent demands of the teaching and research to which he devoted himself did not, however, turn him into a man whose every waking thought was devoted to science. His daughter Margaret remembers that "he just loved to go to the movies, for instance. They were segregated in Washington then, and three or four times a week he would go up U Street to the Lincoln or the Republic, many times with me when I was old enough. Perhaps it was from boredom, I don't know. He liked to play tennis and played until he was 52 or 53. He loved to sail and enjoyed it particularly the summers he was in Naples. And he learned to ski when he was in Switzerland when he was in his late 40s.

"And he was an inveterate reader of detective stories, the good ones—Dashiell Hammett and Agatha Christie and so forth. He slept naked on the porch—he loved fresh air—and read in bed, with a sheet thrown over him, one of his detective stories every night. He would eat six or eight oranges a night in bed while he was reading and make my mother angry because he would throw the peelings and seeds on the floor.

"And he loved good music. His first gift to me was a phonograph. We had excellent records: Toscanini, Paganini, and he was a Bach enthusiast. Later in life he learned to like good jazz. I remember that when he went to Europe on a Rosenwald grant in 1929 he was permitted to take his wife with him. My mother was afraid of water so he took me instead and took me to see *Showboat* in New York the night before we sailed and loved the tunes. He particularly admired Ethel Waters and Florence Mills, especially a song called *Supper Time* that Florence Mills did in one of the Blackbirds shows."

Perhaps as a result of the days when he had two pairs of shoes, "one very worn and the other serviceable," Dr. Just, his daughter says, "adored good clothes and had them all made to order. He had a black camel's hair overcoat he brushed every day. We all called it 'the cat' and used to tease him by asking him if he'd brushed the cat that day.

"And he was an excellent cook. He bought a huge washtub to soak and boil big 15-pound Smithfield hams in and my mother always said, well, at least she had gained a new washtub from it. He always cooked the Thanksgiving and Christmas meals and made fruit and pound cakes he'd cut up, wrap, put in fancy baskets with nuts and things and deliver them himself to neighbors he liked. And he always did the Christmas tree—one year it was all in red satin ribbon and another time it was entirely decorated with holly. The main thing he gave us at Christmas was books, maybe a dozen each. He always said clothes were a necessity but books were a necessary luxury, his daughter remembers."

And, despite the popular image of him as the always serious scholar, Dr. Just had his amusements. Every Saturday night he gathered with some cronies to play cards but occasionally the card sessions were adjourned so Dr. Just and his friends could attend a Saturday night performance at a burlesque theater from which he would return with a collection of burlesque jokes, a habit with which his wife continually was at odds. And on Sunday morning, with another set of friends, he habitually walked to downtown Washington for his copy of *The New York Times*.

"I never heard my father raise his voice," Margaret says. "He was very soft-spoken. He would just look at you and it was worse than any shouting." Dr. Just was a tall, five-foot-eleven, thin and handsome man who looked the same in middle-age as he had in his youth and whose hair never grayed. He especially liked either very young scholars—Ralph Bunche was a particular favorite—or very old people.

Dr. Just's domestic situation had steadily deteriorated and, divorced, he was in France in 1939 before the start of World War II. While there he married a Swiss-Jewish woman of German descent named Hedwig Schnitzler. He had intended on that trip to remain in Europe, although there is some dispute between friends and children about whether it was a more comfortable racial climate abroad or his domestic troubles at home that had led him to that decision. The events of history settled any possibility of permanent expatriation: World War II broke out, France fell, and Dr. Just returned to America.

"He called the war, 'My personal Waterloo,' " his daughter recalls. He returned with his new wife in the summer of 1940, taught at Howard in the 1940–41 school year—during which Hedwig had his fourth child, a daughter, Elizabeth—and went to Woods Hole for another summer. During the summer he suffered a sudden attack, was returned home and died of cancer of the pancreas on November 3, 1941, in the same room at 1846 Third St., N.W. in Washington in which daughter Margaret had been born. His first wife also died of cancer of the pancreas some 20 years later.

The problems Dr. Just was belabored with as a man who was both black and a world-famous scientist before society "was ready" for such men, were put poignantly by a white friend and Woods Hole collaborator. Dr. Frank R. Lillie, then chairman of the department of zoology at the University of Chicago, in a memorial article in *Science* magazine. Dr. Just, he said, was "undoubtedly the best investigator in the field of biology that the Negro people have produced in America. He was more widely acquainted with the embryological resources of the marine fauna than probably any other person." Yet, Dr. Lillie said, Dr. Just's career was a constant struggle for the opportunity for research, the breath of life to a scientist.

"He was condemned by race to remain attached to a Negro institution unfitted by means and tradition to give full opportunity to ambitions such as his," Dr. Lillie wrote, a conclusion which may have been true of Howard in the 1920s and 1930s but certainly is no longer so. "For this condition no blame is to be attached to the institution, which indeed cooperated, by constant and prolonged leaves of absence, with Just's friends outside in securing support to enable him to carry on investigations elsewhere.

"An element of tragedy ran through all Just's scientific career due to the limitations imposed by being a Negro in America, to which he could make no lasting psychological adjustment in spite of earnest efforts on his part. The numerous grants for research did not compensate for failure to receive an appointment in one of the large universities or research institutes. He felt this as a social stigma and hence unjust to a scientist of his recognized standing. In Europe he was received with universal kindness and made to feel at home in every way; he did not experience social discrimination on account of his race, and this contributed greatly to his happiness there. Hence, in part at least, his prolonged self-imposed exile on many occasions. That a man of his ability, scientific devotion, and of such strong personal loyalties as he gave and received, should have been warped in the land of his birth must remain a matter for regret."

Still, one must wonder if Dr. Lillie was entirely accurate in his insistence that Dr. Just was on a constant search for "larger" fields. Just himself once said, "If I can give the boys and girls a scientific start, it will help them in whatever they do later. It will clarify life. I doubt if I'd leave here [Howard] to go into the best research laboratory in the world. I believe in mass action, and I'm here to help raise the general level of race attainment. I feel as if I ought to do something for my race in the South." And Margaret remembers that Dr. Just had several offers to go to larger, better equipped, schools and turned them all down for one reason or another.

"I remember when he was invited to go to Brown University," she says. "They told him they wanted him, but that he couldn't identify with the social life of the campus, that he had to live in the black section of Providence instead of on the campus. He turned them down. He had other, similar offers. He was a stickler for that. My brother Highwarden had eye trouble, and my father, a devoted parent, took him to a Philadelphia oculist several times a year because he didn't think any black oculists in Washington at the time were good enough to treat Highwarden and he refused to sit in a segregated waiting room waiting for a white oculist."

Another of Dr. Just's white friends, Dr. Ben Karpman, remembered talking about the black scientist with E. P. Lyons, dean of the University of Minnesota Medical School. "The greatest problem in American biology is Professor Just," Karpman remembered Lyons saying. "He properly belongs to an institution like Rockefeller Institute, and he was the most logical candidate to take the place of Jacques Loeb when he died [in the '30s], but the Rockefeller Foundation, spending millions of dollars to combat disease internationally, couldn't summon enough courage to solve an interracial problem. By its example it could have set a precedent to follow that science knows no race nor creed. What it actually did was only catering to old prejudices in spite of its presumed internationalism."

Dr. Karpman's obituary of Dr. Just in the *Journal of Nervous and Mental Diseases* said perhaps as much about the scientist as could be said:

"America has lost one of the stalwarts of its science and the world one of the most brilliant and original experimental biologists of the present century," he wrote. "Though Professor Just's special field was cytology and he never contributed a single line to psychiatry, the results of his experimental work carry a far-reaching message to us, especially in giving experimentally supported evidence of the tremendous influences that environment has on constitution.

"As a research scientist he had boundless enthusiasm for his chosen field, but it was a quiet rather than explosive enthusiasm. His contributions were models of scientific presentation—succinct, precise, direct with great economy of words. His work was of lasting value; nothing he has done will ever have to be done over again. His work shows a forceful, lucid and penetrating mind, one that does not lose itself in a mass of detail but is capable of divining at a glance the significant from the trivial. Knowledge just oozed out of him."

FEDERAL HIGHWAY TRUST FUND

HON. ROBERT PRICE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. PRICE of Texas. Mr. Speaker, the Board of Directors of the Pampa, Tex., Chamber of Commerce has met and agreed upon a resolution favoring the extension of the highway trust fund and restricting trust fund disbursements to the construction of highways.

I recommend the text of the resolution to the attention of my colleagues, for it represents the views of a community whose growth and vitality has been greatly promoted by the Federal highway system. I can personally attest to the important role this system has played in the life of the city, because Pampa is my home.

The Federal highway trust fund was created for a particular purpose; namely, to facilitate the development of a national highway network. Since the purpose for which the fund was created has not yet been achieved, I think any allocation of trust fund moneys to unrelated uses would grossly distort the law under which the fund was established. Moreover, it would countenance a backdoor spending practice that I find unjustifiable by law or by conscience.

Mr. Speaker, the Pampa Chamber of Commerce is to be commended for its forthright position on this issue.

The resolution follows:

PAMPA CHAMBER OF COMMERCE,
Pampa, Tex., July 20, 1970.

Congressman BOB PRICE,
Cannon Office Building,
Washington, D.C.

DEAR BOB: I am attaching a Resolution passed at a recent meeting of our Chamber of Commerce Board of Directors relative to the Federal Highway Trust Fund, which is self-explanatory.

We would appreciate your favorable consideration of this Resolution.

Sincerely yours,

E. O. WEDGEWORTH,
Manager.

RESOLUTION

Whereas, the development of improved highways is vital for the continued growth of the community and to the saving of lives by reducing traffic fatalities; and

Whereas, financing of major highway facilities has been done through the Federal Highway Trust Fund, which has provided a steady and dependable means of highway financing; and

Whereas, such Trust Fund is provided through taxes of users of such highways, and such funds should be limited to highway construction and not diverted to urban transportation; and

Whereas, existing legislation provided for such Highway Trust Fund will expire by its own provisions in 1972; and

Whereas, work authorizations have been made for work through 1974, and other work is on the drawing boards for construction after that date; and

Whereas, this pay-as-you-go financing is a sound way for construction of highways;

Now, therefore, be it resolved by the Board of Directors of the Pampa Chamber of Commerce that it does hereby go on record as favoring the extension of the Highway Trust Fund and does further favor that such Trust Fund shall be used solely for the construction of highways and not for the construction of high-speed transit systems in the metropolitan areas, and that a copy of this resolution be furnished to Senator John Tower, Senate Office Building, Washington, D.C. 20025; Senator Ralph Yarborough, Senate Office Building, Washington, D.C. 20025; and Congressman Bob Price, 507 Cannon House Office Building, Washington, D.C. 20515.

Respectfully submitted.

BOARD OF DIRECTORS,
PAMPA CHAMBER OF COMMERCE,
DON R. LANE,
President.

Duly adopted at a regular meeting of the Board of Directors on the 29th day of June, 1970.

E. O. WEDGEWORTH,
General Manager.

CONGRATULATIONS TO THE FILIPINO COMMUNITY OF SANTA CLARA COUNTY

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. EDWARDS of California. Mr. Speaker, on Saturday, the Filipino community of Santa Clara County will launch its drive to build a Philippine Cultural Center. At the same time they will celebrate the final payment on their headquarters building in San Jose. This event is significant far beyond the community of 8,000 persons of Filipino descent who have made Santa Clara County their home. It is a significant step in the emergence of a fine group of Americans whose rich culture, combining the best of Asia and the West, is little known outside the Filipino-American community.

There are historical reasons for our lack of knowledge about this group. Under the national quota system of immigration, only 100 Filipinos were allowed into the country each year. This harshly discriminatory policy caused untold human suffering to the families which were separated by it. The system prevented, to a great extent, the development of stable and progressive communities. All that is changed. The disgraceful quota system was abolished in 1965 and Philippine immigration has increased to the point where it now leads all other nations. Manila is the No. 1 visa issuing post in the world. Most of the new immigrants are highly skilled professionals who bring with them a vast quantity of talent, energy, and enthusiasm for the task of establishing new homes and careers and helping to build up their communities.

This new infusion of humanity from our great Pacific ally will be a source of strength and enrichment to those west coast communities in which they settle. It is timely and appropriate that a cultural center be established, as a channel through which these new arrivals may ease their adjustment to a new homeland, as a means by which the larger community can become acquainted with the rich Filipino culture and customs, and as a vital link between Filipino Americans and their past, a sustaining contact with their ancestral roots.

The Filipino community of Santa Clara County is to be warmly congratulated for taking the lead in this important project.

THE FIGHT AGAINST BIG FEDERAL SPENDING

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. SCHMITZ. Mr. Speaker, the Federal Government is now spending more than $200 billion a year of the money earned by productive American citizens.

This figure is so vast as to defy imagination. Even the California State budget of nearly $7 billion a year pales into insignificance by comparison.

Everyone can think of good reasons for spending money—his own, and still more readily, other people's. Here in Washington, thousands of highly paid and well-organized professionals spend almost all their time developing the most plausible, superficially convincing, and well-documented cases for spending more of the people's money. No one Congressman, or all the Congressmen put together, could match point for point this kind of expertise on why we should spend money.

Therefore, we need a clear, fixed standard by which to judge proposed spending increases. I shall apply in Washington the same standard I used in Sacramento: that no annual spending increase should exceed the annual percentage of population growth and inflation. Furthermore, since Federal deficit spending is primarily responsible for inflation, spending must be cut in every possible area so as to eliminate the Federal deficit entirely.

This may hurt some good people and programs. But inflation hurts more. The inflation rate has been going up steadily and, if this increase continues indefinitely, it will destroy our economy as it has destroyed the economies of other nations. Uncontrolled inflation in Germany during the 1920's was one of the primary factors which brought Hitler and the Nazis to power.

In my first month of service in Congress, I have been deeply disturbed by the steady flow of bills through the House which authorize or appropriate money for continued heavy Federal spending and large spending increases. A relatively small group of Congressmen in nearly every case fights a gallant rearguard action against these spending bills, usually to little avail. They deserve to become much better known, as the taxpayer's unsung friends. I have been particularly impressed with the work of Congressmen H. R. GROSS of Iowa and DURWARD HALL of Missouri as floor leaders in the daily fight against big Federal spending.

President Nixon has also criticized the record of Congress this year in voting for

spending increases, notably the huge aid to education bill which, as passed by the House on July 16 with only 30 "no" votes including my own, would provide over half a billion dollars more for our often misdirected school systems than the President requested—and his request in turn, represented a substantial increase over what they are now receiving. Even if available, more money is not the answer to the problems of our schools today, as or California experience in recent years has clearly shown.

I hope the President will back up his words with action and veto this and other big spending bills which reach his desk. His leadership could rally enough votes in the House to sustain a veto.

Almost as disturbing as the vote itself approving the half-billion dollar increase in aid to education above the President's request, was the fact that some Congressmen did not want to have a record vote on this issue at all. While it is true that the large number of Members in the House precludes a rollcall on every issue, certainly there should be a record vote on every spending increase of anywhere near this magnitude, so that the people can know whether their Representative approved it or not. Though now one of the most junior Members of the House, I will make every effort to see that votes are recorded on all major Federal spending bills.

MIDDLE EAST

HON. JOHN C. CULVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. CULVER. Mr. Speaker, I am sure that every American was as dismayed as I was by recent revelations that the Soviet Union is expanding its presence in the Middle East and sending pilots and technicians into Egypt. As a member of the Foreign Affairs Committee, I am particularly concerned that the Russian assumption of a more aggressive role in this conflict poses a grave threat to world peace.

I believe that this development threatens not only to upset the delicate balance of power in the region but also to involve the major powers more and more deeply in an ever-escalating war. I also believe that it is essential for the Nation to demonstrate its resolve to honor its commitments in the area.

To this end, I recently introduced a resolution in the House urging the President to call upon the Soviet Union to withdraw its personnel. The resolution has the support of many of my colleagues and I am hopeful that favorable action will be taken on it in the near future. The text of the resolution follows:

RESOLUTION

Resolved, That it is the sense of the House of Representatives that the introduction of Russian pilots and the manning of missile sites by Russian technicians in the United Arab Republic is contributing to the increasing tension in the Middle East and the President is strongly urged to call upon the Soviet Union to withdraw all Russian personnel as a major step toward encouragement of peace in the Middle East.

OUTSTANDING PERFORMANCE OF DUTY

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. GAYDOS. Mr. Speaker, the commanding officer of a U.S. Army service unit in Pittsburgh, Pa., recently was cited in a letter of commendation from his superior officer for "outstanding performance of duty" while undergoing annual training at the headquarters of the Army's Military Mail Terminal in Seattle, Wash.

The officer singled out for this tribute was Capt. Walter S. Tyc, who commands the 330th base post office, stationed at the Army Reserve Center, 950 Saw Mill Run Boulevard in Pittsburgh.

Mr. Speaker, the 330th base post office includes many men from my 20th Congressional District and they share in the honor paid Captain Tyc by Lt. Col. Jose Strazzara, commanding officer of the Seattle Military Mail Terminal.

It is with great pleasure I insert a copy of Lieutenant Colonel Strazzara's letter to Captain Tyc in the RECORD, and I invite the attention of my colleagues to its contents:

DEPARTMENT OF THE ARMY, HEADQUARTERS, U.S. ARMY MILITARY MAIL TERMINAL, SEATTLE, SEATTLE POST OFFICE, LANDER STREET ANNEX,

Seattle, Wash., June 27, 1970.

Subject: Letter of commendation.

Capt. WALTER S. TYC,
Commanding Officer,
330th Base Post Office,
Seattle, Wash.

1. Upon your departure from this installation, I wish to commend you and members of your command for the truly outstanding performance of duty while undergoing annual training at this installation during the period of 14 June 1970 through 27 June 1970.

2. Your extraordinary professional excellence, guidance, leadership, military bearing and sincere concern have been largely responsible for the successful completion of annual training, 1970. Indicative of your responsible attitude was the fact that you personally supervised the training during long and arduous hours without a single complaint. You have insured that the need of your personnel were catered. Your mature guidance, judgment and background experience have been an invaluable tool to the commissioned, non-commissioned officers and enlisted men under your command.

3. The outstanding training tools developed by you and members of your command have increased the efficiency and knowledge of personnel in this installation and, as a result, have greatly improved the capability of this command to conduct its training mission.

4. I request that you convey my respect and deepest appreciation to the officers and men of your command who were responsible for the truly outstanding training. It is truly a response that is in the finest tradition of the United States Army Reserve and the United States Army.

Lt. Col. JOSE STRAZZARA,
AGC, Commanding.

NUTRITION PROGRAM FOR THE ELDERLY

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. WILLIAM D. FORD. Mr. Speaker, as cosponsor of H.R. 17763, the nutrition program for the elderly, I urge all those who are concerned with the problems faced by our senior citizens to give serious consideration to this bill.

All too often, in our complex technological society we fail to recognize the needs of a segment of our population to whom we owe so much—our senior citizens. Inflation may bring discomfort to us all, but not to the degree faced by our elderly citizens living on fixed incomes. While we may at times find it necessary to forego certain luxuries, our senior citizens struggle to obtain the bare necessities of life. Certainly those who have devoted a lifetime contributing to the progress of our Nation deserve our respect and consideration in their later years.

Recently we celebrated the fifth anniversary of the Older Americans Act. While it is true that a great deal has been accomplished in the past half decade, much remains to be done.

Intensive research has shown the need for a comprehensive nutrition program. Inflation and unemployment have hit the elderly especially hard, and with the constant rise in food prices it becomes increasingly difficult for them to obtain a balanced diet. Consequently, many of our senior citizens suffer from a lack of nutrition which intensifies many of the other physical limitations brought on by the process of aging.

H.R. 17763, the nutrition program for the elderly, would bring us further toward the goal of insuring that our older Americans are provided with balanced meals served in a social setting. In addition to maintaining high standards of health, it would end the depressing isolation suffered by so many of our elder citizens in their later years of life.

Balanced meals would be served in strategically located centers such as schools, senior citizen and community centers, and public and private nonprofit institutions where suitable. The funding of the bill would be provided on a matching basis by Federal, State, and local governments. Commodity surplus programs would also be utilized for the preparation of at least one hot meal per day at a reasonably low cost to participants in the program.

America has long been proud of its efforts to provide a healthy, productive life to all its citizens. The nutrition program for the elderly will aid in the attainment of that goal, and help repay the debt we owe to those whose efforts have helped make our country great.

FEES NOT PAID BY HOUSE

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. BOW. Mr. Speaker, it has come to my attention that some of the local employment agencies are advertising positions on Capitol Hill with the notice that all fees are paid by the employer. I am certain it is well known to everyone on the Hill that there is no provision in our system whereby the House of Representatives can pay a fee to an employment agency for recruiting personnel for officers or members of the House. It might be well if the appropriate officials of the House were to investigate the possibility of misleading advertising which could be embarrassing to the House and to prospective employees. I assume that the same considerations would apply to the other body.

Mr. Speaker, I am as you know a longtime champion of the private employment agencies, feeling that they do a vital, useful, and necessary service in our society. The problem I mention may seem of little significance but it can be of great significance if through misunderstanding or oversight any agency is misleading applicants for positions on the Hill.

HOUSE OF REPRESENTATIVES—*Tuesday, July 28, 1970*

The House met at 12 o'clock noon.

Rev. John L. Meares, Evangel Temple, Washington, D.C., offered the following prayer:

Almighty God, we bow our heads and hearts before Thee in worship and honor. We need help. There are many perplexing problems that have sprung up around us like a wilderness. We do not know the way. We are like sheep without a shepherd. In Thy divine providence You have ordained these Congressmen to lead us. You said, if any man lack wisdom let him ask of God who giveth liberally. When men set their hearts to seek after Thee, You are faithful to answer. May the ears of each leader of our Nation be open to hear the voice of the Great Shepherd who is the Prince of Peace and the everlasting Father. In the name of our Lord Jesus Christ we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

REPRESENTATIVE MICHAEL J. KIRWAN

(Mr. HAYS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HAYS. Mr. Speaker, I have in my hand a copy of the Daily News Digest of yesterday from the Republican congressional committee public relations office. One of the items in that paper is as follows:

> Representative Michael J. Kirwan, Democrat-Ohio, second oldest member of Congress who since 1937 doled out billions of dollars of "pork barrel" water projects and campaign funds, died today.

Mr. Speaker, this item has a UPI dateline. Somebody down at Republican headquarters probably picked it up and copied the first sentence. I think it is a reprehensible piece of business, both on the part of whoever wrote it downtown in the Republican headquarters, and UPI, for that matter.

Mike Kirwan was responsible for probably more public works projects for the benefit of Americans than any man who ever sat in this body, and he did not make any political decisions about it. They are in every district in the country. I think it is a poor way to honor the memory of a man who died only yesterday morning and who has such an outstanding record.

I will say that his reputation as a builder of America will live on long after these snide remarks and the people who wrote them are forgotten.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. HAYS. I yield to the distinguished minority leader who, I know, deplores this as much as I do.

Mr. GERALD R. FORD. Mr. Speaker, I appreciate the gentleman yielding.

Mike Kirwan was a dear personal friend of mine. I served with him on the Committee on Appropriations many, many years. We worked together on innumerable programs and projects. I am saddened by his passing. I apologize for the article or the line or the newspiece that appeared in that publication. Mike Kirwan was a great American.

Mr. HAYS. I thank the gentleman. I just want to close, Mr. Speaker, by pointing out that there are some people who think that everything in the past and all the traditions we have had are old-fashioned and outmoded, and there is something better for everything.

I remember my grandfather saying—and I think it is just as applicable today as it was then—"If you cannot say anything good about a person, you ought not to say anything." I think that is as applicable today and I think it ought to be followed.

TRIBUTE TO GIRLS NATION

(Mr. HECHLER of West Virginia, asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HECHLER of West Virginia. Mr. Speaker, Girls Nation is one of the finest programs for youth citizenship training which has ever been devised. This week 100 young women, two from each of the 50 States in the Union, are gaining practical experience in the functions and procedures of the Federal Government.

I am particularly proud of West Virginia's two senators who are represented in Girls Nation, Miss Teresa Alderson, of Vienna, W. Va., and Miss Charlene Hill, of Elkins, W. Va. It was a great thrill yesterday to get a telephone call from Miss Alderson in which she told me of the success which she and Miss Hill had in getting their bill passed by the senate of Girls Nation. The bill is to authorize that the crime of possession of marihuana be reduced from a felony to a misdemeanor.

I wish that all the young people throughout the Nation had the opportunity to have the practical training in citizenship which Girls Nation and Boys Nation provide. I would like to congratulate the American Legion auxiliary for its leadership in arranging and supervising this excellent program.

More especially, I extend my personal congratulations to the 1970 participants in Girls Nation, who I am sure will return to provide leadership in good citizenship as they return to their home communities.

FLY BEFORE YOU BUY

(Mr. BINGHAM asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BINGHAM. Mr. Speaker, since I have not always agreed with Secretary of Defense Laird, I am glad of the opportunity to rise today to commend him on the announcement he made yesterday of the adoption of a new policy in Defense procurement: Fly before you buy.

Last year and this year I offered amendments to military authorization bills, seeking to eliminate the procurement phase of the F–14 contracts until the F–14 had been flight tested. My amendments failed in the face of strenuous opposition by members of the Armed Services Committee, who said in effect that I did not know what I was talking about. I am delighted that the Secretary of Defense has now come around to my point of view.

I do hope that the policy the Secretary has announced will be put into effect immediately and that the requests the Pentagon has made for authorizations that do not comply with the policy of "Fly before you buy" will be withdrawn. This will reduce the military authorization for fiscal year 1971 to $658 million for the F–14 alone.

TRIBUTE TO THE HONORABLE MARTHA W. GRIFFITHS

(Mr. BOGGS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BOGGS. Mr. Speaker and Members of the House, I take this time to

extend my congratulations to the distinguished gentlewoman from Michigan (Mrs. GRIFFITHS) who, after many years of effort, has succeeded in bringing to this body the constitutional amendment to provide equal rights for women.

In the petition, which Members will find in the RECORD for the 20th, I believe, she secured the most bipartisan group of people I have ever seen—Republicans, Democrats, some who classify themselves as conservatives, some who classify themselves as liberals, or progressives, committee chairmen. There are 13 committee chairmen who signed the petition. They are: Mr. FALLON, Mr. STAGGERS, Mr. MORGAN, Mr. FRIEDEL, Mr. GARMATZ, Mr. KLUCZYNSKI, Mr. MILLS, Mr. ASPINALL, Mr. HOLIFIELD, Mr. PERKINS, Mr. RIVERS, Mr. PATMAN, and Mr. MCMILLAN.

Mrs. GRIFFITHS, in my judgment, deserves high commendation. I was happy I was one of those who signed the petition.

CONFERENCE REPORT ON H.R. 15733, RAILROAD RETIREMENT ACT AMENDMENTS

Mr. STAGGERS submitted the following conference report and statement on the bill (H.R. 15733) to amend the Railroad Retirement Act of 1937 to provide a temporary 15-percent increase in annuities, to change for a temporary period the method of computing interest on investments of the railroad retirement accounts, and for other purposes:

CONFERENCE REPORT (H. REPT. No. 91-1337)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 15733) to amend the Railroad Retirement Act of 1937 to provide a temporary 15 per centum increase in annuities, to change for a temporary period the method of computing interest on investments of the railroad retirement accounts, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 6, 7, 8, and 11.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 2, 3, and 9, and agree to the same.

Amendment numbered 4: That the House recede from its disagreement to the amendment of the Senate numbered 4, and agree to the same with an amendment as follows:

Strike out the matter proposed to be stricken out by the Senate amendment, and on page 6 of the House engrossed bill, after line 7, insert the following:

"SEC. 5. The fifth sentence of section 15(c) of the Railroad Retirement Act of 1937 is amended by striking out 'obligations' the second place it appears and inserting in lieu thereof 'notes'."

And the Senate agree to the same.

Amendment numbered 5: That the House recede from its disagreement to the amendment of the Senate numbered 5, and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the Senate amendment, insert the following: "6."; and the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment as follows:

On page 3, line 19, of the Senate engrossed amendments, strike out "Sec. 6." and insert the following: "Sec. 7."; and the Senate agree to the same.

HARLEY O. STAGGERS,
SAMUEL N. FRIEDEL,
JOHN D. DINGELL,
WILLIAM L. SPRINGER,
SAMUEL L. DEVINE,
Managers on the Part of the House.

THOMAS F. EAGLETON,
CLAIBORNE PELL,
GAYLORD NELSON,
HAROLD E. HUGHES,
RALPH T. SMITH,
RICHARD S. SCHWEIKER,
WILLIAM B. SAXBE,
Managers on the Part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 15733) to amend the Railroad Retirement Act of 1937 to provide a temporary 15 per centum increase in annuities, to change for a temporary period the method of computing interest on investments of the railroad retirement accounts, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon by the conferees and recommended in the accompanying conference report:

The following Senate amendments made technical or conforming changes: 1, 2, 5, and 9. With respect to these amendments the House either recedes or recedes with amendments which are technical or conforming in nature.

Amendment No. 3: The Senate amendment made a largely technical modification in the provision of the House bill dealing with the application of the 15-percent benefit increase to persons receiving pensions under section 6 of the Act and to certain survivor annuitants, in order to simplify the computation of the increase for certain widows and widowers by avoiding the necessity of going back to recompute the employee's annuity on which a widow's or widower's annuity is based and instead permitting the Board simply to increase the widow's or widower's annuity by 15 percent. The House recedes.

Amendment No. 4: The House bill provided for a temporary change in the method of computing interest payable on the obligations of the United States in which the railroad retirement account is invested. The new method would have provided for reinvestment of the account in Government obligations bearing interest at a rate equal to the highest rate then payable on any obligations of the United States then outstanding. The Senate amendment deleted this provision.

The conference substitute provides that the rate of interest to be borne by investments in the railroad retirement account will hereafter be computed on the basis of U.S. "notes," rather than "obligations", thereby providing an increase in the interest rate currently payable on these investments.

Present law provides that the special obligations issued to the railroad retirement account shall bear interest at a rate equal to the average market yield, computed at the end of the month preceding the date of issue, borne by all marketable Treasury obligations not due until after the expiration of 3 years. For obligations issued during July, this formula produces a rate of 7⅝ percent.

The interest rates on special obligations issued to the social security trust funds are governed by similar statutory formulas. The current Advisory Council on Social Security (such a council is set up every 5 years to make recommendations on social security matters) is recommending that, if the statutory limit on interest rates (which now prevents the issuance of long-term bonds, leaving for investment of the funds only notes, which can be no more than 7 years to maturity) is not repealed, the statutory formula governing interest rates on special obligations issued to the social security trust funds should be changed to make the interest rate computations consistent with the fact that only notes can be issued. This would be done by eliminating, in computing the average yields on outstanding obligations, the yields on Treasury bonds, which would result in a formula producing a higher yield. The reason it would produce a higher yield is that outstanding bonds, all of which were issued in earlier years when rates were lower, have lower market yields that notes because of two tax advantages: (1) a substantial part of the income earned on them is taxable at the capital gain rate, and (2) they can be used at par value to pay estate taxes. Since neither of these tax advantages has any value to a Government trust fund, there is logic in eliminating these lower yielding bonds from the average used in computing the rate which will be applied to the obligations which can be issued to the funds, whose permissible maturity excludes bonds. Legislation would be required to make this change.

If such a formula were used to compute the rate on obligations issued to the railroad retirement account, it would produce a rate of 7¾ percent for obligations issued during July. This is one-eighth percent higher than the rate derived from the present statutory formula. It is estimated that the higher rates under the proposed formula would increase the account's interest income by $27.5 million over the next 8 years. The attached table shows the increase by years.

Estimated increase in interest income to railroad retirement account

[In millions]

1971	$0.1
1972	.5
1973	.8
1974	1.7
1975	2.8
1976	4.1
1977	7.3
1978	10.2
Total	27.5

In addition, agreement has been reached with the Treasury Department upon an administrative change in the investment procedures governing the railroad retirement account. It is estimated that this new procedure will provide increased income to the railroad retirement account in the amount of $168 million over the next 8 years, which, when combined with the $27.5 million estimated to accrue as a result of the change in the interest rate computation, will provide over the next 8 years $195.5 million in additional income to the railroad retirement account.

A letter from the Secretary of the Treasury embodying the terms of this proposed modified investment procedure is set forth below in the following table:

RAILROAD RETIREMENT TRUST FUND

Proposed procedure (proposed July 22, 1970):

1. First use current year's investments to cover current year's expenditures.

2. Use holdings which were part of rollover pattern prior to bond rate (market yield) exceeding 4¼-percent ceiling (use 4 percent and 4⅛ percent first).

3. Holdings nearest maturity.

ESTIMATED INTEREST COST

Fiscal year	Current procedure	Proposed procedure	Increased income
1971	$205,000,000	$206,000,000	$1,000,000
1972	221,000,000	234,000,000	13,000,000
1973	227,000,000	258,000,000	31,000,000
1974	245,000,000	275,000,000	30,000,000
1975	254,000,000	281,000,000	17,000,000
1976	263,000,000	290,000,000	27,000,000
1977	274,000,000	297,000,000	23,000,000
1978	287,000,000	303,000,000	16,000,000
Total	1,976,000,000	2,144,000,000	168,000,000

THE SECRETARY OF THE TREASURY,
Washington.

HON. HARLEY O. STAGGERS,
Chairman, Interstate and Foreign Commerce Committee, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: The House-passed version of H.R. 15733, a bill to provide a temporary increase in railroad retirement benefits, included a provision which would change the method of investing funds of the retirement account. This provision was designed to increase the account's income as a way of financing the increased benefits. As you know, the Treasury opposed this provision in the House-passed bill on the ground that the proposed formula was an unsound procedure and that it would be an unwise and costly precedent. The provision was deleted from the bill as it passed the Senate.

I understand that this difference has been a principal matter of disagreement between the conferees. In order to assist in the resolution of that disagreement, the Treasury has carefully reviewed the investment procedures of the railroad retirement account. On the basis of this review, we are prepared, as a substitute for the House's proposed change in the investment procedure, to change the procedure under which special obligations issued to the account are redeemed to make benefit payments. We estimate that this change, which can be made administratively, would produce $168 million of additional interest income for the account over the next 8 years, after which the change in redemption procedure would not increase income (although the additions to the account through increased income in those 8 years would, of course, continue forever to earn interest).

Under the present procedure, receipts during a fiscal year are invested in temporary special obligations which mature on the last day of that fiscal year; on the last day of the fiscal year, all available funds, including the temporary special obligations maturing that day, are invested in special obligations maturing in 7 years, the maximum permissible because of the statutory interest-rate ceiling on longer term obligations. To make benefit payments and other outlays, temporary special issues maturing within the current fiscal year are redeemed first, starting with the ones with the lowest yields; if funds are needed for outlays and there are no current year maturities, special issues maturing in the earliest year after the current year are redeemed, beginning with those with the lowest yield and working through the year.

Since the account runs at a substantial deficit through the fiscal year, until the social security interchange and interest payments are made at the end of the year, redemption of current year investments does not provide enough money to meet outlays, and it is always necessary to redeem throughout the year a substantial amount of special issues maturing in later years. Through this process, over half a billion dollars of special obligations issued when rates were lower in earlier years are redeemed before maturity each year (even through permanent investments in an even greater amount are made at current higher rates at the end of the year). Our proposal would speed up this conversion of the account's portfolio to higher yields by moving to the end of the redemption cycle those special obligations whose maturity had to be shortened because of the statutory ceiling on long-term-bond rates.

The attached table, showing the account's investments in special issues at the time of the annual permanent investment last June 30, will illustrate how this will operate. Since receipts will not be adequate during the current year to cover outlays, under the present procedure the first redemptions will be the 4 percent notes of 1974, next the 4⅛ percent notes of 1974, then the 4¾ percent of 1974, and, if that is still not enough, the 4 percent notes of 1975 will be used. The proposal is to change this procedure in only one respect: After the 4 percent notes of 1974 and the 4⅛ percent notes of 1974 are used, the 4¾ percent notes of 1974 will be skipped, the 4 percent and 4⅛ percent notes of 1975 will be redeemed, and so on. The 4¾ percent notes of 1974 can be skipped because the reason those notes mature in that year is that the statutory interest-rate ceiling, which does not permit the issuance of obligations with rates over 4¼ percent at maturities of over 7 years, prevented the use, when these obligations were issued in 1967, of maturities of up to 15 years, as had been the policy when interest rates were below 4¼ percent and the statutory rate ceiling did not inhibit the use of longer maturities.

By speeding up the conversion of the portfolio to higher yields, the proposed change will substantially increase the account's interest income. The Treasury recognizes that, in all the circumstances, there may be valid reasons for the proposed method of handling redemption of special issues in the railroad retirement account.

Assuming the Congress approves a conference report deleting the House-passed provision changing the method of investing funds of the railroad retirement account, the Treasury will adopt immediately this new redemption procedure.

Sincerely,

DAVID M. KENNEDY.

RAILROAD RETIREMENT ACCOUNT: CURRENT HOLDINGS OF SPECIAL ISSUES AS OF JUNE 30, 1970—FINAL

Amendments Nos. 6, 7, and 8: The House bill contained provisions terminating the 15-percent benefit increase on June 30, 1972. The Senate amendments provided instead for the termination of such increase on December 31, 1971. The Senate recedes.

Amendment No. 10: The House bill provided for a study of the railroad retirement system and its financing, to be made by the Railroad Retirement Board for the purpose of recommending to Congress on or before July 1, 1971, such changes in the system as might be needed to provide adequate benefits on an actuarially sound basis. The Senate amendment provided for the same study (with two additional areas to be considered) to be made by a temporary Commission consisting of five members, three appointed by the President and one each by the Speaker of the House and the President pro tempore of the Senate. The House recedes (with a conforming amendment).

Amendment No. 11: The Senate amendment added to the House bill a new section requiring that the 15-percent benefit increase under the bill be disregarded in establishing the amount of the income-related veterans benefits to which railroad retirement annuitants and pensioners may become entitled. The Senate recedes.

PERMISSION FOR SUBCOMMITTEE ON INVESTIGATIONS, COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, TO MEET TOMORROW AFTERNOON

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent that the Subcommittee on Investigations of the Committee on Interstate and Foreign Commerce be permitted to sit tomorrow afternoon at 2 o'clock.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

CONFERENCE REPORT ON S. 1076, YOUTH CONSERVATION CORPS

Mr. PERKINS submitted the following conference report and statement on the bill (S. 1076) to establish a pilot program in the Departments of the Interior and Agriculture designated as the Youth Conservation Corps, and for other purposes:

CONFERENCE REPORT (H. REPT. No. 91-1338)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 1076) to establish a pilot program in the Departments of the Interior and Agriculture designated as the Youth Conservation Corps, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its disagreement to the amendment of the House and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the House amendment insert the following:

POLICY AND PURPOSE

SECTION 1. The Congress finds that the gainful employment during the summer months of American youth, representing all segments of society, in the healthful outdoor atmosphere afforded in the national

park system, the national forest system, the national wildlife refuge system, and other public land and water areas administered by the Secretary of the Interior and the Secretary of Agriculture creates an opportunity for understanding and appreciation of the Nation's natural environment and heritage. Accordingly, it is the purpose of this Act to further the development and maintenance of the natural resources of the United States by the youth, upon whom will fall the ultimate responsibility for maintaining and managing these resources for the American people.

YOUTH CONSERVATION CORPS

SEC. 2. (a) To carry out the purposes of this Act, there is hereby established in the Department of the Interior and the Department of Agriculture a three-year pilot program designated as the Youth Conservation Corps (hereinafter referred to as the "Corps"). The Corps shall consist of young men and women who are permanent residents of the United States, its territories, or possession, who have attained age fifteen but have not attained age nineteen, and whom the Secretary of the Interior or the Secretary of Agriculture may employ during the summer months without regard to the civil service or classification laws, rules, or regulations, for the purpose of developing, preserving, or maintaining lands and waters of the United States under the jurisdiction of the appropriate Secretary.

(b) The Corps shall be open to youth of both sexes and youth of all social, economic, and racial classifications, with no person being employed as a member of the Corps for a term in excess of ninety days during any single year.

SECRETARIAL DUTIES

SEC. 3. (a) The Secretary of the Interior and the Secretary of Agriculture shall:

(1) determine the areas under their administrative jurisdictions which are appropriate for carrying out programs using employees of the Corps;

(2) determine the rates of pay, hours, and other conditions of employment in the Corps: *Provided*, That members of the Corps shall not be deemed to be Federal employees, other than for the purposes of chapter 171 of title 28, United States Code, and chapter 81 of title 5, United States Code;

(3) provide for such transportation, lodging, subsistence, and other services and equipment as they may deem necessary or appropriate for the needs of members of the Corps in their duties. The Secretary of the Interior and the Secretary of Agriculture may contract with any public agency or organization or any private nonprofit agency or organization which has been in existence for at least five years for the operation of any Youth Conservation Corps project. Whenever economically feasible, existing but unoccupied federal facilities, including military facilities, shall be utilized for the purposes of the Corps where appropriate and with the approval of the Federal agency involved. To minimize transportation costs Corps members shall be employed on conservation projects as near to their places of residence as is feasible.

(4) promulgate regulations to insure the safety, health, and welfare of the Corps members;

(5) prepare a report, indicating the most feasible and efficient method for initiating a cost-sharing youth conservation program with State natural resource, conservation, or outdoor recreation agencies, which report shall be submitted to the President not later than one year following enactment of this Act for transmittal to the Congress for review and appropriate action.

(b) The provision of title II of the Revenue and Expenditure Control Act of 1968 (82 Stat. 251, 270) shall not apply to appointments made to the Corps, to temporary supervisory personnel, or to temporary program support staff.

SECRETARIAL REPORTS

SEC. 4. Upon completion of each year's pilot program, the Secretary of the Interior and Secretary of Agriculture shall prepare a joint report detailing the contribution of the program toward achieving the purposes of the Act and providing recommendations. Each report shall be submitted to the President not later than one hundred and eighty days following completion of that year's pilot program. The President shall transmit the report to the Congress for review and appropriate action.

AUTHORIZATION OF FUNDS

SEC. 5. For three years following enactment of this Act, there are hereby authorized to be appropriated amounts not to exceed $3,500,000 annually to be made available to the Secretary of the Interior and the Secretary of Agriculture to carry out the purposes of this Act.

And the House agree to the same.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 1076) to establish a pilot program in the Departments of the Interior and Agriculture designated as the Youth Conservation Corps, and for other purposes, submit the following statement in explanation of the action agreed upon by the conferees and recommended in the accompanying conference report:

The House amendment called for Youth Conservation Corps members to be representative of "all segments of society." The Senate bill did not contain such a provision. The conference substitute adopts the language of the House amendment in this respect.

The Senate statement of purpose referred to activities of the corps on public lands and water areas "administered by the Secretary of the Interior and the Secretary of Agriculture." The House amendment contained comparable language with respect to conservation areas but did not refer to specific Federal agencies. The conference report makes specific reference to these Federal agencies.

The House amendment limited the corpsmen's minimum age to 16 years while in the Senate bill the minimum age would have been 14 years. The conference report specifies that the minimum age of a corpsman shall be 15 years.

The Senate bill required preference be given to disadvantaged youth to become corpsmen and that preference for selecting supervisory personnel be given to "primary, secondary, and university teachers and administrators, and university students pursuing studies in the education and natural resources disciplines." The House amendment contained neither of these preference categories. The conference substitute does not contain this provision. In rejecting the Senate provision the Conferees do not want their action to be interpreted as precluding from participation those given preference in the Senate bill. To the contrary the Conferees expect that full and fair consideration will be given to all applicants.

The House amendment specifically included youth of both sexes in the program by reference in two places (sec. 2(a) and 2(b)). The Senate bill included youth of both sexes by reference in section 2(a). The conference report makes reference to youth of both sexes in sections 2(a) and 2(b).

The Senate bill required that Corps programs be carried out only on lands under the jurisdiction of the Secretary of Agriculture or Interior. Under the House amendment the Secretaries were to designate the public lands to be used and coordinate Corps efforts with those agencies having jurisdiction over such lands. The conference substitute contains the Senate provision.

Both bills authorized contracting for equipment, transportation, lodging, subsistence and other services by components or as a package, although House language was more explicit. The House amendment required that any organization contracted with must have been in existence for at least 5 years. The House amendment allowed use of unoccupied Federal facilities including abandoned military installations. The Senate bill also allowed use of unoccupied facilities operated by Departments of the Interior and Agriculture, but required approval of the Secretary of Defense to use unoccupied military facilities. The Senate amendment qualified use of other Federal agency facilities to where "feasible and appropriate." The House amendment qualified such use as where "economically feasible." The conference report in resolving these differences provides that the Secretary of Agriculture and the Secretary of the Interior shall provide for such transportation, lodging, subsistence, and other services and equipment as they may deem necessary or appropriate for the needs of members of the corps in their duties. The Secretary of the Interior and the Secretary of Agriculture may contract with any public agency or organization or any private nonprofit agency or organization which has been in existence for at least 5 years for the operation of any youth conservation corps project. Whenever economically feasible, existing but unoccupied Federal facilities, including military facilities, shall be utilized for the purposes of the corps where appropriate and with the approval of the Federal agency involved.

Both bills required a report from the Secretary of Agriculture and from the Secretary of the Interior with respect to initiating a cost-sharing youth conservation program with State agencies, but the Senate required the report to indicate the "feasibility" of such a program while the House amendment called for the report to indicate the "most efficient method for initiating" such a program. The conference report provides that the report indicate the most feasible and efficient method for initiating such a program.

Managers on the Part of the House.

PERMISSION FOR HOUSE MANAGERS TO FILE CONFERENCE REPORT ON H.R. 17548, INDEPENDENT OFFICES AND DEPARTMENT OF HUD APPROPRIATIONS, 1971

Mr. EVINS of Tennessee. Mr. Speaker, I ask unanimous consent that the managers on the part of the House may have until midnight tonight to file a conference report on the bill (H.R. 17548) making appropriations for the independent offices and the Department of Housing and Urban Development, 1971.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

QUESTION OF PERSONAL PRIVILEGE

Mr. HAWKINS. Mr. Speaker, I rise to a question of personal privilege.

The SPEAKER. The gentleman will state his question of personal privilege.

Mr. HAWKINS. Mr. Speaker, the gentleman from Illinois (Mr. CRANE), in a recent press release which I send to the desk, has made certain allegations with respect to the additional views which I filed to accompany the report of the Select Committee To Investigate U.S. Military Involvement in Southeast Asia. His allegations include charges which directly impugn my motives and veracity in submitting those additional views. I therefore rise to a question of personal privilege to respond to the statement of the gentleman from Illinois.

The SPEAKER. The Chair has examined the press release sent to the desk by the gentleman from California (Mr. HAWKINS), and the Chair is of the opinion that the gentleman from California has stated a question of personal privilege under rule IX of the rules of the House.

The gentleman from California (Mr. HAWKINS) is recognized.

CALL OF THE HOUSE

Mr. ARENDS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 235]

Alexander	Gallagher	Powell
Baring	Goldwater	Rarick
Brock	Gray	Reid, N.Y.
Brooks	Halpern	Rivers
Brown, Mich.	Hathaway	Roe
Burton, Utah	Ichord	Rostenkowski
Bush	King	Roudebush
Caffery	Lloyd	Ryan
Carey	Long, La.	Sandman
Clark	McCarthy	Scheuer
Clay	McEwen	Sikes
Conte	MacGregor	Thompson, N.J.
Cramer	Mailliard	Tunney
Culver	Meskill	Watson
Cunningham	Monagan	Weicker
de la Garza	Nelsen	Wold
Diggs	O'Neill, Mass.	Wydler
Donohue	Ottinger	Zwach
Fallon	Pelly	
Ford, William D.	Pike	
	Pollock	

The SPEAKER. On this rollcall 370 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

QUESTION OF PERSONAL PRIVILEGE

The SPEAKER. The gentleman from California (Mr. HAWKINS) is recognized.

Mr. HAWKINS. Mr. Speaker, I use this time to set the RECORD straight concerning a news release issued by the gentleman from Illinois (Mr. CRANE) on July 23, 1970.

I can very well accept his statement that his trip was on his own initiative; that he himself appointed himself to make this trip; and that his demands were actually met. I can only hope that the other Members of this body and other committees would have the same privilege of being able to inspect prisons and other facilities in South Vietnam with a photographer and with the support of the State Department and of the South Vietnamese Government. I think that privilege should be enjoyed by each and every one of us. His guided tour was well staged and cleverly contrived by the officials there to allow him to see what they wanted him to see. I have no doubt in his veracity that he has reported what he actually saw, but I believe he saw only what certain persons wanted him to see.

I do object, however, to personal attacks whether on me or any other Member of this body. It is peculiar that I was singled out when other members of the committee saw exactly what I saw and reported so, including Mr. ANDERSON of Tennessee.

The members of the House Government Operations Committee, with Mr. Moss and Mr. REID, a few days ago issued a statement concerning testimony before their subcommittee of the Committee on Government Operations which contains statements which are much broader in scope than those statements which I have made.

I apologize to this body that I acted with certain restraint and did not fully report, due to limited time to prepare a full report, as I might have, many of the other conditions in South Vietnam.

In the RECORD, also, in past RECORDS of this body, Mr. FRASER, on several occasions reported torture in South Vietnam in detention centers and elsewhere.

This is a matter of record and I shall offer at the conclusion of my remarks exhibits that will be inserted into the RECORD. The statement by the gentleman from Minnesota (Mr. FRASER) is recorded on June 8, 1970, in the CONGRESSIONAL RECORD.

Also, a correspondent for the Christian Science Monitor, Mr. Daniel Sutherland, interviewed some of the same witnesses that we interviewed, including Mr. Caao Nguyen Loi, a student leader who had spent many months on Conson, and who with four other students reported to the National Assembly their experience findings and what they found at Conson as prisoners. Mr. Sutherland's report is in the Christian Science Monitor of July 13 and I will eventually ask unanimous consent that that also be inserted in the RECORD.

Mr. Speaker, a few days ago the gentleman from New York (Mr. REID) and the gentleman from California (Mr. Moss) issued a release which went into the question of brutality and torture and which had this to say, and I quote from the joint statement of Mr. Moss and Mr. REID:

> For example, while it is abolishing the "tiger cages," it should also remedy the so-called "cattle cages," which although larger, are jammed with more human beings much like animals are in railroad cattle cars. We urge also the release of political prisoners unjustly sent to some of these caged hells on earth. Many civilians have never been tried and convicted of any crime by any tribunal, military or civilian, nor have they been afforded any protections of due process——

The Moss-Reid statement also called attention to something about which I did not report because we were denied entrance and that was to the cattle cages, and I assume the gentleman from Illinois (Mr. CRANE) also did not see the cattle cages although he had the apparent authority to make this one of his demands.

Mr. Moss and Mr. REID go on to say:

> We especially deplore the imprisonment of mothers and their children. Actions of this sort are characteristic of totalitarian dictatorships, not democratic societies.

And then the Moss-Reid report goes into another situation which we do not even get into and that was the prisoner-of-war issue. In this they are referring to the International Red Cross reports and they—meaning Mr. Moss and Mr. REID—said this:

> The brutal torture of political prisoners at interrogation centers established and advised by Americans is a shocking indictment of the depths to which we, as a people, have fallen.

They also say—again referring to the International Red Cross:

> Those reports indicate some prisoners of war have not been treated humanely. For refusing to salute the flag of South Vietnam, seven prisoners of war were locked in cells 24 hours a day, kept in irons for 13 hours during the night and permitted no outside exercise or fresh air for at least 2 months, when the International Red Cross last inspected Con Son prison in February 1970. The Red Cross vehemently protested this treatment as a violation of the Geneva Conventions to the camp commandant.

Mr. Speaker, these were some of the things we did not even cover in our report. But the point is, why did the gentleman from Illinois single me out among all those who had seen these things and have reported on them?

It would seem to me that there must be some reason. I think it is difficult to find out why when some of these reports were just a few pages from those which I inserted into the RECORD in my supplemental views.

So, I can only conclude that there are some readers who are very selective, who are willing to read what they want to read and see what they want to see and not report the facts accurately as they should be.

Now, Mr. Speaker, let us get into the exact statements made by the gentleman from Illinois. Only two or three

were even statements that I had made. They were taken out of Life magazine, from other documents that have been filed by other Members or persons and sometimes, in no way statements emanating from me.

He said:

They stated all the prisoners in the cages were sick with TB, open sores, eye diseases or malnutrition.

He says this is a complete misstatement of the facts.

He goes on to say:

None of the prisoners were sick, except those in the dispensary. I saw no evidence of open sores, eye disease or malnutrition.

Is the gentleman competent as a medical authority to draw this conclusion?

The point is that I will submit later as an exhibit medical testimony refuting the possibility that persons so incarcerated under these conditions for long months could possibly be in such good health and that there would be no evidence of such things such as sores of any kind, no eye disease or malnutrition. In any event, how could an individual go through as many cells as the gentleman from Illinois imply and conclude that "none of the prisoners were sick?"

Now, I think that it also is true that it depends a lot upon the interpreter that you have with you. We found when we were in Con Son, and throughout the country, that many times the interpreter interprets what he believes or wants others to believe to be the essence of what is said. We also found that in the prison, when the guard was standing over you—and they were always standing over you, unless you could just deliberately sneak away—that the prisoners said one thing when guards were near, and quite another thing when alone with you.

I will also ask unanimous consent to offer for the RECORD, following my statement, a statement by Mr. Don Luce, who reported to the Council of Churches his involvement with our inspection team, and I think graphically called attention to the fact that when we were talking to some of the prisoners in front of guards, that they completely denied there was any such thing as brutal treatment, they indicated that the food was good and that they had medical attention. And when we were able to get them off to themselves they denied this completely.

Mr. Speaker, I ask unanimous consent to offer the statement of Mr. Don Luce, made to the Council of Churches, to be entered in the RECORD at the conclusion of my remarks.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. HAWKINS. Mr. Speaker, the gentleman also states that it was not true that, as we had indicated, the prisoners could not stand. He says that "in each cell we entered"—we entered—"the prisoners immediately stood up. Out of hundreds of prisoners only one experienced difficulty in standing, and this was due to an old injury."

Well, I do not know how many cells he entered. I do not know how many prisoners he saw, but I would doubt that he saw enough on that day to conclude that there were no prisoners who could not stand up. And I certainly indicate that Mr. ANDERSON of Tennessee and I, did interview at least 40 or 50 prisoners, through an interpreter, and we were told by, I would say not less than 15 or 20, and that is a very conservative estimate of the persons who could not stand up, who said that they were paralyzed; that they had been shackled and could not use their legs.

There was no particular reason why these people with some courage could admit to us in the presence of the commandant these statements. I would certainly assume that they were not lying for they face reprisals for even telling the truth. I would, however, assume that anyone going there on a special trip, and with the commandant with him on a guided tour, is certainly going to be in a position where the prisoners are not going to tell the truth. I would say that to conclude that this statement that we made is a misstatement, is highly improbable.

Point 3. He said:

They claimed prisoners found it necessary to eat insects, lizards, and so forth.

He said:

I found absolutely no evidence to indicate this. All prisoners appeared healthy and well fed.

Well, I would refer the gentleman to page 39 of our report, which has been filed by the select committee, in which this is refuted, and in which five prisoners who had been released just a few weeks before we went there had filed with the National Assembly, and with the Minister of the Interior, a documented statement, a verified statement of theirs indicating that this was a fact. The statement, however, came from them, and not from me. But I believe the statement to be true, and at least the South Vietnamese Government, and no one else, has yet been able to refute the statement.

Point 4. He said:

They stated the air was foul, and the heat stupifying. This is not true. The cells in the "Tiger Cages" were well ventilated, well lighted, and relatively cool.

Now, I will show you a picture of these cells. I hope that you can see it. This is the top of the cell, looking down into the cell, and it is an exact replica of the cells on Devil's Island—the old Devil's Island built by the French—and these cells were also built by the French—and this is a cell in which the prisoners can be viewed from a catwalk above.

There is one door, which is here, which is a heavy door, which is bolted, and the only entrance of air or light is above.

I submit that it is very improbable for anyone to believe this is lighted—lighted how? Ventilated how?

There is contained in this type of cell 5 feet by 10 feet, five persons, sometimes two or three, but generally five persons.

There are no accommodations—that is, bathroom accommodations, except for a latrine—a small box about 1 foot by 1 foot wide and about 2 feet high for these five persons. They complained that often it was not emptied for days and they had to use that. There was no water available. As a matter of fact, one of the reasons why this island is not as beautiful as it is pictured to be is because there is no basic water supply on the island.

These prisoners are not given ample water because of the limited supply of water on that island. How you can describe that as anything other than terrible—I do not know.

Here is a box at the top of that cell. That is a lime box, which was used for holding lime which was sprinkled on them if they protested against food or against the conditions.

I understand that these boxes had been removed when the gentleman from Illinois went on his guided tour of the island.

The gentleman from Illinois said:

The cells were cleaner than the average Vietnamese home.

I do not know how long he was in South Vietnam. I do not know how many Vietnamese homes he visited, but I would say that that is a very unusual statement—to compare these cells with the average Vietnamese home which could only be done from a fair sampling.

He certainly did not have enough samples, I would suggest, of Vietnamese homes to compare these cells with. But I would certainly submit that any Vietnamese home that had lime boxes available for punishment and had no latrine facilities and which lacked water and which were as overcrowded as these cells are certainly not the type of Vietnamese home that I would want to compare anything with.

He stated we mentioned that the prisoners were shackled to an iron rod and that lying in this position caused paralysis.

I refer the gentleman to introductory remarks of the testimony of Mr. Walton, our American adviser in 1963 which indicated in the Benson report that these shackles were used not for escape, as the gentleman from Illinois said they were used for, but for discipline.

First of all—escape from what? From maximum security cells, heavily guarded and across two walls that were heavily guarded and with barbed wire at the top and from an island 45 miles off the mainland across dangerous waters they would have to swim to achieve an escape. Yet, he says they must be shackled in order to prevent their escape.

Mr. Speaker, I offer for the RECORD at this point the statement by Mr. Walton in preface to the Benson report which contains the statement:

The confinement in a discipline cell may be from a few hours to several months, depending upon the center, the violation and the violator. For example in Con Son II, some of the hardcore communists keep preaching the "party" line, so these "Reds" are sent to the tiger cages in Con Son I where they are isolated from all others for months at a time.

This confinement may also include rice without salt and water—the U.S. prisons' equivalent of bread and water. It may include immobilization—the prisoner is bolted to the floor, handcuffed to a rod or bar, or legirons with the chain through an eyebolt, or around a bar or rod.

Also the gentleman from Illinois says—

If anyone cares to investigate, I am confident that everything I have stated will be backed up by the inspection teams of the International Red Cross.

Yet, in a statement issued by the gentleman from California (Mr. Moss) and the gentleman from New York (Mr. REID), we read that the International Red Cross has not backed them up, and that it has called attention to a situation that is prevailing which certainly needs correction.

At this point I ask unanimous consent to have printed in the RECORD an article from the Washington Star of July 20, 1970, an AP release from Geneva, which states that the Swiss International Red Cross delegates visiting this prison have not given approval, and that in effect they are seeking to have the inspection so that they may look into this matter and thus to use the name of the International Red Cross to document loose statements is a little far-fetched and unfair.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

The article is as follows:

[From the Washington Star, July 20, 1970]

APPROVAL BY RED CROSS OF CON SON IS DENIED

GENEVA.—Swiss International Red Cross delegates visiting the South Vietnamese prison of Con Son last February were able to talk to only about 20 of the 9,000 inmates, informed sources said today.

The delegates saw only a tiny portion of the vast detention center. But interviews with the prisoners, which took place without witnesses, were enough to prompt "serious recommendations" for improvement which were relayed to the Saigon government, the sources reported.

An official Saigon statement earlier this month claimed the representatives of the all-Swiss International Red Cross Committee reported "satisfactory conditions in all re-education centers." Later, press reports quoted Red Cross officials in Geneva as saying that conditions in Con Son were found to be "not so bad."

In line with committee policy that publicity does not help the work of Red Cross delegates, no official reaction to the Saigon statements is likely.

But the sources said they hope that the debate over Con Son and similar reports of alleged mistreatment of prisoners in South Vietnam would produce increased support for Red Cross efforts to obtain access to civil prison camps in addition to the prisoner of war centers now regularly visited.

Mr. HAWKINS. Mr. Speaker, at this point in the RECORD I would like to enter the statement of Mr. Moss and Mr. REID. I would also like to enter a letter from Senator PROXMIRE in which he details the situation at Conson as reported by a Mr. Mark Oliva, who was recently with the Military Assistance Command in Vietnam, and who was assigned to Conson as a responsibility. In this letter he goes into the question of health because the gentleman from Illinois said that health care, although limited, was adequate. How limited medical care can be adequate I do not know, but at least he says that.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

The material referred to follows:

JOINT STATEMENT BY REPRESENTATIVE JOHN E. MOSS, CHAIRMAN, AND REPRESENTATIVE OGDEN R. REID

The House Foreign Operations and Government Information Subcommittee of the Committee on Government Operations has been conducting an intensive investigation of the effectiveness of U.S. Public Safety assistance programs to the National Police Force and penal system of South Vietnam. The cost of these programs to the American taxpayer has been more than $110 million.

The main objectives of our assistance and advisory efforts in regard to the penal system have been described in sworn testimony before the Subcommittee by witnesses from the Agency for International Development and the Department of Defense.

The top priority one was "to improve prison conditions to an acceptable minimum standard." Among the other major goals listed were "to improve confinement and health conditions, to increase prisoner food allowance" and "to develop rehabilitation programs for prisoners."

Considerable Subcommittee attention has been given to conditions at Con Son Island prison—South Vietnam's largest penal institution—especially the use of small pit-like cells called "tiger cages." The South Vietnamese Government announced yesterday that the "tiger cages" would be discontinued and other reforms would be instituted at Con Son to provide better sanitary conditions and "comfort." The South Vietnam Government also promises to investigate its other correctional institutions and make "further improvements."

In these points, we feel that the world will judge South Vietnam by its deeds, not by its words. Needless to say, we hope that government will move quickly to make deeds out of what certainly are commendable words. For example, while it is abolishing the "tiger cages," it should also remedy the so-called "cattle cages," which although larger, are jammed with more human beings much like animals are in railroad cattle cars. We urge also the release of political prisoners unjustly sent to some of these caged hells on earth. Many civilians have never been tried and convicted of any crime by any tribunal, military or civilian, nor have they been afforded any protections of due process. We especially deplore the imprisonment of mothers and their children. Actions of this sort are characteristic of totalitarian dictatorships, not democratic societies.

We find it difficult to understand previous American indifference to these conditions, even though they were known to many. The brutal torture of political prisoners at interrogation centers established and advised by Americans is a shocking indictment of the depths to which we, as a people, have fallen. It is more painful to our consciences because of the principle we helped to establish at the Nuremberg war crimes trials—that there is a law of humanity, which supercedes immoral orders that are given in the name of national governments. The U.S. has a clear moral and legal responsibility. It is no solace that the North Vietnamese are guilty of the same offenses against mankind. We ask world public opinion to demand that International Red Cross teams ferret out and expose the maltreatment and injustices that exist in the prisons of both North and South Vietnam. It should be noted for the record that North Vietnam has consistently refused the inspection of POW camps.

In its investigation, the Subcommittee has been informed of the imprisonment on Con Son of a number of prisoners of war who have been sentenced for crimes committed after they became prisoners of war. For that reason, we have been interested in the treatment of these prisoners of war as documented in the periodic inspection reports of the International Red Cross.

Those reports indicate some prisoners of war have not been treated humanely. For refusing to salute the flag of South Vietnam, seven prisoners of war were locked in cells 24 hours a day, kept in irons for 13 hours during the night and permitted no outside exercise or fresh air for at least two months, when the International Red Cross last inspected Con Son prison in February, 1970. *The Red Cross vehemently protested this treatment as a violation of the Geneva Conventions to the camp commandant.* We did not even report these facts. Complaints also were made that the prisoners of war were not given adequate fresh food and drinking water. Only those in rags were provided with new clothing, according to the Red Cross reports. No tooth brushes or tooth paste were provided to the prisoners of war. In an inspection made last September, the Red Cross team found two prisoners of war who claimed that they had been beaten by other prisoners who serve as supervisors.

In our view, all of these conditions must be corrected immediately. Nations cannot expect their own soldiers who become prisoners of war to be treated humanely unless they treat enemy prisoners of war humanely. That is one of our prime concerns here—the North Vietnamese must be given no excuse or other justification to maltreat Americans who are their prisoners. In addition, simple humanity demands the proper treatment of prisoners of war on all sides.

Lest this sound like a hypocritical lecture, we pledge on our part to work for the righting of injustices in our own country—for the humanizing of our own civilian prisons, for the protection of basic civil liberties and a return to the idealism which made America a great nation and an inspiration to oppressed peoples throughout the world. We ask our youth to help in this effort even though it may be an agonizing and frustrating road. We believe the world can be changed, but it will require a deep commitment on the part of men of goodwill everywhere.

JULY 23, 1970.

Hon. JOHN E. MOSS,

Chairman, Subcommittee on Foreign Operations and Government Information, Government Operations Committee, House of Representatives, Washington, D.C.

DEAR CHAIRMAN MOSS: It has come to my attention that your Subcommittee on Foreign Operations and Government Information is currently investigating the South Vietnamese prison on Con Son Island, and the involvement of the United States Government in this matter.

The brutal conditions of the prison, epitomized by the infamous "tiger cages," are most shocking to us all. The courageous efforts of Congressmen William Anderson and Augustus Hawkins to uncover this distressing matter should not be ended without a full investigation. I, therefore, commend you and your Subcommittee for pursuing this matter. You are performing a most valuable public service.

An article has come to my attention that may prove quite helpful to your Subcommittee as it continues its investigation. Entitled "Vietnam Concentration Camp Operates with U.S. Approval," this article describes the conditions which existed on Con Son one year ago.

I believe the author of this article, Mark O. Oliva, formerly on the staff of the Appleton (Wisconsin) *Post-Crescent*, is most qualified to write on this subject. Mr. Oliva spent two years with the Military Assistance Command-Vietnam (MACV), assigned as an advisor to the South Vietnamese General Political Warfare Department. During this pe-

riod, Mr. Oliva was twice sent to Con Son Island as part of MACV's psychological operations study group.

"Vietnam Concentration Camp Operates with U.S. Approval" was a direct result of what Mr. Oliva heard and saw during his visits to Con Son Island. I believe Mr. Oliva would be able to offer valuable first-hand information on the Con Son prison, if you would wish him to testify before your Subcommittee. He is now with the Press Enterprise Company in Riverside, California.

I trust this information will be helpful to your Subcommittee as it continues to bring the truth of this matter to light and attempts to instruct us on how we can avoid a tragedy of this nature in the future.

Warmest regards.

Sincerely,

WILLIAM PROXMIRE,
U.S. Senator.

[From the Appleton (Wis.) Post-Crescent]

DETENTION BASED ON SUSPICION: VIETNAM CONCENTRATION CAMP OPERATES WITH U.S. APPROVAL

(By Mark Oliva)

CON SON ISLAND, VIETNAM.—History again is witnessing the horrors of the concentration camp, this time with a helping hand from the United States.

Con Son, the French "Devil's Island of Indochina," now is South Vietnam's barbed-wire home for more than 7,000 Vietnamese who "had to be removed" but couldn't be convicted in a trial.

Log beds, malarial mosquitoes and a host of diseases with no effective medical program, no shelter from the tropical monsoon rains and a diet not much better than silage greet the unfortunates interned in the concentration camps here.

The United States provides both financial and advisory assistance to the Con Son island prison.

On March 1, Con Son housed in excess of 9,000 prisoners. Of these, more than 7,000 were detainees. A detainee is an individual suspected of being a Viet Cong sympathizer or supporter who never has been convicted or tried.

KING OF CON SON

Vietnamese Lt. Col. Nguyen Van Ve, a brash man who illustrates his every point with a swing or sway of his swagger stick, is the commander here. He calls himself the "King of Con Son," and the title fits his power. He has total rule over the island and its prison population.

Lt. Col. Ve explains the "detainee" system simply.

He says his government needs a means to remove the potential or possible enemy from causing or contributing to trouble. When a man is suspected of giving food, shelter or information to the Viet Cong, he cannot be convicted without evidence, according to Lt. Col. Ve.

Instead, he says, these Viet Cong suspects are brought before district security committees. The committee, according to Lt. Col. Ve, does not require evidence, only grounds to believe the individual may be aiding the Viet Cong. The committee then has the power to order the suspect sent to Con Son or one of several other detention centers for a period of six months.

Lt. Col. Ve says this dispenses with the need for a trial, conviction and evidence. He also admits that almost all of the detainees would be acquitted for lack of evidence if they were to be tried.

When questioned, Lt. Col. Ve said that he has the authority to detain these prisoners beyond the six-month period based upon his observations, and that very few actually are released after their initial six months' detention.

Our study group's tour of the prison included Camps Six and Seven, the camps that house all but 200 of the detainees.

BARBED WIRE

Each of these camps is surrounded by double fences strung heavily with barbed wire. Within, the camps are divided into many small sections, each also ringed with double fences of heavily-barbed wire. The main sections consist of two 60-foot rows of rough logs, each log five feet long, with the entire row elevated two feet off the ground. Canvas, perforated with holes is stretched about six feet overhead.

These rows of logs serve as bed, home and recreation area for the detainees. They are not allowed to leave the compound at any time. There is no shelter from malarial mosquitoes or monsoons.

At the end of each camp is a small dispensary stocked only with aspirins, salt tablets and anti-malaria pills that are ineffective against the fatal strains of malaria found on the island, according to the U.S. Army doctor accompanying our study group. These dispensaries are staffed with untrained personnel.

On the side of each dispensary is a disciplinary area used for detainees found guilty of even the smallest infraction of prison rules. It, too, is encircled with a double barbed wire fence. Barbed wire also is strung the length and width of the disciplinary area about 16 inches above the ground, with the strand about six inches apart.

Detainees being disciplined are forced to crawl under this layer of barbed wire and lie on their backs for the duration of their sentences, often several days. They are allowed only bread and water.

We were permitted to interview individual prisoners, but Lt. Col. Ve insisted the detainees be interviewed only in the presence of a guard. Detainees interviewed refused to answer questions, apparently in fear that a "wrong" answer, after being reported by the guard, would lead to days and nights under the barbed wire.

Lt. Col. Ve stated that the detainees come from all walks of life but mainly are farmers from the provinces. He listed the three main ways in which these prisoners come before the security committees:

—They are reported by a neighbor as aiding or being sympathetic to the Viet Cong.

—All persons in an area are held when an Army commander in the area states someone has been aiding the Viet Cong.

—When a village is being force-evacuated and relocated prior to being destroyed to eliminate Viet Cong havens, all persons in the village who resist in any way are brought before the committees.

As with most of the other prisoners on Con Son, according to Lt. Col. Ve, the majority of the detainees continue to be held there.

Basic living conditions in the Con Son concentration camps are extremely bad, but the island's prisoners also are faced with even worse medical problems.

Malaria is the major disease. The island's mosquitoes carry two strains, one which usually is fatal and the other which the victim usually survives, but with his strength sapped. The prison dispensaries are stocked, though inadequately, with chloroquine-primaquine anti-malarial pills. These combat only the nonfatal strain. No preventative for the usually-fatal strain is available to the prisoners.

Con Son's prison population also has severe problems with beriberi and tuberculosis, as well as year-round epidemic levels of diarrhea and dysentery. Almost non-existent latrine and sewage facilities contribute to this.

All the prison dispensaries are staffed by prisoners, mostly captured Viet Cong medics. None has been trained beyond the level attained by a student nurse in the U.S.

ONE DOCTOR

The island has one doctor, a first lieutenant in the Vietnamese Regional and Popular Forces (roughly equivalent to our National Guard). However he treats only the civil servants, national police and military.

A Vietnamese public health nurse also is assigned to Con Son, mainly to treat the non-prisoner population. The nurse makes a monthly visit to each of the seven prison dispensaries.

The government provides air evacuation for members of the non-prisoner population requiring mainland treatment, but prisoners requiring such treatment must wait for the monthly supply boat.

The public health nurse admits that several prisoners have died due to lack of proper medical attention.

In addition to the detainees, Con Son also houses about 2,000 other prisoners including Viet Cong, political, religious and criminal prisoners and military prisoners from the South Vietnamese forces. All these categories have been tried and convicted.

Convicted Viet Cong are considered civil prisoners and are held at Con Son. North Vietnamese prisoners of war are held at another island prison, Phu Quoc. The U.S. is not involved in the operation of Phu Quoc because the South Vietnamese government does not abide by the Geneva prisoner-of-war conventions.

With the exception of 200 detainees, the regular prisoners only are confined in Camps One through Five. Strangely, the convicted prisoners fare much better than the detainees. Camps One through Five consist of the old French prison buildings, and provide adequate though unpleasant shelter.

These prisoners leave the camps each day to go out in work parties. Although some of the prisoners still split rocks, the majority work on fishing teams or on the farms which produce most of the food other than rice which is consumed on the island. The prisoners raise mainly papaya, coconuts, pigs and chickens.

A large number of the sentenced prisoners have attained trustee status and are allowed to live outside the camps. All the prisoners except the detainees are allowed monthly three-day visits with their families, who are taken to the island on the supply boat. A beach home has been set up to house these families.

PRISONER DIET

All the prisoners, detainees included, are on the same diet. The catch of the fishing teams is laid out and salted on tin sheets placed on the streets daily. After a day in the sun, the fish, well-dried, are fed to the prisoners. Prisoners cook the fruits, vegetables and meats raised on the island as well as rice brought in from the mainland. The cooking is done in extremely unsanitary and antiquated outdoor kitchens surviving from French days.

Many of Con Son's political prisoners were sentenced several Vietnamese regimes ago but never were released by succeeding governments, including the current Thieu government.

One prisoner interviewed on death row had been there for 13 years, sentenced for political opposition to the late President Ngo Dinh Diem in the early days of his rule.

Another death row prisoner interviewed stated he has been confined seven years for the same reason, since the latter days of Diem.

A Buddhist monk stated he has served 11 years of a 15-year political sentence, also a Diem victim still on Con Son.

A student monk said he came here three years ago on a one-year sentence, for giving sanctuary to a Viet Cong in a pagoda. He too has been forgotten.

Prisoner interviews also produced some

surprising opinions. Many of the regular prisoners from rural Vietnam stated they were not too dissatisfied with their confinement because the prison living conditions were better than those they had experienced in the countryside. Other prisoners said they felt relieved to be at Con Son and away from the war.

But no prisoner was willing to say he is happy.

Mr. HAWKINS. Mr. Speaker, we are told by the commandant that there was one doctor on the island. We did not even question that. But in the statement by Mr. Oliva he says this:

The island has one doctor, a First Lieutenant in the Vietnamese Regional and Popular Forces (roughly equivalent to our National Guard). However, he treats only the civil servants, the national police and the military.

That is the statement from a man who did occupy a rather strategic position in the U.S. service.

Also, Mr. Speaker, for the sake of supporting some of the statements which I have made, I would like to enter into the RECORD at this point as previously requested a full statement of Mr. Don Luce which has been filed with the Council of Churches and a letter from Mr. Luce to me.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

The statement and letter are as follows:

COORDINATING CONFERENCE FOR RECONSTRUCTION IN VIETNAM

July 7, 1970.

Congressman AUGUSTUS HAWKINS,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN HAWKINS: I should have written a long letter earlier, but I have been very busy. I have had to let my secretaries go for their own personal safety and things have been piling up. Enclosed is a copy of the account of our trip that I wrote. There has been an awful lot of feedback here due to your statements. There are some indications that this may lead to an improvement of conditions in the prisons. I think we can be sure that the press here will carefully watch prison conditions.

I have used the statement as a backgrounder for press people here. They have been anxious to have articles from here to give the story more Vietnam color. I even went out to Con Son Island once again with an NBC team but we did not get to see anything. They are quite nervous at the island now.

I shall never forget your efforts in making the trip to Con Son. I know that the Vietnamese people are very grateful to you, especially those who have been imprisoned and tortured. Your efforts confirm my belief in the goodness of people. It is also evidence that there are people in the "system" who are truly good people. I hope that this message is communicated throughout our land. Again my sincere thanks for your courage.

Sincerely,

DON LUCE.

THE TIGER CAGES OF CON SON

(By Don Luce)

CON SON ISLAND—"The tiger cages existed during the time of the French. It was the most inhuman kind of treatment you can imagine. Prisoners were shackled to iron bars in tiny cages and deprived of physical necessities and human dignity. But these cages no longer exist."

This was the official position of prison authorities in Vietnam before a Congressional committee. The committee included Congressman Augustus Hawkins of the Los Angeles Watts area, Congressman William Anderson, former commander of the Nautilus submarine, Thomas Harkin, a congressional aide, and myself. A group from the U.S. Public Safety office accompanied us.

Con Son prison is located in the South China Sea approximately 140 miles southeast of Saigon. It is Vietnam's largest civilian prison, having 9,916 prisoners as of June 1970 according to the U.S. Public Safety Director in Vietnam. Its seven camps have a total capacity of 9,750 inmates (about 2,000 trustees now have housing outside the seven camps). The prison was established in 1862 by the French. Sometimes called "Devil's Island," mention of the name Con Son brings fear to most Vietnamese. Although Ho Chi Minh was never imprisoned there, it was also called "University of Ho Chi Minh" because so many of its "graduates" changed from a strong anti-communist position when they entered to joining the Viet Minh on their release.

No, Con Son is not like Alcatraz or a "Devil's Island," claimed Frank E. Walton, Director of the U.S. Public Safety program in Vietnam at the beginning of the trip, commenting: "This (place) is more like a Boy Scout Recreational Camp."

But there had been other stories. After considerable pressure from the Vietnamese student movement, five students were released from Con Son where they claimed they had been held under terrible conditions in the same tiger cages that the French had used. They wrote in a report to the Vietnamese National Assembly:

"Living under these conditions lacking food, clothing and shelter, the prisoners had to endure confusion and serious disease. Food was inadequate, beatings were regular, feet were shackled day and night. Most of our fellow prisoners in the cages were paralyzed, not to mention the number suffering from chronic dysentery; tuberculosis due to long-term physical exhaustion; stomach disorders from the beating by trustees, from eating sand and pebbles in the rice, from being forced to eat too fast; gangrenous feet from a lack of vitamins, and endless other diseases. . . . Medicine was dispensed as the person in charge of medical problems was inspired to do so. Here, every time we wanted to ask for medicine we had to wait until we were in agony and then we generally only received a few aspirin tablets. Any medicine more valuable than this was all hoarded by the orderlies and their accomplices in the administration and was taken away and sold."

Was their story true? The two Congressmen went to Con Son to investigate. Earlier three Congressmen had backed out after two of them had heard detailed descriptions of the conditions in the tiger cages by a former inmate. It all seemed too preposterous. For a time it appeared that none of the Congressmen would go—but due to the hard work of aide Thomas Harkin and courageous personal qualities of the Congressmen Hawkins and Anderson the trip was made.

As the airplane approached the beautiful island of Con Son we read the prepared briefing:

"The Con Son Island National Correction Center, located in the South China Sea approximately 140 miles southeast of Saigon, is Vietnam's largest correctional institution. Established by the French in 1862 as a penal colony, it has long held a reputation of being a 'Devil's Island.' This reputation still prevails, in spite of an enlightened and modern administration of the facility."

We were perplexed. Former inmates had related tales of horror, yet the American advisors spoke in glowing terms. Other investigation teams had found nothing. No Westerners had seen the cages since the time of the French (or at least none would confirm their existence). "There are no tige. cages. Only a thing of the past," everyone had been told who visited the island by the officials. Yet they had left unconvinced because the prisoners on the island had told them secretly "you must see the tiger cages."

At 9:58, after a twenty minute drive from the airport, we began discussions with the Chief Warden, Col. Nguyen Van Ve. We talked about the plane ride and the beautiful island. "Con Son means Mountain Island," Col. Ve explained cordially. At 10:10 a prison guard brought us cafe filtre—the kind of coffee that drips slowly into your cup drop by drop while you wait. The conversation went on slowly.

At 10:23, Thomas Harkin abruptly changed the discussion about the weather and mountain. "Would it be possible to talk to some individual prisoners," he asked.

"Why, yes, of course," Colonel Ve said in his impeccable English, smiling. He could arrange that.

"We have a list of names of people we would like to see," Harkin said. "These are some people we have learned are here and we would like to see them."

A cloud passed over the face of Colonel Ve as he reached over to receive the list of six names.

"You must have permission from the Ministry of Interior if you want to see specific individuals," he said after reading the names. "You can't just come here and see anyone you want. This is a prison."

"We have come to investigate all aspects of American aid here and we would like to get as accurate a picture as we can," Congressman Hawkins explained. "Perhaps you could telegram the Ministry of Interior to ask permission."

At this point, Frank Walton, the top U.S prison advisor commented angrily: "We thought this trip was above-board. If you had wanted to see specific individuals, you should have informed us first. This is sneaky and unethical."

Colonel Ve then reverted to Vietnamese, using the U.S. Public Safety Division's interpreter to translate. "I'll send a message to the Ministry of Interior, but they cannot respond before eleven o'clock when you are scheduled to leave for Saigon."

"Oh, we can stay a few extra minutes," Congressman Hawkins said. "Perhaps we can go to see the prison wards now. Do you have a map of the island showing the location of the camps?"

"I'm afraid we don't," Colonel Ve said. When questioned further, Colonel Ve explained in Vietnamese that the camps were so small and the island so big that the camp locations would seem insignificant on a map of the island. But before this was translated, Mr. Walton interrupted and explained that security reasons did not allow them to make such a map. "The VC might get hold of it and come and release all the prisoners."

It was now 10:40 and, according to our schedule we were supposed to leave to catch the plane. At that point Colonel Ve went to his desk to give final instructions on sending the telegram to Saigon to get permission to see the specific six prisoners. "Whether they (Saigon) answer or not is not important," he told his aide in Vietnamese who was questioning the wording (at this point, they still did not know that I spoke Vietnamese).

"Why don't we go over to the curio shop?" Mr. Walton suggested. "They have some really nice things like the swagger stick that Col. Ve has. It's just across the road. It would be nice for you to have some souvenirs to take back to the U.S."

"I'd like to see the prison camps," Con-

gressman Hawkins replied. "We can pick up the souvenirs when we finish the tour of the prison sites."

The group then loaded itself into three jeeps and went to camp number 2. The prisoners were lined up, faces tightened into stiff, frightened masks.

At the infirmary, medical care to the prisoners was explained.

"We have a doctor who treats each patient separately. Medical care here meets modern standards."

The sick prisoners were asked a few questions by the congressmen:

"Do you get enough to eat?"

"Yes, plenty. Rice, dried fish, and vegetables," one answered .

"Do you receive medicine?"

"Yes, we get medicine every day."

As the questioning went on, I wandered over and talked to a man alone. He told me:

"I am a political prisoner from the time of Diem. I have no idea when I'll be released. It is so bad here. Do you see the man who is so sick? He has received no medicine until today when they put the bottle with water up (a dextrose bottle was being used to feed him intravenously). That was for you to see. No medicine. No vegetables . . ."

At this point a guard came up and he continued:

"Everything is quite good here. It's not like the mainland but we have plenty to eat and the people here are kind."

As I walked away, he pleaded with his frightened eyes.

That was the first time that the prison administration realized I spoke Vietnamese. From then on they made a desperate attempt to keep me from speaking to any prisoner alone.

In response to a question about whether the inmates had a chance to play sports, Randolph Berkeley, Chief of the Corrections and Detention Division of the U.S. Public Safety advisory program said:

"Colonel Ve even plays soccer with the prisoners. He is so well liked!"

"I play soccer with them on Sunday afternoon," Col. Ve said picking up the cue. "And sometimes they beat me—but I don't even punish them," Colonel Ve laughed pleasantly at his joke.

Congressman Hawkins suggested that we go on to Camp 4. We all got into the jeeps and were taken to Camp 5. I was asked to interpret by Thomas Harkin. This time a guard was standing by:

"Where are you from?"

"Ben Tre."

"When were you arrested?"

"Ten years ago."

"Why were you arrested?"

"I am a political prisoner."

"But what was the specific reason?"

"The provincial authorities arrested me."

"You were arrested because you are a traitor, weren't you?" the guard prompted.

"I was arrested because I am a traitor," the prisoner parroted.

In another case, a prisoner said he did not know why he was arrested.

"You had a grenade in your hand and you were planning to kill people. Isn't that true?" Colonel Ve shouted authoritatively.

"I had a grenade in my hand and was going to kill people," the prisoner said.

It was the same, situation after situation. Yes, the food was delicious—when the guards were around. No, we have almost no food, they said, when the guards were not around. Yes, we get letters from home—when the guards stood by and listened. No, we cannot receive or send out letters—when the guards were not listening.

After Camp 5, Representative Hawkins made his request once again to see Camp 4. It was there we had been told the infamous tiger cages were. As we entered the compound of Camp 4, it was as it had been been described and as we had put together clues from various people. Two wells on one end with Chinese imperial type decorative walls in front of the wells. Some beautiful flowers which one of the Representatives photographed. But what we could not see at first was the small alley which was supposed to be between the wall of one of the prison buildings and the outer wall. Thomas Harkin saw it first—a narrow path between the two walls with some vegetables growing along the side for the trustees. He passed the word on.

"It is good to see that you have an agricultural project here, Colonel," Representative Hawkins observed. "What are these plants?"

"These are called Vietnamese spinach," Colonel Ve replied. "We encourage the prisoners to plant things after they become trustees."

"Not really enough to feed many people though," the Congressman observed as he worked his way to the far end of the alley. "By the way, where does this little door lead to?"

We started to shake the door and rap on it. It was a tiny door, hardly large enough for one person to enter.

"Oh, that goes to another camp," Col Ve replied. "We can enter through the other side."

We looked at each other, remembering the words of one person who knew the location of the tiger cages: "There is only one way. You must go through the tiny door at the end of the path where the vegetables are grown."

"I'm tired," Representative Hawkins said. "Can't you send someone around to open the door? We can wait here."

"The Congressman is tired. Can you send someone around to open the door?" Thomas Harkin repeated the request.

"This door is always locked. You can't get in," the Colonel said.

Then miraculously someone came to the gate from the other side to see what was the matter. He opened the door and we slipped through. There before us were the tiger cages. We climbed to the top and looked down onto the prisoners huddled in the cages, three or four in each cage.

The tiger cages are small stone compartments. Inside each cage is a wooden bucket for sanitary purposes which is emptied once a day. The cages are not quite five feet across and about nine feet long. There were three prisoners in each one. To see them we climbed up a stairway and looked down on the prisoners through an opening at the top which is crossed with iron bars. There were 60 or 70 cages in the building.

"Donnez-moi d'eau," one prisoner said in French.

"I am sorry I cannot speak French," I answered in Vietnamese, not trusting my poor high school French. "But I can speak Vietnamese. This is a Congressional team from the United States who have come to look into prison conditions in Vietnam."

"We are thirsty. We are hungry. We have been beaten," one said and the chant was picked up.

"I am here because I spoke for peace. That is what all Vietnamese want. We only ask for peace," said another.

As we walked down the aisle above them, the prisoners pointed to sores on their bodies. One man showed us his hand. Three fingers were missing.

"They cut off my fingers when they arrested me," he said. Then he turned his head and showed us a big scar on the back of his head.

None of the men could stand up. Until a few days ago, they said they had been shackled to a bar that went across one end of the cage. The bars had just been removed (although the bars were still left in a few cages) but the slots to put them back in were still there.

"We will be shackled again in a few days," one said as he crawled around the cage using his hands to move himself.

One of the prisoners pointed to the scars on his useless legs and said, "We were shackled here for months. We are hungry, thirsty and sick. Please give us some water."

"I am a Buddhist monk and I spoke for peace in 1966. I am here for no reason except wanting peace. I have been beaten. I have been shackled. But I still speak out for peace."

Above each cell was a wooden bucket of lime.

"What is this for?" we asked Colonel Ve.

"The lime is to whitewash the walls," the colonel said.

"No! No!" the prisoners shouted. "It is thrown on us when we ask for food."

The floors of many of the cages were covered with lime.

"When it is thrown on us, we cough and spit blood. Many of us now have the disease of the lungs (T.B.) and it is so difficult to breathe when the lime is thrown on us."

"There are other cages. You must see them too," we were told. "There are cages with women. We hear them screaming and they are near. Right over there."

We climbed down the stairs and went to the adjacent building. Here was another double row of cages identical to the ones in the men's side. Every cage was filled with five women. The women ranged in age from fifteen years old to one old, blind lady who must have been nearly 70.

"Please give us some water. Please give us some food," they pleaded.

"We have been here seven months and have had a vegetable three times in these seven months."

"We are beaten and sick and yet we don't have any medicines."

Many of the women were obviously very sick. Some had T.B.; some had eye diseases; most had skin diseases. Those who were in the worst condition lay on the floor of the tiny cages while others fanned them with odd bits of cloth.

"How old are you?" I asked one beautiful young girl.

"Eighteen."

"Are you a student?"

"No, I am a laborer. I worked in a factory."

"Why were you arrested?"

"I was in a peace demonstration."

"Are you a Communist?"

At this, the young girl laughed at what seemed to her an irrelevant question.

"No, I am not a Communist. I am not concerned about politics. I am concerned about peace."

"Will you salute the flag?" the guard who was standing beside me demanded.

"No! No, I will not salute your flag which represents all the things you have done to me," she answered defiantly.

"Then you are a Communist and should be killed," the guard retorted in equally bitter tones.

Many of the girls were young students from Saigon's most prestigious schools like Gia Long, Madame Curie, etc.

"We can only wash every two or three days and then we have almost no water," they said. "During our menstruation period it is very hard because we cannot wash ourselves properly. That is not sanitary."

There are about 500 people in the tiger cages. They are hungry, thirsty and show obvious signs of having been beaten many times.

As we left the tiger cages, we were confronted once again by Frank Walton, head of the U.S. Public Safety Division.

"You have no right to interfere with Vietnamese affairs," he told us. "You have come here trying to stir up trouble. You are guests of Colonel Ve here. You aren't supposed to go poking your nose into doors that aren't your business."

"But this is our business," Congressman Hawkins explained. "The United States gives considerable aid to these prisons. We want to be sure our aid is used in a humane way. Several American boys are being held prisoner in North Viet Nam. I hope they are not being treated the same way as are the prisoners I have just seen being treated here."

"You are judging the whole prison of 10,000 inmates on how four or five hundred are being treated. This prison is equal to the standards of many of the prisons in our own country."

"These are very bad people," Colonel Ve told us. "They will not salute the flag. They will not even salute the American flag."

We then went back to the headquarters of the prison island where Colonel Ve apologized for not having lunch for us (it was now past one o'clock) and because he had still not received word from the Ministry of Interior about the Congressmen's request to see six specific prisoners.

"I am sorry I have no luncheon prepared," he said. "I thought you were leaving at eleven this morning."

"That's all right, Colonel," Representative Hawkins said. "But I would like to go to that curio shop. I'd like to get me one of those swagger sticks."

But the curio shop was closed.

The conditions we say at Con Son were very different from the "fact sheet" which had been passed out on our departure from Saigon that had stated:

"The inmates are kept busy with work projects and vocational tasks such as woodcutting, tile making, woodworking, animal husbandry, chicken and duck production and sewing. Inmates also attend classes in literacy training, and all grades of formal education. Rice, papayas, coconuts and vegetables grown on the prison farm and fish caught by the prisoners supplement the diet . . . In the opinion of Correction Advisers with lengthy U.S. penology experience, Con Son is not a 'Devil's Island,' but on the contrary is a correctional institution worthy of higher ratings than some prisons in the United States."

A better description is the last words we heard as we left the tiger cages:

"Please give us some water."

Mr. HAWKINS. Mr. Speaker, I would like to introduce also a copy of a Fellowship publication which goes into the question of imprisonment and torture in South Vietnam.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

The article is as follows:

IMPRISONMENT AND TORTURE IN SOUTH VIETNAM

(By Pham Tam)

AN INTRODUCTORY WORD BY ALFRED HASSLER

This is the story of the scores of thousands of men and women, civilians, who clog the prisons of South Vietnam, charged with "political" offenses. It is a horror story, told in a low key, matter-of-fact style, and all the more horrifying for that reason. It is told by a Vietnamese journalist who spent four years as such a prisoner, shuttled back and forth between the crowded noisome holes that pass for prisons, but drawing also on others' intimate knowledge of the whole prison system.

No one knows how many political prisoners there are in the Republic of Vietnam. The lowest estimates, based on official figures, top 20,000; less biased observers tend to agree that the total is probably close to 200,000. They range from villagers charged with being accomplices of the Vietcong to some of the country's best-known political religious and intellectual leaders.

Discussions of their "guilt" are fruitless: in South Vietnam one is guilty if he favors peace, or calls for negotiations, or says that the country should be neutralized, or expresses opposition to the ruling clique of generals headed by President Thieu and Vice-President Ky. Where there are trials they are hasty, before military courts, with none of the safeguards of a free judiciary and with no right of appeal; but thousands of the victims are held without trial for months and years.

Many of the prisoners have confessed to whatever offenses were laid against them by their jailers, and many of them have implicated others who in turn have been arrested and jailed. The confessions and the implications are the consequence of the torture to which most political prisoners are subjected, ranging from the primitive brutality of beatings with rifle butts or heavy sticks to such "sophisticated" devices as the application of electric wires to the testicles of male prisoners and the forcing of bottles or live eels into the vaginas of the women.

None of this is the consequense of the accidental rise to power of a few pathological sadists. Rather it is the deliberate expression of the desperate determination of the Thieu-Ky government to stay in power by suppressing all dissent. Open opponents of the government are immobilized by being imprisoned themselves or by being frightened into exile by the fear of being imprisoned and undergoing the torture themselves. Some of them have taken refuge abroad; others have fled to the National Liberation Front, submerging whatever qualms they have about it in the desperation of seeing no other choice.

Even so, the dissent continues, the demands increase for the replacement of Thieu and Ky by a genuinely representative government that will bring the war to an end. Students, academics, Buddhist monks and Catholic priests confront the terror and insist on calling for peace.

It is this insistent, indefatigable body of the country's ablest and most respected citizens, not allied with the NLF but demanding a "government of peace," that Thieu and Ky and the American establishment in Saigon fear most. It is they, in their non-violent but unremitting opposition, who disclose the instability of the government even more than do the military attacks of the NLF and North Vietnamese.

Some Americans, reading this account, will take refuge in that ancient canard that has it that Orientals have somehow a lower regard for human life and suffering than do we more sensitive Westerners. Leaving aside the consideration that we sensitive Americans have been engaged in indiscriminate slaughter in Vietnam in a fashion that has revolted people throughout the world, the assertion itself is a lie. War evokes the worst in men and allows the most brutal of men to come to power. Vietnamese torture other Vietnamese; still others carry on a struggle without violence and with a sense of compassion not often matched in the West.

What Americans need to face is that these horrors are being perpetrated with American assent, by a government kept in power solely by American military might, by men paid for by American dollars, and in a system permeated throughout by American advisors. This is part of the black and spreading stain of shame that the Vietnam war has cast on this country's reputation. To win a war, or to end it "with honor"—honor, no less—we condone and finance a totalitarian government in the total suppression of individul rights, and in a pattern of imprisonment and torture that should be turning our stomachs with revulsion.

IMPRISONMENT AND TORTURE IN SOUTH VIETNAM

The case of the five South Vietnamese peasants who found themselves entangled in a net lowered from an American helicopter and, thereafter, trapped in a web of arrest, examination and torture which, after a year, left them still liable to trial for "actions contrary to state security," is symbolic of the fate of millions of South Vietnamese people today. Almost everyone is subject to arrest at any time on an array of often vague and ill-formulated charges from draft evasion to "anti-patriotism," or simply and pragmatically for being unable to bribe the right official. Interrogation is all too often a euphemism for torture, and it may be carried on by one or several of the dozens of official and semi-official agencies and sub-agencies responsible for political security. Detention without trial is legal in South Vietnam for periods of six months to two years, after which prisoners may be re-examined and returned to detention. Trials are often summary. Imprisonment after trial generally means a continuation of the conditions of brutality under which the prisoner has been held during his interrogation.

The fact that thousands of South Vietnamese citizens are being held as political prisoners by the Saigon Government has, during the last year or so, become common knowledge in the United States. Not until recently, however, have we begun to read reports in our press and periodicals of the officially instigated torture and other mistreatment which accompany political imprisonment. This account, written from personal experience and observation, by a journalist who spent four years in South Vietnamese jails, gives a more complete and authoritative account of the system of surveillance, torture and imprisonment in South Vietnam than any that has heretofore been available. "Pham Tam" is, of course, a pseudonyn. For obvious reasons, the identity of the author must remain secret.—Ed.

I. THE WEB OF CONTROL: SAIGON AND THE CITIES

"Anyone with a gun can make arrests." This is not just a cynical Saigon remark. While such a law cannot be found in any body of legislation, it is part of an unwritten code that Vietnamese civil servants at all levels understand and apply.

The network arrest system in Saigon consists of six different agencies and their subagencies. In addition to the Official Police Headquarters of Saigon, there are five secretly functioning agencies, the Active Service Police or *Hoat Vu*, the Bureau of Military Security, the Central Intelligence Service, the American Special Forces, and the Secret Service.

(1) The Official Saigon Police Headquarters (*Nha Giam Doc Canh Sat Do Thanh*) is centered in one large station, with a branch station in each of the nine districts of Saigon. Each station, besides a large number of uniformed police, has a section of plainsclothesmen, who have unlimited powers of arrest and have also special rooms for the unofficial interrogation, torture and confinement of prisoners. The Official Saigon Police are said to make many arrests for purposes of personal revenge or blackmail, and to accept bribes to void the sentences of real criminals.

(2) The Active Service Police, or *Hoat Vu*, judging from their activities, are, in fact, the secret police. Theirs is the most important agency in the network arrest system, and its aim is to repress all popular movements struggling for peace and neutrality, all organizations whose policy is opposed to that of the Government, and to wipe out secret NLF bases within the capital.

Currently the *Hoat Vu* center directs more than twenty stations situated in the big towns (Dalat, Can Tho, Nha Trang, Qui Nhon, Hue, Danang). In the Saigon-Gia Dinh region alone there are eight such stations. These are set up in large villas, surrounded by high walls topped with barbed wire and often electric fencing, and are patrolled by

watch dogs and by guards in civilian clothes who carry carefully concealed pistols. Each of these eight Saigon-area stations has from 80 to 120 official employees, plus two or three hundred informers. There are two *Hoat Vu* stations in the Cholon area, one in Binh Dong, one in Thi Nghe, one in Khanh Hoi, one near the Tan Son Nhut Airport, one in Phu Lam, and another in Gia Dinh.

The *Hoat Vu* belongs to the Special Police Force (*Khoi Canh Sac Dac Biet*) within the National Police Force (*Tong Nha Canh Sat Quoc Gia*), and it receives orders directly from the Presidency, from the American Intelligence Service, from the Chiefs of Staff of the South Vietnamese Army, and in many cases, from the American Special Forces.

This Special Police Force operates the Central Bureau of Investigation (*Trung Tam Tham Van*) situated at the National Police Force headquarters. The Bureau is fully equipped with instruments of torture, and includes eight or ten smaller interrogation units, each one staffed by five persons. There are three detention centers, *Cau Luu Xa, A, B, and C*, and a communal prison, *Lao Xa Tong Nha*. All political prisoners from Saigon, as well as many of the more important prisoners from the provinces, must go through this Central Bureau of Investigation, where files are completed, fuller inquiries undertaken, and decisions made as to whether the prisoners will be tried, sent to detention camps, or some other disposition made of their cases.

(3) The Bureau of Military Security (*Cuc An Ninh Quan Doi*) is commonly called the "second bureau," a name that strikes terror into the hearts of the people of Saigon and has haunted them since the arrival of the French Army in Indo-China. Most of those arrested by the "second bureau" are beaten to death, maimed for life, or have to be hospitalized after their release. The Bureau is an agency of the Army Chiefs of Staff and is administered by a colonel. Secret agents of the Bureau are present and active within every army unit and have an organization parallel to that of the army. Their field of action, however, is not limited to the army; they have the power to arrest civilians and to search buildings in areas near army installations. There is close cooperation between the Bureau of Military Security and the other agencies in making arrests as well as for the exchange of documents and files. At the headquarters of the Bureau and in each sub-station there are detention centers and torture rooms.

In Saigon, apart from the Bureau of Military Security, there are also numbers of agents working in collaboration with the Military Police, among them men from all the army units in the Saigon-Cholon region. These "soldiers of safety" (*quan nhan cong an*) go around looting the cafes and the bars, the dance halls and the brothels. The bosses and prostitutes in these areas are exploited and subjected to blackmail. Many Military Police officers become pimps and owners of houses of prostitution. The regular police and even the *Hoat Vu* dare not penetrate the areas they control, and they settle many an acount by exploding a grenade. Politically speaking, the Military Police have the right to arrest journalists, professors and students who have written or spoken against the army. Arrested soldiers, along with civilians suspected of being their accomplices, are sent directly to a military tribunal. Other prisoners are handed to the Special Police at the Central Bureau of Investigation.

In addition to the Bureau of Military Security, there is also an intelligence bureau at army headquarters. It is endowed with the right to arrest arbitrarily, but its activities are more secret and confined than those of many of the other agencies.

(4) The Central Intelligence Service (*So Trung Uong Tinh Bao*) is also thought to be the American center for secret and double agents. The Central Intelligences Service makes arrests in great secrecy, gives orders and supplies information to both the *Hoat Vu* and to Bureau of Military Security, as well as to the Army Intelligence Bureau. Prisoners going to the Intelligence Center are sent blindfolded and are often made to travel at night. Since they can still hear, however, they have been able to testify that it is located on the Bach Dang Embankment near the *Nha Quan Phap* (military tribunal) and the naval headquarters.

(5) The American Special Forces (*Luc Luong Dac Biet My*) is said to have a headquarters some place in Saigon. A great number of prisoners sent to the Central Investigation Bureau relate that they were arrested and interrogated by the American Special Forces. Their files bear this out, but so far no one can testify as to the exact location of the headquarters.

(6) The Secret Service (*Mat Vu*) is composed of a large number of devoted officers who work under the direct orders of President Thieu. Their task consists essentially of kidnapping, assasinating, or otherwise eliminating officers and politicians who oppose Government policy. Their headquarters move constantly between three villas—from one on Cong Ly street (near Tan Son Nhut Airport) to another in the first district of Saigon, to a third in the third district. Each officer in the *Mat Vu* has under his direction from three to five young delinquents, whom he pays for each "job." These youths are provided with forged military papers, military identity cards, a quartermaster's card to give them valid reason for being loose on the town, and even a folder containing fake military records. The youths are quite likely to be suspected by the local police of avoiding the draft, and, as forged identity cards are common among civilians, many different documents have to be produced in order to allay suspicion. The special papers are valid for only two weeks, by which time the "job" must be completed.

II. THE WEB OF CONTROL: THE PROVINCES

Each province has a National Police station (*Ty Canh Sat Quoc Gia*) and a Special Police force (*Ty Can Sat Dac Biet*). In the large cities there is also an Active Service Police Station (*Hoat Vu*). These are the official agencies of control. Annexed to these are Military Security (*An Ninh Quan Doi*), and under the control of the American military forces are the Army Special Forces, the Provincial Reconnaissance Units of the CIA, the Coast Guard, and several other special groups. None of the latter, except for the South Vietnamese Military Security, has permanent headquarters. They accomplish their arrests and tortures in one day, then pass their more fortunate prisoners over to the Special Police force. (The less fortunate prisoners are either beaten to death or drowned on suspicion of being NLF agents). One of these groups, the *PRU* is the most savage in its methods of torture.

The Special Police forces in the provinces make arrests in the chief towns of the districts, but seldom go into the surrounding countryside except during times of military operations. In the country, ordinary soldiers have the right to arrest, interrogate and imprison citizens. As these soldiers are far removed from central authority, laws are virtually meaningless, and they are more or less at liberty to act as they choose. People in the provinces may also be arrested by the Civil Guards (*Dan Ve*), the village administrative bodies, the cadres of the Provincial Government Rural Reconstruction Program, as well as by the local militia when there are military operations under way in the area.

The arbitrary nature of many political arrests and their consequences are illustrated by the following story:

Among the prisoners sent from the South Vietnamese Army Headquarters to the Central Bureau of Investigation, there was once a group of five men, all over fifty years old, peasants who had been rounded up in the hamlet of Tan Sinh. Having received permission to go outside the hamlet one day, they were scything grass in the fields, when they were suddenly trapped in a net dropped from an American helicopter and then arrested on suspicion of belonging to the NLF. After subjecting them to interrogation and torture and finding them not to be NLF members, the Americans sent them on to the South Vietnamese Army Headquarters to be released and returned to Tan Sinh. They had, however, already been designated as "political prisoners" by the American army administration, and their files were stamped accordingly. They could not, therefore, be released until some determination had been made of the reasons for their arrest, so for six months they were sent from one military camp to another for examination and re-examination. Arriving finally at the Central Bureau of Investigation, they were informed that it would be another five months before officials had time to draw up the papers that would send them before a military court.

The end of the story of the five old men is not known, but other prisoners in similar situations have been charged with actions contrary to state security—most frequently with paying takes to the NLF. If found guilty, as they most often are, they are sentenced to three years' imprisonment, and the letters C.T.P. (*Chinh Tri Pham*: political prisoner) are stamped on their identification cards. Other peasants with as little evidence against them have been judged guilty of the graver crime of "anti-patriotism," which carries a minimum sentence of five years of forced labor on the prison island of Con Son.

All political cases brought officially to trial are handled by the military courts, of which there are two kinds, the Ordinary Military Court (*Tou An Quan Su Thuong*) and the Front Military Court (*Tou An Quan Su Mat Tran*), the latter established by Nguyen Van Thieu and Nguyen Cao Ky, to take the place of the infamous Special Military Tribunal, abolished after the *coup d'etat* of November 1963. The Special Military Tribunal had been created by Ngo Dinh Diem in 1959 to suppress all political opposition to his Government, and it moved about the country, carrying with it the guillotine, functioning both as judge and executioner of its victims. Except that the guillotine is no longer used, the Front Military Court acts in the same way and fulfills the same functions as the Special Military Tribunal. There is no appeal from its decisions except—when a death sentence has been imposed—to the mercy of President Thieu.

The Ordinary Military Court holds trials in the Palace of Justice in Saigon and at a special court in Ben Bach Dang. It examines the cases of army law violations by military men and political crimes attributed to civilians. It has six offices for preliminary investigations and takes care of about eighty per cent of all political offenses, handing down indictments from twenty days to one week before trial. As it is extremely slow in its procedures, it cannot respond as rapidly as the Front Military Court to the political strategy of the Government, which aims at the immediate suppression of all anti-war movements, and political opposition.

Both courts belong to the Department of National Defense; their judges and most of their officials are military men, and they have no connection with the judiciary branch of the civil government. Though the preliminary investigation offices of neither court are equipped with sophisticated torture devices, they are both supplied with clubs and other instruments for the administration of beatings.

III. ACCUSATION AND TORTURE

When he makes an arrest in the forest or out in the rice fields during military operations, the soldier seeks answers to four main questions: Where has the prisoner hidden his weapons? To what unit of the NLF does he belong? Where is the unit located, and where does it store its arms and provisions?

The response to these questions is the same, whether true or not: "I am not a VC," and "I do not know." Then begins the torture. The methods used in such situations are direct and unsophisticated. Prisoners are beaten, slugged with gun butts, strangled with leather belts or barbed wire, their heads plunged under water and held there, the flesh of their bodies sliced or stabbed, while threats are made to cut open their stomachs. This torture may last for hours. If the peasant is a member of the NLF, he can end the torture by one of two alternatives: confession or death. If he is not an NLF member, he has no choice but death. (This explains why the peasants, whether or not they belong to the NLF, must either take flight or hide when the U.S. armies and their allies arrive.) If by chance, the prisoner emerges alive from the torture, he is classed as an NLF member. Weapons found any place in the area of his arrest will likely be identified as his, and the man will be considered part of the last NLF unit to have passed that way, perhaps even its leader.

At the Central Bureau of Investigation, I once met a peasant who had been sent there from the South Vietnamese Army Headquarters. Cao (not, of course, his real name) was a strong, healthy young man, but rather slow, and could hardly read. In his files, which had been compiled with scrupulous care by the Army to note the minutest details of his arrest and supposed mission, he was identified under another name as the leader of a certain NLF battalion. A year later, I met him again at the Chi Hoa prison. He was wearing an identity plate which bore the initials C.T.T.A. (convicted political prisoner), and was about to be exiled to the island of Con Son, where the prison of Polo Condor is located, under a sentence of twenty years of forced labor. Soon after his departure, three political prisoners were brought in my My Tho. All were members of the NLF and had been taken to My Tho for hospitalization after being wounded and captured by the U.S. Army at the battle of Kien Phong. Among them was a man said to be the chief of the very same NLF battalion my friend Cao had been accused of leading, and he bore the same name that Army Headquarters had assigned to Cao. After seeing the warmth and respect with which the other prisoners welcomed him, I was convinced that he was the real battalion leader. What, then, of young Cao? Who was he? Probably he was merely a peasant, victim of vicious torture, the unwitting subject of the maneuvering of South Vietnamese soldiers to gain commendation from their superiors and their American advisors.

Even more feared than the soldiers by the peasants are the *Dan Ve*, or Civil Guards. The true meaning of the words, *Dan Ve*, is "organization of the people for self-protection," but its name cannot disguise the real character of the organization. Since the peasants feel very deeply that they have been displaced by the U.S.-created war machine, most of them refuse categorically to enlist in the *Dan Ve*, which is consequently composed of hoodlums who are attracted by the possibilities for exploitation that it offers. These Civil Guards receive half the salary of South Vietnamese soldiers, plus a supply of arms and grenades. During the day, they tour the villages searching for NLF members, while stealing pigs and poultry, molesting women, etc. At night they return to their quarters to drink and gamble; when they feel bored, they fire guns blindly and indiscriminately. They know very well which house has just sold a pig or some poultry, or which family has just taken a sampan of rice to the city. They force their way into these houses, denouncing their occupants as NLF collaborators. If their victims are not able or quick enough to offer them money, the *Dan Ve* take them to their quarters to be tortured so that evidence of crime can be manufactured.[1] In most cases, peasants who fail to invite the *Dan Ve* to family feasts are denounced as NLF members. One has only to read the Saigon newspapers to know that every day there are stories of murder, rape and torture of innocent victims, as well as arbitrary imprisonment of peasants by the Civil Guards.

The *Dan Ve* operate under the direction of a Province Chief. At every level, they have prisons and torture chambers of their own. After arresting and torturing their prisoners, they send them to the National Police (*Ty-Can Sat Quo Gia*) in the small towns or in the provincial capitals, so that their information may be further exploited.

The village administrators and the local police chiefs carry on the same kind of activities as the *Dan Ve*. People arrested by the National Police receive somewhat lighter tortures, since this is the most open and accessible of all governmental agencies. But every prisoner arrested by the National Police is sent on to the Security Police Bureau (*Cog An*) or to the *Hoat Vu* branch, so that all possible information may be drawn from him.

The typical prisoner who is taken in the cities or larger towns has to undergo three sessions of torture at the office of the police who have arrested him. During the first and worst session, the police attempt to discover the names of others who may have collaborated with him. Even if he is innocent, he may, under torture, find some names to say—perhaps those of friends or relatives. This is one of the reasons there are so many unjust arrests. The second session of torture is for the purpose of extracting information about activities of the enemy. The third session, for the purpose of recording the prisoner's confession, is less harsh than the other two, except when the prisoner tries to deny any parts of his earlier confessions. (If he does not deny what he has said, however, his eventual sentence is likely to be exceedingly severe.) No matter what he says, the record of the interview is really a creation of the interrogator, with all details arranged to illustrate the prisoner's crime. At the bottom of the record, there is always this notation: "After having listened to this recording, or these lines, three times, I acknowledge that everything in them is true, and I, therefore, sign my name together with [that of] the interrogator." The prisoner will be beaten every day until he agrees to sign.

Depending on whether the original arresting officer was in the provinces or in Saigon, the prisoner's record and his "confession" are then turned over to the appropriate provincial or Saigon supervisory bureau. Officials of this bureau have the right to interrogate and torture him again. Sometimes his records are sent to several bureaus, and he is subject to re-examination by as many as these agencies as are interested in him. It may be six months or more before he knows where or by whom he is to be tried, or, even if he is not tried, whether he will be released or detained[2] for a term in prison or whether further exploration of his case has been recommended. If the latter is true, he will have to start with interrogation and torture all over again, from the beginning.

The methods of torture by which the Army Intelligence Bureau, the *Hoat Vul* and the Security Police Bureau extract confessions from there prisoners are generally similar to each other. The officials who apply the tortures have had long experience in their jobs.

IV. METHODS OF TORTURE

Briefly, these are some common torture methods.

The prisoner's hands are placed, palm up, on a table and beaten, fifty times each, with a heavy wooden truncheon. This turns the hands black; the fingers swell up so much that the prisoner cannot hold a bowl of food in his hands for a week or more. Usually, during this process, the table shatters, so that the hands are also full of splinters.

The prisoner is made to lie on his stomach with his knees bent so that his feet are in the air. The soles of the feet are then beaten with heavy truncheons, so that he feels pain in three places—the feet, the knees and the heart, as the blood is forced up in his body.

The prisoner is positioned with his hands tied behind his back in such a way that his chest is taut and protruding. Then his chest is beaten with rubber truncheons. This causes him to spit blood and excrete, and those who endure this torture are usually left with permanent lung damage.

The prisoner is hung by a thin metal wire tied to his big toes and beaten like a punching bag by four men. This is the best known and most common method of torture; it is generally called "the plane ride."

The prisoner is placed inside a barrel with water up to his neck. The barrel is then beaten full force with cloth-covered wooden cudgels, producing great pressure on the body of the prisoner: the heart is shocked severely, the liver and kidneys swell, and the bladder bursts. This torture is the specialty of the Army Intelligence Bureau. The peasants call it *chen ve*—a slang term meaning "beneath the water or mud."

The prisoner is forced to cup his hands, and pins are thrust into the quick of his nails. Some prisoners endure ten pins in their fingers and yet say nothing because they are innocent and have no information to give. A more elaborate development of this torture is for a pin with a feather attached to be thrust in half its length. Then an electric fan is switched on, the air from which makes the feathered pin rotate violently in the wound.

The prisoner has nails driven into his kneecaps or into the bones of his heels or ankles. These are often left there for several days.

The prisoner is laid on a bench, with his hands tied by the wrists and his head tilted back. Very salty or soapy water is then forced into his nose and mouth, until he loses consciousness. Sometimes, when the water enters the lungs, the prisoner may die. They call this kind of torture "taking the submarine."

The prisoner receives an electric shock of twelve volts from a hand-operated generator. Wires from the machine are tied to his thumbs or to his toes and sometimes even to his sex organ if he is a male. If the prisoner is a woman, the wires are tied to the tips of her breasts. Those who have heart trouble may die at the first shock. All torture rooms are equipped with the same kind of generator, a machine that looks like a square pepper grinder.

The prisoner is made to stand naked on top of a small stool with light projectors

---

[1] One of the Civil Guards' favorite methods of torture is to hammer nails into the bones and flesh of their prisoners, and, as a consequence of this, the peasants in their trading and bargaining, are often heard to say, "Isn't this too low a price to pay for the nails of the *Dan Ve?*"

[2] Detention (to be distinguished from a sentence served as the result of a trial) is legal in South Vietnam for periods of up to two years, but may be prolonged indefinitely by a reexamination, or a series of reexaminations) after which the detention period is extended. In 1968, it was found that some political prisoners had already served nearly ten years in Polo Condor prison, and they are still there.

with 200- to 500-watt bulbs all around him, or he may be forced to stand facing the wall with a 500-watt bulb placed about fifteen inches behind his head. He must stand in this same position for many days, except for brief moments when he is allowed to relieve himself or when he is fed. There are prisoners who stand this way for as long as a week before they collapse. Recovery from this ordeal may take several weeks, and a number of its victims break down completely and never recover.

The prisoner is tied firmly to a chair. Above his head is placed a can of ice water which drops upon his head slowly, drop by drop. The effect of this is that after about three hours, the prisoner begins to feel each drop falling upon him as the stroke of a hammer.

There are special forms of torture for female prisoners. For example, bottles or eels may be introduced into their vaginas, causing hemmorrhages which may last for many weeks.

The forms of torture are limited only by the ingenuity of the torturer, but the foregoing are the most usual. They may even become an amusement for professional interrogators. There are those who become so attached to their instruments that they take care of them as knights used to care for their swords. Some interrogators have carpenters make them wooden clubs with strange images and with carved lettering that may say something like this: "If you confess, you may live, if you don't, you shall die." One end of such club is called the "life end," the other, the "death end." The "life end" is small, round and smooth, while the "death end" is bigger and knobbed. One interrogator at the Central Bureau of Investigation owns a club carved in the form of a penis. The club is called "the penis of Heaven," and the owner has been nicknamed *Than Ong Cac Troi*—Mr. Heavenly Penis-Stick. Strangely enough, this man seems happy with his nickname. There is another interrogator who has had all his instruments of torture covered with zinc. Even his handcuffs are covered with zinc, though they originally bore the trademark "Made in U.S.A." and were already considered beautiful.

Many times prisoners are tortured, not so much for interrogation as for punishment, and often for capricious reasons. For example, a prisoner may be punished for having a name like *Cao* (tall) when he is short, or *Tuoi Sang* (bright) when he has dark skin, or a name like *Hung Dung* (hero) when he is small and slender. He may be punished for not being able to laugh or cry at the order of an interrogator. Once I saw a young man being beaten on his head until his scalp split open for not agreeing to drink a cup of tea with live cockroaches in it. He was finally made to eat them. When he was asked whether they were good or not, he responded that they were not, so he was beaten again for his answer. When at last he said that they were good, he was beaten still a third time for lying.

There was another young man who was beaten so severely simply because he had a mustache, that he had to crawl back to his cell, although his guards knew as well as the prisoner that it is impossible to get a razor in prison. The young man was made to stand in front of his tormentors and to pull out his mustache, hair by hair, with his fingers. If by chance he took out two hairs at once, he would be beaten five strokes. During the period in which he removed half his mustache, he received 145 strokes. Next week, he was forced to pull out the other half of the mustache. Altogether he received more than 3,000 strokes during the five months he was in prison—all because of his mustache. Finally, after his parents sold their house and used the money to bribe an official in the Special Police force, the young man was judged innocent and released.

V. PRISONS IN SOUTH VIETNAM

It is difficult to know how many prisons there are in South Vietnam, because—besides the official prisons—there are a multitude of secret prisons and semi-official prisons set up by the Army of the Republic of South Vietnam, by the local army, by the American army, by the intelligence services, secret services, security services, and by the different levels of administration of the local areas.

OFFICIAL PRISONS

The Minister of the Interior, who has jurisdiction over the official prisons, has created an administrative agency called the Department of General Administration of Rehabilitation Centers (*Nha Tong Quan Doc Cac Trung Tam Cai Huan*) to supervise these prisons throughout South Vietnam. Colonel Tran Van Tu heads this agency; its headquarters are located near the Chi Hoa prison at the end of Hoa Hung Street in Saigon.

Under Colonel Tran Van Tu's administration, there are 58 official prisons in 58 provinces and cities, plus five big prisons: Chi Hoa, Tan Hiep, Thu Duc, Phu Quoc and Con Dao (The Con Dao Polo Condor Prison on Con Son Island). There is also another smaller prison located at the Cho Quan hospital to house sick prisoners taken from the five large prisons.

The province chiefs, who are usually lieutenant colonels, supervise the administration of the prisons in the provinces, but do not directly run them. The five big prisons are run by officers in the Army of the Republic of Vietnam.

Four types of personnel are employed to take care of the prisons:

Local army men (*dia phuong quan*): These look after the military aspects of the prison area. Their major responsibility is the security of the prison walls. They concern themselves with the prisoners only in the event of a revolt.

Professional supervisors (*giam thi chuyen nghiep*): Each is in charge of a certain number of prisoners and has the responsibility of seeing that the cell doors are secure. They carry out the orders of the courts with regard to transferrals of prisoners, their release or exile.

Cadres for rehabilitation (*can bo cai huan*): They look after the education of ordinary prisoners, the political indoctrination of political prisoners. They can also make recommendations with regard to extension of a prisoner's detention.

Public security agents (*cong an*): These are sent directly from the Special Police Force (*Khoi Canh Stat Dac Biet*). They specialize in beating and torturing prisoners who have violated prison regulations. Their job is to prevent political action in the prison, and they try to suppress any movements aimed toward improvement of prison conditions.

In these official prisons, there are usually three kinds of inmates: political prisoners, ordinary prisoners, and military prisoners. The majority, however—from sixty to eighty per cent—are political prisoners.

1. The five big prisons

Chi Hoa: Thought of as the prison crossroads of South Vietnam, this institution houses from 6,000 to 8,000 prisoners and is located in Saigon. Prisoners are brought in from the Security Police Headquarters and from all the provinces. Many are in transition to Con Dao or Phu Quoc or they may have come from these prisons after having served a term there. In Chi Hoa they wait either to be released or to be transferred to Tan Hiep or some other prison in the provinces.

The Chi Hoa prison is built in the form of an octagon four stories high with a court in the center. The interior of each of the eight sections is divided into four parts. Each of the eight sections is given the name of a letter in the alphabet from A to H. Attached to side D, there is a square building which has been given the letter I, and which has four stories numbered from 0 to 3. Each story of the octagon itself can be divided into four parts by combining two adjoining sides, A and B to form AB, or A and H to form AH, etc. Each of these combinations has a special use. For example, section AB contains comfortable and spacious quarters and is used for officials imprisoned for corruption or on similar charges, or for rich merchants who have obtained these quarters through bribery. Section 1E of ED is reserved for military officials; Section 3B of BC is especially for prisoners awaiting execution; Section 1H of AH is for lodging the *cong vu* (prisoners who are doing office work), officers and clerks and for medical personnel; Section FG is for political prisoners, except for 1G which is reserved for prisoners who work in the kitchen. Except for OD, which is used as an infirmary, O is reserved for political prisoners who have not been observing the political regulations of the prison; the three stories of section D are composed of very small dark cells reserved for political prisoners who are considered dangerous. On the outside of Section E, there has been built a large one-story building called the Hall of Photography and Pictures (*Phong Dien Anh*), but it is, in reality, the headquarters of the prison's security service.

There are many kinds of torture instruments. From the walls near the floor protrude iron bars to which prisoners are shackled. The room also contains a number of very small closed cells, the size of lockers. In the sections of the octagon that have not been mentioned are two categories of rooms: small, individual rooms for political prisoners, and larger rooms for military and regular prisoners.[3]

Phu Quoc: This prison on Phu Quoc Island near the Cambodian sea border, houses about 30,000 prisoners from fifteen to sixty years old, who have been captured by American or Vietnamese soldiers during military operations, and who have been suspected of being NLF members. They are guarded by a number of ordinary prisoners who have committed acts of piracy or murder, etc. This prison is administered by a lieutenant colonel and other military officers.

Thu Duc: This prison houses from 3,000 to 4,000 prisoners and is located in the Thu Duc district of the Gia Dinh province. It is reserved for female prisoners who were arrested in the Saigon, Cholon or surrounding areas; or for other female prisoners from other provinces who have heavier sentences, or for those who have not been tried. The prison is administered by a commanding officer of the army.

Tan Hiep: This prison also houses from 3,000 to 4,000 prisoners and is located near the Bien Hoa airstrip on the old highway between Bien Hoa and Vung Tau. This is a detention place for political prisoners who have not had a trial and for those prisoners who have already served a prison term but who have not been released. It is now being moved to Vung Tau.

Con Dao Polo Condor (Con Son Island): This prison houses more than 15,000 prisoners. Con Dao is an island with a governmental administration comparable to that of a province. There is a town hall as well as a Provincial Security Service (*Ty Con An*) but there are no civilian residents—only soldiers, civil servants, supervisors and their families, and prisoners. Here there are two big prisons, "Prison House No. 1" and "Prison House No. 2," and another small prison at the Security Service headquarters. Also on

[3] The foregoing description of Chi Hoa can best be understood by visualizing a structure like the one diagrammed below, keeping in mind that the sections are combined differently on different floors.

the island are the dreaded "tiger cages" for important prisoners. Con Dao is administered by a lieutenant colonel, a security chief and a number of other military officers.

2. Official provincial prisons

Each one of the 58 provincial prisons usually houses from 500 to 1,000 prisoners, though there are some that are much larger, like the one in Gia Dinh province, located near the Gia Dinh Town Hall. The Gia Dinh prison holds from 1,500 to 2,500 persons and is used for the temporary confinement of prisoners being sent by the National Police to Tan Hiep and Con Dao. Other important prisons are Ben Tre and My Tho, each with from 1,000 to 1,500 and sometimes 2,000 prisoners; the Nha Trang, which keeps political prisoners who are waiting to be brought before military courts in the southern provinces, and has a capacity of between 2,000 and 3,000; Qui Nhon, Da Nang, and Hoi An, with an average capacity of 1,500. In Hue, there are two large prisons, Thua Phu and Mang Ca Nho. The Thua Phu prison takes military prisoners, political prisoners and ordinary prisoners who have been tried. In the Mang Ca Nho prison (as is also true of the Tan Hiep prison in the south), there are only prisoners being held in detention. Thua Phu and Mang Ca Nho each houses about 2,500 prisoners.

Secret and Semi-Official Prisons: Saigon

The list that follows accounts for only a part of the secret and semi-official prisons in South Vietnam. No one really knows how many there are, as secret prisons are hidden away in private villas, in public buildings, in army barracks, etc. In general, these prisons are administered by the officials who have arrested the people incarcerated in them.

In the general headquarters of the National Police Force (*Tong Nha Canh Sac Quoc Gia*) in Saigon, there are two prisons, each with a capacity of from 2,000 to 3,000 prisoners. One is located within the limits of the Central Bureau of Investigation and is called *Cau Luu Xa* (detention center); it has three rows of cells for political prisoners who are being investigated. About two hundreds meters from *Cau Luu Xa*, still within the grounds of the National Police Force Headquarters, there is a big L-shaped prison, two stories high, with six large rooms and more than ten cells. Among the prisoners here, only about ten percent are criminals; the rest are political prisoners who have been sent from other prisons for interrogation by the Central Bureau of Investigation, or who have fully served their sentences or detention terms, but are still held for indefinite terms in prison.

The *Hoat Vu* has eight secret prisons in villas scattered throughout the Saigon-Cholon-Gia Dinh area, with perhaps 100 to 200 prisoners held in each. (See reference in Part I). The District Police Headquarters in Saigon operates nine prisons, each housing from 50 to 100 prisoners. There is one prison at Official Police Headquarters with a capacity from 50 to 100, and the Bureau of Military Security (*Cuc An Ninh Quan Doi*) operates a prison near the Saigon Zoo in District 1, that can accommodate between 300 and 600 prisoners. The Secret Service of the Army Headquarters own a prison housing 300 to 500, located near the Tan Son Nhut Airport, and the Central Intelligence Service also has a prison located at Ben Bach Dang that holds from 200 to 500. (This number was furnished by a political prisoner who stayed in the Central Intelligence Service prison for about six months. He said that the figures may not be accurate, since the activities of the Central Intelligence Service are kept very secret.)

Secret and Semi-Official Prisons: The Provinces

The National Police, the Special Police, the *Hoat Vu*, the Military Security Forces, and the Local Army Forces each have one prison in the provinces, and there is one in each military barracks of the American and Allied Forces. Every one of these prisons houses an average of thirty to fifty prisoners.

In each district of every province there is one prison that holds the combined prisoners of the Security District Branch of the Special Police, the *Dan Ve*, the Cadres of the Provincial Government Rural Reconstruction Program, and those arrested by the district chief. Here and there in every district, wherever there is a barracks, no matter now big or small it is, there is always a small room that serves as a prison for the captives of the *Dan Ve* and of the village councils.

Finally, in each barracks in the district, there are one or more rooms reserved for the "night prisoners." These are peasants who have not violated the law but who are considered potential violators. They are in prison only from 6:00 p.m. to 8:00 a.m. and are allowed to go home during the day.

The number of prisoners held in these provincial jails varies greatly, of course, depending on the political and military situation and on the mood of those who are in power.

VI. INSIDE THE PRISONS

Though conditions differ somewhat from one prison to another, they are bad enough in all to weaken or destroy the physical and mental health of most prisoners. Torture, filth, overcrowding, malnutrition—these are the common lot of the victims of South Vietnamese justice.

Chi Hoa

Chi Hoa in Saigon is considered the best of the prisons, and is, in fact, used as a showcase to obscure the horrors common to the rest of the prisons in South Vietnam, although visitors who are aware of its showcase status could scarcely feel sanguine about conditions elsewhere.

The quarters in Chi Hoa vary in quality from one section to another (See Part V), but the communal cells which house most of the political prisoners are occupied by sixty to eighty persons—thus providing a space of about fifty square decimeters (or approximately 5 square feet) for each prisoner. There is enough air to breathe in these rooms because one of the four walls in each is barred.

Prisoners in Chi Hoa receive two full meals each day, plus soup for breakfast. Each prisoner is allowed one and one-half kilos of cooked rice, 200 grams of vegetables, seventy grams of meat or fish, and twenty grams of sugar per day. These provisions are bought by a contractor who receives a commission and hands on the goods to regular prisoners (i.e., those convicted of crimes such as robbery) in charge of the prison kitchen. There are deals between the contractor and the prison administrators to take some of the food allowance for themselves, so that the prisoners rarely receive their just quota. The above amounts are the official quotas per prisoner, but not what they actually receive. Although rice is the staple diet of the prisoners, the quality of rice they are given is very low. It is of coarse grade and contains grit.

Saigon is extremely hot, especially in the summer, which lasts eight months of the year. The water supply in the prison is always low. At each corner of the octagon is a tank of water measuring about five cubic meters. This water must provide for all the needs of the 900 to 1,000 prisoners in the sixteen communal cells. Each receives a maximum of about five liters (1.8 gals) of water a day which must serve for cooking, drinking, bathing, washing, etc.

All political prisoners are required to pledge allegiance to the flag and to practice shouting patriotic slogans. At least five times a week, they must receive prison administrators or visitors to the prison, greeting them with these slogans. They are forbidden to discuss politics or any news coming from the outside, and they may not refer to Chi Hoa as a prison. They must call it a rehabilitation center. After curfew at seven or eight o'clock in the evening, they are not allowed to sit or stand or talk to one another but must lie down and go to sleep. In the non-curfew hours, they are not allowed to lie down. Those who violate any of these rules are sent into the Hall of Photography and Pictures (*Phong Dien Anh*), where they are tied up and beaten. Sometimes they are placed in solitary confinement for days on end in a dark room filled with mosquitoes. A considerable number of political prisoners refuse from the beginning to obey any of the regulations. After a week of punishment in the Hall of Photography and Pictures, these prisoners are shut up in individual windowless cells in the OB and OC sections of the octagon, and their diet is reduced to plain rice and salt. Every two weeks they are brought back to the Hall of Photography and Pictures for more punishment.

Prisoners who have not been tried may receive visitors and supplies only with the permission of the military court, and those who have violated prison rules are allowed no visitors or supplies. Usually prisoners may see their families and receive gifts from them once a month and, after they are sentenced, the visits may be increased to twice a month with the permission of the prison administration, but prisoners and their visitors must always sit far apart. They may not touch each other, and the visits last for only five minutes.

Censorship of mail is very strict. Often prisoners receive letters with everything deleted but the salutation and signature. Neither incoming nor outgoing letters may mention any personal problems; incoming letters must not be written on colored stationery, and may not be typed. All papers, magazines and books, except for small dictionaries, are forbidden.

There is a hospital at Chi Hoa run by a doctor, but his priority patients are military officers and administrative personnel and their families. Part of his job is to perform quick autopsies on dead prisoners and to sign their death certificates. Invariably he finds that any deaths in the prison occur as the result of disease, whereas, in fact, many result from the treatment inflicted in the Hall of Photography and Pictures. The hospital is in the ED section of the octagon, but a number of prisoners who suffer from leprosy, tuberculosis or mental illnesses are sent to a special prison in the Cho Quan hospital in Saigon.

Often during the night, one may hear tragic and desperate voices crying for help. "Sir! Sir!" someone may cry. "There is a man vomiting blood in room 2F!" or "Sir! Sir! There is someone in room OB who is dying!" Generally no one comes to help, although sometimes a nurse appears with a little powdered quinine. (This is used as a treatment for every disease and ailment, from colds and stomach ache to hemorrhages.) As often as not the prisoner ends his cry with the desperate shout, "That's that! The man has just died in room OB. Do you hear, Sir?"

Con Dao, Polo Condor

Often referred to as the Island of Con Son, Con Dao is called "hell" by persons confined there. Here are to be found the notorious "tiger cages," and it is here that murder by starvation is most commonly used as a punishment.

Many prisoners who have been sentenced to hard labor are sent to Con Dao, and many of these are put to work at the centers of Lo Voi or So Cui. At Lo Voi prisoners work in quarries, breaking and carrying stones for the construction of prison units, road repair, etc., and some are made to wade deep into the sea to gather shells for the lime kiln.

At So Cui, the prisoners must climb long distances over high mountains to gather half a cubic meter of wood each day. The forests

on the mountains have been exploited for years; trees are scarce, and it is forbidden to cut many of those that remain. At the end of the day, if it has not been possible to find the allotted amount of wood, the prisoners are beaten so severely that they must often crawl back to their cells. Yet the next day they are expected to go back to the mountains for more wood. What they gather is used to make furniture for the mainland homes of military officers and supervisors of the prison.

Three months after their arrival at Con Dao, prisoners who have a trade are selected to go to work at So Moc, the carpentry center, So Chan Nuoi, the livestock center, So Ray, the agricultural center, or So Luoi, the fishing center. The best produce from these centers is kept for the Province Chief, a lieutenant colonel, who is also the director of the rehabilitation center of the prison. Military officials are given the next best produce, and the rest is for supervisors and soldiers.

As in all other prisons, the prisoner's food in Con Dao is provided by a dealer and there is always an agreement between him and the administrators to keep some of the money that is supposed to be spent on food. Once a month, a supply ship comes from the mainland to the island, bringing rice of very low quality, dried fish, so poor and rotten that it would be used only as fertilizer outside prison, and some pigs and a number of cows. Military officials, supervisors, and soldiers are not anxious to share the rice or the fish, but are very willing to take the larger share of the pigs and the cows, leaving each prisoner with an average of about 10 grams of pork and beef per month.[4]

Because of the shortage of food, prisoners sent to work at So Ray and So Luoi, the agricultural and fishing centers, must steal whatever fish and vegetables they can, though if caught, they are sent to the "tiger cages." These tiger cages are housed in two long cement structures divided into thirty units each. The cages are too small for a man to lie full-length inside them; the barred top of each cage is so low that it can be reached with the hand. Over the bars is a catwalk for the guards, and over all is a roof or awning made of corrugated metal.

When a prisoner is consigned to a period of punishment in one of the tiger cages, his clothing is first removed and he is beaten into a state of unconsciousness. Then he is thrown into the cage. While he is there, he is not allowed to take a shower or even wash himself; his cage is his bathroom; his only food is bowls of rice lowered into the cage from above; the metal roof above the cage makes it very hot during the day and very cold at night; supervisors may suddenly pour down water from above or urinate onto the head of the prisoner. Sometimes they throw rocks or filthy excremental liquids. Their aim is to keep the prisoner in a state of constant fear, pain and despair.

Once or twice a week, guards and supervisors bring ordinary prisoners (those convicted for criminal offenses), armed with sticks to administer beatings to those within the cages. After the beatings, more water is poured down upon their heads. When I was at Chi Hoa, a supervisor from Con Dao told me that after having seen the liquid swilling around the cages, a mixture of water, blood, excrement and white rice vomited by prisoners after a beating, he was unable to eat for three days.

[4] Prisoners do their own cooking and combine the small portions of meat that come to them infrequently with rice in a common stew. Only certain prisoners who were formerly high grade civil servants, military officers, businessmen, or rich politicians are granted higher living standards. They manage this by bribing the administration or by using family influence within the Government circle.

Some prisoners are kept caged for several months; only about thirty percent of these survive.

Because there are not enough tiger cages for all the prisoners the administration wants to punish, hundreds of others are locked in dark cells with only a few air holes. They are not permitted to wash themselves, have no toilet facilities, and are fed only unsalted white rice, and their confinement may last for months. After the first twenty days, one out of every two hundred prisoners dies; after a month, two die, and so it goes on up to the point where from five to ten prisoners die every day. Their corpses are removed from the cells once every three days.

As time goes on, the prisoners' bodies darken gradually from the feet upward and there is no feeling in the parts of the body that have gone dark. Death is approaching slowly, minute by minute, and the prisoners are very well aware of this. When the death rate reaches fifty percent, the administrators open the cells and stop the punishment. Prisoners from Con Dao have told me that when the cell doors open, the survivors try desperately to crawl into the yard and eat the grass. These blades of grass are sufficient to postpone their deaths and to keep them alive for the next wave of punishment.

Tan Hiep

The number of political prisoners at Tan Hiep is increasing rapidly, the majority of them being sent there on suspicion. As the Government has not found enough evidence against them to bring them before a military court, they are being held in detention. Tan Hiep is the most crowded of the official prisons. In a large prison room, each prisoner may have a sleeping space of only 20 centimeters by 2 meters (about 8" x 80"). Prisoners are not allowed to lie facing each other because the administration fears any communication between political prisoners, even if it is only by movement of the lips or eyes. That is why one sees hundreds of prisoners all lying on the cement floor, facing the same direction. They can change the direction only with the permission of the night guard whom they elect themselves and who is approved by the prison administration.

During the night if they wish to go to the lavatory, they must raise their hands. The prisoner may have to wait for hours before he is allowed to go, since there is only one WC for each prison room and that is occupied night and day.

The list of regulations in this prison is very long, and the prisoners must learn it by heart during the first five days after their arrival. Those who do not resign themselves to the iron regulations here are punished by regular beatings before being sent to the tiger cages or the confinement cells of Con Dao.

Cau Luu Xa (The Detention Center) and the Prison of the General Headquarters

In both prisons, men are packed like sardines into the cells. There are rooms in the detention center where prisoners have to be divided into three groups, so that everyone can have a chance to sleep for a few hours during the night; one group sleeps lying down, one group sleeps sitting down, and one group clings to the iron bars to make room for the other two groups.

At the detention center, each prisoner is allowed to wash once a day, but at the Prison of the General Headquarters, there is not so much water. Every three days, each prisoner is given two liters (about two quarts) of water for washing clothes and bathing. Because of the lack of water, prisoners must use chemical toilets located inside the cell.

Many of the prisoners here have skin diseases and coughs. Every night there are prisoners who suffocate and lose consciousness, and there are a considerable number who contract tuberculosis.

The Prisons of the Hoat Vu

Because of the need for secrecy, the *Hoat Vu* cannot set up well-organized prisons, and must put prisoners into rooms wherever they can find them, often into servants' quarters in private villas. To prevent escape, they chain prisoners to iron bars, sometimes five or ten prisoners to each bar. Strong prisoners have their hands tied as well.

Most of those arrested and taken to the *Hoat Vu* jails consider suicide, for they know that they have no way to escape the tortures which await them. Even if they are innocent, even if they resist making confessions, even if they confess all or make false confessions—whatever they do, they will be submitted to torture and punishment.

A prisoner who attempts suicide or who is suspected of making a suicide attempt is punished by being bound hand and foot and by having a wooden cylinder placed between his jaws and tied with wires behind his head. He is fed on soup with the cylinder still in his mouth, and is sometimes left in this state for a week. Prisoners in this way cannot close their mouths for twenty-fours after the torture is ended and cannot chew food for at least a week.

The Cho Quan Hospital Prison

Cho Quan is a hospital for the treatment of mental illnesses and dangerous contagious diseases. In the compound of this hospital is a prison housing about 600 very ill prisoners. Both ordinary criminal prisoners and political prisoners are sent here from the five big prisons and the *Hoat Vu* and the Police Services in the Saigon-Cholon-Gia Dinh area. All these diseases are common: leprosy, tuberculosis, venereal disease, mental illness. Cho Quan is considered to be the dirtiest prison in South Vietnam. At least two or three prisoners die daily, mostly from tuberculosis. Each year several prisoners die of injuries received after they have attempted to climb into a very slippery sanitary toilet. Insane prisoners sometimes go beserk and murder others.

The principal medicines in use here are quinine, sulfa, phenobarbital, and camphor oil. They are used for treating all diseases.

Who are the political prisoners?

The easiest and best way to learn of the social position, political affiliation and religious tendencies of political prisoners in South Vietnam is to read the daily report made out by the administration of each prison. For example, the September 15, 1968, report[5] from the Chi Hoa Prison reads as follows:

Religious affiliation	Political prisoners	Ordinary prisoners	Military prisoners	Total
Catholic	163	29	24	216
Buddhist	1,315	42	51	1,408
Protestant	32	5	11	48
Cao Dai	31	1	4	36
Hao Hao	42	3	7	52
No religion	72	10	28	110
Total	1,665	90	125	1,870

According to the report, if one examines only the case of political prisoners one will see:

$$\text{Buddhists} = \frac{1315}{1655} \quad 79\%$$

$$\text{Christians} = \frac{163+32}{1655} \quad 12\%$$

Followers of other religions or nonreligious prisoners=9%

Apart from this report, there are 3 other kinds of reports: the number of prisoners per room (to calculate the food supply); the

[5] This report is chalked on the walls of the offices of 6 sections in the Chi Hoa prisons. The numbers are changed every day at 9 a.m.

number of prisoners accused of being communists; the social position of political prisoners.

The last two reports are secret, and are sent to *Van Phong Kiem Tra*, the head office of the Hall of Pictures and Photographs. They are also incorporated in the general daily report that is sent by the Chi Hoa prison administration to the General Director of Rehabilitation Centers. The two items that are most important in the report are the numbers of communists and peasants. When I took note of the report on section FG at Chi Hoa prison, the number of communists were 50 out of 1655 political prisoners. That is about 3.3% of the prisoners. The number of peasants was listed at 1062 (about 64%). What will people think if they look at the percentages in the report? Twelve per cent of the prisoners are Catholic, 79% are Buddhist, 3.3% are communists and 64% are peasants?

VII. AFTER SERVING THE TERM

Some years ago, prison administrators used to attempt to persuade prisoners to obey regulations by promising them shortened terms. These promises were never kept and administrators have stopped making them. Now they promise that if the prisoner behaves himself, he will be released after he has fully served his term.

This promise is meaningful, because of late years, most prisoners are not released at the end of their terms, but detained in prison for another six months to a year. Those in unofficial prisons are often kept indefinitely. Political prisoners with families in Saigon are released after serving their sentences, only if they produce a written guarantee signed by three relatives certifying that they will take responsibility for the future political actions of the prisoner.

Upon his release, the prisoner receives only a temporary resident card issued by the Chief of the Special Police. He must present himself once a week or once a fortnight thereafter to the police headquarters of his district and also to the Central Bureau of Investigation. Each time he goes, he must relate in minutest detail all of his activities, what he has done, whom he has seen and so on, and each time, he must take with him some clothes, a towel and a toothbrush in case he is rearrested. Where he goes, he is followed by an Active Intelligence Service agent, who sometimes comes directly into his house and demands a monthly payment for "protection."

The former prisoner now lives in a permanent state of anxiety, feeling that he has no real freedom, not daring to visit intimate friends because, if he did, he would have to mention their names at the Bureau of Investigation. Eventually he is either rearrested or finds himself obliged to escape the city and seek refuge with the NLF, as he feels that he cannot return to the terror of the torture room and the prison.

Mr. HAWKINS. I would like to introduce also a statement from the Fellowship of Reconciliation, which also conducted an investigation of prison conditions, in a letter to me under date of July 14.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

The letter is as follows:

THE FELLOWSHIP OF RECONCILIATION,
Nyack, N.Y., July 14, 1970.

Representative AUGUSTUS F. HAWKINS,
House Office Building,
Washington, D.C.

DEAR MR. HAWKINS: I am pleased to see your concern about the situation of political prisoners held in the "tiger cages" in the prison on Con Son Island, and particularly to see that moves are being made to extend the investigation to other of South Vietnamese prisons.

Cruelty and torture in prison are bad enough in themselves, but as the *Washington Star* observed the other day, what is particularly important here is who are held and why. Non-Communist opponents of the present regime in Saigon are the principal victims not only in Con Son, but in the nine "interrogation centers" in Saigon alone, plus others scattered through the country, at which systematic torture for the purpose of intimidation is the rule. All this reflects the fact that there is a very formidable peace movement in South Vietnam, largely nonviolent, oriented to the Buddhist Church and the student movement but including representatives of all segments of the society, which is totally opposed to the Thieu government and to continuation of the war.

I am taking the liberty of sending you a copy of my recent book, *Saigon, U.S.A.*, in which I have tried to assemble the story and have included considerable documentation, including the full report of last year's U.S. Study Team on Religious and Political Freedom in Vietnam and excerpts from "Imprisonment and Torture in South Vietnam" by a noted South Vietnamese journalist who spent four years in that country's prisons.

Another "investigation," whether by the South Vietnamese or the United States government, will simply be a means of mollifying public opinion. No real accomplishment will be possible in connection with the mistreatment of tens of thousands of political prisoners in that country until it is openly recognized that their mistreatment is part of the calculated policy by which the Thieu government stays in power, and which is connived in, supported and financed by the United States.

Sincerely yours,

ALFRED HASSLER.

Mr. HAWKINS. I also introduce the statement by our colleague (Mr. ANDERSON) appearing in the RECORD of July 16, in which he enters a letter from a Dr. Marjorie Nelson, a competent medical authority. He describes also the filthy conditions, the neglect, and the fact that children are sometimes incarcerated along with their mothers with some of the prisoners in this compound.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

The statement and letter are as follows:

QUANG NGAI PRISON

(By Hon. WILLIAM R. ANDERSON)

Mr. Speaker, under previous unanimous consent request, I submit for he RECORD a letter I received from Dr. Marjorie Nelson of Connecticut. I have discussed the letter at some length with Dr. Nelson by telephone. It is a most revealing letter, giving further explicit evidence of the outrageous treatment of political prisoners by the Saigon government. Dr. Nelson has advised me that the children of whom she speaks generally range from infants to youngsters of 10, crowded with their mother into 15-by-15 feet cells—as many as 50 in a cell. Are these children "Communist criminals"?

Dr. Nelson proved to my satisfaction that her reporting is objective by pointing out in our telephone conversation that the head of Quang Ngai Prison was a very humane, understanding, and helpful man, concerned about the conditions in the prison under his direction, but unable to alleviate conditions because of the lack of physical resources available to him.

JULY 8, 1970.

Hon. WILLIAM R. ANDERSON,
House Office Building,
Washington, D.C.

DEAR MR. ANDERSON: I have read with more than casual interest the accounts in the *New York Times*, July 7, and July 8, of your visit to Con Son Island prison in the first week of July. I worked as a doctor with the American Friends Service Committee Project in Quang Ngai from October, 1967, to Otcober 1969, as part of my work there, I made regular vists once or twice a week to the Quang Ngai civilian prison where I examined and treated prisoners. I would like to share my experiences with you as I feel it is directly related to your own brief visit.

The prison in Quang Ngai was built by the French to house approximately 500 prisoners. During the time I worked there, the prison population ranged from 800 to 1300—usually between 150–300 of them women. Many of these women had their children with them—40–120 children. Crowding was compounded by the fact that in August, 1967, the NLF troops attacked and overran the prison (releasing some 1000 prisoners) and damaged several buildings. At least two of these large buildings were still partially or completely roofless in the fall of 1969. I quote from a letter I sent to the American Friends Service Committee in Philadelphia in February, 1969, shortly after I had returned from a furlough to my work in Quang Ngai:

"In addition to the room I described to you in [a previous letter], I found the following: two small square rooms approximately 15x15 at most with only small slit windows at the top of three walls held respectively 50 and 40 women and children. No beds provided in either one. A large room approximately 45x15 with two-tiered wooden bunks filling the room leaving an aisle between housed 200 women. They sleep on the floor as well as on both tiers. Another room, slightly smaller, houses 75 women and 3 children, but contains only a couple tables and no beds. Two other small rooms, perhaps 12x30 housed a total of 74 women—also with no beds. These latter two rooms have now been emptied and another large building without a roof is now being occupied by an undetermined no. of women. Large tarpaulin tents have been spread over the rafters to provide a roof of sorts.

"My first visit after I returned, I found widespread colds and diarrhea among the patients, especially the children, which is to be expected when a lot of people get thrown together like this. The dispensary was completely out of all cough medicine and diarrhea preparations and had been for several days."

We were invited by the Prison Chief in the summer of 1968 to make regular medical visits to the prison because he had many sick prisoners. Successive Prison Chiefs were very helpful to us and eager for us to continue our work. We were given free access to the prison by day and cooperation from the prison Chief on several occasions when our work required it. We were informed both by prison officials and by prisoners that 80% or more of the inmates were "political prisoners." Personal conversations with prisoners seemed to indicate that in many cases their "political crime" was improper or incomplete papers, presence in an "unauthorized place," or, in the case of the women, inability to account for the whereabouts of their husbands who were therefore assumed to be NLF guerrillas. In addition, many prisoners paid bribes to gain their release and on several occasions the assertion was made to me that they had been arrested for the sole purpose of extorting money from them.

We were told by officials that this was a minimum security prison and no one was supposed to stay who had a sentence of more than four to six months. However, prisoners

never met their accusers (except in the Province Interrogation Center), never had a trial, and never knew the length of their sentences. I talked with several who were in for as long as a year.

It is my understanding that regulations provide for a nurse to be assigned to the province prison. However, the nurse assigned to Quang Ngai prison was an opium addict and I only met him in the dispensary once in my 13 months there. Prisoners themselves manned the dispensary using whatever knowledge had been passed on to them about administration of drugs and treatment of disease. In addition to crowding, there was neither running water nor latrines in any of the rooms where prisoners were confined from 6:00 p.m. to 6:00 a.m. and food and water were both provided in unsanitary if not contaminated condition.

In addition to treating the common ailments and the infectious diseases and malnutrition occasioned by these conditions, I also regularly examined and treated prisoners who had been tortured. This seems not to have occurred in the prison itself but in the Province Interrogation Center. I saw dozens of patients with bruises of varying severity. I also examined patients who had coughed up, vomited, or urinated blood after being beaten about the chest, back, and stomach. On at least two occasions I was able to document by x-rays fractures of bones following beatings. Prisoners also told me of being tortured by electricity with wires attached to ears, nipples, and genitalia; by being forced to drink concoctions containing powdered lime and other noxious substances, and by being tied up and suspended by ropes often upside down from the rafters for hours. On at least three occasions, patients seriously ill or injured and under my care were removed to the Province Interrogation Center without my knowledge for further interrogation.

In April, 1969, another team member and I presented this situation to the American Province Senior Advisor asking his advice as to how to seek to stop these practices. He shared our distress at this and promised to speak to the man in charge of the Province Interrogation Center—a project started by the U.S. to teach "enlightened intelligence and interrogation procedures." In a subsequent visit he informed us that the Province Interrogation Center was no longer under U.S. control but had been turned over to the Vietnamese and therefore he would encourage us to go directly to Colonel Khein, the Province Chief. On April 20, 1969, we spent approximately thirty-five minutes with Colonel Khein and I presented my experience and we expressed our conviction that this was self-defeating on political grounds as well as unacceptable on humanitarian grounds. He essentially acknowledged that some beating did take place and that he was aware of it; that some prisoners were "very hard" and refuse to talk and in such situations physical force was necessary and was employed to get information. However, he said, "there are limits." We suggested that he might need to intervene with the Province Interrogation Center authorities to see that this was adhered to, but my impression was that he was not willing or not able to substantially alter the practices.

In August, 1969, in my prenatal clinic in the prison, I examined a woman, seven months pregnant, who had been badly beaten the previous week. This was the worst example of the beatings which I continued to see so I again called on the American Province Senior Advisor and brought this latest case to his attention. He promised to raise it with the Province Chief again. He went on to say, due to a recent directive from Saigon to free prisoners who guilt was only suspected and the general pressure about the treatment of prisoners, that quite a few prisoners had been released (the census at that time was down slightly—about 1100). He also said that the Americans had been sending fewer people into the interrogation center. He seemed to imply that the Americans were largely responsible for sending detainees to the Province Interrogation Center although they did not control the center itself. There were very few going through it then compared to the one hundred per month previously, he stated. He said, "That means at least fewer people will be getting 'the treatment' and supposedly only those people most likely to be 'productive'." I replied that in my opinion even if that woman, for example, was a known NLF cadre, I didn't consider it acceptable to beat a pregnant woman.

Since returning to the United States I have shared my experience with a few Senators and Congressmen or their aides. My concern and that of the American Friends Service Committee has always been to alleviate the suffering of these prisoners. I urge you to do whatever you can to end these inhuman practices and I am ready to offer you any further help that I can.

Sincerely,

MARJORIE NELSON, M.D.

Mr. HAWKINS. I certainly want to indicate that I have tried to correct just a few of the mistakes of the gentleman from Illinois. There are many others. But I would not want to indulge further on the time of this body. I simply would like to say that we went to Vietnam as part of a select committee, that all of the members of this committee had great respect for each other. We differed politically, we differed ideologically, but we never questioned each other's integrity.

I include the following items:

[From the CONGRESSIONAL RECORD, June 8, 1970]

SAIGON TORTURES THOSE WHO SEEK PEACE

(By Hon. DONALD M. FRASER)

Mr. Speaker, on May 30, the New York Times noted the occupation of the Veteran's Ministry in Saigon by 200 disabled South Vietnamese veterans. On the same day, thousands of students and Buddhist monks demonstrated at the state funeral for Phan Khac Suu, former South Vietnamese Chief of State. The Thieu-Ky government responded to the veteran's sit-in and the student demonstration with tear gas and clubs.

It has been brought to my attention, Mr. Speaker, that students, disabled war veterans, Buddhist monks and laymen have been holding demonstrations in Saigon almost every day since mid-April. In addition to tear gas and clubs, many demonstrators have also been subjected to torture and imprisonment.

These demonstrations against the Thieu-Ky government and the continuation of the Indochina war have not been adequately reported in the American press.

The following statement from the Fellowship of Reconciliation and an article by Don Luce, former head of International Voluntary Services by Vietnam and coauthor of "Vietnam: The Unheard Voices," describe the brutal and repressive response of the South Vietnamese Government to these sincere demands for reform and peace.

I believe every Member of Congress should be aware of the repressive nature of the Thieu-Ky regime which claims to be our ally in the search for peace.

STUDENT PROTESTS IN SOUTH VIETNAM

While the attention of the American public has been riveted on the protests and demonstrations of American students and other anti-war forces, a sequence of equally significant and far more hazardous actions in South Vietnam has gone almost entirely unreported and unnoticed.

For more than two months, protests against the war and the government of Generals Thieu, Ky and Khiem have occurred almost daily under the leadership of students, disabled war veterans, Buddhist monks and laymen, and Catholic priests, and have led to the beating, imprisonment and torture of hundreds, perhaps thousands, of their participants.

The Thieu government is facing a crisis comparable to that preceding the fall of President Ngo Dinh in 1963, and has reacted with predictably ferocious repression. Yet the demonstrations continue. When police surrounded the Cambodian embassy in Saigon that had been occupied by 400 students in protest against the Cambodian adventures, and refused to allow other students to pass through to bring them food, members of the House of Representatives carried the food to the students.

Important Saigon newspapers, including *tin sang, Dong nai* and *Duoc Nha Nam* have challenged the omnipresent censorship by carrying stories of these actions, with photographs, on their front pages. It is reported that, as a consequence, 40 of the last 48 issues of *tin sang* alone have been confiscated by the police.

All universities and high schools have been closed; arrests have multiplied, and the most brutal forms of torture inflicted on the protesting students. Repression has been characteristic of the Thieu government since its formation, but according to eyewitnesses, is worse now than ever.

Yet almost none of this has been reported in the American press. The U.S. embassy in Saigon refused even to see a delegation of American relief workers protesting American collusion in the repression.

We align ourselves with these students, and will seek every way possible to identify with them more directly. We call on the peace movement in the United States, and particularly the students, to find means to publicize and reinforce these actions by their Vietnamese counterparts.

We remonstrate with the American press for its failure to report and interpret these events to their American readers. Nothing so clearly reveals the nature of this war as the fact that the Thieu government is so strenuously opposed by these non-NLF, non-Communist people in their own country.

We plead with the officials of our own government, at every level, to withdraw support from this tyrannical puppet we have created, and take the burden of the war off the backs of the Vietnamese people.

TORTURE IN SAIGON

(By Don Luce)

It is now known beyond any doubt that the Saigon police are subjecting Vietnamese students to brutal torture in an attempt to stifle student dissent against the war and the government. On April 21, ten of these young people were released. Their condition was pitiable but not nearly as grave as that of some whom they left behind in prison.

Do Huu But lies in semi-shock in a laboratory at the College of Agriculture which has been converted into a dispensary for the ten released prisoners. His fingernails are blackened from having pins pushed underneath. He is nearly deaf from having had soapy water forced into his ears, after which they were beaten. Miss Que Huong, a philosophy teacher at Doan Thi Diem high school in Can Tho, forces a small smile when visitors come. Her knees are swollen three times their normal size, and black and blue welts cover her thin arms. She was completely undressed in front of several policemen who watched and drank whisky while she was beaten. Her fiance, Nguyen Ngoc Phong, was brought into the room to watch in an attempt to get him to sign confession papers.

After five weeks in jail, Luu Hoang Thao,

deputy chairman of the Van Hanh University student association, is one of the few students in good enough physical condition to give an extended interview:

"For the first three days, the police beat me continuously," he said. "They didn't ask me any questions or to sign anything. They just beat my knee caps and neck with billy clubs, then hit me with chair legs until I was unconscious. When I regained consciousness, they beat me again. Finally, after three days, they asked me to sign a paper that they had already written. I wouldn't sign it, so they beat me some more." Thao said he doesn't know why he was arrested or why he was released. Some observers believe that the government released the tortured students to frighten other students who have been demonstrating against government repression in large numbers in recent weeks. In any event, the torture of Luu Hoang Thao continued day after day, increasing in ferocity and variety. The details of what they did to him are sickening.

"Finally," he said, "they injected medicine into me and took my hand and signed a paper. It said that I had had liaison with the Communists."

Dr. Nguyen Dinh Mai, who is attending the ten students, said he did not yet know the full extent of their injuries.

"When they regain their strength, we will take them to one of the large hospitals for x-rays and thorough medical examinations," he said.

But the students are concerned about the many others who are still in jail. The condition of three of them, who were reported "too ill" to appear with other students for trial in Saigon April 20, was described by the newspaper *Tin Sang* (Morning News) on April 11. One lay near death from torture suffered for refusing to sign a statement that police had found weapons and explosives in his house. Two others were in grave condition with paralyzed legs in both cases and other serious injuries. While refusing to comment on its accuracy, a government spokesman, Nguyen Ngoc Huyen, called the article "objectionable" and had the paper confiscated—for the ninth time in less than a month.

Article 7 of the Constitution of South Vietnam specifically prohibits the use of torture or of confessions obtained by torture, threat or force. Yet signed statements obtained in this way are used extensively in the trials of political prisoners. In the case of the students, the government denies that it has tortured or manhandled them but will not comment on their obvious disfigurement when they appear in court.

The gravity of the situation has led several leading Vietnamese to come to the aid of the students. Father Nguyen Huy Lich, a respected Dominican priest, has investigated reports of torture and obtained substantiation from nurses and doctors who have the job of treating prisoners during the day in preparation for another night of torture. On March 31, Father Lich and seven other priests called upon the Saigon government to provide humane treatment of its prisoners. Others, like former Minister Vu Van Man, Vietnam's foremost legal authority, have joined the struggle against torture in the prisons.

On April 21, Leo Dorsey, a volunteer social worker with the Unitarian Universalist Committee in Vietnam, went to the U.S. Embassy to request a private interview with Ambassador Ellsworth Bunker for himself and a small group of American volunteers concerned with the fact that U.S. equipment is supporting the Saigon government's repression of its people. The tear gas grenades the police use, for example, are made by Federal Laboratories Inc. in Saltsburg, Pa., and are part of the U.S. assistance program to Vietnam. Mr. Dorsey's group was unable to meet with the ambassador or his deputy.

[From the Christian Science Monitor, July 13, 1970]

VIET STUDENT TELLS OF 11 MONTHS IN TIGER CAGE AND TORTURE

(By Daniel Southerland)

SAIGON.—Cao Nguyen Loi is a thin, intense university student who recently spent 11 months in one of the so-called tiger cages at the prison island of Con Son.

He says he spent all but eight days of that time—seven of those days were holidays and one the day before he was released—shackled to the prison floor, with very little to eat or drink. He says he was beaten more times than he can count.

But the experience has not broken his spirit. If anything, it has straightened the 27-year-old student's opposition to the war and the American involvement in South Vietnam.

Released just six weeks ago, Mr. Loi looked healthy, but he complains of stomach and chest trouble resulting from his treatment.

PRISON RECRUITING GROUNDS

If only half of what Mr. Loi says about treatment at Con Son Island is true, and much of it rings true, then one can easily understand why the crowded prisons of South Vietnam have always been considered excellent recruiting centers for the Viet Cong.

In the French period, Con Son was known by some of its "graduates" as the "University of Ho Chi Minh."

Located in the South China Sea about 140 miles southeast of Saigon, Con Son is South Vietnam's largest civilian prison, with nearly 10,000 prisoners. About 400 of the prisoners are kept in the maximum-security block, the "tiger cages," where Mr. Loi spent most of his time on the island.

After having earlier denied the existence of the "tiger cages," the Saigon government now has issued a statement saying they are "separate quarters" for the disciplining of prisoners who "carried out instigations against the internal regulations" at Con Son.

Mr. Loi said he was shackled to an iron bar, along with four other prisoners, in a stone cell about 4½ feet wide and 10½ long. He said he was released from Con Son along with four other students about a year before his sentence was to end because of the protests of students in Saigon.

EXISTENCE DENIED

Last month Mr. Loi and the four other students submitted a report on conditions at Con Son to the South Vietnamese National Assembly. They later provided information on the location of the maximum-security block which enabled two United States congressmen, Augustus F. Hawkins (D) of California and William R. Anderson (D) of Tennessee, to get into the "tiger cage" area during a visit to Con Son on July 2.

Vietnamese authorities had told previous visitors to the island that these cells did not exist. U.S. officials had told this correspondent last year that the "tiger cages" had been done away with in 1968.

Mr. Loi was one of a number of Saigon university students arrested in mid-1968 for protesting the war and calling for a negotiated settlement. He and some of his colleagues, such as Nguyen Truong Con, editor of the student newspaper Sinh Vien (Student), opposed military conscription and the program of military training for students and blamed the U.S. for prolonging the war.

The Saigon government charged that the student newspaper had a "clear-cut pro-Communist tendency," and a military field court sentenced Mr. Con, the editor, to five years' imprisonment.

According to Mr. Loi, Mr. Con is still in prison at Con Son as is Mr. Loi's own younger brother.

TORTURE DESCRIBED

"We did not agree with President Thieu's policy of forcing people to go into the military service," said Mr. Loi.

"We saw that President Thieu's policy was a policy of war rather than peace," he said. "At a time when hopes for peace were rising, President Thieu forced more and more young people into the Army."

Following his arrest on July 6, 1968, Mr. Loi said he was beaten and tortured for two months at the national police headquarters in Saigon.

"They forced water into my stomach, beat on my chest, put my hands behind my back and hung me up by a rope, took electrodes and attached them to my sexual organs," he said.

"They beat me on the knees, shoulders, and the soles of my feet so that they became very swollen. After that they demanded that I sign a paper saying I was pro-Communist.

"At that time I had no derogatory papers on me except one paper from the student union asking for peace. I said I was not Communist or pro-Communist but only a student who wants peace.

CHARGES DENIED

"They replied that if you are a person who is for peace, then we will continue to beat you. So they beat me for two months. At that time I could not walk because of swollen feet.

He was given a three-year prison sentence based on a prepared statement—"forcibly signed after many beatings"—on charges of "disturbing national security."

He was transferred to the Chi Hoa prison in Saigon, where, he said, the prison director decided to send him and several other students on to Con Son Island for "hard labor."

Mr. Loi said he was sent to the "tiger cage" because he refused to admit to the charges made against him, refused to be trustee for the other prisoners or to do secretariat work, and "dared to protest" conditions in the prison.

Some of those confined to the "tiger cages" had refused to salute the South Vietnamese flag, he said.

U.S. RESPONSE

"If people accept the accusations made against them, they don't have to go to the tiger cases," he said. "But if they deny the charges and struggle for their basic rights, they are sent there."

The U.S. mission here replied to the charges of the two congressmen concerning the conditions they had observed in the maximum-security cells by issuing a statement saying responsibility for prison conditions in Vietnam rests with the Saigon government.

Mr. Loi does not agree.

"The American Government has to accept responsibility for this situation," he said, adding that it is the Americans who are responsible for the future.

"My only aspiration is to see the aspirations of the people fulfilled," he said, "and I am prepared to work against the injustices of the Americans and the present government."

AMERICAN FRIENDS SERVICE COMMITTEE, INC.,
Philadelphia, Pa., July 10, 1970.

Ambassador BUI DIEM,
Embassy of Vietnam,
Washington, D.C.

DEAR MR. AMBASSADOR: We have received your letter of June 29, 1970 regarding the announced July 11, 1970 release of 62 North Vietnamese prisoners who have been held by your government, and also the decision to return to North Vietnam 24 North Vietnamese fishermen who were seized in 1965 and have been held prisoner ever since. We also have read accounts in the New York Times of the cruel treatment of prisoners on Con Son Island.

The New York Times reports that two U.S. Congressmen who were engaged in a fact-finding tour managed to gain entry to the notorious "tiger cages" area of Con Son where they found some 500 prisoners (both men and women) confined in 86 filthy concrete pits. The persons held in these claimed they were beaten, hungry, sick, without medicine and without sufficient water. The congressional fact-finders reported that while "it was high enough for the prisoners to stand up—none of the men did. They dragged themselves to the spot where they could look up and speak to us."

We have in mind the fact that possibly it may be claimed that some distinction must be made between "prisoners of war" and persons held on civil charges. We also have in mind that the line that separates "civil offenses" from participation in the armed struggle against your government and against the armed forces of the United States by Vietnamese is a very blurred line in South Vietnam today; this seems especially the case when one ponders the fact that the Geneva Convention of 1949 relative to the protection of civilian persons in time of war provides among other things that:

1. An individual protected person detained as a spy or saboteur or under suspicion of activity hostile to the security of the occupying power shall be treated with humanity;

2. Protected persons shall at all times be humanely treated and no physical or moral coercion shall be used to obtain information from them.

However one may sort these matters out we are struck by your statement regarding the release of the 62 prisoners and the 24 fishermen in your June 29 letter that "we ask nothing in return from the Communists as we consider it a routine humanitarian act, common to any civilized nation of the world."

It has been our experience gained during our own efforts to engage in therapeutic and social service in Quang Ngai over a period of years that humanitarian standards are not observed as a matter of routine in South Vietnam when it comes to political prisoners, persons held in prison on suspicion of lending support or sympathy to the NLF forces, or persons accused of actively opposing the Thieu-Ky regime.

Medical staff connected with our Quang Ngai team have had direct, personal contact with civilian prisoners in the Quang Ngai jail who were routinely subjected to interrogation under torture at the Interrogation Center in Quang Ngai. Prisoners have told our medical staff members of having been taken from the jail to the Interrogation Center and there being beaten, tortured with electrodes, and otherwise subjected to cruel and inhumane treatment. Our medical and nursing staff have observed physical marks on the bodies of such prisoners (both men and women), and also psychological symptoms, which were corroborative of these reports of explicit and deliberate torture.

Our people have made complaints both to the local Vietnamese authorities and to the American authorities in Quang Ngai without any discernible effect.

So long as such conditions exist (and persistent rumors of similar conditions come from many parts of South Vietnam) it is idle for one to claim that treatment of prisoners in South Vietnam is humanitarian or civilized.

The American Friends Service Committee long has concerned itself with the plight of prisoners in Vietnam, both in South Vietnam and in the North, both American and Vietnamese. Over a period of months our representatives made a number of visits to North Vietnamese who were being held by the American authorities near Danang, inquiring about their needs and taking certain supplies to them. These visits continued until the release and repatriation of these prisoners about two years ago. Later one of our representatives while visiting in Phnom Penh made inquiries of representatives of the Democratic Republic of Vietnam and of the Provisional Revolutionary Government regarding possible services to others held in South Vietnam. In 1968 an AFSC staff member went to Hanoi and facilitated the repatriation of three American pilots released by the North Vietnamese authorities. At that time and subsequently AFSC representatives have carried packets of letters from relatives of Americans held in detention camps in North Vietnam and have returned with letters from the captured pilots to their relatives. One of our staff members in Quang Ngai, Dr. Majorie Nelson, was captured by Liberation Army forces in Hue during the 1968 Tet offensive and later, after 59 days was released unharmed. More recently two of our staff sent messages to North Vietnam officials expressing concern and hope for the early release of U.S. press correspondent Richard Dudman and his two colleagues who were captured in Cambodia and released unharmed after 41 days.

We mention these instances to indicate the intimacy and scope of our experience and concern as a service body for those held captive in this war. We would like to see the early release of all political prisoners and prisoners of war whether they be held in North or in the South in Vietnam. The release of even a small number is a step in the right direction.

But we are concerned also that such a step not be used, even inadvertantly, as an occasion to hide a wider and a more appalling condition of human cruelty and human suffering. While thousands are held under conditions of extreme harshness, as is now the case in South Vietnam, it is no time to congratulate either the government of the United States nor any of its allied government in South Vietnam. Much more must be done.

We enclose a letter written by our former staff colleague at Quang Ngai, Dr. Marjorie Nelson, who we mention above. Her letter is self-explanatory. If you would like to meet with Dr. Nelson and discuss her firsthand observations with respect to these matters, she has informed us that she would welcome the opportunity to meet with you.

Sincerely yours,

LOUIS W. SCHNEIDER,
Associate Executive Secretary.

THE REHABILITATION SYSTEM OF VIETNAM

(By American Adviser Benson)

INTRODUCTION

OCTOBER 1, 1963.

In January 1961, PSD Rural Police Advisor William Benson was assigned additional duty as advisor to the Prison Rehabilitation system of Vietnam. He was directed to make a personal visit to each of the prisons throughout the entire country as a preliminary to a fuller understanding of the problems involved. In January 1962, he was assigned to full time duty as advisor to the Director of Prison Rehabilitation.

During the period from January 1961 to June 1963, Mr. Benson visited each of the 44 rehabilitation centers throughout Vietnam; several of them many times. These 44 centers are located in 36 of the 41 provinces of Vietnam. During this period, Mr. Benson traveled over 14,000 kilometers—10,000 by air (5,000 commercial and 5,000 USOM-chartered aircraft), 3,000 by road, 500 by water, 400 by rail and 100 by helicopter. Included in his visits were several trips to the "Devil's Island of the Pacific"—Poulo Condere, now named Con Son.

A major portion of this report was prepared by Mr. Benson with editing by PSD personnel; another portion was prepared by Mr. Raymond Landgren of PSD, while parts of it are translation of basic Vietnamese documents.

It is believed that the data gathered on this survey will be of value to various agencies for a number of purposes. Questions concerning this report will be most welcome at USOM/PSD Saigon headquarters.

FRANK E. WALTON,
Chief, Public Safety Division, USOM.

SAIGON, VIETNAM.

X. DISCIPLINE

Discipline in the centers is usually handled by the chief jailer in the most expeditious manner possible. There are some chiefs who, before they can punish any offender, must get the province chief's permission. Others only have to report that they did or are punishing some violator. In a few centers a committee of jailers and cadres handles all discipline cases. The cases are reviewed and approved by the province chief before any action can be started.

As a rule the minor or first violations are handled by the jailer or cadre who witnesses the act, but they may be brought to the attention of the chief jailer, who will reprimand the violator. In the case of serious or numerous violations, the chief jailer usually calls in the violator and the officer and discusses the case. As a rule the chief goes along with his staff and will then severely reprimand the individual, withdraw his privileges and/or confine him in a discipline cell, with or without constraints.

The loss of privileges is in itself a rather severe penalty, as one privilege is the weekly or bimonthly visit and gifts of food to supplement the center's rations. Other privileges that are often withdrawn are recreation periods, mail, hobbies or other money-making projects.

The confinement in a discipline cell may be from a few hours to several months, depending upon the center, the violation and the violator. For example in Con Son II, some of the hardcore communists keep preaching the "party" line, so these "Reds" are sent to the tiger cages in Con Son I where they are isolated from all others for months at a time.

This confinement may also include rice without salt and water—the U.S. prisons' equivalent of bread and water. It may include immobilization—the prisoner is bolted to the floor, handcuffed to a rod or bar, or legirons with the chain through an eyebolt, or around a bar or rod.

The discipline of staff members is much easier. They are either "slapped down" or transferred. The transfer is a rather severe punishment, as it goes against their record and the transferee must pay his own way. In some centers a staff member may be punished by assigning him additional duty. But this punishment is rather ineffective, as most jailers work excessively long hours.

The report I gave and that which was given by Mr. ANDERSON were given to all members of this select committee, and not one questioned our integrity. They might have a different interpretation, but they certainly did not question our integrity or the right we had to make our report.

I think it is unusual that a different report or a different version would come from someone who was not selected by the House, but who selected himself to make the trip and that a nonmember of the select committee has seen fit to say that we did not truthfully present what we actually reported to the full committee and to the House.

Mr. MOSS. Mr. Speaker, will the gentleman yield?

Mr. HAWKINS. I yield to the gentleman from California (Mr. Moss).

Mr. MOSS. Mr. Speaker, first I want to say I have known the distinguished gentleman in the well for more than 30 years. I served with him in the California State Assembly 22 years ago, where he was the dean of that body. He has a legislative record in that State which I think has never been equaled.

The gentleman is a very thorough investigator and is far too experienced to expose himself to any possible error, especially on a matter as significant as this. My distinguished colleague has inspected many prisons as part of his duties during his long and distinguished legislative career. Some of the maximum detention facilities in California were very closely under his jurisdiction during his service. He knows the difference between a poorly run prison and a well-oiled public relations office.

If he—and only he—said conditions at Con Son Prison were deplorable, then that is a factual statement as far as I am concerned. But it is backed up by 26 color slides submitted to the subcommittee which I chair, plus the verbatim tapes taken at the residence of the Vietnamese colonel on Con Son and all through the tiger cages and back to the colonel's residence. At the moment, arrangements are being made to have a full translation made of those tapes, and they will be made available with the report of the subcommittee.

Second, I realize that when one wears rose-colored glasses, his view of what he sees may be somewhat different than what actually exists—and that seems to happen most frequently when one sees red. It is difficult to think of one's enemies as human beings who deserve the same type of humane treatment in prison that we expect and demand—at least we should certainly demand—for American prisoners of war.

I happen to have the honor of serving as chairman of the House Foreign Operations and Government Information Subcommittee. Our subcommittee is conducting the investigation into the economy and efficiency—yes, the effectiveness, if you like—of American assistance to the South Vietnamese national police force and penal system. The American taxpayer has invested more than $110 million in this type of assistance to Vietnam.

There is an old saying, Mr. Speaker, that the road to hell is paved with good intentions. I am sorry to say, apparently, that is what has resulted from our aid to the Vietnamese for the national police and prison system. We had only good intentions and a plentiful supply of American dollars. But what we have accomplished is indeed a living hell.

We have helped to train a national police force which arrests Vietnamese citizens on the flimsiest of pretexts. I quote from testimony given the Foreign Operations Subcommittee by Mr. Robert H. Nooter, Assistant Administrator for Vietnam, Agency for International Development. He tells us:

The information I have on that, Mr. Chairman, indicates that there are 6,112 who were tried, convicted, and sentenced by regular court processes. There were another 3,789, who were administratively sentenced by provincial security committees under wartime emergency detention procedures.

These are the detainees. They are there without any meaningful due process of law whatsoever.

I know that the North Vietnamese have just as efficient a system of railroading people into their prisons and they have been guilty of great cruelties, but I say, before God and all these witnesses here, that one wrong does not justify another.

I cannot believe this is what our men have been fighting and dying for.

There has been talk of blindness and deliberate misrepresentation on this issue. I, for one, find it difficult to stomach the contention that Con Son Prison is an island paradise down among the sheltering palms—somewhat similar to Hawaii. In reality, it is the Devil's Island of the Pacific and has been for the better part of a century.

Members may be interested to know that the original Devil's Island off the coast of French Guiana is also a tropical isle. Very much like Con Son, it too had tiger cages where human beings suffered. It too was a caged hell on earth.

I recall reading many years ago a book called "Dry Guillotine." I went back to refer to that book the other day, and in it were nearly exact duplicates of what ones sees in the 26 photographs that have been supplied the committee, some of which the gentleman showed in the well.

Let me point out here that in the statement prepared by Mr. Frank E. Walton, chief of AID's public safety program in Vietnam, and transmitted to the congressional party in advance of their visit, he made the assertion that Con Son Island Correction Center "has long held the reputation of being a 'Devil's Island.' This reputation still prevails in spite of an enlightened and modern administration of facility."

Yet a few days later, in another wire from the Department of State transmitting the responses of Mr. Walton in reaction to the visit of the distinguished gentleman from California and the distinguished gentleman from Tennessee to the island he made this statement:

Some of prisoners were questioned by Harkin and Luce. They claimed that when they were recalcitrant, powdered lime would be dumped on them. Colonel Ve denied this, stating that lime was used to whitewash walls—

This is the official message—

However, from appearance of powdered lime on tops of iron grill work it appeared that it had been poured in in powdered form.

That is, on the prisoners in those cages.

We had testimony subsequently from Dr. Marjorie Nelson as to the effect that powdered lime would have upon the respiratory systems of people who had it poured in upon them.

Then, strangely enough, this model facility, this example of modern and enlightened prison administration, was described in an official statement from the Prime Minister of Vietnam in the following manner:

Considering the fact that the disciplinary quarter at Con Son correctional institution was built since 1895 under the French, and that it no longer corresponds to the standards of a modern correctional institution, the government of the Republic of Vietnam has decided:

1. To put an end to the use of this disciplinary quarter from now on.

2. To order the immediate repair of disciplinary cells so that even undisciplined prisoners can enjoy better sanitary conditions and comfort.

Finally, animated by the spirit of giving decent treatment to all prisoners, a policy which has been solemnly reaffirmed, the GVN now proceeds to a survey of its correctional institutions throughout the country and will make further improvements where this is found necessary and when the national budget allows.

Obviously the Government of Vietnam did not find this a model correctional facility.

When our committee called in officials from the Agency for International Development and the Department of Defense, I was hoping they would reassure us that all the statements made were just a bad dream. They did nothing of the sort. They could not deny a single charge about the inhumanity of the tiger cages at Con Son. They could only confirm those charges.

I sat there and watched a man I know to be a good man, a man of compassion, honesty, and integrity, admit that our great country had failed completely to accomplish the worthy objectives of what was supposed to be a program of humanizing and improving penal conditions. I must acknowledge that I felt the same anguish in my heart that he must have felt when he had to admit publicly his first knowledge of the tiger cages came when he read about them in the newspapers.

Mr. Speaker, I for one never want to see that expression on the face of an official of our Government again—the look of undeniable shame.

I think if we look at this and attempt—those who want to attempt—to say there is some disloyalty in bringing out these facts, then we ought to examine deeply into our conscience the need to demonstrate humanity in the treatment of prisoners if we can expect world support in demanding humanity in the treatment of our prisoners in the hands of enemy forces. That is the kind of treatment I want our people to have and I want to give the North Vietnamese no excuse to give less than that.

I compliment the gentleman in the well and the gentleman from Tennessee for doing what I regard as a tremendous public service.

Mr. HAWKINS. I thank the gentleman.

Mr. MOSS. I have just one further statement.

I have here—and I will not put them in the RECORD—the official reports of the International Red Cross from Geneva. The last two reports were transmitted for the use of my subcommittee. They confirm the statement released by me and Mr. REID of New York as to the characterization given to those prisons by the International Red Cross.

Mr. HAWKINS. Mr. Speaker, I yield to the gentleman from Tennessee, Mr. ANDERSON.

Mr. ANDERSON of Tennessee. Mr. Speaker, I thank the gentleman for yielding

I want to compliment the gentleman in the well and the distinguished gentleman from California, Mr. Moss, on setting the RECORD straight in this matter. There is nothing that has been said heretofore by the gentleman in the well or that has been said here this afternoon that I have not personally observed to be the absolute truth and that I have not entirely observed to be actually an admirable understatement of the situation rather than what he has been accused of saying, that is, to overstate the situation.

Mr. Speaker, I would like to address myself to two or three points that have been brought out by the gentleman from Illinois. With regard to malnutrition, for example, I was told personally by a corpsman in the prison camp—and this was not in the presence of guards—that the most prevalent overall health problem of Con Son was that of malnutrition and vitamin deficiencies, which affected more than two-thirds of the prison population.

I was also told that the prevalence of tuberculosis was approximately 20 percent.

There is one public health sector on the entire island to care for more than 10,000 people. His attention is normally directed not to prisoners but to guards and staff personnel.

Mr. Speaker, I do not want to take up further time this afternoon except to reiterate what the distinguished gentleman from California (Mr. Moss) has said. There are those who say that the bringing out of the truth is a disservice to this country. There are those who say that the bringing out of the truth in regard to Con Son will have an adverse impact upon our prisoners in the north. I would like to point out to the ladies and gentlemen of the House that the North Vietnamese have an incredible intelligence network operating throughout South Vietnam. They know full well and precisely how the system of justice operates in South Vietnam. They know fully about the conditions at Con Son and throughout the entire prison complex. Apparently just about everybody in the world knows about it except the citizens of the United States. If we cannot face up to the facts and show that our concern for humanity goes throughout the entire world, then indeed we do risk the lives and put in further jeopardy our boys in the north.

Mr. Speaker, I say this because I am positive that the North Vietnamese know chapter and verse of this situation at Con Son and every other prison in South Vietnam.

Mr. Speaker, I compliment the gentleman in the well and I want to say that he is a wonderful man with whom to make a trip. He does come back with the facts and you can depend upon what he says.

Mr. Speaker, I hope that all our colleagues will give whatever assistance they can to the resolution which the gentleman in the well and I introduced over 2 weeks ago which endeavors to bring congressional attention to this matter, not only in relation to political prisoners in the south but also in relation to the treatment and the exchange of American POW's in the north.

I thank the gentleman for yielding.

Mr. HAWKINS. I thank the distinguished gentleman from Tennessee for his remarks.

Mr. HOLIFIELD. Mr. Speaker, will the gentleman yield?

Mr. HAWKINS. I yield to the gentleman from California.

Mr. HOLIFIELD. Mr. Speaker, the gentleman now speaking has known the gentleman from California (Mr. HAWKINS) for 38 years. He has a distinguished record in the California Legislature since 1932. Over these 38 years that I have known him I have never known a challenge to be made to his integrity or to his character.

Mr. Speaker, the gentleman from California (Mr. HAWKINS) has served with distinction and his reputation in California is one of the best. I am proud, as dean of the California delegation, to have him here as a member of the California delegation.

Mr. Speaker, the gentleman from California (Mr. HAWKINS) diligently carries out his duties as a responsible member on the committee on which he serves and on the floor of the House.

Mr. Speaker, I want to express not only my own confidence but the confidence I am sure of all the members of the California delegation who have served with him in the California Legislature as well as Members who were not so fortunate as to have served with the gentleman.

Mr. Speaker, I believe the gentleman from California has done a great service in bringing to the attention of the Nation these deplorable situations in the prisons of South Vietnam. I am hopeful that these prisons will be humanized for the benefit of the human beings who have been treated as these miserable people have been treated.

Mr. HAWKINS. Mr. Speaker, I thank the distinguished dean of the California delegation for his support and for his statement.

Mr. SISK. Mr. Speaker, will the gentleman yield?

Mr. HAWKINS. I yield to the gentleman from California (Mr. SISK).

Mr. SISK. Mr. Speaker, I want to join in the statements which have been made by my other colleagues here as to the background and reputation of the distinguished gentleman from California (Mr. HAWKINS) and his long history of integrity and of working for the benefit and for the best interests of America. I admire him and I appreciate the fact that he was able to pursue the facts and to get the information that he did and to bring it back from South Vietnam. I appreciate his courage in outlining what he saw there.

Mr. Speaker, certainly, it seems to me that the gentleman has done a great service for America to bring these things out so that we might appreciate and understand some of the real concerns which we should have in connection with our involvement in Southeast Asia.

I believe that it is unfortunate and certainly deplorable that individuals or any colleagues of ours or whomever it may be, find it necessary at times to come in with unfounded criticisms and, apparently, with misstatements of fact, whether they knowingly were guilty of it or had any part in creating it, because they are doing a disservice not only to the gentleman from California but to the country.

However, Mr. Speaker, I do want to commend the gentleman in the well of taking the floor on this occasion and I want to again restate my support in a matter which he feels very strongly about and which we know he is dedicated in trying to correct.

Mr. HAWKINS. I thank my distinguished colleague for those remarks.

Mr. DON H. CLAUSEN. Mr. Speaker, will the gentleman yield?

Mr. HAWKINS. I yield to the gentleman from California.

Mr. DON H. CLAUSEN. Mr. Speaker, I want to join the dean of our California delegation (Mr. HOLIFIELD) in adding my voice in the strongest possible terms in attesting to the qualifications, competency, and integrity of our colleague, the gentleman from California (Mr. HAWKINS).

Prior to coming to Congress, I was well aware of the reputation "GUS" HAWKINS enjoyed in California and, while I did not serve with him in the State legislature, I did have numerous opportunities to observe him in Sacramento. As a member of the Del Norte County Board of Supervisors, I was introduced to Mr. HAWKINS by our own Assemblyman Frank Belotti, while testifying on legislative matters before the legislature. "GUS" HAWKINS had a distinguished record of service to his constituency and an outstanding record of accomplishment in his district and in his committee activities. He was then, and remains today, an effective legislator who is admired and respected by Democrats and Republicans alike.

As such, I have always regarded him as a good friend and a distinguished fellow colleague, and I would never permit anyone to impugn the motives, the honesty, or the integrity of this distinguished gentleman from California. It is for this reason that I have asked the gentleman to yield, thereby permitting me to record my sentiments.

As has been the case with others who supported the measure, I have been questioned about voting to send the congressional investigating team to Southeast Asia to check into conditions there and report back to the Congress. However, I sincerely believe that Mr. HAWKINS and the other members of this investigating team have served a very constructive purpose and, with the revelation of this information concerning the so-called Con Son tiger cages, I am more convinced than ever that my vote was a proper one.

What has been largely overlooked, both in the press and in the colloquy here today, is the fact that the very existence of these tiger cages was developed and made public by Members of Congress. There has been no attempt made to cover up this incident by the committee or

here in the Congress, nor will there be. In my judgment, however, it is too bad that no one is giving credit where credit is due. Judging from recent reports coming out of Vietnam, changes are being made to correct these facilities and detention practices. This is what is most important.

As one who has joined a number of my colleagues in repeatedly demanding fair and humane treatment for our own prisoners of war in North Vietnam, I believe it is incumbent on us, in the key leadership role our country has assumed, to see that our fellow security alliance friends conform to the same standards, or at least those prescribed by the Geneva Convention on the Treatment and Handling of Prisoners. We must demand no less.

Certainly, there is enough suffering going on in Southeast Asia and in far too many other sections of the world, without this. While I am well aware of and deplore the indignities and degradation being imposed on the people of Southeast Asia and our men by the Vietcong and the NLF, man's inhumanity to man remains the No. 1 problem of our time.

America, in spite of its internal differences and human frailties, is still associated in the minds of people throughout the world as a country that cares about people and about human dignity both in war and in peace. This is the image America has held in the eyes of the world and, therefore, we must make it clear that those countries committed to building free institutions must conform to these same high standards of conduct, as they relate to morality and the treatment of human beings.

Again, I commend Mr. HAWKINS and the members of the committee for their forthright and balanced presentation of the facts in Vietnam, as they observed them.

Mr. HAWKINS. Mr. Speaker, I thank the various gentlemen for the statements which they have made and I want to again say that I regret it was necessary to take the time of this body on the issue of Con Son because I honestly believe this is not the only issue. Certainly this is not the sole issue of our involvement in Southeast Asia. There are many other things that I think demand a lot more attention than just this. The issue is much broader and it concerns the truth in our foreign relations and whether or not our image is going to be damaged by not dealing in true statements and not dealing in the truth about things that are happening in that part of the world. I would hope that by combining truth and peace we can bring an end to this terrible conflict. I think all of the Members of this body should read all of the statements of the select committee. I think the thrust of those statements brings out the fact that this terrible conflict should be brought to an end as soon as possible.

I think that this concensus of the members of that committee has been lost somehow over the debate on Con Son, and I would hope that we will devote more serious attention to what is happening overseas, and report what the truth is to the American people so that they will know, and so that our country can with dignity get out of this conflict just as rapidly as possible.

If that is so, then I believe our select committee has done a great job.

I want to thank that select committee, particularly the chairman of that select committee, on the impartial way and the fairness with which he dealt with the members of that committee, and even for the way that he worked us almost to death to bring back a constructive report.

I have the greatest respect for the members of the select committee which you selected. I think the more the public becomes aware of the various reports of this committee, the more the American people will realize that this committee indeed was not a junket, but was a serious-minded committee, a committee which saw the things it was instructed to see, and reported the things that it saw as honestly as possible even though from individual viewpoints and honest differences.

Mr. ERLENBORN. Mr. Speaker, will the gentleman yield?

Mr. HAWKINS. I yield to the distinguished gentleman from Illinois.

Mr. ERLENBORN. Mr. Speaker, I thank the gentleman for yielding. I want to compliment the gentleman. I have not heard the entire statement that he has been making, but I would compliment the gentleman on what he has said just most recently about the impact of the total report of the special committee. I think the publicity that has been given to the one issue of Con Son has tended to overshadow the major purpose of the very good report of the special committee.

I think it is unfortunate that one of the employees of the committee saw fit not to work with the committee and with the gentleman in the well, and the gentleman from Tennessee (Mr. ANDERSON) in presenting a balanced report. But this thing about the island has been sensationalized out of proportion because of the way it was handled by a staff member.

But, Mr. Speaker, I do compliment the gentleman in the well and the gentleman from Tennessee for their balanced approach. And I would hope that not only Members in this body, but the press, and the people in the country, would give attention to the whole of the report of the committee.

Mr. HAWKINS. Mr. Speaker, I thank the gentleman, and I certainly agree with him.

Mr. BURTON of California. Mr. Speaker, I wish to compliment my distinguished colleague from California, Congressman HAWKINS, for a lifetime of loyal and dedicated service to his community, his State, and to his Nation. He served with great ability and distinction in the California State Legislature for 28 years. While we were both members of that body I came to respect not only his ability, but also his integrity and dedication to democracy. Congressman HAWKINS has now served in the Congress for 8 years, and here, too, he has added to the distinction of this body. I am proud to have enjoyed the friendship of Congressman HAWKINS who is one of the finest men I know and who has been an able and effective colleague.

CALL OF THE HOUSE

Mr. HALL. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER pro tempore (Mr. ALBERT). Evidently a quorum is not present.

Mr. McFALL. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 236]

Alexander	Fallon	Pelly
Baring	Ford,	Pepper
Blackburn	William D.	Pollock
Blanton	Fraser	Powell
Brock	Gallagher	Pryor, Ark.
Buchanan	Gray	Railsback
Burleson, Tex.	Green, Oreg.	Rarick
Burton, Utah	Griffiths	Reid, N.Y.
Bush	Halpern	Rooney, Pa.
Caffery	Holifield	Rostenkowski
Clark	Ichord	Roudebush
Clay	King	Ruppe
Cramer	Lloyd	Ryan
Crane	Long, La.	Sandman
Culver	McCarthy	Scheuer
Cunningham	McEwen	Sikes
Dawson	Mailliard	Smith, N.Y.
de la Garza	Meskill	Staggers
Diggs	Mink	Tunney
Donohue	Monagan	Watson
Dwyer	O'Neill, Mass.	Weicker
Edwards, La.	Ottinger	Wydler

The SPEAKER pro tempore. On this rollcall 365 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

CONTINUING APPROPRIATIONS, 1971

Mr. MAHON. Mr. Speaker, pursuant to the order of the House on Thursday, July 23, 1970, I call up the joint resolution (H.J. Res. 1328) making further continuing appropriations for the fiscal year 1971, and for other purposes, and I ask unanimous consent that it be considered in the House as in the Committee of the Whole.

The Clerk read the title of the joint resolution.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the joint resolution, as follows:

H.J. RES. 1328

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That clause (c) of section 102 of the joint resolution of June 29, 1970 (Public Law 91-294), is hereby amended by striking out "July 31, 1970" and inserting in lieu thereof "October 15, 1970".

Mr. MAHON. Mr. Speaker, I move to strike the last word.

Mr. Speaker, this joint resolution makes temporary appropriations to continue the operation of those functions and activities of Government for which the applicable annual appropriation acts for the fiscal year 1971 are not signed into law by July 31, the date the present continuing resolution expires.

The pending resolution would extend the existing continuing resolution to not later than October 15, 1970.

The House has passed all of the regular annual appropriation bills for fiscal 1971 with the exception of one, which is the Defense bill. That bill lacks legislative authorization.

The other body has passed six of the regular annual appropriation bills for fiscal 1971.

Three regular annual appropriation bills for fiscal 1971 have now cleared conference and readied for the President; one of the three has been signed by him.

In the circumstances, it is necessary that we pass an additional continuing resolution in order to permit the agencies of the Government and the Departments to continue to operate. There is nothing novel about this continuing resolution. It is a type of resolution we have passed many times before. We propose merely to extend the resolution under which virtually all of the Government has operated since July 1 last.

Mr. Speaker, I urge adoption of the joint resolution.

Mr. Speaker, under leave granted, I am including excerpts from the report of the Committee on Appropriations accompanying the joint resolution, which explains the resolution in more detail and contains pertinent statistics on the status of the appropriation bills:

PURPOSE AND SCOPE OF THE RESOLUTION

* * * * *

The joint resolution would extend the provisions of the July continuing resolution (Public Law 91-294) to not later than October 15, 1970. That is, the ground rules for continuing the operations of government that generally obtained during July would continue after July 31 in respect to activities for which the regular bills are not, by that date, enacted into law. These ground rules are covered in some considerable detail in House Report No. 91-1220, of June 18, accompanying the joint resolution which became Public Law 91-294.

With the announced summer recess of the House extending from mid-August to September 9, and the certainty that several of the appropriation bills will not be finalized until after the recess, it was thought that the date of October 15, 1970, would not be an unreasonable date. The resolution constricts and ceases to apply to activities when and as Congress makes final disposition of their budgets in the normal course of events, and becomes wholly inoperative after the last bill for fiscal 1971 is approved, or October 15, whichever first occurs.

While the House has passed 13 of the 14 annual appropriation bills for the current fiscal year, and the other body has passed six of them, only three have cleared conference—the District of Columbia bill; the Interior bill; and the Education bill. Thus, prompt enactment of another resolution is essential to avoid interruption of authority and funds for on-going programs and activities pending final determinations on their budgets.

STATUS OF THE APPROPRIATION BILLS

The only regular bill for 1971 not yet reported to the House is the Defense appropriation bill. Hearings were completed several weeks ago, but reporting awaits progress on the legislative authorization now in the other body.

Of the seven bills still in committee in the other body, it is informally understood that some may be reported before mid-August and that hearings are either substantially completed or are underway on all except one.

The following is a tabulation of pertinent dates as to each of the bills:

THE ANNUAL APPROPRIATION BILLS FOR FISCAL YEAR 1971

Bill	Reported in House	Passed House	Passed Senate	Enacted
1. Legislative	Apr. 9	Apr. 13	July 13	
2. Treasury-Post Office	do	do		
3. Education	do	Apr. 14	June 25	[1] July 28
4. Independent Offices-HUD	May 7	May 12	July 7	
5. State-Justice-Commerce-Judiciary	May 12	May 14		
6. Interior	May 24	May 19	July 1	[1] July 22
7. Transportation	May 21	May 27		
8. District of Columbia	June 1	June 4	June 26	July 16
9. Foreign assistance	do	do		
10. Agriculture	June 4	June 9	July 9	
11. Military construction	June 8	June 11		
12. Public Works-AEC	June 18	June 24		
13. Labor-HEW	July 16	July 23		
14. Defense	(2)			

[1] Cleared conference.

[2] Awaiting legislative authorization.

TOTALS OF THE APPROPRIATION BILLS FOR FISCAL YEAR 1971

House

In the 13 general appropriation bills passed by the House in relation to budget requests for fiscal 1971 (that is, not counting any 1972 *advance* funding requests), the House considered budget requests for new budget (obligational) authority of $68,392,996,000; approved $67,820,836,000, including $347,027,000 of *net* floor additions; a net reduction of $572,160,000 from the requests.

Senate

In the six bills passed by the other body in relation to fiscal 1971 amounts, that body has considered budget requests of $31,553,880,000 for new budget (obligational) authority; approved $34,271,991,000; a *net* addition of $2,718,111,000 to the budget requests considered, and $3,238,862,000 above the amounts of the six bills as they passed the House.

Conference

In the three bills which have cleared conference, budget requests for new budget (obligational) authority relating to fiscal 1971 considered in those bills totaled $5,915,887,000; the total approved was $6,364,558,000; a *net* addition of $448,671,000 to the budget requests considered.

These summaries are shown in the following table by bills:

NEW BUDGET (OBLIGATIONAL) AUTHORITY IN THE APPROPRIATION BILLS, 1971

[As to fiscal year 1971 amounts only]

Bill	Budget requests considered	Approved	Change, (+) or (−)
IN THE HOUSE			
1. Legislative	$356,043,285	$346,649,230	−$9,394,055
2. Treasury-Post Office	3,044,755,000	2,971,702,000	−73,053,000
3. Education	3,807,524,000	4,127,114,000	+319,590,000
4. Independent Offices-HUD	17,216,823,500	17,390,212,300	+173,388,800
5. State-Justice-Commerce-Judiciary	3,243,905,000	3,106,956,500	−136,948,500
6. Interior	1,610,757,600	1,610,026,700	−730,900
7. Transportation	2,465,814,937	2,429,579,937	−36,235,000
8. District of Columbia	109,088,000	108,938,000	−150,000
9. Foreign Assistance	2,876,539,000	2,220,961,000	−655,578,000
10. Agriculture	7,531,775,500	7,450,188,150	−81,587,350
11. Military Construction	2,134,800,000	1,997,037,000	−137,763,000
12. Public Works-AEC	5,263,433,000	5,236,808,000	−26,625,000

[1] Signed into law.

The foregoing table relates only to the traditional appropriation bills. And the amounts refer to "appropriations", or more precisely, "new budget (obligational) authority", which is the time-honored conceptual basis on which amounts in the bills are stated. The table does not deal in "expenditures", or more precisely, "budget outlays", nor does it encompass other types of bills carrying "backdoor" authority or mandatory-type spending authorizations or provisions.

For general reference purposes of Members and others, attention is called to the periodic budget "scorekeeping" reports issued by the staff of the Joint Committee on Reduction of Federal Expenditures. These reports are designed to keep tabs, currently, on what is happening in the legislative process to the budget recommendations of the President, both appropriation-wise and expenditure-wise, and on the revenue recommendations, and not only from actions in the revenue and appropriation bills but also in legislative bills that affect budget authority and expenditures (backdoor bills, bills that mandate expenditures, and so on).

Several such reports have been issued this year, and another is due shortly. The most recent one is published in the Record of July 16, at page E6734.

SUMMARY TOTALS OF THE APPROPRIATION BILLS FOR THE SESSION

In addition to the appropriation bills and amounts relating to fiscal 1971, discussed in the immediately preceding section of this report, there was a general supplemental appropriation bill during the present session, relating to fiscal year 1970. And in two of the bills for 1971, budget requests for advance fiscal 1972 appropriations were dealt with.

The following summary cranks in all these items, relating to fiscals 1970, 1971, and 1972 at this session:

SUMMARY OF APPROPRIATION BILL TOTALS OF NEW BUDGET (OBLIGATIONAL) AUTHORITY, 91st CONG., 2D SESS., AS OF JULY 27, 1970 (BUT SUBSEQUENT TO MAR. 5)

[Does not include any "back-door" type budget authority; or any permanent (Federal or trust) authority, under earlier or "permanent" law,[1] without further or annual action by the Congress]

	New budget (obligational) authority. (All figures are slightly rounded.)		
	Bills for fiscal 1970	Bills for fiscal 1971	Bills for the session
A. House actions:			
1. Budget requests considered	$5,918,073,000	$69,920,057,000	$75,838,130,000
2. Amounts approved by House	5,764,116,000	67,970,836,000	73,734,952,000
3. Comparison with corresponding budget requests	−153,957,000	[2]−1,949,221,000	−2,103,178,000
B. Senate actions:			
1. Budget requests considered	6,430,172,000	32,892,929,000	39,323,101,000
2. Amounts approved by Senate	6,702,375,000	34,271,991,000	40,974,366,000
3. Comparison with corresponding budget requests	[3]+272,203,000	[3]+$1,379,062,000	+$1,651,265,000
4. Comparison with House amounts in same bills	+938,259,000	+3,238,862,000	+4,177,121,000
C. Cleared conference:			
1. Budget requests considered	6,430,172,000	7,254,937,000	13,685,109,000
2. Amounts enacted	6,021,535,000	6,364,558,000	12,386,093,000
3. Comparison with corresponding budget requests	[4]−408,637,000	[5]−890,379,000	−1,299,016,000

[1] The budget for 1971, as submitted Feb. 2, tentatively estimated total new budget authority for 1971 at $234.8 billion ($218,000,000,000, net of certain budget presentation adjustments) of which $148,100,000,000 was for action by Congress and $86,700,000,000 would become available under permanent law.

[2] Consists of a net reduction of $572,160,000 in respect to amounts relating to fiscal 1971, and $1,377,061,000 advance fiscal 1972 requests that were disallowed.

[3] Consists of a net increase of $2,718,111,000 in respect to amounts relating to fiscal 1971, partially offset by $1,339,050 000 relating to an advance fiscal 1972 request in the education appropriation bill.

[4] Reflects cut of $275,000,000 for foreign military credit sales which may be reconsidered in the regular bill for fiscal year 1971.

[5] Consists of a net increase of $448,671,000 in respect to amounts relating to fiscal 1971, offset by $1,339,050 000 relating to advance fiscal 1972 request in the education appropriation bill.

Mr. BOW. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the distinguished gentleman from Ohio.

Mr. BOW. Mr. Speaker, I join the distinguished gentleman, the chairman of the House Committee on Appropriations, in urging the adoption of this resolution which will continue the operations of the Government until October 15.

The only appropiations bill left to be considered by the House is the defense bill. But I understand the other body has just started to consider the authorization bill, and may not complete action on it until the end of September.

In addition, I must also alert the House to the fact that some conference reports can be expected containing amounts that are way over the budget. We completed action on one of them today—independent offices and the Department of Housing and Urban Development—that will be up before the House in the very near future. Some Members on our side were not able to sign this report because it contains amounts that are far in excess of the budget. So we may have a delay before final enactment of this bill, and possibly others. Therefore, in order to provide for the orderly process of government, it is necessary to have a continuing resolution.

I am sure the gentleman from Texas agrees that we wish it was not necessary to bring these resolutions before you. This is not good government. It is not good for the Congress or the executive branches of Government to have to operate under these continuing resolutions, but there is no other alternative except to close down the Government. I am sure no one wants to do that.

Mr. Speaker, I appreciate the gentleman yielding to me.

Mr. GROSS. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, I should like to ask the gentleman from Texas if this is in any way a direction, or an invitation, for Congress to continue this session until October 15, in this election year of 1970?

Mr. MAHON. No; it is not in any way a direction, or even a suggestion, along that line. But in the absence of more expeditious action in finalizing the appropriation bills, it seems logical to adopt what seems to be a realistic date.

As has been pointed out, on appropriations bills in the House we have passed all the bills except the defense appropriation bill. Some matters are being held in the other body for more consideration and further inquiry.

So, until the other body authorizes the defense appropriations and there is agreement in conference, and until we are able to settle these pending measures, certainly from the standpoint of appropriations, we have to remain in session and also, of course, provide continuing funds and authority in the meantime. It is regrettable that we find it necessary to extend this resolution to October 15, but I think it is realistic to do so. Of course, if Congress finishes its appropriations business before then, as we should, then this resolution will have no force and effect. By its terms it fades away as each regular appropriation bill is enacted into law.

Mr. GROSS. Would it not have been at least a measure of direction to the other body if the date had been made October 1? It seems to me if we are going on until October 15, it is going to allow Members of the House very little time in which to campaign and report to their constituencies on the activities and record of the past months.

I am not being critical of the gentleman from Texas or the gentleman from Ohio for bringing this resolution to the House floor, but I just did not like this October 15 date because it seems to me there is implicit in it an invitation to the other body to prolong what is already going on.

I sometimes wonder why these resolutions—since it seems to me the other body is largely responsible for the necessity for them—do not originate in the other body. Why do they not at some time or other send resolutions over here rather than the House initiating them and sending them to the other body, which, as I have said, is prolonging this session of the Congress.

Mr. MAHON. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I am glad to yield to the gentleman.

Mr. MAHON. An invitation for the other body to be very deliberate in its work is not, of course, required. We would not want a continuing resolution to originate in the other body because a continuing resolution is, in effect, an appropriation for a temporary period of

time. As the gentleman, of course, knows, all appropriation bills and resolutions originate in the House, so we must originate the continuing resolution in the House of Representatives.

Mr. GROSS. I will say to the gentleman that my main point is I do not like to do anything here today to encourage the other body in what they are already doing, and that is foot dragging.

However, there is probably no escape now from the situation we are in.

Mr. MAHON. Mr. Speaker, will the gentleman yield further?

Mr. GROSS. I yield to the gentleman.

Mr. MAHON. I would add that one of the reasons why the expiration date of the resolution was put at October 15 rather than October 1 was that the House has just recently voted to recess the House from the 14th of August until perhaps the 9th of September. That will preempt considerable time that could otherwise be devoted to appropriation conference business if the other body should pass several more of the bills.

But I hope we can move rapidly and get the appropriations business concluded. There are some problems, including the defense authorization delay.

I might add that in addition to the three bills that have cleared conference, the conference report will be filed tonight on the independent offices, HUD appropriation bill. And we have a conference scheduled for tomorrow on the legislative branch appropriation bill.

Mr. GROSS. I am afraid we are going to be here until October 15 and I, for one, am not at all enthusiastic about that, and for the reason that it is not necessary to proper disposition of the business pending before Congress.

Mr. MAHON. I share the gentleman's concern over this unnecessary prolongation of this session.

Mr. GROSS. Mr. Speaker, I yield back the balance of my time.

The SPEAKER pro tempore (Mr. ALBERT). The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

LEGISLATIVE REORGANIZATION ACT OF 1970

Mr. SISK. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 17654) to improve the operation of the legislative branch of the Federal Government, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 17654, with Mr. NATCHER in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday, the Clerk had read through section 118, ending on page 39, line 4, of the bill, and there was pending the amendment offered by the gentleman from Wisconsin (Mr. REUSS), and a substitute amendment for the Reuss amendment offered by the gentleman from Iowa (Mr. SCHWENGEL).

For what purpose does the gentleman from California (Mr. SISK) rise?

Mr. SISK. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from California is recognized.

Mr. SISK. Mr. Chairman, I take this brief time to sum up a little bit of where we are in connection with this bill. Before I do so, I would like to take this opportunity to pay a special tribute to the very excellent staff that your Subcommittee on Reorganization has had during the past 16 months. We have had the good fortune to have the use of the Rules Committee staff headed by Mr. Laurie C. Battle and Mr. Robert D. Hynes, Jr., along with Jonna Lynne Cullen. We have had very excellent advice, counsel, and aid from Mr. David B. Carper, assistant counsel, Office of the Legislative Counsel, and Mr. Walter Kravitz, senior specialist in American National Government, Legislative Reference Service, Library of Congress.

Your committee did not employ any special staff. We have borrowed staff here and there and used them. I did want to commend these people for their patience and their hard work, because in many cases they were here working nights and weekends trying to pull together the voluminous amount of material that was necessary for the committee to do its work.

Mr. Chairman, I think we should take stock of just where we are in connection with this bill as we reach this point in time.

There have been some amendments adopted, some that frankly I think have improved the bill because, as I said in the beginning, the committee did not possess all wisdom, but there have been also some amendments that, in my opinion, have not helped the bill, and I am afraid they tend to load it down. As we attempt to conclude this bill today and possibly later this week—because now I understand we may have some further time this week, and that I will leave up to the leadership to inform the Members about—I would hope and trust that all Members who seek a bill will move along.

Mr. Chairman, I realize the problems of Members in getting around to other work, but we would like to move along. I do not wish to take a great deal of time, but we should take an inventory, as I say. We have pending before us two amendments at the present time, that, in my opinion—and I am going to be quite frank—if adopted, probably are going to be enough weight to sink this bill.

This I am not saying as any threat or any warning or anything of that kind, but I think we should assess what we are doing and where we are going. We have a couple of amendments pending, one offered by the gentleman from Wisconsin (Mr. REUSS), and another by the gentleman from Iowa (Mr. SCHWENGEL), which get into areas of seniority.

I am not afraid to study and take a look at seniority. We have committees among the Democrats who are today looking at it, and I know there is a committee working among my friends on the Republican side on this question of seniority, but certainly so far as this subcommittee and the Committee on Rules are concerned, this is not the bill and not the time in which to get involved in this subject.

I can understand the desire of many of my colleagues to talk about this, if they would like, but I would hope that we would not unduly delay the progress of this reorganizational bill or reform bill, or call it what we will, by spending too much time in an area which, as I say quite frankly in my opinion, will create a load that this package simply cannot carry.

I would hope as we go along and as we consider, I am sure, many other amendments, certainly some of which are good and I am sure they are all well intentioned, that we will give the committee and the Committee of the Whole House an opportunity to look at those amendments, and I would hope we might proceed to see how far down the road we can get between now and 7 o'clock tonight, and then we hope that possibly we will get enough time some time later this week to bring this bill to a conclusion.

Mr. CONABLE. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from New York.

Mr. CONABLE. Mr. Chairman, I would like to associate myself with the remarks of the gentleman in the well. I think he has conducted himself in the course of this debate with great patience and great wisdom.

I do think it appropriate that we move along as quickly as we can to the conclusion of this bill.

I associate myself also with the gentleman's remarks with respect to the Schwengel amendment. The gentleman from Iowa (Mr. SCHWENGEL) has done pioneering work in this area and he has an interesting idea, but it seems to me entirely appropriate to handle this issue on a party basis and not by changing the rules of the House.

Mr. VANIK. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, and in response to our distinguished colleague, I concur in the fine leadership the gentleman from California (Mr. SISK) has provided on this bill during the course of this discussion.

Mr. Chairman, I am among those who feel there may be no other time, that there may be no other bill with which to deal with this critical issue of seniority. I want to speak out in support of the proposal which has been offered in the amendment I cosponsored with my distinguished colleague, the gentleman from Wisconsin (Mr. REUSS).

While I appreciate the high purpose of the substitute offered by the gentleman from Iowa (Mr. SCHWENGEL), it is my judgment our amendment is more

workable and less restrictive. It leaves the issue of chairman selection to the discretion of the majority caucus or policy committee. It does not narrow the choice of committee chairman to the three most senior members.

It leaves the method of chairman selection to a majority decision, at least theoretically permitting any Member to qualify for election. And this is as it should be. Under the Constitution and under the laws of this land every Congress is a new and separate entity, organizing itself, conducting its business, closing its life with adjournment. Every Member is or should be equal to every other. At least theoretically any Member should be eligible for the committee chairmanship.

It is conceivable that at some time a Member may be elected so heavily endowed with special skills and qualifications in a given field to be most suitable for chairman, and yet have only a short term to serve. Why should such a choice be denied?

Any member of any committee should be eligible to the chairmanship as an equal and eligible member under the Constitution and under the law.

The seniority system has produced good chairmen and it has produced some not quite as good as others. However, it is false to presume that seniority alone can produce the very best. Some men are bettered by time and experience, while others remain unchanged.

Mr. Chairman, the amendment which we suggest would make the committee chairmen more aware of their reciprocal obligation to their committees. The power of the chairman would come from the membership of the House and not from his constituency or his political sources of power, or by the divine providence which brought him to the committee earlier than his fellow members.

A chairman so designated would be more likely to confer with his committee on positions or programs or the developing of the staff or making the staff available to the members of the committee, instead of using the entire staff as a personal and private facility.

Mr. Chairman, the harm of the seniority system is not what it may do to some chairmen who feel a sense of divine authority. The great harm that occurs is what it does to members who must grovel in its wake, who tremble at the chairman's awesome power.

Mr. Chairman, when confronted with seniority, a new member raises a question as to how it all comes about. The answer is that the power of the chairman comes only from the members. All that we seek to do with this amendment is to provide a qualification in addition to seniority, leaving it up to the majority to decide what ought to be done in the selection of the proper chairmen for the committees of the House.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. VANIK. I am happy to yield to the gentleman from Minnesota.

Mr. FRASER. I understand that the gentleman does not favor the proposal by the gentleman from Iowa.

Mr. VANIK. I believe the proposal made by the gentleman from Iowa would be too restrictive. It is a qualified or modified seniority rule. I believe it would be far better to take the original language of the proposal which I cosponsored with Mr. REUSS, and simply make it a rule of the House that seniority alone shall not be the determining factor.

Mr. FRASER. I agree with the gentleman. I feel the same way. I believe the the idea of the gentleman from Iowa may be worth considering, but not now.

I have somewhat the same problem with respect to the amendment the gentleman is speaking for, because it does not in fact do anything. I should like to see the seniority system changed, but since the amendment will not accomplish that I am not clear it is useful to pursue it at this point.

Mr. BOLLING. Mr. Chairman, I move to strike the necessary number of words.

Mr. Chairman, I hesitate to speak again, having spoken a couple of times yesterday, but I feel impelled to speak on two amendments that are pending before the House.

I have been a critic of seniority as an unmodified system for a very long time. The other day in an interview in U.S. News & World Report the distinguished Speaker of the House reiterated something he had said earlier in a Democratic caucus. He pointed out the incontrovertible fact that if the Democrats were in the majority, that a majority of the Democratic caucus has the right to determine who will be the chairmen of the committees. This is a fact. That has been a fact for a very long time. If there is a desire to change the chairman of a committee and the Democrats are in power, the Democrats in caucus have the power to make that change.

I know of no argument against that. It has been a fact ever since the day the system changed and the then Speaker Cannon was stripped of his powers of appointment.

The problem of seniority when the Democrats are in the majority is the problem of the will of a majority of the Democrats. If they choose to modify seniority, they have the power to do so.

Now, I have recommendations on the two amendments. I would suggest that it makes no difference how a Member votes on the Reuss-Vanik amendment. It will accomplish nothing. It may become symbolic. It may have the effect of representing a vote for or against an idea, but it will change nothing. The present rules of the House provide—and everybody knows that it is a pro forma act—that the House will elect chairmen of committees. Obviously, if the House elects chairmen of committees, it can elect anybody it wants to as chairman. So the Reuss amendment, except in symbolism, adds nothing and subtracts nothing. I can see no harm in it. This is one of those rare cases when a Member could vote "present" and be performing a rational act.

Now, the Schwengel amendment is something else again. The Schwengel amendment demonstrates a well-intentioned complete misunderstanding of legislative institutions. There is no institution within the House of Representatives that acts. Only the House of Representatives, under the Constitution of the United States, can act. President Wilson has been misquoted. President Wilson has been misquoted to the effect that the only time Congress was at work, in effect, was when it was in committee. Well, a great deal of the preliminary work of the Congress is and must be done in committee, but the committees are the creatures of the House; they are not little separate legislative bodies. They represent the House in their performance, and to give to the committee the right of the institution as a whole to select chairmen is to state flatly that we are not a unified entity. Why should those who are Members of a small part of the institution select the Member who will have power in the whole institution? A chairman of a committee has power not only in his committee, but he has power in the House.

It seems to me absolutely clear that both these amendments should be defeated and we should proceed to face the problem of seniority in a reasonable, meaningful, and rational way in our two parties.

Mr. BOGGS. Mr. Chairman, I rise in opposition to the amendment.

(By unanimous consent, Mr. BOGGS was allowed to proceed for 5 additional minutes and to revise and extend his remarks.)

Mr. BOGGS. Mr. Chairman, I feel somewhat embarrassed to be talking again. However, we have debated this bill for 2 weeks and this is only the second time I have been on my feet. I do have some leadership responsibilities.

First, let me say that I concur completely with my old and dear friend from Missouri (Mr. BOLLING) who has spent a great deal of his life studying the problems of this body as an institution. I would say that had he had the time he could have added a great deal to the discussion of this body as an institution because of his very profound study and knowledge of the subject.

Mr. Chairman, I am reminded of a statement attributed to the late, great Winston Churchill when commenting upon democracy. He is alleged to have said that it is the worst system on earth until you examine all the others.

Mr. Chairman, when I look at the question of seniority, I say to myself, what do you substitute therefor? Let us first remember the admonition of the gentleman from Missouri when he said that insofar as the Democratic Party is concerned we now have full power to name or not to name, to remove or not to remove, committee chairmen. That power exists in our caucuses today. We do not have the power for Members to elect committee chairmen within the committee. And, let me for a moment advise and consent with you and tell you what that might do.

Mr. Chairman, I happen to be the ranking member of the Committee on Ways and Means. I sit next to the distinguished gentleman from Arkansas (Mr. MILLS) and I have sat there for many years. I admire and respect him.

But based upon the manner in which I read the amendment which has been offered by my distinguished friend, almost at any time I could call for a vote in the Ways and Means Committee and they could vote for either HALE BOGGS or WILBUR MILLS or the gentleman from Kentucky (Mr. WATTS), the three ranking members of that committee.

Now, let us be pragmatic for just a moment, if you will. The Ways and Means Committee handles tax legislation, it handles trade legislation, it handles welfare legislation, it handles debt management, and many other matters. Why, it is not inconceivable that one who was seeking the position as chairman would go out and make himself an arrangement with these various pressure groups and then it is not inconceivable that the chairman, whomever he may be, would make a better deal than the one that I could make.

Mr. Chairman, I saw sitting here a moment ago the distinguished chairman of the Committee on Interstate and Foreign Commerce. That committee regulates the FCC, the ICC, the Federal Trade Commission, and all of the regulatory agencies of the Government of the United States, involving the expenditure of billions and billions and billions of dollars.

So, let us take a look at what happens if we adopt this amendment—and God forbid that we should—but let us say we did. Let us say we have an unscrupulous man in either the second or third place. Think what deals he could make. Think of the corruption that would possibly come into being. You talk about problems, you talk about logrolling, you talk about corruption; it is possible that you would have it.

You know, sometimes in the name of reform, sometimes in the name of change, our institutions are ruined. There are those who would destroy the church because of a minister who was found to be dishonest. There are those who would destroy Congress because of a Congressman who is not true to his trust.

There are those who would wreck the free enterprise system because of dishonest businessmen. There are those who would wreck the labor movement because of dishonest labor leaders. I say to you that these amendments that we have here, the amendment offered by the gentleman from Wisconsin (Mr. REUSS), and the amendment offered by my distinguished friend on the Republican side the gentleman from Iowa (Mr. SCHWENGEL), strike at the heart of this institution.

Let me give you a few other examples. I remember just a few years ago in the first years of the late revered John F. Kennedy, we had a proposition here to create a Department of Housing and Urban Affairs, and it was voted down. Do you know why it was voted down? Because it had been rumored that a Negro would head up that Department; that is why it was voted down.

The oldest Member of this body is a revered gentleman, our beloved colleague, the gentleman from Illinois, BILL DAWSON. I can assure my colleagues that there have been times in the history of this body that BILL DAWSON could not have been elected chairman of the committee he heads. And I could carry on.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. BOGGS. I will be very happy to yield to our beloved Speaker.

Mr. McCORMACK. Mr. Chairman, I thank the gentleman for yielding.

The gentleman has referred to something that is near and dear to me, to our dear friend, Congressman BILL DAWSON.

I was on the Committee on Government Operations at the time. As a matter of fact, I was ahead of BILL DAWSON. I was coming back as majority leader. We Democrats had taken over the Congress. I served on the committee during, I think, the 80th to 83d Congresses, with BILL DAWSON, and we were coming back. I could have stayed as the chairman of the committee, but, of course, I did not think of that. I withdrew with pleasure, and as a result of which in accordance not with the rule, but the custom and practice, as the gentleman from Missouri (Mr. BOLLING) so eloquently referred to, BILL DAWSON became recommended by the committee on committees as chairman.

The committee could have refused to do so. The committee could have named another chairman, but they did not do so. So I know something about the "Dawson affair." I know, because I stepped aside, and as a result of which BILL DAWSON became chairman. But I also was proud to serve under him as chairman of the committee.

Mr. BOGGS. Mr. Chairman, I thank our distinguished Speaker. What greater veracity could I have than that of the beloved Speaker of this House?

Let me give you one other example. There is the distinguished chairman of the Committee on the Judiciary, the revered MANNY CELLER. He is 82 years of age, I believe. He happens to be a member of the Jewish faith, a minority faith. There was a time when, believe it or not, in the days of the know-nothings in this country, when a Jew, if he happened to be elected, could not have become a chairman of a committee.

So I say to my fellow reformers—and I consider myself one—that in these amendments you seek to tear down this institution, not to build it up. And I trust and I hope that these amendments will be resoundly defeated.

Mr. Chairman, I yield back the balance of my time.

Mr. GUDE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I appreciate the recognition. I know that there are more senior Members on our side of the aisle who also wish to be recognized, the gentleman from Minnesota (Mr. MACGREGOR), the gentleman from Vermont (Mr. STAFFORD), the gentleman from California (Mr. BELL), as well as the gentleman from Iowa (Mr. SCHWENGEL), who have proposed this amendment. And I want to commend them for their work and thought in offering this proposal.

There is talk about what is the heart of the congressional body here. I think we should speculate for a moment on how our Nation has been served in recent years by the system. Both the majority and the minority parties have, with few exceptions, let the seniority system control the succession to leadership. I think it is time for the House to reassert some responsibility for the election of its leaders.

I strongly support legislative reform and have voted for many of the amendments which have been offered in the House over the past few days.

Several of these amendments represent tremendous progress in modernizing our House and making it more responsive to our constituents. But none of them gets to the heart of the matter like the several proposals to do away with the seniority system.

I cannot accept the argument that the seniority system is the only way to assure the fair treatment of those of us who are members of ethnic or religious minorities. I cannot agree that Americans who serve in this body collectively lack the maturity to make choices based on individual merit. If this were so, democracy would be in a sorry state. Nor can I accept the argument that pressures by evil forces would so sway committee members that we must have a seniority system to protect them against themselves.

Whether we achieve reform through amendments of the rules of the House or by action in party caucus, I think it is vital that this bill be the vehicle to get us moving toward a revision of the seniority system of the House of Representatives.

Only dynamic and innovative committee leadership, which is not assured by the present system, can keep up with demands on a great legislature in 1970. American citizens are fully aware of the deep shortcomings in the seniority system. They know that the U.S. Congress is the only legislature in the free world, including the 50 States, to select its leaders under a strict seniority system.

The proposal before us would provide that the members of the majority would by secret ballot select committee chairmen. I am convinced that in many cases those who now serve as chairmen, whether they be black, Jewish, Catholic, or Protestant, would be reelected because they have demonstrated their qualifications of leadership.

But the question should be put to a vote. Those of us on both sides of the aisle who want very much a more progressive rule cannot reject this proposal out-of-hand. We should support this amendment because, as the gentleman from California (Mr. BURTON) stated yesterday, it is a first step.

Seniority studies being made on both sides of the aisle are not finalized. Further changes in the methods of selecting leaders will hopefully be forthcoming. This is a beginning, however, to break away from the seniority system, and will continue to grow into a strong wave to produce a legislative body with its leadership selected on the basic principles of democracy.

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. GUDE. I yield to the gentleman.

Mr. STEIGER of Wisconsin. I appreciate the gentleman yielding during his articulate speech.

Mr. Chairman, I take this moment of the gentleman's time to indicate that I am sympathetic to the point the gentleman is making but want to indicate my very strong opposition to both the Schwengel amendment and the Reuss amendment. I do so, may I say to the gentleman from Maryland, for two reasons. One, because I do not believe that a bill which relates to reform of the rules of the House of Representatives is a proper vehicle by which the seniority system ought to be attacked. I think it belongs in the party caucus. It does not belong in the rules and it is not there now. I concur with the gentleman that a modification in the present rigid system is needed but I believe such a change should be made in the party caucus.

Two, it seems to me, if any of us truly intend to work to pass an effective bill, one way to kill the bill is to add either of these amendments.

I intend to vote against the Schwengel amendment and I also intend to vote against the Reuss amendment, in large part may I say to the gentleman from Maryland if he will yield further, because it is ineffective and a charade.

The CHAIRMAN. The time of the gentleman from Maryland has expired.

Mr. CELLER. Mr. Chairman, I move to strike the requisite number of words.

The CHAIRMAN. The Chair recognizes the dean of the House of Representatives, the distinguished gentleman from New York (Mr. CELLER).

Mr. CELLER. Mr. Chairman, I think it was Churchill who said that "if we open a quarrel between the past and the present, we shall find we have lost the future." The past gave us decades of the seniority system. Now, the young men among us presently quarrel with the past, and in that quarrel we bid fair to lose the future.

I contemplated long before I planned to speak on this controversial subject, I would run the risk of speaking in self-interest. I might be charged with having an ax to grind. I am a chairman.

Frankly, I do not fear the outcome of this debate. Whether the seniority rule prevails or is cast into limbo, I will not be unduly perturbed. As chairman or just an ordinary member of the Judiciary Committee, I shall continue to serve with all the vigor and intelligence of which I am possessed.

Lest any statement I make concerning the desirability of retaining the seniority system be viewed as self-serving, I do not wish to further belabor that point. I know of no plan which will result in a perfect system of naming committee chairmen.

Certainly the seniority system is not without its flaws. I maintain, however, that the rules of the House are sufficiently flexible—the present rules—so as to assure the working of the majority will of the committee if the members of the majority so wish it. The supposed unbreakable grip of a committee chairman is just a myth. I know whereof I speak. The majority of any committee can veto any action of any chairman. The majority can direct the chairman and the chairman cannot command the committee if its majority asserts its authority.

As the Members of the House know, many methods have been tried and many have failed. Nor is the seniority system as practiced today so rigid as to foreclose the deposing of a chairman.

It is a matter, one, of intraparty discipline, the most recent incident of which was the denial of the chairmanship of the Committee on Education and Labor to ADAM CLAYTON POWELL; and, two, the fact that a committee list is presented to the House and acted upon in pro forma fashion is not the fault of the seniority system; rather, it is the unwillingness of the Members to challenge the list.

Whether the election by a majority vote of a committee of a chairman will erase the flaws of the present system is indeed yet to be proven.

I note, too, that the so-called Schwengel amendment pays its respects to the seniority system by foreclosing choice beyond the three senior members. That indeed is a recognition of the seniority system.

One final word. The senior member, no matter what system is adopted, will carry with him the weight of his experience, the knowledgeability of the legislation before him, and the proven ability to manage a committee bill on the floor. It may thus be possible that the elected chairman would find such influence as the post brings with it diluted by the very presence and activities of the senior member deposed.

As I have said, many methods in our history have been tried and found wanting. They were abandoned. The seniority system has survived as least objectionable.

Victor Hugo once said:

> If we do not recognize the mistakes of the past, we shall only live those mistakes all over again.

The CHAIRMAN. The time of the gentleman from New York has expired.

(By unanimous consent, Mr. CELLER was allowed to proceed for 1 additional minute.)

Mr. CELLER. I end as I began, by quoting Winston Churchill:

> No one pretends that democracy is perfect or all-wise. Indeed it has been said that democracy is the worst form of government except all those other forms which have been tried from time to time.

Similarly the seniority system is not perfect, but its value lies in the inefficiency of all the substitutes.

Mr. LONG of Maryland. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Maryland.

Mr. LONG of Maryland. Mr. Chairman, would the gentleman agree that the fact that a member of a committee can oppose his chairman, the Speaker, or his colleagues knowing that this would not interfere with his ultimately becoming chairman creates the spirit of independence that makes the Congress the greatest deliberative body in the world?

Mr. CELLER. I think the gentleman is correct.

Mr. BELL of California. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the amendment to revise the seniority system offered by my distinguished colleague the gentleman from Iowa (Mr. SCHWENGEL).

Bear in mind the gentleman's amendment just suggests that our seniority system be revised. The chairman would be elected by a majority of the majority side among the three most senior members. In the same way the ranking minority Member would be elected by the majority of the minority side, from the three most senior members.

Many people argue that our present seniority system is the best system that can be devised for the selection of committee chairmen, but they should bear something else also in mind.

The Democratic Party did not select the Speaker by the seniority system. They did not select the majority leader by the seniority system. They did not select their whip by the seniority system. The Republicans did not select our distinguished minority leader by the seniority system. We did not select our whip or the chairman of our conference by the seniority system. None of these choices, Mr. Chairman, was made in accordance with the seniority system. But I believe they were excellent choices.

Not longevity, but competence and leadership were the factors inherent in these election choices. Should we not allow ourselves the same opportunity when electing our own committee chairmen? What could be more important than the strong leadership in our legislative committees?

The proposal before us retains experience as a factor in the selection process, and I believe that this is good. As a practical matter, as has been said before, in most cases the number one senior member would probably be reelected. But it also puts a few committee chairmen or some committee chairmen who may be a bit careless or lackadaisical on notice or makes sure they put their best foot forward and do a good job, and within the rules it defines electability. At the same time, however, it allows committee members, themselves, who have observed each other working under unique committee conditions, to choose the chairman they believe possesses the best combination of ability and leadership characteristics.

Under the system provided by this amendment, the chairman would necessarily be more responsive to the committee as a whole, knowing that his actions and record would determine his tenure.

The very rare occasion of abuse would become even less likely under these circumstances.

Can we afford any longer to leave the control of this power to chance? Can we allow the selection of the chairman to be based solely on longevity? I think not.

The public at large, whether rightly or wrongly, has become increasingly concerned about the organization of the

Congress. And what are some of the factors they complain about most? On this I quote: "The antiquated seniority system" is high on the list of criticisms.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. BELL of California. I yield to the gentleman from Minnesota.

Mr. FRASER. Mr. Chairman, let me raise this question because I know of the gentleman's deep interest and commitment to bringing reform and change to the House. Supposing the majority of my colleagues on the Democratic side decided they wanted to change the chairman of a committee of the House.

We now have that power, through our caucus, to do so; that is true; is it not?

Mr. BELL of California. That is right.

Mr. FRASER. But if the proposal the gentleman is supporting is adopted, that power would be taken away from us; would it not?

Mr. BELL of California. The power to select?

Mr. FRASER. The power in the majority to make a decision would be stripped away from us and conferred upon a much smaller group.

Mr. BELL of California. It would be conferred upon the members of the committee itself.

Mr. FRASER. That is right; so the members of the caucus would lose control over the chairmanship.

Mr. BELL of California. The members of the caucus would, but who properly knows more about the workings of the committee, about the eligibility and the ability of the chairman and the potential leaders, than the people who are working with the committee chairman?

Mr. FRASER. If I may speak bluntly—and it might be unwise to do so—some of the chairmen of whom I believe there has been more criticism than others would surely be elected by their committees but might not be elected by the caucus. That is one aspect to be looked at. It is one reason why I have a question about the proposal.

Mr. BELL of California. I can also recall a considerable amount of bad publicity and trouble which the Congress received as a result of some mistakes made by a previous chairman. That helped to give the Congress such a bad image insofar as the public is concerned. Also why the American people are so critical of the seniority system.

What are some of the factors that they complain about most? The, and I quote "antiquated," seniority system is high on the list of criticisms. To say that Congress has not been adversely affected by such criticism is to put our head in the sand.

If we pass a Legislative Reorganization Act—without acting on the seniority system—the anger and disappointment felt by our citizens will be totally justified.

The amendment under consideration offers us an important choice.

We can go on record as taking a major step toward streamlining the committee system and making it more responsive to the public and to this House—or we can sustain the rigid structure under which we now operate.

This is not just a party matter.

Selection procedures of committee chairmen affect the entire Congress and reflect upon it and I, therefore, urge my colleagues to support the pending amendment.

Mr. SISK. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I do this in order to see if we can determine about how many Members would like to speak on this subject. A number have inquired about when we would like to vote.

I do not desire, Mr. Chairman, to limit the Members to a half minute or to 1 minute. If we can get an idea as to the number who would like to speak, perhaps we can figure out something like 3 or 4 minutes each.

Mr. Chairman, I ask unanimous consent that we vote on this amendment no later than 4 o'clock.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. SAYLOR. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. SISK. Mr. Chairman, as I say, I have only a desire to try to see if we cannot get some understanding. I wonder if we could say 4:15? I ask unanimous consent that debate be limited to 4:15 on this amendment. I have no desire to cut off the Members.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. SCHWENGEL. Mr. Chairman, reserving the right to object, I have spent a lot of time on this. Many of us have. We feel deeply about this subject.

Yesterday when I spoke I had only 5 minutes, and much of that time was given over to a Member to whom I yielded.

I had hoped that I would be granted the courtesy of spending some extra time on this. Some things have been said here that had some implications about my attitude on racial matters and the like. I should like to have an opportunity to talk about this. This is quite important. I believe we ought to have more time.

We have had more time on amendments of lesser importance than this. Therefore I think we need more time on this important matter.

PARLIAMENTARY INQUIRY

Mr. HARSHA. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. HARSHA. How many times is a Member permitted to speak on his own amendment?

The CHAIRMAN. The gentleman from Ohio inquires as to how many times a Member may speak on his own amendment. The answer to that is he may speak one time to his amendment.

Mr. HARSHA. The author of the amendment is asking for additional time, and some of the rest of us have not had any time.

Mr. SISK. Mr. Chairman, I withdraw my request and yield back the remainder of my time.

PARLIAMENTARY INQUIRY

Mr. COLLIER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. COLLIER. Is that rule not also applicable to any other Member of the House, once he has spoken on an amendment?

The CHAIRMAN. The gentleman is correct.

PARLIAMENTARY INQUIRY

Mr. CLEVELAND. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. CLEVELAND. Am I not correct in stating that when the gentleman from Iowa (Mr. SCHWENGEL) offered his amendment, he spoke on it; and am I not correct that when the gentleman from Wisconsin (Mr. REUSS) offered an amendment the gentleman from Iowa (Mr. SCHWENGEL) offered a substitute. Would not the gentleman from Iowa (Mr. SCHWENGEL) be allowed to speak for 5 minutes for or against the Reuss amendment, as well as in support of his own substitute?

The CHAIRMAN. The gentleman is correct.

Mr. CLEVELAND. I thank the Chairman.

PARLIAMENTARY INQUIRY

Mr. WAGGONNER. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. WAGGONNER. Under the rules of the House cannot a Member move to strike the last word and be considered on the same amendment?

The CHAIRMAN. The gentleman is correct.

Mr. WAGGONNER. And under those conditions a man could speak twice, could he not?

The CHAIRMAN. Possibly. If a Member were to speak one time in opposition to an amendment subsequently he could move to strike the last word and he would be entitled to be recognized.

Mr. WAGGONNER. A further parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. WAGGONNER. If some time is set, does not that abrogate the time and a Member then could be allowed to speak again?

The CHAIRMAN. The gentleman is correct.

Mr. HAYS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in opposition to both amendments. As has been pointed out by people who know more about the rules of the House than I do, caucuses have the power to overrule the selection of their various committees on committees as to who may be the chairmen and who may not be. Mr. SCHWENGEL's amendment restricts this to not even a majority of the majority, because he would be counting only among three people.

The distinguished majority whip pointed out some of the things that could happen if you started bargaining among members of committees for votes for election.

I happen to be the ranking member of the Committee on House Administration, and I have no doubt that under Mr.

SCHWENGEL'S amendment I could be elected from that committee tomorrow by simply promising to divide amongst the other members the patronage of the chairman, the gentleman from Maryland.

I would not do that. I would not try to supersede him. I would not be a candidate. But there are some people who would. You could have this House and its committees taking away from the caucus, taking away from the majority, taking away from the minority the rights that they have to veto a chairman if he gets out of line. A horrible example was raised a little while ago of a chairman who did and he was vetoed by his committee and he had only the right to sit in the chair and nothing else.

So all of these horrible things are not necessarily as bad as some of those who are not chairmen but who would like to be would like to make us believe they are.

Now, let us be pragmatic and factual. There is a great hue and cry about the rules here. There is one rule here that I have seen violated repeatedly in the last 2 days and mostly violated by those who want reform; that is, rule 42, which blankets in Jefferson's Manual as the rules of the House. In Jefferson's Manual—I think it is on page 203—it says that a Member may not read anything that anybody else has written or anything that he has written to the House of Representatives. Now, I know sometimes, for purposes of accuracy, it is nice to have a printed text to read from, but if we are going to revise the rules wholesale, why do we not change that one, which is violated more times, it seems to me, than it is observed. I just mention that in passing.

I know that there are some things in the rules of the House that maybe ought to be changed. We have committees in both caucuses working on the seniority problem. The gentlewoman from Washington is chairman of the committee on our side, and that committee is working. She has it working and keeps it working, and she checks on you every day to see what you are doing if you are on a subcommittee. We have had a lot of suggestions, but when you get down to it, about the one thing that seems to be of the greatest concern to us—and I do not want to violate any secrets, because it will all be brought up in our caucus—is the fact that probably some people are chairmen of more subcommittees than they can actually physically handle because of the limitations of time, and we are trying to work out as best we can some recommendations to the caucus to spread that work around.

We are trying to work out as best we can some recommendation to the caucus to spread it around. I think that we can work out a practical solution which may alleviate some of the problems that some of the Members feel as very real problems in that they have a lot of time on their hands and not much to do with it. I am all for it. I am all for spreading the workload around. But I think if we adopt the amendment which has been offered by the gentleman from Iowa that we further shackle the democratic powers of the House in that we take it away from the great mass and we confine it merely to the members on both sides of a specific committee.

Mr. ALBERT. Mr. Chairman, will the distinguished gentleman from Ohio yield to me at that point?

Mr. HAYS. I am glad to yield to the distinguished majority leader.

Mr. ALBERT. The gentleman is talking about taking the power away from the caucus. It would also be taking the power away from the House, the power to approve the committees.

Mr. HAYS. The gentleman is exactly right. We talk about taking it away from the caucus but we would, in fact, be taking that power away from the House.

So I suggest to the gentleman from Maryland (Mr. GUDE), since the gentleman made a very eloquent speech on this, if these amendments do not pass and next year when the committee chairmen and the members of the various committees come up for approval that the gentleman stand up and tell us which chairman the gentleman does not want and make a motion that he not be elected.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

(By unanimous consent, Mr. HAYS was allowed to proceed for 1 additional minute.)

Mr. HAYS. I mentioned the gentleman's name and I want to be fair and give him a chance to answer.

Mr. GUDE. Mr. Chairman, will the gentleman yield?

Mr. HAYS. Yes; I yield to the gentleman from Maryland.

Mr. GUDE. I am only suggesting to the gentleman that be it Republican or Democrat Party which is in the majority——

Mr. HAYS. Well, it will be the Democrats and the gentleman may proceed on that assumption.

Mr. GUDE. Then the caucus of the Democratic Party would be able to further revise the rules if they are unsatisfactory to them should the Schwengel amendment be adopted.

I thank the gentleman for yielding.

Mr. HAYS. We will revise—I do not think we would, may I say if the Schwengel amendment is adopted—I do not think the caucus could take away and revise a law which has been passed by both Houses and signed by the President. The gentleman is in error.

Mr. HARSHA. Mr. Chairman, I move to strike the requisite number of words.

(Mr. HARSHA asked and was given permission to revise and extend his remarks.)

Mr. HARSHA. Mr. Chairman, if I understand the Schwengel amendment, it perpetuates the seniority system but, further, it relegates that into a popularity contest, because the only qualifications for these three Members must be seniority or longevity. It says nothing about their expertise in the field in which the committee deals. It says nothing about their technical knowledge, nothing about their attention to committee work. It deals solely on a longevity or seniority basis. However, it relegates that selection to a popularity contest and you are invariably going to have a campaign by members of the committees for this particular position, because every pressure group, every special interest group interested in the work of that committee, may have a favorite among those three that they want to select or get into the position of ranking member or chairman of that committee. You invariably will have commitments between members. Bargaining for position if you will.

Mr. McCORMACK. Mr. Chairman, will the distinguished gentleman yield to me right there?

Mr. HARSHA. I would be happy to yield to the distinguished Speaker.

Mr. McCORMACK. Can you imagine the election of a chairman of the Ways and Means Committee from among the first three members with the big interests interested, what the pressure would be? Can you imagine the pressure to elect the chairman of the Committee on Interstate and Foreign Commerce? Can you imagine the pressure which would be exerted in the election of the chairman of the Committee on Education and Labor? Can you imagine what the pressure would be on the election of the chairman of any number of other committees? Why, it would be tremendous.

Mr. Chairman, the gentleman from Ohio has referred to a subject that is very important and I respect him for it and I appreciate the fact that he yielded to me to make my brief observation.

You could have the worst scandals in the world if an election from among the first three members of a committee happens to take place in this House. My mind is open, but this particular proposal would be dangerous—offered in good faith as it is—but it would be dangerous.

Mr. HARSHA. I thank the distinguished Speaker. That was the point I was trying to make, and he has made it far more eloquently than I. But please let me point out that you should stop to realize that we are going to have coming before the House a highway bill for 1970 that will involve over $22 billion in the years ahead. When you stop to think of all the highway users' groups, all of the contracting groups, all of the oil people who are involved, every facet of American life that has anything to do with highway construction-interstate-development. Then think of all the river navigation projects, all of the public works projects, all over the country, the flood control projects, just think of the ramifications of that when we get into a bidding contest on who is going to be the ranking member and chairman of that committee.

What you are doing is laying the groundwork, if you adopt this amendment, laying the groundwork for the greatest wheeling and dealing operation that this body has ever seen in the history of the Congress.

Let me say one other word to you about this question of seniority before you want to destroy it all. Every single one of you—every single one of you has seniority over your opponent. Now, you can be attacked by your opponent on your voting record. He can attack you on a personality basis, he can hire a famous public

relations outfit to improve or project the image he thinks the voters would most likely be receptive to, he can spend a million dollars or a hundred thousand dollars to make his name a household word, he can attack you from every single angle but one, and that is seniority. And the first, or lowest Member in seniority in this House has seniority over his opponent. And when you give that up, then you lay yourself completely open to a successful attack by any opponent whom you might have in future elections.

I would hope that you would keep that in mind before you adopt such an amendment as this.

I will now yield to the gentleman from California (Mr. BELL).

Mr. BELL of California. Mr. Chairman, relative to the popularity contest the gentleman mentioned, I might mention that the Speaker of the House is elected, the majority leader is elected, the minority leader is elected, and the conference leaders. Relative to the other matter with regard to dishonesty that might be involved because of having to make arrangements with these lobbyist groups, I might remind the gentleman that most of your State legislatures are formed not on the basis of seniority. And as far as seniority, I just had a very tough campaign in the primary campaign in which a lot of money was placed against me, and I mentioned seniority until it was coming out of my ears, and I got absolutely nowhere with it.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. HARSHA was allowed to proceed for 1 additional minute.)

Mr. HARSHA. Mr. Chairman, in the first place, in response to the gentleman from California, the Speaker, the majority leader, and the minority leader are not selected from the top three men on a seniority basis, as it would be in the committee election amendment. Furthermore the gentleman won the primary contest he refers to and who is to say that his plea of seniority fell on deaf ears. As he says he used the issue of seniority and was successful—that speaks for itself.

I certainly do not suggest any dishonesty on the part of Members but the pressures will be there and they will be great, make no mistake about that. The opportunity for this type of maneuvering and trading is obvious. The ramifications of the ominous results of such an amendment far outweigh the deficiencies of the seniority system.

Mr. COLLIER. Mr. Chairman, will the gentleman yield?

Mr. HARSHA. I yield to the gentleman from Illinois.

Mr. COLLIER. Mr. Chairman, I thank the gentleman for yielding. That was the exact point that I wanted to make.

I would also like to make this additional observation that in that instance, in order to apply the same logic, the same argument, then you could not restrict it to three. You would have to go through the whole gamut, and open it up, if you are going to use this as the basic argument to everyone on the committee.

Mr. HARSHA. Every member on the committee would be eligible; that is right.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. ECKHARDT. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the one salient point which needs to be kept in mind in voting on this amendment, is the overriding objective of improving the operation of the House of Representatives as an institution.

If that is our objective, we do not achieve it by enlarging the isolation of the committee inverting it within itself—we do not provide a means by which three select men rather than one selected man maintains a small baronetcy against the interest of the entire body.

Our primary interest must be in the House of Representatives as an institution. We must be directing our interest toward the discipline of the parties over the conflicting body of ideas from which legislation must ultimately be devised.

Now if we go by the route of the Schwengel amendment, then we go in the opposite direction of that reform that I am talking about here.

I am against the Schwengel amendment and I believe I am against the Reuss amendment. The reason I say I believe I am against the Reuss amendment is that although the Reuss amendment merely affords guidance to a caucus, as I understand it, it seems to me that guidance adds no concrete basis upon which the caucus will gain increased power.

Mr. REUSS. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman.

Mr. REUSS. Yes, the Reuss amendment does do something. It acts as a signal and a symbol to the caucus that they must take into account factors other than pure longevity of service. I point out to the gentleman from Texas that since 1952 on only two occasions—in 1965 and 1969—in those 18 years did the House Democratic caucus even look at the list of proposed chosen-by-seniority chairmen. They were whisked to the floor by the committee on committees with a great whoosh, and the Democratic caucus did not even look at them.

The passage of the Reuss amendment, therefore, would do something—it would signal the two-party caucuses that they must take into account the chairman's qualifications, not just his seniority—and that, it seems to me, is a worthy first step.

Mr. ECKHARDT. I thank the gentleman. Insofar as he states that his amendment is for the purpose primarily of strengthening the caucus, his amendment, if it adds anything, is desirable in that respect, but I would respectfully state to the House that I believe that anything that is done in the rules themselves to widen the authority of the caucus implies the power of the House to restrict the authority of the caucus.

I speak for the power of the caucus. I think the caucus of the majority party, and its opposition on the minority side, is the ultimate basis of Anglo-American effectiveness in a legislative body.

Therefore, I would commend the purpose of the Reuss amendment. But I would not recommend to this body in making its rules that it restrict the caucus or direct it. It is for these reasons that I oppose both the Schwengel amendment and the Reuss amendment.

Mr. SAYLOR. Mr. Chairman, I move to strike out the last word and rise in opposition to both amendments.

Mr. Chairman, and Members of the Committee, the distinguished gentleman from Missouri, RICHARD BOLLING, a short time ago gave the Members of the Committee of the Whole House one of the best lectures on the parliamentary procedures and methods of the Congress that it has ever been my privilege to hear. I sincerely hope that tomorrow when the RECORD comes out that each and everyone of you read it.

I realize that some of my colleagues are interested in changing the Rules of the House, particularly the rules with regard to seniority. I just looked over the list of the 21 standing committees of the House of Representatives.

The three ranking members, both Democrat and Republican, of the standing committees of the House are:

AGRICULTURE

Democrats

W. R. Poage, Tex.
John L. McMillan, S.C.
Thomas G. Abernethy, Miss.

Republicans

Page Belcher, Okla.
Charles M. Teague, Calif.
Catherine May, Wash.

APPROPRIATIONS

Democrats

George H. Mahon, Tex.
Jamie L. Whitten, Miss.
George W. Andrews, Ala.

Republicans

Frank T. Bow, Ohio.
Charles Raper Jonas, N.C.
Elford A. Cederberg, Mich.

ARMED SERVICES

Democrats

L. Mendel Rivers, S.C.
Philip J. Philbin, Miss.
F. Edward Hebert, La.

Republicans

Leslie C. Arends, Ill.
Alvin E. O'Konski, Wis.
William G. Bray, Ind.

BANKING AND CURRENCY

Democrats

Wright Patman, Tex.

You know, it is a remarkable thing. No Member who qualifies for consideration as a chairman under any of these two amendments has spoken in favor of these amendments. It is only those who do not have seniority that want to do something about it.

By the way, as a Member of what has been described as the greatest legislative body in the world, I am sick and tired of hearing what they do in State legislatures. This is not a State legislature. Let everybody get that clear. This is the Congress of the United States. This is the House of Representatives, and we are not bound by what the legislature of any State does.

With the exception of the original 13 States, we have created the machinery that established all the State legislatures, and what they do is of little mind as far as this body is concerned. Most of the State legislators do not even have an office, let alone worry about the things that we have to worry about here in Congress.

Very frankly, if the seniority system is attacked and the attack is upheld by any of the amendments which have been proposed, the next step will be a direct follow-up of what Mr. BOLLING pointed out. Each little committee would then be authorized to pass a bill send it to the corresponding committee in the Senate—Work out the conference, have it engrossed and forwarded to the President to sign into law. That will be the next step that will come, and you will never see legislation come back to this body as intended by the Founding Fathers.

Every one of you who are elected as Members of this body have a right to get up and object when rules go through. It has been my privilege to serve in the Congress for almost 22 years; in that period of time I have seen only two Members who I felt were not qualified to be committee chairmen, and in each of those instances the committee itself took charge and, in a sense, removed the chairman or made him so sterile that he was absolutely ineffective.

The rules of the House as they exist now with regard to seniority are an integral part of the Democratic caucus and the Republican caucus, and if the Republican caucus and the Democratic caucus do not like the system, it is within their province to change it, but not by the rules changes that are now proposed.

The gentleman from Ohio (Mr. HAYS) a short time ago made the statement that if the proposed legislation becomes law, it will be binding upon the caucus of each party, and we will not be permitted to change it. That is correct.

Mr. Chairman, I urge that both amendments be defeated and, with all of its faults, I urge that we do not do anything to disturb the seniority system.

Mr. CONABLE. Mr. Chairman, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to the gentleman from New York.

Mr. CONABLE. The point the gentleman has made is a good one. The issue here is not really so much seniority as it is the proper place of seniority in this bill. It is properly a matter of party rule. As chairman of the task force on seniority for Republicans, I can tell the Members that we are seriously considering a possible modification of the seniority rule, and this is where it should be considered rather than in the Committee of the Whole.

Mr. SAYLOR. The Republican caucus, for the benefit of the Members on the

Democratic side, took some action on this matter some time ago. They said that no Member on the Republican side could be the ranking member of two standing committees of the House.

Mr. WALDIE. Mr. Chairman, I move to strike the requisite number of words.

The Chairman, I rise in opposition to the Schwengel amendment for many of the reasons that have been heretofore advanced, but primarily for those reasons involving a diminution of the power of the caucus if the Schwengel amendment is adopted. I think the caucus in matters of seniority and committee assignments should be absolute under our present system. I think also the Schwengel amendment enhances one of the difficulties I personally find with the system, and that is it makes even more isolated and remote from control the enclave that the committee now represents.

Personally, I find one of the most objectionable faults of the system as it presently is constituted is that power is too diffused from the Speaker and too concentrated in the respective committees.

I would go much further, I am sure, than most other Members of this House would go. I would permit the Speaker to appoint all committee chairman subject to the approval of the respective caucuses of each party without regard to seniority or without regard to any other factors than those he deems proper.

I would answer, in reply to the suggestion that this is no more than Speaker Cannon's system, that the era of America today is entirely different from the era that existed during the Cannon tenure when power was concentrated and abused by Speaker Cannon, because the ability, particularly of the communications media, to identify abuses and call attention to those abuses so that they would be redressed was much less then than it is today.

In addition, the power of the executive branch in the Cannon era vis-a-vis the legislative branch was considerably different and considerably less. The power of the executive branch is awesome today compared to the legislative branch.

One of the reasons why there is so much difference between these two branches is that we have diffused our power through the committee system and have not permitted the Speaker to exercise the power his office possesses—which is second in the land—and to exercise the power which should be wrapped up in the speakership. If we should permit the Speaker that power, subject to caucus veto, it would make this legislative branch a more important branch than it has been.

I would also suggest that the objections to selecting committee chairmen solely on the basis of seniority are apparent to all—or must be, because few have addressed themselves to the inexcusable situation that a man should assume the tremendous powers of the committee chairman just because he is reasonably healthy and has a tolerant constituency—that is so incomprehensible to explain to the public that no one on the floor defended it, and properly so. They defended seniority on two very strange bases. One was that historically the Congress was bigoted and prejudiced, and to avoid that bigotry and prejudice in the majority of the Congress, it was necessary to have a system that took out of the hands of individual Congressmen the right to make these selections, and the seniority system did that.

In recent days it has been defended by speaker after speaker because the individual Congressman—it adds up to—are irresponsible and weak and are unable to withstand the tremendous economic pressures of the lobbyists, and it is to protect the individual Congressmen from their own weaknesses that we must have this indefensible system.

One Member said that on his committee he could become chairman tomorrow. He perhaps knows his committee better than I, and he knows their weaknesses, but as he described them, if no one else knew who the members of that committee were, it would have to be assumed they were relatively spineless people and would select the committee chairman on the basis of favors he would give them. It is that demeaning process we engage in when we describe our colleagues by defending the seniority system—it is never assumed we are describing ourselves—and we seek to protect our colleagues by this peculiar system that is indefensible under any other terms than protecting our colleagues against their weaknesses which in the past were bigotry and prejudice and today consists of an inability to withstand the lobbyists.

Those are the types of descriptions of Members of the House that make the public very, very concerned about the House of Representatives.

Mr. ARENDS. Mr. Chairman, I move to strike the necessary number of words.

Mr. Chairman, I am not going to particularly address myself to the Schwengel amendment, but many thoughts have been going through my mind, after listening all afternoon to this debate on reorganization and reform.

There is a great concern many Members have had about this legislative proposal. How inclined we all are to make sure that the people back home think we are doing what they want us to do. How we want to tell them all the truth about what happens in the House of Representatives. This what we say we want to do; namely, tell them all.

I happened to count the House a minute ago, and, lo and behold, with this great measure we have before us, we had but 76 Members of the House present and listening to the debate. Perhaps we ought to tell the people about that fact.

I do not know how truly concerned we are about really wanting to do something about reorganizing the House.

Going back into history, referring to something that has been mentioned time and again, is talk about Uncle Joe Cannon. That is history being discussed today. I happened to read recently a book called "Tyrant from Illinois." It is about the legislative life of Uncle Joe Cannon.

I now am privileged to represent a part of his old district, due to the last redistricting in the State of Illinois.

It might be interesting for the Members, if they want to know the truth about what happened in those days, to read the book.

The truth is, Uncle Joe Cannon did not do anything except what the House gave him the power to do. He exercised those rights.

Then, lo and behold, the so-called liberals of those days took those powers away from Uncle Joe, and rightfully so.

The great difficulty at that particular era in history was that Uncle Joe Cannon not only was the Speaker of the House but also was the chairman of the Rules Committee. Whenever the Rules Committee proceeded to report out a rule that Uncle Joe wanted, or did not want, he would put it in his pocket and carry it around. Finally, if one wanted legislative action on the House floor, even if it were a request from the White House, one made inquiry of Uncle Joe Cannon, "What is going to happen to H.R. so and so?" The President might call the Speaker, by telephone, and he would say, "What about that bill?" And Speaker Cannon would reply, "I have it in my pocket." Then he would be asked, "What are you going to do about it? We would like to have you come down to talk it over with the President of the United States." And Uncle Joe would respond to the President of the United States, "Why do you not come up to talk to me about it?"

That is the ways things happened in those days, until the Congress saw fit, in its wisdom, to change the signals.

So whatever changes the Congress wants we can adapt to change. We all desire change and progress. We can, I repeat, adapt to change at any time the House wishes to take action. We can make rules and change them as we see fit.

As suggested this afternoon, by action of the majority party and by action of the minority party these matters can be taken care of. I repeat, it is the responsibility of the Members of the House of our two parties to do all the things for change that have to be done on this House floor. The House has such power and no one else.

Mrs. CHISHOLM. Mr. Chairman, I move to strike the necessary number of words.

Mr. Chairman, it is very seldom that I come to the well of the House, in the time I have been here, but this is a matter which has been of grave concern to me for quite some time. I believe it is most important for us to realize it is not only a question of trying to update the rules and the procedures in this House so that the Congress can become a much more effective body but also, I believe, it is a question of the fact that the American people on many levels—different colors, different economic groups—are questioning some of the actions and some of the operations in this great body.

I do not believe we should close our eyes to some of the stark-naked truths which confront us as we attempt to leave the 1960's and move into the 1970's and try to come up with a legislative body that truly is more relevant to the needs of the people of the United States today.

It seems to me that always a large

number have to suffer for the mistakes of a few. There is no question in my mind about the fact that the seniority system based on longevity of tenure has built into it certain inherent weaknesses which many of us do not like to discuss openly because sooner or later many of us hope to become old and still be able to retain some of the capacities and abilities we have when we are young. Let us face it, gentlemen. The fact of the matter is this: our dynamic, changing society, which has to come up with answers to problems that have been collecting for a long period of time, no longer fulfills the need. It becomes very necessary to change some of the traditions and some of the rules that many of us who have been beneficiaries of the status quo find most difficult to accept in these changing and perilous times in which we are living.

Mr. Chairman, I am not here to condemn the seniority system in and of itself. I think the important thing to recognize is that there are additional criteria that have to be considered in addition to longevity of service. I think we have to consider the fact that the reason why young people and other people are lashing out today in our country is that they are seeing by virtue of some of the things they hear some of the gentlemen here say, that we cannot really defend what we are doing. I also recognize, as I have heard some of the gentlemen here say, that we need change; we need change so desperately. However, we are so afraid to speak out even in the caucus because, those of us who have been in the political arena for any length of time, recognize the term "political reprisal." Therefore, even if gentlemen desire to say something in the caucus, and they have very deep feelings and very deep convictions about it, the caucus becomes relatively paralyzed because of their fear of what might happen after they dare to get up and speak out.

I am going to tell it like it is because many of us have been talking in the back rooms. Many of us have been talking about it with each other, but we dare not speak about it within our own caucus. How sad that is. Therefore, we have to recognize the very reason why we have to bring such a bill as this to the floor. It is because the caucus has been relatively powerless in terms of bringing about changes that are very necessary.

In conclusion, Mr. Chairman, let me say that I support the Reuss amendment. The reason why I support that amendment is that the people of this country are not interested in excuses from us as their elected representatives as to why we are not functioning. We have a responsibility to carry out in this body in terms of electing the leaders of our committees and in terms of electing those persons who will be controlling the destiny of this Nation. Therefore, it seems to me in our caucuses all of us who are a part of this magnificent body should have the opportunity to make a selection, if you will, merely to have the right to do this, particularly with a closed ballot, because we know what will happen if we do it openly.

In conclusion, there is an element of fear that permeates so much of what we want to do here and so much of what we really should do in order to make this great institution relevant. Let all of us come out from behind our masks and do that which has to be done.

Mr. WYATT. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I oppose both of the pending amendments, and I do so for some strategic reasons. The reasons are those which were so very eloquently articulated by the gentleman from Wisconsin (Mr. STEIGER).

This reorganization bill we have been struggling with for many days now is to me like a vessel on the high seas. It is struggling already loaded with a very heavy cargo. I submit to my colleagues that if we add the additional cargo of seniority, the entire ship will sink. There are many of us who do not want to see this happen.

I am simply arguing that for those who want some meaningful reform and who want this body to effectively consider any changes in the seniority system, I would urge that if they want to go beyond that that they vote against it here. The proper place to accomplish it is in the respective caucuses of the parties. Being a member of the task force on our side, I know we are giving very deep consideration to this matter and I have confidence that we are going to do the right thing in this regard.

Mr. LOWENSTEIN. Mr. Chairman, I move to strike the requisite number of words.

Mr. SCHWENGEL. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment offered by the gentleman from Wisconsin (Mr. REUSS).

Mr. Chairman, and colleagues, I have listened avidly to the debate here, and for the most part it has been very good. I am glad we are debating this, because this is the first time this question has been debated on the floor of the House. This will result in a change that will result in a better and more effective Congress.

Now, whether or not my amendment passes is not so important as that we do something on this question of seniority.

I have been on 300 different college campuses in my political life, and I can say to my colleagues that there is a disenchantment there about the establishment, and we are it. The present seniority system is one of the principal criticisms that one hears.

I think we are going to be sensitive to this question and I think we are going to make a change; whether it is my amendment or not is not quite so important as that we do something about the seniority system, which I think is inherently bad in that it will not produce the best leadership nor the most effective leadership.

All of you know that I read history some, and I have read the biographies—and I stress biographies in my reading—of the Members of this House and the Senate. It is a tragedy that too few volumes have been written about our predecessors, but I have read enough on the history of this House and those who served here to believe, having now served here almost 14 years, that we have, and you and I are serving with colleagues on both sides of the aisle that measure highly from a sense of capacity, a sense of capability and a sense of dedication.

So all that I have desired to do, and that is my principal purpose for presenting this proposition, is to improve the House so that the capabilities and the capacities of this House to function as a legislative body will have a chance to come through, and to show itself at its best. It is not doing that now.

Now, how do we come to the conclusion that we want to do it this way? Well, I am a pragmatist. As a number of people have said, "Well, why do you not present a modified form?" And that is what this is, a modified change. I would just as soon eliminate the seniority question entirely, and just provide for the election of the chairmen by the committee members.

Now on that point people have gone on and spoken about what was going to happen if we did this. Ladies and gentlemen of the House, I cannot believe that this House or the membership character of it will be less with this change than it is now.

This wheeling and dealing would not happen any more, with this change, than is happening today.

As it has been pointed out, our leaders are elected by secret ballot and ballot election is not a new idea at all. We do not need to be afraid of it.

Members of the committee would not be any more influenced than they now are by lobbyists. I know something about lobbying influences because I served in the Iowa Legislature and we do not elect chairmen out there by seniority.

I have not seen any evidence of the lobbyists running high, wide, and handsome over the Iowa Legislature. Although I think at times they do have too much influence. Always that influence is not bad either. I can remember when we were fighting for State aid for schools, when we had a pretty good bunch of lobbyists who turned out to be good lobbyists—they were lobbyists of the people and should the desires of the people come through, it is not going to be bad.

The distinguished gentlewoman from New York has spoken here and touched on a very important point, and that is the importance of our responding to the people's needs—not to the desire of the executive or the desire of the special interests. If I believed that my amendment or the Reuss amendment or any amendment that does something about the seniority system and which would change the seniority system would be a handicap—I would be against it.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. SISK. Mr. Chairman, I rise for the purpose of making a unanimous consent request again to set a time certain to vote on the pending amendment and the substitute thereto.

Mr. Chairman, I ask unanimous consent that debate on the Schwengel amendment and the Reuss amendment, and all amendments thereto, close at 5 o'clock.

Mr. CLEVELAND. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. SISK. Mr. Chairman, I hesitate to make a motion, but there are a number of people who are seeking a motion on this because they would like to know some time certain as to the close of debate on the pending amendments.

If I may make another unanimous consent request, Mr. Chairman, I ask unanimous consent that all debate on the pending amendments, and all amendments thereto, close at 5:15 p.m.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. BELL of California. Mr. Chairman, reserving the right to object, once a Member has spoken on these amendments, can he under the limitation of time speak on the amendment again?

The CHAIRMAN. The Chair would like to inform the gentleman from California (Mr. BELL) that all Members standing would be recognized.

Mr. BELL of California. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from California (Mr. SISK)?

Mr. CLEVELAND. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mrs. HANSEN of Washington. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, it is with some humility that I speak to the members of the Committee this afternoon because I was chosen by the chairman of the Democratic caucus to preside over a committee which contains as much controversial material as could possibly be provided by any Democratic caucus.

However, I would like to say to the Members of this House who have discussed this problem of seniority today that, first, I oppose the Schwengel amendment—and I have no feeling for or against the Reuss amendment.

I would like to associate myself with the remarks of the very distinguished gentleman from Missouri (Mr. BOLLING) who spoke earlier this afternoon, outlining the problems that are at stake in some of the basic proposals. I would like to say to the members of this committee that we have had an overwhelming response from Members on the subject of seniority and associated problems. Seniority is not the whole problem. Basically, we cannot have a more responsive kind of committee system unless the committees are made up of the most able people with the philosophies that we wish to see represented.

Therefore, associated with the problem of seniority is the composition of the committees themselves.

I urge that the Members of this House give the Republican caucus and the Democratic caucus an opportunity to bring before the House a recapitulation of some of the very thoughtful and thought-provoking ideas which have come from nearly all the Members of this House. Some of them deal with rules and how they are administered within the committees. Some of them deal with tenure of the committee chairmen: Shall they be rotated? How long shall a chairman serve? Shall the caucus be given an opportunity to vote on three or five selected people as chairman? You see the complexities of all the items before the committee.

Therefore, I do not propose to delegate the power of this House—my power or your power—to a committee which would name and select chairmen for us to approve and impose their will upon us.

Mr. HAYS. Mr. Chairman, will the gentlewoman yield?

Mrs. HANSEN of Washington. I yield to the gentleman from Ohio.

Mr. HAYS. It is a rather anomalous situation that we have here when some of the very people who were yesterday saying that we have got to get rid of secrecy and we have to have a recorded teller vote are now saying we must have a secret ballot to elect chairmen, which election would not be subject to a review of the House and, therefore, no chance to get a record vote on.

Mrs. HANSEN of Washington. I thank the gentleman.

I will say to the Members again you will have a report on this subject. The distinguished gentlewoman from New York who spoke earlier is a member of that subcommittee. She will have a chance to voice her support for reform within the committee itself. So I would appreciate it if the Members remember that we are working to try to improve the system in the House so that it will be reflective of the changes that are occurring in this century, that we are trying to reflect all of your viewpoints and to reconcile them and to bring about some changes in the structure which will make a more relevant operation within the House.

Mr. COLLIER. Mr. Chairman, I move to strike the requisite number of words.

The CHAIRMAN. The gentleman from Illinois is recognized.

Mr. COLLIER. Mr. Chairman, first let me make this observation. The gentleman from New York (Mr. LOWENSTEIN), in justifying his position on the pending amendment, suggested that using the same logic, we should take the oldest citizen in each district or the oldest person to serve as chairman.

This in and of itself is not alone a totally specious argument, but it is void of any logical parallel to what we are talking about today, because every Member of this House has been elected by the constituents in his district. To attempt to draw such a parallel, I repeat, is void of any logic.

I would like to make one further observation, and that is the gracious gentlewoman from New York pointed out in her very eloquent address here today that one of the reasons the young people are unhappy today is because we are here in the House unable to defend our positions. I reserve the right of the gentlewoman to make this statement. I personally will not accept it, because I can justify and defend to the young people every position I take in this House. Whether they agree with me is something else, or whether I agree with them again is another issue.

We have debated this issue of seniority, and I would like to say this: I do not think there is a person on this floor or a Member of this House who does not understand this issue by now. If that is the case, that he or she does not understand it, then he or she does not belong here. We have spent long hours on it. Whether one or 30 more Members of this House speak on it, we all know almost every Member on the basis of every logical argument—logical or otherwise—presented on this issue will vote as he wants to vote.

While I understand the gentleman from California (Mr. SISK) is making every effort, and perhaps properly so, not to limit debate, the sad fact of the matter is we are going to spend a great deal more time in repetition on a subject on which I am certain every Member has made a decision. I would hope, yielding back the balance of my time, that none of us would be so presumptuous at this point in the afternoon as to believe there is an argument that can be made that has not already been presented on either side, and that we would be prepared to vote on the amendment and on the substitute to the amendment which is before us.

Mr. ERLENBORN. Mr. Chairman, would the gentleman yield?

Mr. COLLIER. I yield to the gentleman from Illinois (Mr. ERLENBORN).

Mr. ERLENBORN. Mr. Chairman, I thank the gentleman for yielding.

Let me just say I feel for good reasons the two parties would have different rules for seniority. I think we should attack this question, and I think we should make a reasoned judgment, and in the future the two parties may decide to follow different rules. This should be a matter for the two caucuses of the two different parties.

Therefore, it is my intention to vote against the amendment offered by the gentleman from Iowa (Mr. SCHWENGEL), even though it approaches what I think the Republican Party should do, but I believe we should not bury it in the rules of the House, and we should keep it more flexible.

Mr. COLLIER. I agree with the gentleman. It is easy to criticize what we have, but I question whether what we offer as a substitute will be any better. In fact, I feel we would live to regret the action if we took it.

Mr. DENT. Mr. Chairman, I move to strike out the necessary number of words.

Mr. Chairman, some 38 or 40 years ago, when I enjoyed the privilege of being a younger member of the elected party, I was very impatient about having to walk behind a man who walked a little slower, who talked a little slower, and, I often thought in those days, thought a little slower. But as the years rolled by and I stayed at the job of being a legislator, I found out that my own pace had slowed a little, and I had just behind me the same kind of eager beaver who just could not wait until his time had come.

Now maybe there is something wrong with this democratic fashion of electing individuals.

I understood the gentleman from New York had said we were not operating in a democratic fashion. I am elected by a secret ballot.

I assume that I have just as many people displeased with me as anyone else. After 38 years of being an elected official, I probably have more than some of these young fellows who still have them all fooled. I do not have them all fooled anymore.

Therefore, I do not see that we would gain anything, especially in the undemocratic fashion of selecting three at the top. How would we do it when we had five after the first two who were all with the same seniority? Would we put it in a democratic fashion of selecting them according to the alphabetical order, or would we have a drawing of straws, and have it fixed so that they were all long straws except when it came to one?

That is the worst thing that could happen to this body. I served for many years in a body that operated in that fashion. The worst thing is the arrangement by which one creates cliques. Clique government is the worst kind of government anyone will ever serve in.

Certainly, we have some old men around here, including myself. I cannot run a foot race with some others, but I do not believe I would be too much worried about having a brain race with them, because I have the great advantage of having lived a long time, of having seen a lot of dirty linen on the line, of having helped to wash some of it clean. I have lived long enough to know that there is much more in life than just being an eager beaver, trying to chase the professor out of the room because one knows more than he does. I can remember that I knew more than the teacher when I was in the fourth grade. Somehow or other, when I got to the eighth grade I did not know as much as I knew in the fourth grade, except that I thought I did.

There is not anything to get hot about. Just live long enough.

Where do you want to start the seniority? Do you want to start it in the first term? In the second term? In the tenth term? Do you want it to be for a Member of a certain subcommittee?

Why not elect a subcommittee by the same fashion, so that every year we would have new subcommittees?

It is bad enough now, with the complex problems of this large Government of ours, for certain Members serving on a committee 8 or 10 years, and sometimes eight or ten terms, to keep up with the changes in the field in which they become experts, rather than to have them come in every year as new Members because a certain clique enjoys the privilege of owning and controlling the votes on the committee.

Let me tell you one serious thing. This is more serious than anything. If you want to do anything about the system, then do something about some of the privileges that certain chairmen have assumed unto themselves. A chairman is nothing but a housekeeper. He has absolutely nothing to do except to see to it that the rules of the committee, selected and approved by the committee members, are obeyed. When he goes beyond that, then address yourselves to that point.

It does not take the hand of a 28-year-old to pound a gavel. I have seen some fellows who are 80 years of age who are able to lift a gavel and to hold the attention of the House and keep the House in silence and in decorum.

There is not any magic to being young, except that probably it is wasted on too many people.

Those of us who have lived were once young ourselves.

My grandchildren cannot wait for the day until they are 21. Then they will not be able to wait until the day they have entered that stage where they can make money, somewhere between 35 and 40. And they never get impatient, if they are normal human beings.

I have no desire to go back beyond my 62 years of age. I believe that that which has been given me has been given me by the rule of life to this day. Whatever the Lord has in store for me I will take it, with whatever he gives me, whether he gives me a chairmanship in this House or defeats me. Whatever it may be, I will leave that as it is.

Mr. SISK. Mr. Chairman, I ask unanimous consent that all debate on the pending amendments and all amendments thereto close at 5:15 p.m.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. The Chair would like to advise those Members standing that the Chair will recognize each Member for 1½ minutes.

(By unanimous consent, Mr. SPRINGER yielded his time to Mr. CLEVELAND.)

(By unanimous consent, Mr. BELL of California yielded his time to Mr. MACGREGOR.)

The CHAIRMAN. The Chair recognizes the gentleman from New Hampshire (Mr. CLEVELAND).

Mr. CLEVELAND. Mr. Chairman, I rise in support of the Schwengel substitute and then, if that is not adopted, I will certainly support the Reuss amendment.

Some of the speakers have raised a question that this matter of seniority strikes at the heart of our system and other speakers have mentioned the fact that, if we load this bill up with reforms in this area, we may sink it. I think it is important to remind the Members that the gentleman from California (Mr. SISK) himself admitted earlier in this debate that the Reuss amendment was not any such blow at seniority that he could consider it something he would particularly oppose.

The Schwengel substitute, it is true, goes further; it is more specific; it definitely gives to the members of the committee the right to select their chairman and ranking minority member from the three senior members of each party, respectively. If somebody feels that the Democratic caucus or the Republican conference should have the power to name the chairmen, and there is merit in such a plan, they would probably oppose the Schwengel amendment.

It is regrettable that we do not all have the time to speak our full 5 minutes here. Had I been given my full time, I would have risked the wrath of the gentleman from Ohio (Mr. HAYS) and would have read from that great book on congressional reform, "We Propose: A Modern Congress," which I have referred to in earlier discussions during this debate. In its chapter on the seniority system, which was written by a former Member of this House, John Lindsay, now mayor of the city of New York, there were some remarks on the seniority system that I would have liked to have shared with the Members. Later on, under unanimous consent, when we get back into the House, I will ask that this chapter be printed, because I think the remarks are pertinent. In recognition of the fact there are two sides to the issue, I will also include a pro and con summary prepared by the Library of Congress.

A point I wish to make in the brief time allotted to me is this: If the seniority system is as good as people here today have said it is, then, why is it that not one State government or one modern parliamentary government anywhere in the world has adopted the seniority system?

It seems to me this definitely and emphatically puts the burden of proof upon those who would speak in favor of a rigid seniority system. As I have sat and worked in this body, it seems to me seniority has resulted in some instances—and I underline "in some instances"—in an unresponsive committee system that has not been fully responsive to the needs of the people. I think the criticisms of the seniority system are sufficiently valid that we should at least modify it. We should do so here and now, if we are truly to put our own house in order in response to the needs of the times.

Mr. MILLER of California. Mr. Chairman, if the gentleman will yield, can the gentleman tell me how you can have an effective committee system operate under this proposed amendment?

The CHAIRMAN. The time of the gentleman has expired.

Mr. CLEVELAND. I regret my time has expired; the inserts I referred to follow:

THE SENIORITY SYSTEM

(By Hon. John V. Lindsay*)

There are three things you can do about the seniority system in Congress: you can attack it directly, you can gnaw at its edges, or you can leave it alone.

The most frustrating part of it is that the practice of elevating to the chairmanship and ranking minority positions the Members longest in point of service on each committee can be stopped at any time by both political parties, without a formal amendment of the rules!

Rule 10 of the Standing Rules of the House states:

"At the commencement of each Congress, the House shall elect as chairman of each standing committee one of the Members thereof; in the temporary absence of the chairman the Member next in rank in the order named in the election of the committee, and so on, as often as the case shall happen, shall act as chairman . . ."[1]

Although selection of committee chairmen by seniority is clearly implied in the language

Footnotes at end of article.

"the Member next in rank . . . as often as the case shall happen," there is no actual *rule* of seniority. The Standing Rules provide for election of committee chairmen by the House. The full House, according to the rules, "shall elect as chairman of each standing committee one of the Members thereof . . ." Not necessarily the Member longest in service, but *one of the Members thereof.*

In actual practice, however, the House simply ratifies the decisions which have already been made on the basis of seniority. This is the way it works: Members are appointed to the standing committees by their party's committee on committees. These lists are then approved by the party's conference or caucus and submitted to the House. In the dullest of *pro forma* proceedings, the House "elects" as chairman of each standing committee the Member who was in fact *selected* by his party colleagues to serve as chairman. The sole determining factor in that selection, made in secret caucus was length of service, or seniority.

HOW OLD IS THE PRACTICE?

Dr. George Galloway, eminent historian of the House, marks the birth of seniority at 120 years ago in the Senate and 56 years ago in the House.[2] One of the most memorable speeches on the subject was delivered nearly a century ago, during protracted floor debate over committee assignments in the Senate in the 42nd Congress. The year was 1871, the speaker was Senator John Sherman of Ohio:

"It has been the custom since I have been a member of the Senate, now more than ten years, for each party to arrange the members of that party on the different committees constitution [sic.] the Senate of the United States. Before I became a member of the Senate it was the common courtesy of the Democratic Senators, then a majority of this body, to allow the minority to fill the places assigned to them on the committees. The division of members of a political party among the various committees was regarded as in the nature of a personal matter, appertaining solely to that party, and not to be controlled or affected by the wishes or desires of the opposing party. . . .That has always been the custom, and therefore time out of mind, at the beginning of every new Congress, a meeting of our political friends has been held and these assignments have been made." [3]

The irony in recalling Sherman's speech is that in only six years the Senator was to become a sorry victim of the very system he had so stoutly defended. Sherman entered the Senate in 1861 and in time became chairman of the Finance Committee. In 1877 he resigned his seat—and his chairmanship of the Finance Committee—to become Secretary of the Treasury in the cabinet of President Hayes. When he returned to the Senate in 1881, he was reassigned to the Finance Committee all right, but at the bottom rung of the ladder.

The seniority system is less entrenched in the House than in the Senate. Prior to 1910, the Speaker of the House generally appointed both members and chairmen of the standing and select committees. That business ended in the revolt against Joe Cannon, when the Speaker was unceremoniously stripped of much of his previous authority, including the authority to appoint members and chairmen of the committees. Unfortunately, the practice of selecting chairmen and ranking minority members on the basis of seniority developed quickly and firmly in the political caucuses of both parties.

HOW WIDESPREAD IS THE PRACTICE?

In response to a question put to it by Congressman Morris Udall, the Library of Congress found that "there is not a single State legislature or a free world parliament that operates under this system except the U.S. Congress."

"Rep. Udall: 'I asked the Library of Congress a couple of years ago to answer me one question, and the question was: How many of the parliaments of the free world, the American States, and the free world parliaments, use this indispensable system? The answer is none; none, except the U.S. Congress. Fifty State legislatures, the British, French, the Swedes, the Australians, no one else uses what we are told is an indispensable system to which we are told there is no alternative.' [4]"

If imitation is the sincerest form of flattery, the U.S. Congress is not exactly overwhelmed with compliments in the way she selects her leaders. Admittedly, "We're only Number Two" as living democracies go—but do we "try harder?"

In summary, we see that seniority (1) is *not* a written rule of the House but is instead a practice which developed in the political parties; (2) in the House, at least, is of relatively recent origin, and (3) as practiced in the U.S. Congress is a system unique among the world's parliaments and even among the legislatures of our own fifty States.

WHY IS THE SYSTEM BAD?

There are some people, of course, who maintain that it is not bad. The standard cliché among Members of Congress is: "The longer you're around here, the better you like seniority." No doubt.

Eighty years ago Woodrow Wilson characterized our federal apparatus as "government by the chairmen of the standing committees of Congress." [5] This was something of an exaggeration then and certainly misses the mark today. But there remains a strong element of truth in the phrase, as illustrated in the following compilation by *Congressional Quarterly* of a committee chairman's powers:

Meetings may be called on short notice, at times when certain members are known to be absent. Or, as a stalling tactic, a chairman can neglect to call meetings.

"In most committees, the chairman also controls the agenda. He can bring up a bill without notice, under circumstances in which his recommendation carries great weight because other members do not know what the bill does. . . . He can also refuse to place bills on the agenda.

"The chairman also appoints subcommittees and subcommittee chairmen.

"He either manages bills on the floor himself or appoints a floor manager. . . . He usually heads the conferees appointed to work out differences on legislation with the other chamber, or influences their appointment.

"The chairman has the major voice in hiring committee staff, and he controls the disbursal of authorized travel funds, saying which members may go on field trips. . . ." [6]

In America's continuing experiment in democracy, the seniority system operates to elevate men to positions of leadership in Congress without regard to any qualification except length of service. As presently practiced, the system is unsound, inflexible, undemocratic, and certainly discouraging to junior Members of Congress. Even the "law of the jungle" operates on a higher level than the "law" of seniority: the first at least works to assure survival of the fittest; the latter operates only to assure survival of the oldest.

ARGUMENTS IN FAVOR OF RETAINING THE SYSTEM

Let us now examine the arguments put forward to retain the seniority system. First, the argument of Experience: "New Members must learn their way around before they can qualify for chairmanships. There is no substitute for the time that this learning process requires." [7]

No one who has served in Congress will deny that experience is a valuable factor in considering the appointment of a committee chairman. It takes a year or more to unravel the legislative process; most freshman Members would shy away from the reins of a major committee even if they had the opportunity presented to them to grab hold. The fallacy in the Experience argument is that tenure is no guarantee of ability. As the late Estes Kefauver summed it up:

"This much can be said in favor of rule by seniority: the law of averages works in its favor. In many cases, because of knowledge and skill acquired during years of grappling with problems that regularly come before his committee, the man who is handed the chairmanship through seniority in most cases would be chosen for the post by any system of more democratic election that might be devised. But there is abundant evidence to prove that fitness and leadership are not based upon years in office alone." [8]

In the same vein, the argument of Committee Expertise:

"Long service on a committee develops a certain expertise on particular problems which is an essential qualification of the office of chairman. Ranking Members have acquired an acquaintance with most subjects likely to come before the committee and with the personalities and private interests with whom it has to deal. There is also the gain which comes from Members becoming acquainted with one another and learning how to work together. The committee becomes more of a unit as its membership becomes more stable." [9]

Unquestionably, any committee's efficiency would be impaired whose chairman lacked knowledge of its special problems and routine functions. But the point can be made that long service does not *necessarily* produce expertise. Natural ability, devoted interest, and applied study do. I suspect Kefauver was right in predicting that most committee chairmen would be re-elected on the basis of proved expertise whether the system of seniority prevailed or not. But to assume that the man longest in service on a committee is *therefore* the most expert in handling the business of that committee is to present an argument based on something other than hard logic. Expertise, harmony, and continuity from one Congress to the next are all desirable factors in determining leadership positions. However, as Professor Holcombe notes, party leaders

". . . are not necessarily the ablest members of the party. They may even be grotesquely unsuited for the chairmanship of the important committees on which they happen to serve. They may be out of sympathy with, or even bitterly opposed to, the measures favored by the majority of their fellow partisans. They may be suffering grievously from the infirmities of old age." [10]

Next, the argument that seniority prevents log-rolling and dissension within the political parties:

"Abolition of the rule (sic) would be followed by log-rolling, factional fights, and political trading on a grand scale. 'The danger,' writes Professor Chamberlain, 'that most committee places would go to those who were chosen with specific bills or policies in mind would be real and would be suspected even where it did not exist. The bitter personal feelings engendered by an open contest for committee places would complicate party management, and there would be delay in beginning work in each new Congress until personal and sectional quarrels could be smoothed out.' The rule provides a kind of automatic protocol, like one's place at table at a state dinner or the order of appearance of counsel before the Supreme Court, which settles harmoniously the problem of priority without dispute or controversy and without jeopardizing morale." [11]

Galloway effectively rebuts this argument by pointing out that, indeed,

"One of the greatest drawbacks of the seniority system is that it destroys party responsibility or prevents political parties from performing their campaign promises. For if the chairmen of committees owe their

Footnotes at end of article.

places not to their political parties but to the accident of tenure, then they can follow their own inclinations on legislative matters and disregard the platform pledges and legislative program of the party leaders." [12]

Griffith illustrates the point in even more glaring terms (although on balance Dr. Griffith is disposed to favor selection by seniority):

"If one is an advocate of responsible and disciplined party government, the seniority rule is certainly an obstacle. . . . To put the matter in concrete terms, if the Democrats are in control, about 60% of the committee chairmen are from the South, which is in general its conservative sector. If the Republicans control, about 60% of the chairmen are from the Middle West, which is usually more conservative. . . . If leadership is, as it should be, a reflection of the general will of the majority of a legislative body, then such overweighting is a sericus matter." [13]

As for seniority providing a "kind of automatic protocol," it is precisely the rigidity and complacency which any automatic method of selection imposes or conduces that we are trying to get away from. The problem of "jeopardizing morale," it should be noted, will remain as long as Congress refuses to deal with the conduct of its Members at least by establishing a code of ethics and grappling with the actual, not talked about, restructuring of its organization and procedures in keeping with the changing times.

The Insulation argument runs as follows:

"Committee chairmen are reelected to Congress because their constituents desire to retain the power and prestige of their office. Long and continued service in Congress and the local benefits derived therefrom would be discouraged by abolition of the seniority system." [14]

Proponents of this theory argue that because Members from so-called "safe" districts are in almost no danger of being removed from office, they are free to exercise judgment that will result in legislation in the national interest.

The argument would have some validity if we could accept the premise that Members representing non-marginal districts were insulated, also, from the pressures of important lobby groups and sectional bias. Unfortunately, Members are often removed from fear of reprisal at the polls only because they share the parochial prejudices of their constituents, which may or may not coincide with the national platform of the Member's party or reflect a national consensus. As Professor Dahl writes,

Such validity as this argument has must apply entirely to the question of rationality, not that of responsibility. For often enough, it may be the old and senior member who is most at odds with the bulk of his party and the platform on which that party was elected to govern the country. By erecting seniority into a principle, committees may be converted, in effect, into associations of members responsible only to their own constituents, not, in any meaningful sense, to the national electorate as a whole.[15]

A study by *Congressional Quarterly* of Urban-Suburban-Rural House Districts in 1963 showed the following distribution of House chairmanships and ranking minority positions in the second session of the 88th Congress:

Chairmen (Democrats):	
Urban	4
Suburban	1
Rural	17
Ranking minority (Republican):	
Urban	3
Suburban	4
Rural	15

Footnotes at end of article.

These statistics hardly reflect an equitable representation of the two Americans out of every three who live in and around the nation's cities!

From a compilation of roll call votes in the 87th Congress on which the President's position was ascertainable, *Congressional Quarterly* found that only three of the chairmen of the twenty standing committees of the House supported the leader of their party as often as 75% of the time.[16]

A thorough statistical analysis of the 85th Congress by George Goodwin elicited this less forceful yet still disconcerting conclusion:

"(My) statistical analysis does not make as clear a case against seniority as many of the critics of the system seem to claim. Chairmen are older on the average than their colleagues, and yet with luck a number of younger men are singled out for chairmanships. The districts which produce chairmen are not as stagnant as is often suggested, and the degree of party unity and presidential support among chairmen is not as low as many believe. The picture, however, is far from the ideal held by the proponents of majority rule." [17]

Occasionally, arguments by supporters of the seniority system attempt to justify it by pointing out that "It is no more than fair or just that Members who have been in Congress a long time should be rewarded with committee chairmanships." [18] As far as I am concerned, this argument has been demolished in one memorable sentence by Senator Gore:

"A rule by which a member for no reason except seniority automatically becomes chairman of a committee and so remains until death or defeat is indefensible in principle." [19]

As for the last-ditch cry that "The seniority rule is neither absolute nor invariable; on many occasions the House has ignored this rule and designated members of low committee rank as chairmen," Dr. Galloway was able to record in his authoritative book only one such deviation—and that occurred in 1921—since the practice of seniority took root in the House in 1910.[20]

Finally, it is argued that "Members with long service have greater prestige and influence than new members." To dispute this, Senate historian George Haynes has written:

"There is this much of logic in the seniority rule: it usually brings to the headship of the committee a man who has had many years of experience in handling the special problems in its domain. . . . (But) servile compliance with the seniority rule involves gamblers' chances. It is a limited appeal to the lot. It implies merely duration of service on the committee—not in the least does it guarantee superior ability or fitness for leadership." [21]

GNAWING AT THE EDGES

Testifying before a Senate committee during hearings 18 years ago to evaluate the Legislative Reorganization Act of 1946, Senator Robert LaFollette, chairman of the joint committee from which the Act had come, plaintively told his colleagues:

"We were unable to get any substantial agreement on methods to improve the seniority system in the selection of committee chairmen. . . . The committee had a great many suggestions made to it . . . but frankly, I have never seen a solution which I thought was better than the disease.[22]

Unfortunately, the result of the 1946 Act was to treat the symptoms rather than the disease. This is illustrated in the following excerpts from testimony of George H. E. Smith, former staff director of the Senate Republican Policy Committee, in the course of these same hearings:

"Under the Reorganization Act . . . the power of the chairman is shared by the committee as a whole. He cannot appoint the staff without committee approval . . . He cannot work by proxies . . . He cannot report a measure unless a majority of the committee were actually present . . . He must conduct all hearings in public . . .

"In the light of these limitations on the power of committee chairmen and opportunities afforded to others regardless of seniority, the matter of seniority loses much of its former importance. At the same time, the usefulness of the seniority rule in solving conflicting claims is retained and no satisfactory substitute has been found." [23]

Smith's argument that "the matter of seniority loses much of its former importance . . . in the light of these limitations on the power of committee chairmen" holds only to the degree the limitations imposed *actually curtail* the authority of committee chairmen. In fact, the symptoms persist because the "disease" is still with us. For example, Rule 11 of the Standing Rules of the House provides that committee staff shall be appointed "by majority vote of the committee . . . without regard to political affiliations and solely on the basis of fitness to perform the duties of the office . . ."

In spite of this language, committee chairmen may and do appoint staff without approval of the full committee. Again, the Rules clearly state that

"No measure or recommendation shall be reported from any committee unless a majority of the committee were actually present."

In spite of this language, committee chairmen may and do work by proxies. "The fault," Cassius reminded Brutus, "is not in our stars, but in ourselves, that we are underlings."

Another form of gnawing at the edges is seen in the proposals to limit the number of terms a committee chairman may serve, or to force him to retire at a certain age. Again, as in the attempt to limit the chairman's powers, the attempt to limit his length of service attacks only the periphery of the problem. Granted, a limitation of terms or age does have merit, but *not* as a "solution" to the seniority problem.

ALTERNATIVES TO THE SENIORITY SYSTEM

Postulating three basic prerequisites—"ability, which embraces knowledge, training, and experience; loyalty to the national interest rather than to local or sectional interest; and a sense of political responsibility to execute party covenants with the people" [24]—Galloway poses seven conceivable methods of selecting committee chairmen:

1. Automatic elevation by seniority.
2. Election from the floor.
3. Selection by a committee on committees.
4. Appointment by the Speaker of the House and the presiding officers of the Senate (or by the majority leaders in each chamber).
5. Automatic rotation in office at periodic intervals.
6. Secret election by committee members.
7. Secret election by party caucus.

We may eliminate the first three possibilities, as the system now in effect is a combination of this trio: committee chairmen are "elected" from the floor *after* the respective committees on committees have submitted their lists, which were dictated in party caucus by application of the "law" of seniority.

Appointment by the Speaker (No. 4) has flunked the test of history, as seen in the 1910 revolt against Speaker Cannon.

The rotation plan has a great deal of merit, notwithstanding its automatic feature. According to the Atomic Energy Act, the chairmanship of the Joint Committee on Atomic Energy must alternate between House and Senate in succeeding Congresses. Three Senators and three Representatives have filled the post with distinction in the ten years of the committee's existence. Testifying before the Joint Committee on the Organization of Congress last year, present JCAE Chairman Chet Holifield noted:

"Each of my colleagues in the chairmanship has brought talents and ideas and resourcefulness to the job. Each has gained valuable experience in the chairmanship role. Each has been responsive to and considerate of other committee members' ideas and suggestions. The understanding that the chairman's tenure was alternating rather than continuous prevented the growth of complacency and inspired each chairman to excel in performance." [25]

This would be an acceptable alternative to selection by strict seniority.

Two other methods seem to me to present attractive alternatives to the seniority system: election of committee chairmen by secret ballot within the respective party caucuses, and election by secret ballot within each committee. The former has the advantage of strengthening the role of the parties in the legislative process, but it carries some dangers of potential factionalism and swapping of state delegations. However, this alternative has been advanced by the highly respected American Assembly of Columbia University, by many political scientists, and by some Members of Congress Certainly, it is vastly preferable to the strict application of seniority.

I am personally inclined to favor selection of committee chairmen by secret ballot of the members of each committee. Each of the standing committees of the House is a semi-autonomous body with its own unique problems and special norms. Committee members, by observing each other at close range in the daily operations of the committee, would seem to me to be in the best position to judge the qualifications necessary for their chairman, and they certainly are aware of intelligence or personality traits which are often important to a smooth-working relationship. Committees are the workshops of Congress; their members should determine who should be seated at the head of the worktable.

However, this warning applies to any and all methods of selecting committee chairmen: as long as Members of Congress agree among themselves to elevate their colleagues according to length of service, no amendment of House rules will abolish the rite. Neither will the problem be solved by such peripheral attacks as the attempt to establish uniform procedures for all committees or to force chairmen to retire at a certain age. As we have seen from the operation of the 1946 Act, the first cannot be enforced; the second, unfortunately, is directed at senility rather than seniority.

Speakers, majority leaders and minority leaders, have long been elected by the usual democratic process of casting a ballot, with each party electing its own. It is a tribute to the ability and integrity of the Members that highly qualified men have uniformly emerged in these positions of general leadership. It would seem that a similar system in the committee structure would serve to strengthen the operations of the legislative branch. A responsible legislative body must make every effort to avoid even the occasional disaster that is caused by the blind application of the seniority "rule." The contention has been made that perhaps ambitious and unscrupulous members would trade their votes for the next twenty years in exchange for votes to become chairman. That has never been the operation of the Congress as a whole in the election of minority and majority leaders or the Speaker, and there is absolutely no basis for believing that it would happen in the individual committees.

In closing, the words of Douglass Cater seem to me to present a most eloquent argument for abolishing the seniority system:

"Mostly the reporter comes to accept a certain amount of mystery about the way the House works. He observes the numerous impediments that have been placed in the way of majority rule and the cumbersome procedures for getting around these impediments. But he can never be sure when the seeming frustration of majority rule is simply the working of a silent majority within the membership. One thing is clear. More than in the Senate, raw power in the House is vested in a group of chieftains, a dozen or so, who are pretty much unknown to the public at large. Men of vast seniority, they mostly represent small rural districts where their seignioral rights are seldom challenged. They tend to view their power as a personal accomplishment . . ." [26]

It is a little difficult to say with pride that ours is a government of laws and not of men when power and prestige in Congress are not won, as they should be, through diligent, intelligent achievement, but are rather "awarded" to the winners of the continuing race against time.

FOOTNOTES

*Mr. Lindsay was first elected to Congress in 1958 from the 17th Congressional District of New York. He served on the House Judiciary Committee, resigning his seat in Congress in 1965 when he was elected Mayor of New York City.

[23] *Ibid.*

[24] Galloway, *op. cit.* In summary, Galloway states: "Of the seven possible methods listed above, the only ones that seem most likely to result in the selection of chairmen of ability, public interest, and party accountability are selection by party caucus, by the committee on committees, or by the presiding officer or majority leader. Men of undoubted ability and devotion to the public interest might be chosen by the other methods, but they fail to satisfy the important test of party responsibility. Major importance is attached to this test because, unless political parties can be held responsible for fidelity to their campaign pledges, then party platforms are a snare and a delusion and public confidence in the party system will wither away."

[25] U.S. Congress, Senate. Hearings before the Joint Committee on the Organization of Congress, Part 2, May 17, 1965.

[26] Cater, Douglass, "Spotlight on the House," *The Reporter*, September 28, 1961.

SENIORITY AS A BASIS FOR SELECTING COMMITTEE CHAIRMEN: PROS AND CONS

Presented below are the arguments often raised by those who favor or oppose the operation of the seniority system in Congress.

PRO

1. Service to constituents

(a) "Long service on committees brings members in contact with the personnel of the several departments and helps them to be of service in many little and some big ways to their constituents back home." (George Galloway, *The Legislative Process in Congress*)

(b) "Committee chairmen are sometimes reelected to Congress because their constituents desire to retain the power and prestige of their office. Long and continued service in Congress would be discouraged by abolition of the seniority system." (Hearings, Joint Committee, 1945)

2. Promotes legislative harmony

(a) "The most telling argument of the proponents of seniority is that the system promotes legislative harmony. It prevents hurt feelings on the part of those passed over in the struggle for appointment, and incidentally, it keeps pressure groups out of the struggle. As a result it helps to create groups out of the struggle. As a result it helps to create a more cooperative atmosphere, both in the legislative body as a whole, and on the various committees. Committees can act as more of a unit, and in a more non-partisan manner." (George Goodwin, *The Seniority System in Congress*)

(b) "The adjustment of rival claims must precede the adjustment of major conflicts without being permitted to divert attention for long from the larger task at hand. Some harmony within the legislature—including agreement on the location of internal authority—must exist before the legislature can itself promote harmony between conflicting groups." (Roland Young, *The American Congress*)

"Fundamentally, the seniority system avoids the waste implicit in instability of committee composition and management. It

invokes the presumption that, other things being equal, the man or woman with the greatest experience in a particular job is best fitted to participate in and lead in its performance." (Emanual Celler, The *Seniority Rule in Congress*)

(c) "It has often been suggested that chairmen of committees be elected by the committees. In that event the element of personalities and favoritism would come into play, and there would be log-rolling and electioneering for the votes of the committee members by those who wanted to be chairmen. If the Senate should adopt that method I doubt very much that it would adhere to it very long, because it would result in a very unsatisfactory situation. Jealousies, ambitions, and all the frailities of human nature would crop out in the electioneering methods of men who wanted to be chairmen of committees." (Senator Alben Barkley, *Congressional Record*)

3. Experience and expertise

(a) "This much can be said in favor of rule by seniority: the law of averages works in its favor. In many cases, because of knowledge and skill acquired during years of grappling with problems that regularly come before his committee, the man who is handed the chairmanship through seniority in most cases would be chosen for the post by any system of more democratic election that might be devised." (Estes Kefauver and Jack Levin, *A Twentieth Century Congress*)

(b) "Long service on a committee develops a certain expertness on particular problems. The older members have acquired an acquaintance with most subjects likely to come before the committee and with the personalities and private interests with whom it has to deal. There is also the gain which comes from members becoming acquainted with one another and learning how to work together. The committee becomes more of a unit as its membership becomes more stable, and it is easier to develop a nonpartisan attitude toward legislative projects." (George Galloway, *Congress at the Crossroads*)

"Of course, seniority does have its beneficial side. It cannot and should not be discarded. One needs experience in being a United States Representative, just as physicians or computer-data analysts do. Knowledge presumably generates competence and special skills. (Richard Bolling, *Power in the House*)

(c) "The committee chairman is always the most experienced majority party committee member if not always the most expert. Committees consider bills, not policy in the round, and this places a premium on detailed and highly technical knowledge of earlier statutes, the legislative history of similar bills, relevant administrative rulings on court decisions, and the like. Congress rarely considers an entirely new issue. Years of service on the same committee is a liberal education in the politics of a particular field." (Donald Matthews, *U.S. Senators and Their World*)

4. Serves to protect legislators

(a) "The seniority system acts to protect a person who might be in some danger of being discriminated against for any extraneous reason. This, of course, includes protection of the deviate from the norm of party doctrine, or the majority view among a party. It has protection for the unusual guy." (Randall Ripley, *Power in the Senate*)

(b) "The seniority system also has the virtue of not being arbitrary. To a notable extent it is predictable and definite. Every member after a period of service knows where he stands and what should be his line of progression. He can devote energy and study to the field, secure in the knowledge that as long as he remains in Congress the time spent in developing his committee specialty will not be wasted by the arbitrary decision of some one person or group of persons." (Joe Evins, *Understanding Congress*)

"The seniority rule has the added virtue of being objective. It automatically eliminates the intrigues, deals, and compromises that characterize election campaigns." (Emanuel Celler, *The Seniority Rule in Congress*)

5. Proposed changes likely to create more problems

(a) "If the present more or less automatic system of appointment and preferment were to be abandoned, the judgment of fitness would have to be placed in the hands of some one man or group of men. Does it seem likely that such a system would produce well-balanced committees? I think not, and most members hold a similar view on this subject." (Joe Evins, *Understanding Congress*)

(b) "I would like to make the observation at this time that personally I have listened with a great deal of interest to all these people who want to limit terms or substitute something else for seniority. I am about as junior a Member as you can get and certainly I am the most junior member of this special committee, certainly as far as service in the Congress is concerned, but I am impressed with the fact that the one thing that everybody who is opposed to the seniority system fails to come up with is a better solution. We have a list of five suggestions here the other day just ticked off like that about the seniority system but mostly in a critical vein and certainly there are areas where it does not function, perhaps, even to the majority's satisfaction. But the lack of a better method or substitution therefore is impressing me more and more as we go on with these hearings." (Representative Durward Hall, Joint Committee, 1965)

6. Maintains congressional integrity

(a) "The seniority system is the only way to prevent committees from becoming a rubber stamp for the speaker and the White House. Congressional committees can be free to amend, refine and improve bills only if they are not made too responsive to strong leadership controls." (Washington Post, March 16, 1970)

(b) "Seniority helps to insulate the Congress from encroachments by the White House and other quarters. At present, a President will not seek dismissal of a committee chairman who does not support his program since such an effort would be futile. However, nonautomatic chairmanships would open the door to interference in Congressional affairs by the Chief Executive, especially where he is a member of the majority party." (DSG Study, *Congressional Record*)

(c) "There is no need of outside control over committee chairmen because committee members themselves can spur or veto an unresponsive or obstructionist chairman." (DSG Study, *Congressional Record*)

CON

1. Obstacle to party responsibility

(a) "One of the greatest drawbacks of the seniority system is that it destroys party responsibility or prevents political parties from performing their campaign promises. For if the chairmen of committees owe their places not to their political parties but to the accident of tenure, then they can follow their own inclinations on legislative matters and disregard the platform pledges and legislative program of the party leaders." (George Galloway, *Congress at the Crossroads*)

(b) "One major consequence of the seniority rule, then, is to distribute committee chairmanships to members who may, and do on certain issues (but not all), reflect a minority position of the party caucus." (Louis Froman, *The Congressional Process*)

(c) "The seniority system produces a large number of chairmen who are representative of only one element of the party, and that, generally, a minority element. They represent "stagnant" districts made safe by restrictions on voting, by a one-party monopoly, by the ascendancy of a major interest group, or by an effective rural or urban political machine. Thus, the leaders of Congress, produced by the seniority system, are almost guaranteed to oppose the President, regardless of party, and a new non-constitutional dimension is added to our constitutional system of separation of powers." (George Goodwin, The Seniority System in Congress)

(d) "The seniority system has fragmented and diffused power in the House, thereby crippling effective leadership and making it impossible to present and pursue a coherent legislative program. (DSG Study, *Congressional Record*)

2. Undemocratic

(a) "In America's continuing experiment in democracy, the seniority system operates to elevate men to positions of leadership in Congress without regard to any qualification except length of service. As presently practiced, the system is unsound, inflexible, undemocratic, and certainly discouraging to junior Members of Congress. Even the law of the jungle operates on a higher level than the 'law' of seniority: the first at least works to assure survival of the fittest; the latter operates only to assure survival of the oldest." (John Lindsay in *We Propose: A Modern Congress*)

(b) "The system denies competent younger men a chance to exercise their leadership talents at the time in life when they are most able to meet the rigors of the job. It is therefore wasteful and inefficient." (DSG Study, *Congressional Record*)

3. No correlation with competency

(a) "The seniority rule often gives power to the weak enfeebled members of Congress instead of those who are young and healthy. In addition, the rule has several times advanced to chairmanships men who were later proved totally unfit for public office." (Daniel Berman, *In Congress Assembled*)

(B) "The seniority system is no guarantee that chairmen will be well qualified. A hardy constitution and the ability to get reelected in the home district do not necessarily fit a man to preside over committee meetings or to defend committee reports on the floor. If the system puts so much emphasis on experience, why, ask the critics, is a man who leaves to take an administrative post, but who returns later to Congress, given little or no credit for his previous experience?" (George Goodwin, *The Seniority System in Congress*).

4. Produces chairmen unrepresentative of and unresponsive to the public interest

(a) "At a time when other American institutions are turning over the reins of leadership to younger men, the leaders of Congress have been getting older. Thus the system aggravates the tensions and strains in the society at large, especially when it produces powerful chairmen who are hostile to change and dedicated to protecting and preserving the status quo." (DSG Study, *Congressional Record*)

(b) "These old men have got everything so tied down you can't do anything. I never realized how few people ran things back here. There are 435 members but about 40 call all the shots and they're nearly all around 70 or 80. They're the committee chairmen and the ranking members. Don't misunderstand me. These men have been damn good Congressmen and served their people and their country well. But it's time for them to get out." (Representative Everett Burkhalter, *Washington Post*, April 3, 1964)

5. Deters recruitment of legislators

(a) "It is charged by some that the emphasis on seniority deters good men from

seeking congressional careers because they do not relish what a legislator once called 'the humble and unrewarding roles of freshmen.' (Daniel Berman, *In Congress Assembled*). Senator Richard Neuberger has written that this factor was to blame for the decisions of two former presidential candidates—Thomas E. Dewey and Adlai E. Stevenson—not to run for the Senate. (Richard Neuberger, *A Senator's Case Against Seniority*)

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. BINGHAM).

Mr. BINGHAM. Mr. Chairman, first of all, I would like to express my admiration for the gentleman managing the bill, the gentleman from California (Mr. SISK). He deserves great credit from all of us for permitting this debate to continue without making a motion to close debate as he was being urged to do by some Members. An afternoon was surely not too much time to spend on an issue of this importance. The debate has been a good one. Many good speeches have been made and some nonsensical ones.

I agree with much of what has been said about the irrationability of the system whereby length of service is the sole criterion by which committee chairmen are selected. Surely this system is one of the main reasons why the American people, especially young people, have little respect for the Congress.

The problem, of course, is what to do about it.

The proposal which has been made by the gentleman from Iowa (Mr. SCHWENGEL) whereby the majority members of each committee would select the chairman from the top senior members, is a thoughtful one, but I do not think it should be accepted, mainly because it would interfere with the role and responsibility of the majority caucus.

I do support the Reuss amendment. At first, I thought this amendment was not very significant, but I support it now with enthusiasm after hearing some of the attacks made upon it by those who regard the seniority system as sacrosanct. Surely it would make sense to include in our rules the language proposed by the Reuss amendment that seniority should not be the sole consideration in electing committee chairmen. This would not detract from the responsibility of the majority party in selecting committee chairmen.

The CHAIRMAN. The Chair recognizes the gentleman from Indiana (Mr. JACOBS).

Mr. JACOBS. Mr. Chairman, the story is told of a lawyer who revealed the greatest lawsuit he ever tried. He said it took 6 weeks to put in the evidence and 2 days for the closing arguments and the jury was out for 2 weeks. The fellow who was being told the story said "Well, what happened to the defendant?"

The lawyer said, "Oh, him? Well, they hanged him, but it was the greatest lawsuit I ever tried."

Mr. Chairman, it seems to me most of this debate has been about the prerogatives of the caucuses and the prerogatives of the institution. They did away with the institution of slavery. It is the institution of seniority that we should be discussing here today.

I find it most difficult to go home and tell a high school civics student or the parents of that student who undertake to help him with his homework, that the seniority system is better than democracy.

I might say to the distinguished and esteemed chairman of the Committee on the Judiciary, the gentleman from New York (Mr. CELLER) who referred to the late Winston Churchill and quoted him as saying that democracy is a poor form of government, and it is a shame the rest of them are so much worse. Mr. Churchill did not say democracy is worse than seniority. He said all other systems, including seniority, are worse.

I have a suggestion to the Congress on the subject of seniority. I believe if seniority is a good thing for the Congress, it is a good thing for the country, and therefore, Members of Congress should be selected from the various districts of the United States on the basis of the longest living individual citizen in each congressional district, thus saving the cost of holding an election. Or, if there are some diehards who still believe it is a good idea to elect public officials, I suggest that we continue electing Members of Congress from their respective districts and then also elect the chairmen of the committees. Members would be surprised how many chairmen would remain right where they are by secret ballot. Quite a few of them would. But I think that it would be good to provide, in the alternative, either to have all Americans participate in the blessings of the seniority system, or have the American people and the Congress participate in the blessings of democracy, by abolishing the silly system of seniority here.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. MACGREGOR).

Mr. MACGREGOR. Mr. Chairman, I rise in support of the amendment.

Throughout each of our States, when there is a sampling of public opinion, the answer is "We think highly of our Congressman, or Congresswoman, but we have a low opinion of the House of Representatives as a whole." And when the latter portion of that response is probed further for reasons, one hears charges of corruption, prejudice, bigotry, undue influence, wheeling and dealing. When you and I are confronted with those charges against the House of Representatives, we rise to defend this body and its occupants, and its practices. We know that such charges are untrue with respect to the overwhelming majority of the Members of this body, without regard to party affiliation or, may I say, without regard to the length of service of any sitting Member in this body.

I was more surprised today, I think, than I have been at any time in 9½ years to hear within this Chamber from senior Members of this body the suggestion that the adoption of one or more of the pending amendments might well lead to corruption, could induce or encourage racial prejuice and bigotry, or would open the door to undue influence or wheeling and dealing.

So a great disservice has been done this by some senior Members who have argued in opposition to these amendments.

For those of us who sponsor these modest vehicles for change in the inflexible rigidity of the seniority system, let me say all we are asking is give merit a chance.

Now, we all know that you are not going to see this amended rule used very much even if it is adopted. Neither the Schwengel nor the Reuss amendment would result in the most senior Member failing to be elected committee chairman except in the highly unusual situation of gross incompetence or arrogance in the exercise of the chairman's prerogatives. But the mere presence of either of these amendments in our rules would result in more democratic committee procedures.

The people elect us; we in turn elect our Speaker. In party caucus or conference each side here elects floor leaders and other officers of the House. What sensible reason can there be for not electing those who wield great power from their positions as chairmen of our legislative committees?

We know that these committees are the workshops of Congress. The Members should decide who sits at the head of the workbench.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. Moss).

Mr. MOSS. Mr. Chairman, I think this is the wrong forum, and the wrong time to discuss this particular issue. There is nothing in the rules to prevent the complete abolishing of the so-called seniority system, but to maintain viable political parties we should leave it to the caucuses of those parties to determine which of their members will be nominated for chairmanships, and those nominations confirmed by this House.

Remember, this body elects the members of the committees and the chairmen of the committees.

The thing we are talking about is how the nominations are offered—and they should come out of the caucus.

I do not defend the selection of one because of longevity, but I do ardently defend the right and the need to maintain the individual integrity of each party and to hold it accountable to the people who elected its members and gave them the power to control this House and the responsibility for carrying out the legislative duties of this House.

The CHAIRMAN. The Chair recognizes the gentleman from Arizona (Mr. STEIGER) for 1½ minutes.

Mr. STEIGER of Arizona. Mr. Chairman, it becomes very clear, after enduring or listening to the rhetortic and invective which we have endured and listened to, that the proponents of both of these measures are not only sincere but are convinced that this thing must be charged—"this thing" being the seniority system.

It is equally clear that the end result of the adoption of either of these amendments would lead to a cosmetic covering of the scab and the sore, if there is one.

It is clear that the rhetoric of such gentlemen as the gentleman from New York (Mr. LOWENSTEIN) is best reserved

for the caucus where if there is an injustice, it should be removed.

On this side, those who would support change should do it within the Republican conference.

It is clear that there is room for courage in changing the seniority system. But it is clear too that it must not be done by a cosmetic vote here and now in support of either of these measures because that would be less than honest to those who expect a change.

The change must come from within the caucus otherwise you do yourself and your constituents great dishonor.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. RIEGLE).

Mr. RIEGLE. Mr. Chairman, first I too would like to compliment the gentleman from California, the subcommittee chairman, for his patience, fairness, his excellent work on this bill.

It is difficult to make a case in a minute and one-half. There is a need to change the seniority system itself because it does not work well.

We have a mandatory retirement age in the executive branch of 70. Yet, here in the House today we have seven committee chairmen in their seventies and three in their eighties. I know of no other institution, not a single one in our society, which selects its leadership in this way. If the oldest man on the committee is the best man, he ought to be the chairman; but the oldest surviving member, on the basis of service, should not automatically become the committee chairman.

So the seniority system tends to keep men here too long. It is hard to blame them for staying, because that is the only way they can finally come to exercise committee leadership. A man literally has to outlive his colleagues in order to serve as committee chairman.

With Members staying here for that purpose into their late seventies and eighties, how in the world can we encourage good men and women who care about our society to run for Congress if they know they cannot advance on the basis of ability, but only on the basis of age?

Just think about it. If a man comes here at the age of 35 and spends 20 years here, at age 55 he can be the most effective person on that committee in terms of background, experience, judgment, ability and all the rest—and is the man who ought to be committee chairman. But that person may have to wait another 22 years until he is 77 years old to become the committee chairman. That just does not make sense.

I cannot believe that we are so devoid of imagination that we cannot correct this seniority system without bringing the whole body down into a morass of deal cutting.

Please do not misunderstand, I am not saying that those of us who are 32 years old should be committee chairmen or that I ought to be a committee chairman. I do not say that. I know that after 4 years in this body, that I do not yet feel prepared to serve as a committee chairman.

But what about the Members here who are 45, 55, and 65 years of age who are now ready to serve as committee chairmen? Why should they have to wait another 10, 15, or 20 years before they have a chance to serve?

This just is not right and it does not make sense.

Also the seniority system has tended to produce regional domination of the Congress. Today, for example, many of our most important committees come from one region of the country. The reason we assign congressional districts proportionally based on population, is to provide for national equality in terms of congressional representation. Regional domination—stemming from one-party areas of the country—works to erode and destroy proportional representation in the operation and conduct of the House.

The argument that we should be fearful of electing committee chairmen because of deal-cutting, falls flat. First, I have more faith in my colleagues than that, and believe they would vote for candidates for committee chairmen based on merit. We do not select the Speaker of the House on the basis of seniority—and he is the most powerful figure in the House—in fact the man third in succession to the Presidency. If we feel that we can safely elect the Speaker of the House—why can't we safely elect the committee chairmen? We can, and we should.

The perpetuation of the blind, unthinking seniority system is slowly but steadily destroying the effectiveness of the House of Representatives. If we cannot find an appropriate remedy, I believe the legislative branch will continue to lose relevance and meaning.

Unless we can find immediate ways to substantially improve the operation of this people's branch of government—we, in all likelihood, will do more to handicap and destroy effective self-government than any other force in our society. At times we face this fact—and respond accordingly.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts (Mr. HARRINGTON) for 1½ minutes.

Mr. HARRINGTON. Mr. Chairman, I find myself in a position similar to that of the speaker before me.

I am not interested at all in assuming a greater degree of leadership by virtue of the time spent here and the maturity and wisdom that will come with it.

It seems to me that if one looks a century ago and sees that the average committee chairman serving here had 6 years longevity and was of age 49, and then if one looks at our present situation where the average committee chairman has been here 28 years and is near age 70, we find that we have been thwarting in a regular and hard way over the last two generations the theory behind the House of Representatives in this country.

When you tell me as a newly added member of the Committee on Banking and Currency that to prosper and survive in this system I must regularly hold to the position for the next 20 or 30 years in order to achieve power, narrowing my perspective in other areas when the times require broad national perspective in terms of leadership, it makes no sense to me at all. It does not seem to me rational, nor does it enable us to go to the people to demonstrate our concern with the relevance of the institution and our power.

I come here this afternoon to endorse the theory that we should be able at least to consider before this body and before the caucus on both sides of the aisle the question of how we will pick our leaders. We have been noticeably reticent in discussing that question in the short time I have been here. This does afford us an opportunity to give serious attention to a needed change in the system.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. KOCH).

The CHAIRMAN. The Chair recognizes the gentleman from Wisconsin (Mr. OBEY).

Mr. OBEY. Mr. Chairman, as the Member who is about 430 in seniority in the House I have more than a little interest in providing alternatives to the seniority system. But it seems to me as one who has served some 7 years in a State legislature before I came here, the Schwengel amendment would be an extremely debilitating amendment to adopt today. If anything is wrong with this House, it is not that we have too much centralization. I think, if anything, we have too little. The last thing we need around here is to establish and strengthen independent fiefdoms, and that is precisely what the Schwengel amendment will do.

We must keep in mind that central to the success of the democratic process is the idea of accountability. We do not get accountability by placing more and more power in the hands of a few men sitting in committees. The welfare of this House, the welfare of the country rests in the last analysis upon responsible partisanship and upon the ability of the two parties to fulfill their own goals in their own ways.

It seems to me the only place where you can get that kind of system, where you can establish that kind of system and make it function is in the caucus, not in the committee. I firmly believe, therefore, that the Schwengel amendment to the Reuss amendment should be defeated.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. DINGELL).

Mr. BIAGGI. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from New York (Mr. BIAGGI).

Mr. BIAGGI. Mr. Chairman, I rise in support of the amendment introduced by my colleague from Wisconsin (Mr. REUSS) which would amend rule X of the House regarding selection of committee chairmen.

Although there is no rule requiring the Speaker to nominate the member with the longest consecutive service to the chairmanship of a committee, such has been the longstanding practice. How-

ever, as we ourselves change over the years, so must the rules.

The original custom has evolved from the overbearing power Speaker Joe Cannon exercised in assigning committee chairmen during the early part of this century. His abuse of his duly assigned power led to reorganization of the Speaker's Office and reassessment of the appointment of chairmen.

Now, however, such a threat of power abuse is no longer present, and the rules of the House should reflect a more sensible approach to appointing the chairmen of committees. This amendment would not, by itself, change the practice under the rule. Rather it would serve as an expression of the will of the whole House that seniority should not be the sole criteria in the selection of committee chairmen.

This reform would permit the majority party in its caucus to select committee chairmen based on criteria other than seniority alone. Thus it would also answer the objections of those who say there is a possibility that a senile individual would be elected to a committee chairmanship solely because of his seniority.

The time has come for this and many of the other reforms that have been offered here today and during the past several days of debate. If we are to remain a responsive, relevant, and democratic body, we must make the necessary changes in our operating procedures. The people of this Nation are growing impatient with a Congress whose rules and customs slow its operations to less than a snail's pace. Let us keep them waiting no longer.

Mr. DINGELL. Mr. Chairman, I have listened to this debate for a long time. I might say that I came here at the ripe old age of 29. Now, after 15 years of service in this body, I am a good deal younger than most of the sponsors of this particular amendment. I shall not pretend that I am smarter, but I think there is a certain amount of appreciation of this body that has come to me rather earlier than it has come to my friends who are sponsoring these amendments.

I think it should be plain to everyone here that the committee system functions, the seniority system functions, and the House of Representatives functions well, and that men who are running the committees of this body are capable and, in most instances, if elections were held in the committees, they would be the men who would be elected to serve in that capacity.

It is alleged that a bunch of tired, old men are repressing the Congress and keeping the Congress from functioning. Nothing is farther from the truth. The fact of the matter is that there is a way whereby the committee system can be circumvented if it refuses to function and the chairmen do not permit it to function. Chairmen who are not willing to function within the committees can be disciplined by the committees.

I can cite to you the names of committee upon committee which has disciplined its chairman for failing to be responsive to the needs of the committee and the wishes of the membership.

In addition, within the rules there is provision for circumventing the committees and for taking legislation from the committees and putting it on the floor. There is the discharge petition, Calendar Wednesday, and an abundance of other devices.

If that is not sufficient, let us just remember that the caucuses and the House of Representatives have full capacity to discipline the chairmen. I have observed over the years that committee chairmen have been removed from their chairmanship. So I urge that the amendments be rejected.

Mr. REUSS. Mr. Chairman, I thank the gentleman.

Mr. Chairman, I approach the impending vote on the Reuss amendment with calm and detachment.

If it passes, I will have the small satisfaction of having helped erect a signal to the parties, the Democrats and the Republicans, that they must start choosing as their committee chairmen the ablest and best, rather than always those who happen to have been around the longest. And we will have erected a symbol that this House belongs to the people of the United States, not merely to the political parties.

If, on the other hand, the Reuss amendment should fail, I would console myself with the realization that I have 16 years of service, eight uninterrupted terms, and I can probably make out under the seniority system, if that is going to be the way it is going to be from here on out.

So the issue boils down to simply this: if we think the seniority system is the finest method of selecting committee chairman that has ever been struck off by the mind of man, if we think, as it has been suggested earlier, that it is indeed an edifice, a gothic cathedral which cannot be improved by change, then vote down the Reuss amendment.

If, on the other hand, we think, as I do, that the times are changing and that the House of Representatives must change with the times, then vote the Reuss amendment up.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. ROBISON).

Mr. RUPPE. Mr. Chairman, will the gentleman yield?

Mr. ROBISON. I yield to the gentleman from Michigan.

Mrs. HECKLER of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. ROBINSON. I yield to the gentlewoman from Massachusetts.

Mrs. HECKLER of Massachusetts. Mr. Chairman, I rise in support of the proposed amendment to remove seniority as the sole qualification in the selection of committee chairmen.

At the present time the House applies only one criterion in its choice of committee chairmen. It selects, without deliberation, the member who has the longest continuous service on the committee. Under the provisions of rule X of the House, we need not select the most senior member of the committee as its chairman, but tradition has established that this be done—and it is done without exception.

As one who is over 30 and under 40, I share the views of neither the young Members who object to the seniority system solely on the basis of the age of the chairmen, nor do I share the views of more senior Members who would retain the seniority system without modification.

In my judgment, age should not be the major factor in the selection of chairmen. Age, or seniority, is not nearly as important as ability, experience, responsiveness, and judgment.

Many chairmen of House committees have vast powers in scheduling hearings, inviting testimony from witnesses, determining the legislative schedule and, in effect, controlling the speed and direction of the committee. Committees have become such great influences in the conduct of our legislative business that an unresponsive committee chairman can have a great and unwarranted effect on actions taken by the House.

For these reasons, I urge this body to adopt the amendment offered by the distinguished gentleman from Iowa (Mr. SCHWENGEL) which provides that committee chairmen be selected by members of the committee from among the three most senior Members of the majority party on the committee.

This proposal has two important facets. First, it recognizes the need for experience. It combines the need for experience with the need for responsiveness. Second, the requirement that chairmen be elected by the Members of the committee makes it mandatory that candidates for the chairmanship become more cognizant of the problems and needs of their colleagues on the committee.

If we are able to replace seniority with elected committee chairmen I am confident that the abilities of our chairmen will be considerably improved and the output of the congressional process considerably enhanced.

I prefer the Schwengel amendment in this regard but if it is not adopted I shall support the amendment of my good friend, the gentleman from Wisconsin (Mr. REUSS), which also is far superior to the existing situation of complete reliance on the seniority system.

If we are unable to successfully amend the legislative reorganization bill on the floor today, I am hopeful that we can continue our efforts by working toward adoption of the Schwengel amendment by the Republican conference. This would mean that at least the ranking Republican would be selected on the basis of merit rather than seniority. I am hopeful that the House will repudiate complete reliance on seniority.

Mr. ROBISON. Mr. Chairman, I rise in support of the Schwengel substitute. I do so with some reservations, of course, central among which are the arguments raised that if there is to be some changes in the seniority system, it should come about by virtue of change in party rules rather than by change of House rules. Those who raise this question may well be right in their position but, if that argument carries, then I simply hope that this attempt and this debate will, at least, have had the effect of accelerating

and assuring subsequent, separate party action.

However, if there is to be some reform of the seniority system eventually arrived at by that route, I suspect that in its final form it will follow, in concept if not in detail, the Schwengel proposal. Since I would expect to support such action when and if it takes place within the Republican conference, I see no valid reason why I should not support it now, and I urge my colleagues to do likewise.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Chairman, I rise in opposition to both the substitute amendment and the amendment. In the present language of the rules of the House, paragraph 3 of rule X, it states:

> At the commencement of each Congress, the House shall elect as chairman of each standing committee one of the Members thereof * * *

Mr. Chairman, there is nothing in the present rules about seniority, not one word is said about seniority. Nor is there any requirement that chairmen be selected by seniority. I submit both the substitute and the amendment in fact for the first time inject into these rules the principle of seniority.

The gentleman from Wisconsin (Mr. REUSS), would add the words "who need not be the Member with the longest consecutive service in the committee." They are, in fact, doing with these amendments the very thing they profess they want to eliminate for it is the proponents who inject seniority into the rules for the first time by injecting into the rules the principle of seniority, which is not there now.

I believe we should make clear here that the House can always work its will whenever the majority so desires. The highest institution of this House is the discharge petition. Nobody proved that better than the gentlewoman from Michigan (Mrs. GRIFFITHS) when she got enough signatures to a discharge petition to bring to the floor the equal rights for women amendment. So this House can always work its will. There is no Member of this House big enough to frustrate the will of the majority of this House whenever the majority feels compelled to move on an issue, so I hope both the amendment and the substitute will be defeated.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. SCHEUER).

Mr. SCHEUER. Mr. Chairman, I agree with my colleague from Michigan (Mr. DINGELL) that many, if not most, of our committee chairmen are doing an outstanding job. But if there is one committee chairman anywhere among our committees who is doing less than an outstanding job, if there is a single committee chairman who is held in minimum high regard by a consensus of his colleagues, then this House ought to have a more convenient and appropriate procedure to elect another Member the chairman of that committee, than the agonizingly painful and embarrassing procedures that we on the Committee on Education and Labor have had to employ in the past few years, first to reduce somewhat the freedom, flexibility and power of the chairman, and second, through the power of the caucus, actually to change the committee chairman. That is not a pleasant or felicitous arrangement, and there has to be an easier way of getting on with the work of the Congress.

Last, in addition to all of the reasons of relevance, in addition to responding to the clear expression across the country of how we ought better to provide the leadership to meet the needs and demands of the times, there is the simple matter of utilizing to the maximum our manpower, utilizing the enormously talented men in this Congress, not all of them in the positions of leadership to which they would be gladly elected by their colleagues, were there an acceptable procedure for doing so.

I repeat the words of the gentleman from New York (Mr. LOWENSTEIN). No business could operate this way. No university, no hospital, no executive branch agency, no institution of any kind selects for its top leadership, for its top decision-makers, men solely on the criterion of length and duration of service.

I say, therefore, simply as a matter of elevating to deserved leadership roles the enormous talent which is in this body we should use the criterion of who among us we judge the best fitted to serve in our most demanding, our most taxing, our most honored roles.

I support the Reuss amendment.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. MILLER).

(By unanimous consent, Mr. MILLER of California yielded his time to Mr. HAYS.)

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. HAYS).

Mr. HAYS. Mr. Chairman, I had not intended to speak on this subject again.

The gentleman from New Hampshire mentioned my name, and then interjected very shortly thereafter the name of the unfunny man from fun city, Mr. Lindsay, and said he was going to read, if I would not object, something Mr. Lindsay wrote into the RECORD.

Well, I surely would object, because I served here with him and I will tell the Members one thing. He could not have stayed here long enough to accumulate enough seniority that I ever would have thought he would have made much of a contribution.

I just want to tell you Republicans, furthermore, so far as I am concerned you are not going to get away with foisting him off on the Democratic Party except over my dead body. You have got him. You are stuck with him. I want you to keep him.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. HAYS. I am delighted to yield to my friend from Iowa. He has not made a contribution for a couple of days.

Mr. GROSS. I did not know that the real Republicans were being consulted about that.

Mr. HAYS. I think it is a Republican plot, myself. We surely do not want him. At least, I do not know of any Democrat who does. If there is anyone, I would like for him to stand up and say so.

We have heard a lot of talk around here, as I said earlier, about secrecy in voting. I am going to address myself to the Schwengel amendment because, as said before, I do not believe the so-called Reuss-Vanik amendment changes anything one way or the other. There is nothing in the rules which says we have to follow seniority. The caucus is the determining agent. That is the way I would like to see it.

So far as the Schwengel amendment is concerned, it says we shall elect from the top three by a secret ballot. As I said earlier, not only is this not the rule of the majority, but it could be the rule of the minority of the committee. I cannot think of anything more undemocratic and more restrictive.

We spent all day yesterday, and a part of some days before, in getting rid of the secrecy in the voting on the teller vote. Let us not put more secrecy in by this amendment.

Now, if the people's right to know is important—and I think it is important—then I think the people's right to know or at least for an individual Member to have the right if he wants to ask for a rollcall on the committee chairman is just as important as the opening up of the secrecy on the teller votes. That is the reason why I think that the Schwengel amendment is retrogressive. I think it compounds the injury, if there is any. I think it is a step backward, and I would not like to see us take it.

The CHAIRMAN. The Chair recognizes the gentleman from West Virginia (Mr. HECHLER).

Mr. HECHLER of West Virginia. Mr. Chairman, this has been a historic debate. For the first time, the seniority system, whose limitations are clearly recognized throughout the Nation, is under serious attack within the Halls of Congress. The seniority system is crumbling. I do not believe it will fall today, or tomorrow, but eventually the undemocratic system perpetuated by seniority will collapse before the onslaught.

I believe in clear and strong party responsibility. Under the seniority system, which places in positions of power those Congressmen from safe districts, the committee chairmen frequently are out of sympathy with the elected leadership of the House as well as the national party policies of the majority party. This results in delay, uncertainty, irresponsible action, inability to center responsibility, and great confusion among the general public interested in affixing responsibility for action or inaction.

The passage of either the Schwengel substitute or the Reuss amendment would be steps forward. And I am confident that eventually the undemocratic system of seniority, like other undemocratic institutions throughout the Nation which are being altered or abandoned, will be done away with.

(By unanimous consent, Mr. HECHLER of West Virginia yielded the remainder of his time to Mr .LOWENSTEIN.)

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. LOWENSTEIN).

Mr. HAYS. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

One hundred and twenty-one Members are present, a quorum.

The Chair recognizes the gentleman from Nebraska (Mr. MARTIN).

Mr. MARTIN. Mr. Chairman, I oppose both the substitute and the amendment.

(By unanimous consent, Mr. MARTIN yielded the remainder of his time to Mr. SMITH of California.)

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. GUBSER).

Mr. GUBSER. Mr. Chairman, in response to inquiries from my own congressional district, I have advocated for a long time that we should compromise the seniority system with the political cauldron which would result if it were to be abolished. I have studied very carefully the provisions of the Schwengel amendment and I have told the gentleman that I support his amendment. However, long ago, as a youngster, I learned that it was the last breath of air which burst the balloon and the last 10 pounds of weight which capsized the boat. I now know that it is the last well-meaning amendment that kills the bill.

Mr. Chairman, we have made tremendous progress in the last few days toward a meaningful congressional reform. I honestly believe that if this amendment is adopted, it will kill the bill. I do not want to see that reform lost.

I, therefore, even though I favor it in principle and not as a practical matter, I shall vote against the amendment and the substitute.

The CHAIRMAN. The Chair recognizes the gentleman from Florida (Mr. BENNETT).

Mr. FASCELL. Mr. Chairman, will the gentleman yield?

Mr. BENNETT. I yield to the gentleman from Florida.

Mr. FASCELL. Mr. Chairman, I rise in support of the Reuss amendment which provides that length of service shall not be the sole criteria by which committee chairmen are selected. The people of this country need to know that wisdom, leadership and ability as well as age shall be considered in the selection of men to positions of great power in the Congress.

The American people want the best in positions of leadership in Congress to help run the country. We should all vote to provide the clear intent in our rules to make this possible.

Mr. BENNETT. Mr. Chairman, although I have 22 years of seniority here, which I guess is a good deal of seniority, I think the seniority system does definitely require some change. I am not sure exactly what change it requires. I have suggested to the committee that is studying the matter that some kind of modest program of rotation might be a good thing. However, I do not have a deep conviction about any particular formula of reform.

Mr. Chairman, I do believe that the Schwengel amendment, if adopted, would have little effect, except it would make it difficult to pass this bill. I think this bill is going to have difficulty anyway when it gets over to the Senate, not because of the provisions pertaining to the Senate which would be involved; but I think there are so many people here who do not want to see this bill passed at all that their influence might be felt in the Senate and that the Senate might not ever get to enactment of the bill.

I am, therefore, against the Schwengel amendment and for the further reason that I feel it does solidify into law the seniority system, which I greatly question as a wise direction to take.

I greatly question the present seniority system. I do not have a better solution, but I just do not believe we ought to put it in the law that it has to be there. Right now this law does not require it.

For those reasons, Mr. Chairman, I hope we will defeat the amendment offered by the gentleman from Iowa (Mr. SCHWENGEL). I do hope the matter will be studied further, and that we can bring about improvement in this area at an early date.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. LEGGETT).

Mr. LEGGETT. Mr. Chairman, I rise in support of the amendment offered by the gentleman from Wisconsin (Mr. REUSS). I believe that the amendment offered by the gentleman from Iowa (Mr. SCHWENGEL), and its supporters, is well-intentioned, but I think it does write into law something that we do not need.

I would have hoped that every younger Member of this House would have been here on the floor to participate very vigorously in this debate. In the 8 years that I have been in the Congress, this is the first time we have had an opportunity to express ourselves in opposition to the seniority system.

How does it work? We all take our position on these committees, we may have some mobility between committees in our first few years in the House, but then the only way we can move upward is for either the men more senior to us on the committee to die—which we do not like to see—or to be defeated. And it makes a very, very rigorous, depressing, poor system under which we operate.

We can talk about the fact we can elect people in caucuses, but we cannot get a quorum in a caucus to conduct an election many, many times, or to conduct a referendum on this particular issue.

Of the top 25 senior men——

Mr. MINSHALL. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

One hundred and thirteen Members are present, a quorum.

The Chair recognizes the gentleman from California (Mr. LEGGETT) for one-half of a minute.

Mr. LEGGETT. Mr. Chairman, as I started to say, of the top 25 senior men in the House of Representatives only three of them are on the Republican side. This proves that power does one thing: it perpetuates Members in power. Also I think we should experiment with democracy on the floor of the House. If the one-man, one-vote is good for the people, it should not stop at the door of the House of Representatives.

Mr. Chairman, we should support the amendment offered by the gentleman from Wisconsin (Mr. REUSS).

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. SMITH) for 3 minutes.

Mr. SMITH of California. Mr. Chairman, I have not spoken on these amendments.

I have tried to help to get as much time for everybody as possible so that they could have an opportunity to express their feelings.

Mr. Chairman, I do not think the seniority system is perfect. But I do not know of any system that is any better. If there is some system that might be better, I would give some thought to it. But I think it is the best system we have so far as I know.

The majority party, which happens to be the Democratic Party, has the power, the responsibility, and the duty to select the chairmen of committees. How they do it is for them to decide.

As to the minority party, it is our responsibility to select the ranking minority Members—and how we do it is for us to decide.

I hope that we take over so that we will have a chance to select the chairmen of committees. This problem should be decided by our respective parties in our caucuses.

Mr. Chairman, I am opposed to both amendments and to any amendment which will attempt to change the seniority system of the House of Representatives.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. SISK) for 1½ minutes to close debate.

Mr. SISK. Mr. Chairman, I want to commend the Members of the House. I think they have done an excellent job. So far as I know this is the most extensive debate, at least in the Committee of the Whole, on the subject of seniority in the 16 years that I have been here.

I want to commend the Members for the attitudes they have displayed and I would like to urge Members to vote against the Schwengel amendment and also against the Reuss amendment. I think the reasons for such a vote have been discussed at great length. So at this time I would urge Members to defeat these two amendments and move ahead with further consideration of the legislation pending before us.

The CHAIRMAN. The question is on the substitute amendment offered by the gentleman from Iowa (Mr. SCHWENGEL), for the amendment offered by the gentleman from Wisconsin (Mr. REUSS).

Mr. SMITH of California. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. SCHWENGEL and Mr. SISK.

The Committee divided, and the tellers reported that there were—ayes 28, noes 196.

So the substitute amendment was rejected.

The CHAIRMAN. The question is on

the amendment offered by the gentleman from Wisconsin (Mr. REUSS).

Mr. SISK. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. REUSS and Mr. SISK.

The Committee divided, and the tellers reported that there were—ayes 73, noes 160.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. STEIGER OF ARIZONA

Mr. STEIGER of Arizona. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. STEIGER of Arizona: On page 39, immediately below line 4, insert the following:

"DEBATE TIME ON MOTIONS TO RECOMMIT WITH INSTRUCTIONS

"SEC. 121. Clause 4 of rule XVI of the Rules of the House of Representatives is amended by adding at the end thereof the following sentence: 'It shall not be in order to close debate on any such motion to recommit with instructions for ten minutes, one-half of such time to be given to debate by the proponent, and one-half to debate in opposition to the motion.'"

And make the appropriate technical changes in section numbers and references.

Mr. STEIGER of Arizona. Mr. Chairman, I ask unanimous consent that Mr. MEEDS and I have the opportunity of offering the names of the 70 other sponsors of this amendment, to appear in the RECORD at this time, if that is in order.

The CHAIRMAN. Is there objection to the request of the gentleman from Arizona?

There was no objection.

LIST OF SPONSORS

Mr. Meeds, Mr. Steiger of Arizona, Mr. Addabbo, Mr. Anderson of California, Mr. Brasco, Mr. Brown of California.

Mrs. Chisholm, Mr. Clay, Mr. Cleveland, Mr. Cohelan, Mr. Conyers, Mr. Coughlin.

Mr. Crane, Mr. Culver, Mr. Daniels of New Jersey, Dellenback, Mr. Dennis, Mr. Eckhardt, Mr. Edwards of California, Mr. Eilberg, Mr. Erlenborn, Mr. Evans of Colorado, Mr. Farbstein, Mr. Fascell.

Mr. William D. Ford, Mr. Fraser, Mr. Friedel, Mr. Green of Pennsylvania, Mr. Hanley, Mr. Helstoski, Mr. Hechler of West Virginia, Mr. Hicks, Mr. Howard, Mr. Kastenmeier, Mr. Koch, Mr. Leggett.

Mr. Long of Maryland, Mr. Lowenstein, Mr. MacGregor, Mr. McCarthy, Mr. Matsunaga, Mr. Melcher, Mr. Mikva, Mr. Minish, Mr. Moorhead, Mr. Morse, Mr. Moss, Mr. O'Neill of Massachusetts, Mr. Ottinger, Mr. Patten, Mr. Podell, Mr. Pryor of Arkansas.

Mr. Reid of New York, Mr. Reuss, Mr. Riegle, Mr. Rooney of Pennsylvania, Mr. Roth, Mr. Roybal, Mr. Ryan, Mr. Scheuer, Mr. Schwengel.

Mr. Steiger of Wisconsin, Mr. Stokes, Mr. Thompson of New Jersey, Mr. Tiernan, Mr. Tunney, Mr. Van Deerlin, Mr. Waldie, Mr. Whalen, Mr. Wolff, Mr. Wright.

Mr. STEIGER of Arizona. Mr. Chairman, this amendment, I want to make very clear, is not going to dramatically alter the fabric of the House. It is not going to tear away the veil of secrecy, or do away with the anachronism of seniority, or give immediate equal representation to all the people, or do all the good things we would all like to see accomplished. This is not going to add appreciably to the justice or injustice which might occur on this floor.

It is really an amendment which I believe is probably in accord with the will of everyone here, regardless of his philosophy. What it says, simply, is that when there is a motion to recommit with instructions there shall be permitted 10 minutes of debate. The purpose of the amendment is that, with respect to recommital motions with instructions, said instructions never having been heard before, this will give the Members an opportunity to learn what it is exactly they are voting for when they vote for a motion to recommit with instructions.

Mr. Chairman, the practice has been, as you and the Members well know, to take time in the Committee of the Whole to announce a motion to recommit with instructions.

Again the practice is now, as you all know, to take advantage of the time in the Committee of the Whole to rise and strike the requisite number of words and explain the motion to recommit that you are going to offer. It is also very obvious to many of you that there are those who are not present in that session of the Committee of the Whole who, when they are called upon to vote on the motion to recommit with instructions, either have to depend on the advice or the voting of a friend or simply vote in the dark. This amendment will do no more than clarify the operation of a procedural matter. There is some jeopardy with regard to political advantage. I have been advised this may give an advantage to the majority, since the minority has the option of having the motion to recommit. I submit there is some jeopardy in this, because then it will give the majority the closing arguments on the matter if they so desire. It is my personal judgment that the jeopardy involved is not such as to mitigate the value of knowing what it is we are voting on. I submit that that is of greater value than whatever political jeopardy there may be in the procedural matter of dividing the time between the proponents and opponents.

Mr. SMITH of California. Will the gentleman yield?

Mr. STEIGER of Arizona. I am happy to yield to the distinguished ranking member from California.

Mr. SMITH of California. The gentleman uses the term "one-half of such time to be given in debate by the proponents." To whom does he refer?

Mr. STEIGER of Arizona. The proponent in this language, to respond to the gentleman, would be that person or those persons who favor the language in the motion to recommit with instructions.

Mr. SMITH of California. Should not that better be the mover of the motion? Would he not be the one who should control the 5 minutes rather than the proponent?

Mr. STEIGER of Arizona. If the gentleman would prefer that, I yield to the gentleman's superior legislative knowledge. To me they mean the same thing. If that is the purpose and intent of the gentleman, I will stipulate that.

Mr. SMITH of California. If there is more than one proponent, I think it should be either the maker or the mover of the motion, one of the two. If he or she is going to handle the motion to recommit, then that individual should have 5 minutes to explain it.

Mr. STEIGER of Arizona. The gentleman has clarity, logic, and silver-tongued persuasiveness.

So, Mr. Chairman, I ask unanimous consent that the word "proponent" be changed to read "by the maker of the motion."

The CHAIRMAN. Is there objection to the request of the gentleman from Arizona?

Mr. HAYS. Mr. Chairman, reserving the right to object, I think if we refer to either Roberts Rules of Order or Jefferson's Manual, somewhere in there we will find that it is not proper to say "I make a motion." The proper terminology is "I move." So I think what the unanimous-consent request ought to be is that the mover—or I do not see anything really wrong with the "proponent." Certainly "the maker of the motion" is grammatically incorrect.

Mr. SMITH of California. Will the gentleman yield?

Mr. HAYS. I yield to the gentleman from California.

Mr. SMITH of California. Mr. Chairman, I agree completely with the gentleman from Ohio. My language that I suggested was the mover of the motion, and that would be, in my opinion, the correct language to identify the proponent.

The CHAIRMAN. Is there objection to the request of the gentleman from Arizona?

There was no objection.

The CHAIRMAN. The Clerk will report the modified amendment.

The Clerk read as follows:

Amendment offered by Mr. STEIGER of Arizona: On page 39, immediately below line 4, insert the following:

"DEBATE TIME ON MOTIONS TO RECOMMIT WITH INSTRUCTIONS

"SEC. 121. Clause 4 of rule XVI of the Rules of the House of Representatives is amended by adding at the end thereof the following sentence: 'It shall not be in order to close debate on any such motion to recommit with instructions for ten minutes, one-half of such time to be given to debate by the mover of the motion, and one-half to debate in opposition to the motion.'"

And make the appropriate technical changes in section numbers and references.

Mr. STEIGER of Arizona. I would point out that this might be the time to quote an illustrious Member of this House who said that the jackals may bay but the caravan will move ever on.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. STEIGER of Arizona. I yield to the gentleman from Ohio.

Mr. ASHBROOK. I thank the gentleman for yielding and I agree with the gentleman.

Of course, in his remarks on his amendment he referred to the majority. But I notice in his amendment he said one-half of the debate in opposition to the motion. Would it not be possible un-

der the gentleman's amendment, since the minority has reserved the right to make the motion to recommit, that 5 minutes could come from both the proponents and the opposition on the minority side? I do not believe the gentleman intended it to be so construed.

Mr. STEIGER of Arizona. If I did not make myself clear, the jeopardy I spoke of is the fact that the minority has the right to offer the motion to recommit and it does follow that most of the time under this precedent they would offer the motion to recommit with instructions and they would, therefore, have the first 5 minutes. This would be the normal course of events. It is not mandatory. It is true that the Members of the minority could either oppose or defend the motion to recommit. I was pointing out the procedural jeopardy that would follow most of the time so as to alert my colleagues on this side of the aisle particularly since the minority has a right to offer the motion to recommit and they would have the first 5 minutes and those opposed would have the last 5 minutes.

Mr. ASHBROOK. Mr. Chairman, if the gentleman will yield further, the point I am making, the 5 minutes for the proponents and the 5 minutes for the opposition could conceivably come on the minority side of the aisle. I do not think that is what the gentleman said in his comments. He is talking about reserving 5 minutes to the minority——

The CHAIRMAN. The time of the gentleman from Arizona has expired.

(By unanimous consent, Mr. STEIGER of Arizona was allowed to proceed for 2 additional minutes.)

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. STEIGER of Arizona. I yield to the gentleman from California (Mr. SISK).

Mr. SISK. I would simply like to clarify exactly what we can expect to happen under this proposal. I am inclined not to oppose the amendment offered by the gentleman, provided we have an understanding of what will occur upon the offering of a motion to recommit with instructions.

Now, at the present time we proceed under the rules of the House, under the precedents of the House, and also certain customs. In connection with the questions already raised here I would pose a hypothetical one to the gentleman. If a motion to recommit with instructions is offered by a Member of the minority on, let us say, this particular bill which we are here debating, and at the time we go back into the House which is the proper time to offer such a motion, that then he would be recognized for 5 minutes to explain his motion to recommit and what the instructions were and what the effect would be; is that right?

Mr. STEIGER of Arizona. Yes.

Mr. SISK. Then, the Speaker, I would assume, would be expected to follow normal custom and, let us say, recognize the Member on this side of the aisle managing the bill who would probably be considered to be the opposition; is that the assumption, generally, the gentleman has in mind?

Mr. STEIGER of Arizona. That is exactly the assumption. Of course, I understand that it will limit in the unlikely event, for example, that the manager of the bill would not be opposed to the motion to recommit with instructions, but there was another Member who was opposed, he would then be recognized if he chose to do so.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. SISK. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I am seeking the attention of the gentleman from Arizona, or someone else who is a proponent of this amendment.

Our only desire here is to seek clarification. I said I have no great opposition. I know there are times when motions are made or a motion is made to recommit a matter with instructions where, frankly, there is not very much information available. So I have certain sympathies with what the gentleman proposes.

Now, as we explore the language needed here, it does seem to fit properly. If the gentleman has before him the rules of the House, rule XVI, clause 4, that he attempts to amend——

Mr. STEIGER of Arizona. Mr. Chairman, if the gentleman will yield, could he give me the page number?

Mr. SISK. That would be found on page 397 of Jefferson's Manual, at the top of the page, reading:

> After the previous question shall have been ordered on the passage of a bill or joint resolution, one motion to recommit shall be in order.

And of course the point I am making here is that the previous question ends debate at that point.

Now, the only question I have, and I am not trying to confuse the amendment, but I am wondering if there should not be some additional language "except as provided herein," because, as the gentleman understands by the Rules of the House once the previous question is ordered, debate has been closed.

I will gladly yield to the gentleman for a comment on that.

Mr. STEIGER of Arizona. Mr. Chairman, I would defer to the gentleman from Washington, Mr. MEEDS.

Mr. MEEDS. Mr. Chairman, if the gentleman will yield, actually this amendment would not prevent the Committee on Rules from adopting a rule as they have in the past, which makes the previous question in order, and which follows through the practice of the House, then, true, the question of the previous question is then voted and debate is then cut off. What this amendment really does is to signal the attention of the Committee on Rules of the House of Representatives that we want a minimum of 10 minutes to debate a motion to recommit with instructions, 5 minutes of that time to be given to the mover of the motion, and 5 minutes of the time to be given the opponents.

Now, the Committee on Rules could come in with a rule, and someone could move the previous question even with the adoption of this amendment, and they could be cut off.

Mr. SISK. I think I understand very clearly what is sought to be accomplished, and again I have no particular opposition, but it seems to me that the language does not make it entirely clear.

In connection with the words here on about the fifth line of the gentleman's amendment, where it starts: "It shall not be in order, —", I am wondering whether that "provided that it shall not be in order to close debate," would not make the language more properly fit into the language here being amended. That is the only question that I am attempting to clarify, for the purpose of keeping the record clear for possible future interpretation.

Mr. STEIGER of Arizona. Mr. Chairman, if the gentleman will yield, I have no objection myself, if there is no objection from the gentleman from Washington (Mr. MEEDS) that it include the words "Provided," and so forth. As far as the language which is in the rule, I feel it is appropriate following the words joint resolution in rule IV, I think it is clearly applicable there.

The intention of the language I will say again, as the gentleman from Washington (Mr. MEEDS) has explained, is to provide for 10 minutes of debate on a motion to recommit with instructions. That is the sole purpose of the language.

Mr. SISK. I appreciate the comment of the gentleman. I do believe if he would ask unanimous consent, at least according to my best experts here, to put in the words "provided further"—that it shall not be in order to close debate on any such motion. That would seem to us to be in better form. As I say, I have no basic objection.

Mr. COLMER. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, as one member of the Committee on Rules, I have a lot of sympathy with the objective sought here by this rule. I have not had the opportunity to study it and I am just going to make this gratuitous suggestion, if the gentleman would withdraw his amendment or ask unanimous consent to withdraw it, and then work it out here with the staff as to what he really wants to do and get it in proper order—I think he may have his amendment adopted. I just make that suggestion to clarify the situation.

Mr. STEIGER of Arizona. Mr. Chairman, would the distinguished chairman of the Committee on Rules yield?

Mr. COLMER. I yield to the gentleman.

Mr. STEIGER of Arizona. Mr. Chairman, I would like to make the unanimous-consent request to be permitted to withdraw the amendment, as stated, and work it out with the staff, with the understanding that it would possibly be offered and accepted at some future date.

The CHAIRMAN. Is there objection to the request of the gentleman from Arizona that the amendment be withdrawn?

Mr. HAYS. Mr. Chairman, reserving the right to object, if I understand the gentleman's unanimous-consent request properly, he is asking unanimous consent to withdraw his amendment, rewrite it with the help of the staff, with the understanding that the House will accept it at a later date.

Let me say to the gentleman, I tend to favor his amendment but I do not think he can properly make such a unanimous-consent request.

The CHAIRMAN. The Chair would like to inform the gentleman from Ohio that the request made by the gentleman from Arizona was that the amendment be withdrawn.

Mr. HAYS. If that is it, then, Mr. Chairman, I have no further objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Arizona?

Mr. MEEDS. Mr. Chairman, reserving the right to object, I think, in discussing the matter with the Committee on Rules that we do have the language which will carry out the intent and the purpose of this amendment and we should consider it now and it should be adopted.

The CHAIRMAN. Is there objection to the request of the gentleman from Arizona (Mr. STEIGER)?

Mr. MEEDS. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. MEEDS. Mr. Chairman, I move to strike out the last word and rise in support of the amendment.

Mr. Chairman, I ask unanimous consent that the amendment proposed be further amended by inserting before the words "It shall not be in order" the words "Provided further,".

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

Mr. SISK. Mr. Chairman, reserving the right to object, and I shall not object, "Providing further that"——

Mr. MEEDS. "Provided further that."

Mr. HAYS. Mr. Chairman, reserving the right to object, I thought we had already granted unanimous consent for the amendment to be withdrawn.

The CHAIRMAN. The Chair will advise the gentleman from Ohio (Mr. HAYS) that objection was made to that request. Is there objection to the request of the gentleman from Washington?

Mr. HAYS. Reserving the right to object further, I would like to ask Mr. SISK, the manager of the bill, if, in his opinion or in the opinion of his staff, the requested modification would cure the problem with the amendment.

Mr. SISK. If the gentleman will yield under his reservation, of course, this is one of the problems that we have with a variety of amendments which we have not had an opportunity to see. In fairness, the amendment before the House was presented, but there have been many others also. It is the understanding of our people, as we have checked, that putting in the words "Provided further, that it shall not be in order to close debate," and so forth, will make it read properly in connection with the material included in the present rule.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

Mr. HAYS. Further reserving the right to object, and I shall not object, I want to make an observation. It was reported in the press, perhaps inaccurately, some months ago that the gentleman from Arizona, the author of this amendment, said that most of the Members of this body did not have sense enough to push a wheelbarrow. I would just like to observe that sometimes things get more complicated around here than pushing a wheelbarrow.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

Mr. SMITH of California. Further reserving the right to object, the staff on my side of the aisle states that this is the first proviso in this rule, and the language in setting forth the first proviso is always "Provided that," and if there are further provisos, the language is, "It is further provided that." So it should be, in my opinion, "Provided that," and the "Further" should not be used until there is a second proviso. I submit that to the gentleman for his consideration.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

Mr. ARENDS. Mr. Chairman, reserving the right to object, after that explanation I think it is time that we close for the evening.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

Mr. COLMER. Further reserving the right to object, Mr. Chairman, I am still not clear on this matter. If this rule is going to be adopted, and, I repeat, I favor the objectives, then it should be properly and correctly written. I made what I thought was a reasonable request, that the gentleman withdraw his amendment until the staff could be assured that it was in proper shape. The Parliamentarian should be consulted. I hope that the gentleman will agree to that suggestion so that we could then have the amendment offered and agreed to.

Mr. SISK. Mr. Chairman, will the gentleman yield under his reservation?

Mr. COLMER. I yield to the gentleman from California.

Mr. SISK. Mr. Chairman, I wonder if we could get unanimous consent to withdraw this amendment. We will then protect the gentleman in his right to offer it at a later time. We have some entirely new language which the staff, who deal with the rules, feels is a good deal better. But I would like to consult with the gentleman from Arizona and the gentleman from Washington about it. I wonder if we can get unanimous consent to withdraw the amendment in order further to perfect it.

Mr. MEEDS. Mr. Chairman, will the gentleman yield?

Mr. COLMER. I yield to the gentleman from Washington.

Mr. MEEDS. Is it the gentleman's understanding that this amendment could also be made to language on page 47 and would be in proper order at that place?

Mr. SISK. If the gentleman from Mississippi will yield to me, it would be the understanding of this Member that we could do that. A parliamentary inquiry might clarify it, but it would be my understanding that the amendment would be in order at the end of title I prior to the taking up of title II. But I would suggest a parliamentary inquiry to the Chair on that question.

Mr. HAYS. Mr. Chairman, will the gentleman from Mississippi yield?

Mr. COLMER. I yield to the gentleman from Ohio.

Mr. HAYS. Mr. Chairman, it seems to me the simplest way to cure this would be for the gentleman to ask for unanimous consent to withdraw his amendment for the purpose of perfecting it with the understanding that it would be in order to offer it at a subsequent time, leaving the time indefinite. If the House agrees with that, the gentleman is protected.

Mr. COLMER. That is all I asked, and I hope the gentleman will pursue that course.

PARLIAMENTARY INQUIRY

Mr. MEEDS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MEEDS. Would the proposed amendment be in order on page 47 after line 5?

The CHAIRMAN. The Chair would like to inform the gentleman from Washington that a germane amendment would be in order at that point.

The question before the Committee is the unanimous-consent request of the gentleman from Washington to withdraw his amendment.

Mr. MEEDS. Mr. Chairman, I have not made it yet, but I will.

Mr. COLMER. Mr. Chairman, do I have the floor?

The CHAIRMAN. The gentleman from Mississippi has the floor under a reservation.

Mr. COLMER. I think it is pretty well agreed that this amendment needs a little further study, and if the gentleman does not withdraw his request, I am going to be compelled to object to it, and I do not want to do that.

Mr. MEEDS. If I still have the floor, I thank the gentleman.

Mr. COLMER. I yield to the gentleman from Washington.

Mr. MEEDS. Mr. Chairman, I thank the gentleman for his kind advice. It was my intention to ask unanimous consent to withdraw the amendment with the understanding that it could be offered at a later time.

PARLIAMENTARY INQUIRY

Mr. MEEDS. Mr. Chairman, a parliamentary inquiry. May I have a ruling on the unanimous-consent request?

The CHAIRMAN. The gentleman will state his request again, please.

Mr. MEEDS. My unanimous-consent request is to withdraw the amendment with the understanding that it could be offered at a further point.

The CHAIRMAN. The Chair would like to state to the gentleman from Washington that the request can be made at this time that the amendment be withdrawn.

PARLIAMENTARY INQUIRY

Mr. HOLIFIELD. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. HOLIFIELD. Mr. Chairman, for clarification, I would like to know if we are now talking about the Meeds amendment to the Steiger of Arizona amend-

ment, or the Steiger of Arizona amendment and the Meeds amendment to the Steiger of Arizona amendment, and if so, who has the right to withdraw?

The CHAIRMAN. The Chair would like to inform the gentleman from California that the only amendment before the committee is the Steiger of Arizona amendment.

Mr. HOLIFIELD. But there have been some subsequent changes in it, and the gentleman from Washington suggested some language that the Steiger of Arizona amendment would correct.

The CHAIRMAN. The gentleman is correct.

PARLIAMENTARY INQUIRY

Mr. COLMER. Mr. Chairman, a further parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. COLMER. Mr. Chairman, is it not true that the gentleman from Washington has the floor and has made a unanimous-consent request?

The CHAIRMAN. The time of the gentleman from Washington (Mr. MEED) has expired.

(On request of Mr. COLMER, and by unanimous consent, Mr. MEEDS was allowed to proceed for 1 additional minute.)

PARLIAMENTARY INQUIRY

Mr. HAYS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. Will the gentleman from Washington yield for a parliamentary inquiry?

Mr. MEEDS. I yield to the gentleman from Ohio.

Mr. HAYS. I thank the gentleman.

Mr. Chairman, remembering how Washington got his troops across the fence, I was wondering if it would be in order to make a unanimous-consent request to go back just before the time the gentleman from Arizona offered his amendment and start all over.

Mr. MEEDS. Mr. Chairman, I ask unanimous consent that the amendment offered by the gentleman from Arizona (Mr. STEIGER) and amended by unanimous consent, be withdrawn with the understanding that it will be offered later.

Mr. ARENDS. Mr. Chairman, a point of order.

The CHAIRMAN. The Chair would like to inform the gentleman from Washington that he has the right to make the request that the amendment be withdrawn.

Is there objection to the request of the gentleman from Washington?

Mr. ARENDS. Reserving the right to object, Mr. Chairman, due to the utter confusion on the House floor at this time I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

One hundred forty-three Members are present, a quorum.

Is there objection to the request of the gentleman from Washington that the amendment be withdrawn?

There was no objection.

AMENDMENT OFFERED BY MR. WHITE

Mr. WHITE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WHITE: On page 39, immediately below line 4, insert the following:

"Expeditious conduct of calls of the House, (a) clause 2, rule XV of the rules of the House of Repersentatives is amended by adding immediately after the numeral '2' and '(a)' and clause 2 of rule XV is amended by adding at the end thereof the following: '(b) When a call of the House in the absence of a quorum is ordered, the Speaker of the House or the Chairman of the Committee of the Whole House, as the case may be, at his discretion may order the Clerk of the House to lay out tally sheets on which the presence of the Members shall be recorded by the Clerk or the respective Member. When a quorum has been recorded, which in the Committee of the Whole House shall be one hundred Members, the Clerk shall advise the Speaker or Chairman of this fact, after which it shall be in order to entertain a motion to dispense with further proceedings under the call, and business of the House or the Committee of the Whole shall then resume; however, for a period of thirty minutes from the commencement of said quorum call Members who are present before the expiration of said thirty minutes may have their presence recorded on said tally sheets. Absent Members shall be recorded in the Journal of the House.'

"(b) Clause 2 of rule XXIII of the rules of the House of Representatives is amended as follows:

"'2. Unless the Chairman invokes the procedure for the procedure for the call of the roll under rule XV(b), whenever a Committee of the Whole House or of the Whole House on the State of the Union finds itself without a quorum, which shall consist of one hundred Members, the Chairman shall cause the roll to be called, and thereupon the Committee shall rise, and the Chairman shall report the names of the absentees to the House, which shall be entered on the Journal; but if on such call a quorum shall appear, the committee shall thereupon resume its sitting without further order of the House.'"

And make the necessary conforming and technical changes in the table of contents, section numbers and references, and other technical changes in the bill.

Mr. WHITE (during the reading). Mr. Chairman, I ask unanimous consent that further reading of the amendment be dispensed with and that the amendment be printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The gentleman from Texas (Mr. WHITE) is recognized for 5 minutes in support of his amendment.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. WHITE. I yield to the gentleman from California.

Mr. SISK. I thank the gentleman for yielding.

I see certain merit in connection with the gentleman's amendment. Again, as our staff people have looked at this amendment, we find a good deal of difficulty with some of the language in the amendment. I should simply like to call to the attention of the gentleman that it is our strong feeling, if the amendment is to be adopted, it should be rewritten. This is no criticism of whoever may have written it, but there are some changes that do need to be made. I shall be glad to explain to the gentleman the principles involved.

Mr. WHITE. Would the gentleman like to suggest what some of those changes are? I have gone over this with some of the staff before.

Mr. SISK. There is a change in the system here that the staff feels would be more apropos with the language that follows. If the gentleman wishes to go ahead and discuss the merits and demerits of it, I will see if we can come up with something on it.

Mr. WHITE. Thank you very much.

Mr. Chairman, this amendment is coauthorized by Mr. BIESTER, Mr. UDALL, and Mr. TAFT, and a copy of this amendment is on the majority and minority desks.

This amendment is designed to save time and money.

The time saved is ours and our constituents'. The money is that of our constituents, and the taxpayer.

How much time of the House is wasted while the business of the House awaits the calling of the quorum?

How many times in a week does a committee suspend its business for one-half hour while its members answer a quorum call?

How many times in a week do we leave a constituent, to stand around waiting for our name at a quorum call?

How many telephone calls have we deferred while we waited for our name to be called?

How much time in a week or a year do we waste waiting for our name? Those whose names are the last one-third of the alphabet must wait up to 10 minutes.

Do you realize that each quorum now consumes 26 to 31 minutes? The general worktime of the house is from 12 noon to 6 p.m., or 6 hours; with an average of two quorum calls per day, one-sixth of the time of the House is consumed by merely calling the roll for a quorum.

If there are four quorum calls, one-third of our time is consumed by unproductive quorum calls.

I submit that much of this wasted time could be avoided by this amendment. Further, assuming 350 Members are present, two quorum calls per day costs approximately 350 man-hours of the membership, or over 43 8-hour days.

In money value, this amounts to over $7,082 worth of man-hours alone, plus all the other costs of the House diverted to the quorum call.

What I propose by this amendment is not a displacement of the existing rule, but merely an option for an alternative.

If it works—as I know it will—it will become the standard practice of the House.

If this does not fulfill all its expectation, then it will remain dormant this session and be dropped in the rules of the House for the 92d Congress.

So we have a chance today for real progress, without relinquishing any of our existing procedures.

Before I talk about the amendment itself, let me mention that this does not conflict with the McClory amendment which was passed earlier. That amend-

ment amended section XV which has to do with the House itself. This amendment not only is an alternative to the House action but also touches on the Committee of the Whole House, which was not touched on by the McClory amendment regarding the electronic system. The Committee of the Whole House is covered by section XXIII.

Going on to the merits of the amendment, the amendment merely says that the Speaker or the Chairman of the Committee of the Whole House at his discretion on an expeditious call of the quorum may order the Clerk to lay out tally sheets on which the presence of the Members shall be recorded by the Clerk or the respective Member.

There are several procedures that could be used effectively under this language. The fastest and most orderly would be for the Clerk to recognize and call the names of those Members standing whenever they are in the House or as they come forward; or the Members could sign in and be recorded present, or the roll could still be called.

The great saving of time is provided by the second part of the amendment where it says:

> When a quorum has been recorded, the Clerk shall advise the Speaker or the Chairman of this fact, after which a motion may be entertained to dispense with further proceedings under the call, and the business of the House or the Committee of the Whole shall then resume.

In effect, a quorum then can be established and the business of the House will probably be resumed within 10 minutes of the beginning of the quorum call, thus saving the House 20 minutes of time for each quorum.

When there are only 100 Members needed for a quorum, as in the Committee of the Whole House, it is possible that a quorum could be established in less than 10 minutes.

However, the amendment further provides that for a period of 30 minutes from the commencement of the quorum and though the business of the House has resumed, Members can still come in and be recorded as present. In practice this could be done either by signing the tally sheets or by being recognized and recorded at the desk by the Clerk, which would be faster.

Absent Members would still be recorded in the Journal. Thus, the quorum call is expedited and business can recommence earlier and all Members present within the same time now required for a quorum would be recorded.

A Member could regulate his business more quickly and with greater certainty and the Members would be more likely to stay on the floor as business resumes more quickly and contains their attention. There would be less chance of error since the tally would be made either by signature or by eye recognition and voice rather than by voice alone in a noisy hall.

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. WHITE. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. Mr. Chairman, I point out that whenever there is a motion in the House, there can be a rollcall demanded on that and if a quorum is not present under your amendment, there can be a demand for a rollcall made. So then you will have a rollcall on top of having a quorum call, and that takes more time than the quorum call.

Mr. WHITE. No; it does not work that way, because once the Chair takes notice that a quorum is present and the committee is still proceeding on business, the Speaker will take notice that a quorum is present and they would not consider a point of order made that a quorum is not present.

Mr. BIESTER. Mr. Chairman, I rise in support of the amendment.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. BIESTER. I will be pleased to yield to the gentleman.

Mr. GROSS. What will cause the Members to sign these tally sheets; what is the compulsion on them to do so?

Mr. BIESTER. The same compulsion that requires them to answer to the quorum call orally. They will be recorded as absent if they do not sign in.

Mr. GROSS. If they did not sign in, you would have to go to the present method of a quorum call. Is that not correct?

Mr. BIESTER. No. We are talking about an alternative method to the present method. We would not dispose of the present method, but if we tried this method alternatively, if a quorum had been arrived at of 218 Members, then a further call orally would be dispensed with, but Members could sign in for the additional period of time called for in the rule. And if one signs in one is recorded as present under the quorum call. So, the sanction is if not signing in they would be recorded as absent.

Mr. GROSS. Mr. Chairman, if the gentleman will yield further, how much discretion or power do you want to give the Speaker or to give to any Speaker of the House?

Mr. BIESTER. All we want to do is to make it possible for the House to experiment with this alternate method and find a way to save one-half of the time which is now wasted in quorum calls, and not at the expense of doing something that we cannot change at the discretion of the Chairman or the Speaker.

Mr. GROSS. I agree with my colleague from Iowa (Mr. SMITH) that you will just consume more time with this kind of an arrangement.

Mr. BELCHER. Mr. Chairman, will the gentleman yield?

Mr. BIESTER. I yield to the gentleman from Oklahoma.

Mr. BELCHER. What I do not understand is once you get 218 Members and then we start business and 200 more Members come in and sign a slip, how are you going to conduct business when you have 200 people in line signing them in less than 30 minutes?

Mr. BIESTER. First of all, I would not assume that there would be only one tally sheet but would assume that there would be several tally sheets available in an unobtrusive place where the signing could be done over at the sides of the Clerk's desk, for instance. At least, we would save, perhaps, 15 or 20 minutes of time which is now wasted. So the chance of being able to do that is worth voting on and approving today. If we find that it does not work and that there is not an improvement and that the problems develop which the gentleman from Oklahoma has raised, then it would be in the discretion of the Speaker to dispense with our proposed alternate method.

Mr. BELCHER. Mr. Chairman, if the gentleman will yield further, the only comment I would make on all of these amendments is this: I think we will find that a lot of them are not reform at all. They are just chaos.

Mr. JACOBS. Mr. Chairman, will the gentleman yield?

Mr. BIESTER. I yield to the gentleman from Indiana.

Mr. JACOBS. The gentleman will admit, I presume, that it is a new idea?

Mr. BIESTER. Yes, it is a new idea, and a worthwhile idea.

Mr. TAFT. Mr. Chairman, will the gentleman yield?

Mr. BIESTER. I yield to the gentleman from Ohio.

Mr. TAFT. I think one thing that should be made clear and which I do not believe the gentleman from Pennsylvania has made clear and that is the authority for an alternate procedure which at the discretion of the Speaker might or might not be followed. If it does not work, then we will remain with the present procedure. But in view of the tremendous amount of time wasted on quorum calls—and I have had some experience in this, if not in quantity but in quality at least—in the prior session when we had the so-called omnibus bill on the floor of the House, it seems to me it is worthwhile to experiment with this provision. It was set out in the CONGRESSIONAL RECORD on July 13 in some detail and has been studied very thoroughly. I think it is something at least worth trying. Then, you would have the other procedure to fall back on. You are not necessarily doing away with the present House rules by following this proposed procedure, but you are giving a try to a new idea which would save the House a great deal of time and lose none of the accuracy of the present quorum calls.

Mr. BIESTER. Members here know what amount of time is wasted upon quorum calls collectively in terms of the collective man-hours of the House, and also the individual time of the Members when you consider that one waits 15, 20, or 30 minutes for one's name to be called. That time is being spent away from service to your constituents and the real floor action which makes the time one spends in Congress a purposeful time.

Mr. SISK. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, it is with some hesitancy that I oppose the amendment proposed here, and I particularly want to commend the gentleman from Texas (Mr. WHITE) on the fact that I know he has done a lot of work on this. It is entirely possible that the gentleman from Pennsylvania (Mr. BIESTER), the gentleman from Arizona (Mr. UDALL), and the gentleman from Ohio (Mr. TAFT) have also worked on it, but the gentleman

from Texas (Mr. WHITE) did submit a substantial amount of material in writing and made a statement to the subcommittee back, I believe, as far back as almost a year ago, as I recall it, because he was concerned. I want to say that he did about the most complete job of analyzing the amount of time lost in coming over here for quorum calls of any that I have seen. And because of the work he has done, and the research and checking on this mattter, it is with some hesitancy that I do oppose this.

But I do it at this present time because it seems to me we are getting into a rather complicated situation where at the moment we might make the situation worse.

The committee will recall that we have adopted an amendment on yesterday offered by the gentleman from Illinois (Mr. MCCLORY), in which we provided for the use of electronic recording equipment in connnection with quorum calls. Of course, the idea and the hope there is that, as the gentleman from Louisiana (Mr. WAGGONNER) proceeds with his work, that we are going to be able to speed up this whole situation of quorum calls and votes, and so on.

Mr. BELCHER. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Oklahoma.

Mr. BELCHER. Mr. Chairman, I do not like to come to quorum calls any more than the rest of the Members, and anything that we can do to save time on calling the roll I think will be good. But I think one amendment that will do more good than anything else on that would be to require 10 Members to make a point of order that a quorum is not present. If we had that, we would do away with about nine-tenths of the quorum calls we now have, because then you would not have somebody just getting mad at the Chairman because he did not recognize him and, therefore, making a point of order that a quorum is not present. You would find that more than 50 percent of the points of order that are made are made that way. So I would suggest that if you needed 10 Members to make a point of order I do not think you could get 10 of them mad at one time.

Mr. SISK. Mr. Chairman, I thank my colleague, the gentleman from Oklahoma, for his statement, and I think he might be entirely right, as to the results of that.

Mr. WHITE. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Texas.

Mr. WHITE. Mr. Chairman, I would like to make two points on this matter.

No. 1: The amendment is strictly discretionary, and it is at the option of the Chairman or the Speaker. In other words if it does not prove out he does not have to use it; we can relinquish it right there.

No. 2: The amendment offered by the gentleman from Illinois (Mr. MCCLORY) did not go to section XXIII, this is an optional basis for section XV, it also goes to section XXIII which does give you some means of cutting down on rollcalls in section XXIII in the Committee of the Whole House.

Mr. SISK. Mr. Chairman, I appreciate the comments of the gentleman from Texas. As the gentleman knows, of course, we have had a bill in the last day or so with problems in this connection, both in the Committee of the Whole House on the State of the Union, as well as in the House itself and, as I say, I would like to see a speedup of this process.

I have great sympathy with it. Unfortunately, at the present time it seems to me that it could be somewhat confusing because of the different processes, that in connection with being permissive, that the roll could be called, and also the question of errors that might arise in connection with these sign-ins, as I understand it.

I think at this time it is the judgment of the subcommittee that we best vote down the amendment at the present time, until there is further study on some kind of a program of this kind; therefore, I urge that the amendment be defeated.

Mr. CONABLE. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman.

Mr. CONABLE. Did the subcommittee consider any way in which the time could be shortened on quorum calls? Really that is something, I think, many Members would like to see accomplished.

Mr. SISK. I appreciate that very much. The gentleman will remember that yesterday in the debate we discussed at length the provision of the subcommittee. This was not right, and as I said before, we are in a position to leave the matter to the Joint Committee on House Administration, the committee of the gentleman from Louisiana (Mr. WAGGONNER) who is making a study as to the use of electronic equipment and various ways in which they would recommend rules changes to permit the speeding up of quorum calls.

Mr. TAFT. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I shall be very brief. I think the subject has been fully and thoroughly covered. I would just like to emphasize again, it is an alternative and it is not compulsory.

The point has been raised with regard to the McClory amendment and what the effect might be, and I would just like to point out that no matter how we go about it with an electronic call system, if you are going to record it with a key or with a teller or with a light board or anything else, you are still going to have the problem with regard to the time taken for the quorum call. Because if you are not here on the floor, it is going to take some time to get over here to the floor.

It may be that if we go to time certain, and have something like the Senate procedure, and have to change the procedure of the House very much more materially than you have here.

I think that with this amendment, you could still work within the electronic system, but you are still going to have a timelag situation and you are still going to have a 30-minute period or something of that sort where people can come over and report.

Mr. EVANS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. TAFT. I yield to the gentleman.

Mr. EVANS of Colorado. Mr. Chairman, I am glad that the gentleman has made that statement, and I join him in supporting the amendment offered by the gentleman from Texas.

Mr. Chairman, I think this is an excellent amendment. It is in the alternative.

So many of us are so sick and tired of coming here and having to wait around for 10 or 15 or 20 minutes because somebody in a fit of pique made a point of order of no quorum.

Mr. FRASER. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I have worked for some time on this amendment, and I think it is worth thinking about with some care.

If we move to electronic voting, as I hope we will, as the gentleman from Ohio pointed out, we do not deal with the problem that is dealt with in this amendment because when you go to electronic equipment or whether you stay with the present system, inevitably one is faced with the need to provide time for Members to get over here and respond to either a rollcall on some kind of mechanical or electrical registration.

The practical problem is this. As the parliamentary procedures are administered today, you cannot interrupt a rollcall for the purpose of making a motion to dispense with the further proceedings under the call until that rollcall has been completed.

Now that has been a practice for a long time. The fundamental question is this: Why not interrupt a rollcall once you have the quorum established? Why keep on going after you have met the constitutional requirement that there will be 218 Members on the floor or in the case of the Committee of the Whole, 100 Members?

So what the White amendment seeks to do is to make it in order earlier to move to dispense with the further proceedings under the call when you have met the constitutional requirement of a quorum.

Then you are left with the question: What about those who did not get over? They do not want to be identified as being absent—so it is provided that they can, in effect, sign in within a given and fixed period of time, which they can keep track of themselves.

There is one other very practical advantage in this amendment—and this is quite important in my judgment—if you set up a system whereby you might divide the whole House into, let us say, 12 separate lists and you lay them out around on the desk here, then if you are down at lunch and a quorum call takes place, you can come up immediately and sign in and go right back down without having to figure out whether you are going to hit the right point in the rollcall and if you missed then, you have to stay here another 10 minutes until the call goes around the second time.

This would make it much simpler for Members to get on with their business,

and it would save the time of the House. It would really make it possible for us to get more things done, and we are finding every day that our time is becoming more and more dissipated and scattered by these procedural patterns that are imposed upon us by older practices.

Mr. CONABLE. Mr. Chairman, will the gentleman yield?

Mr. FRASER. I yield to the gentleman from New York.

Mr. CONABLE. I think the gentleman has made a good case for the amendment. It is important that we find some way to shorten the waste periods in our legislative lives. It has been alleged that chaos would result. The proposed amendment sounds to me like an ingenious plan for shortening the process of the quorum call, and I think it should be supported.

Mr. WHITE. Mr. Chairman, will the gentleman yield?

Mr. FRASER. I am glad to yield to the gentleman from Texas.

Mr. WHITE. Is it not true that most of the abuses in relation to quorum calls occur in the Committee of the Whole of the House generally when we have repeated quorum calls during the course of the consideration of bills?

Mr. FRASER. I am a little reluctant to characterize it as an abuse, but I would say that we spend a lot of our time in that process.

Mr. WHITE. I will change the wording of my question. Is it not a fact that the amendment offered by the gentleman from Illinois (Mr. McCLORY) does not address itself to problems arising from quorum calls while the House is in the Committee of the Whole?

Mr. FRASER. Yes, but I would say that does not matter. Even if it did, you would still have the question of whether you will let Members come in early and leave, or whether you are going to require——

Mr. WHITE. Is it not a fact that the McClory amendment does not provide a time factor, and if the Members later wanted more time they would not have it, and that the pending amendment offers an alternative?

Mr. FRASER. That is exactly correct. Under this amendment, electronic devices would fit in very logically and simply.

Mr. WHITE. If an electronic system should break down, would not the amendment provide an alternative for a fast quorum call?

Mr. FRASER. It would.

Mr. WHITE. Is it not also a fact that the Senate uses a system similar to the one proposed, although they do not allow the membership to continue to register their presence to expedite business?

Mr. FRASER. My understanding is that they call the roll until they establish a quorum.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

(On request of Mr. SMITH of Iowa, and by unanimous consent, Mr. FRASER was allowed to proceed for 2 additional minutes.)

Mr. SMITH of Iowa. Mr. Chairman, will the gentleman yield?

Mr. FRASER. I yield to the gentleman from Iowa.

It was on the last point that I really wanted to ask the gentleman a question. I think he alluded to the subject. But this is a very, very significant difference, as I understand. As I understand it, when in the Senate a quorum is reached—the only purpose of having a quorum call is to determine that a majority of the Members is present—when they have reached a quorum, they want to wipe the record clean. In that way you would not get phony reports of how people work in the Congress, how many quorum calls they answered, and also you would not have as many quorum calls to show that they were there that day.

If you put a period in the amendment after the point where it says "a majority has been reached," it would be a better amendment than all that other stuff.

Mr. FRASER. The gentleman has brought up a very important thought. In considering that possibility, we were faced with the practice in the Senate. They apparently have to work very hard to get their Members over to make a quorum. If we had to do the same thing here in the House, work hard to persuade people to come over when they knew it would not make any difference finally when the quorum was reached, I think you would have a difficult time getting a quorum in the House. We must retain the practice of recording the presence of Members, which will require Members to come over and be counted in the quorum.

Mr. Chairman, I make one last point. Someone suggested the request of 10 Members ought to be required in order to challenge the existence of a quorum. I think there is a constitutional problem. The Constitution provides for the presence of a majority of the Members of the House in order to do business. If one Member raises a point of order that a majority is not present, you are constitutionally in trouble if you do not accept that point of order and make a count. Much as that proposed change might be desirable, I think it would require a change in the language of our Constitution.

Mr. McCLORY. Mr. Chairman, I move to strike the last word.

The CHAIRMAN. The gentleman from Illinois is recognized.

Mr. McCLORY. Mr. Chairman, I wish to make a brief comment. It seems to me that a great deal of our discussion yesterday on the subject of electronic voting was with respect to when it would be installed. There was a great interest in installing such a system at the earliest possible time. I think we ought to consider yesterday's action in our consideration of the amendment offered by the gentleman from Texas (Mr. WHITE). It is possible that his plan or some third alternative plan may inadvertently be an excuse or a reason for delaying the installation of the electric or electronic system which can expedite rollcalls and quorum calls with respect to issues before the House.

I would also like to make this observation. As I understand quorum calls, they are not all made for a useless purpose or to relieve somebody from being present on the floor of the House, but are mainly for the purpose of trying to bring people to the floor to conduct important business. If we adopt an amendment which merely gives a person an excuse to finish his lunch or to avoid being present on the floor of the House, it seems to me we are performing a disservice instead of making a change which can enable the Members to perform more efficiently their jobs.

I do not have strong feelings on this amendment. I can see how it can expedite the establishment of a quorum. If that is its sole purpose, it accomplishes that without question. But what happens 5 minutes later when there is not a quorum here, after 218 Members have signed in? The absence of a quorum can be raised again. Am I wrong on that statement?

Mr. TAFT. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Ohio.

Mr. TAFT. Mr. Chairman, I did not want to refer to what the gentleman just said, but rather to point out that with the present system of coming into the well of the House at the end of a quorum call, I do not see how anything that is true about it now would not be true if the amendment is adopted. In other words, people sitting downstairs for a lunch may go into the well of the House anyway.

Mr. McCLORY. It is true, a number of times when we respond to the quorum call, we do not stay on the floor, but my point is that after a quorum is made, there usually is a much larger percentage of Members on the floor than before the quorum call is made. So it seems to me that the quorum call does serve that valid purpose. I raise the question whether the amendment of the gentleman from Texas (Mr. WHITE) would have that effect. I think it would have the opposite effect.

Mr. McCLURE. Mr. Chairman, if the gentleman will yield, if this saves half the time we spend in quorum calls, it is worth the effort. About 2 years ago I made an analysis of the quorum and rollcalls for the preceding 18 months. Based on the average time to call a roll and the average number of times a week we were in session, we had spent in floor time 14 weeks in calling the roll. If we could save 6 weeks of floor time, it seems to me it would be worthwhile.

Mr. McCLORY. Mr. Chairman, let me emphasize that the installation of an electronic rollcall system is designed precisely for that purpose. The only question in my mind is whether or not we serve the purpose of establishing a quorum or producing more Members on the floor of the House by this amendment. It is a question I raise which I think we should consider in casting our vote on the proposal.

Mr. HECHLER of West Virginia. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from West Virginia.

Mr. HECHLER of West Virginia. Mr.

Chairman, is it not true, I ask the gentleman from Illinois, that if the amendment offered by the gentleman from Texas would prevail, that such quorum calls could be taken by electronic means?

Mr. McCLORY. Yes. After the electronic system is established, we can take the rollcall by that means. Yes.

Mr. WAGGONNER. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Louisiana.

Mr. WAGGONNER. Mr. Chairman, the gentleman realizes, does he not, that a quorum call utilizing an electronic device will not be instantaneous?

Mr. McCLORY. That is true, but it would be timesaving without any question at all, which I assume is the purpose of the amendment we are considering here.

Mr. UDALL. Mr. Chairman, I move to strike the requisite number of words.

Mr. UDALL. Mr. Chairman, quorum calls are a part of our lives. We are engaged now in a constructive effort to see if we can keep the benefits and the values of the call of the House, the quorum call, without causing undue hardship upon the Members.

I believe the gentleman from Texas has a sound idea. There may be some bugs or defects in it. The gentleman from Iowa points out one of the problems. There is an answer, as the gentleman from Minnesota stated, to that suggestion, with the Senate practice.

It might be helpful, before we vote on this, if we would ask ourselves, why do we use the call of the House? What is the purpose of the quorum call?

First, we used it for the automatic vote. Under the changed procedure in this Congress, when we have the automatic vote they ring two bells and not three bells. This would not change that procedure. We would still have the ability to get an automatic yea-and-nay vote under that situation.

Second, once in a long time the call of the House is used as a delaying tactic. Occasionally a minority, not anxious for action on a particular measure, will require a series of quorum calls. This would not change that procedure. The minority might have to use 10 of these calls to occupy the same amount of time that six would occupy, but they would still have the constitutional right at any point to raise the question as to whether or not there were 218 Members, or 100 Members, as the case might be, on the floor of the House at that time.

What are other reasons?

Yesterday a distinguished Member of this body said to me that he had been absent for a few quorum calls, and he wanted to improve his batting average, and he said, "I think I will raise a point of order." Members still would have that right. Under this provision, instead of taking 40 minutes, it might take 15 minutes. A Member might infringe on the time of his beloved colleagues for perhaps 15 minutes instead of 40 minutes to improve his batting average.

I recall that not too long ago one of my colleagues was about to make a major speech, and he said, "I would like to have a crowd here. Will you make a point of order and get me a crowd?" This is another reason why we use the quorum call, the call of the House. Under the amendment of the gentleman from Texas the use of the quorum call for that purpose would not be infringed. A Member still would be able to get himself a crowd if his advance publicity had not done the job.

Finally, the last purpose I could think of is that frequently we will be engaged in general debate, and the Members who do not want to participate in the general debate, who have other things to occupy their time, will go back to their offices. All of a sudden the time will be yielded back in the general debate, and we are about to begin consideration under the 5-minute rule, so we want to have some way to get the word out to the Members that we are now going to make decisions on particular amendments, so we make a point of order that a quorum is not present. Again, we go through this 35- or 40-minute procedure.

Again, under the amendment of the gentleman from Texas, this function, this very legitimate form of the quorum call, would be kept. A Member still would have the right to do this. But it would occupy perhaps 15 minutes, as I say, instead of 35 or 40 mintues.

I believe we can keep the values of the quorum call, of the call of the House, and follow the Constitution, which permits Members to make a point of order, and yet save hours and hours—thousands of man-hours—a year through the adoption of this amendment.

I strongly support the amendment.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. UDALL. I yield to the gentleman from Iowa.

Mr. GROSS. Under all of the conditions the gentleman has set forth nothing is going to be changed unless 100 Members stay on the floor of the House, when legislation is considered in the Committee of the Whole.

Mr. UDALL. That is right.

Mr. GROSS. Nothing being done here will change that.

Mr. UDALL. That is right.

Mr. GROSS. If the Members do not want quorum calls, the way to avoid quorum calls is to keep 100 Members on the floor. Is that too much to expect from 435 Members?

Mr. UDALL. Well, we live in an imperfect world, not in a perfect world. In a perfect world we would all be here.

I have had problems, as the gentleman has, in trying to get 100 Members here.

Mr. BENNETT. Mr. Chairman, will the gentleman yield?

Mr. UDALL. I yield to the gentleman from Florida.

Mr. BENNETT. I believe the gentleman's analysis of the reasons why we have quorum calls omitted the chief reason for the quorum call, and that is to have Members here to conduct business. The gentleman did not mention that. I hope in the revision of his remarks he will put that in.

Mr. UDALL. I would concur with the gentleman. This is an essential purpose. That is what the Constitution contemplated, that we do business with quorum.

Mr. BENNETT. If the gentleman will yield further, I did not mean that as a criticism, and did not imply the gentleman did not believe it. I just noted the list did not include it, and it is of paramount importance.

Mr. UDALL. I thank the gentleman for his contribution. I agree with him.

Mr. JACOBS. Mr. Chairman, I move to strike the requisite number of words.

The CHAIRMAN. The gentleman from Indiana is recognized for 5 minutes.

Mr. TAFT. Mr. Chairman, will the gentleman yield?

Mr. JACOBS. I yield to the gentleman from Ohio.

Mr. TAFT. I thank the gentleman for yielding.

Following up the point just made, I believe we all ought to ask ourselves whether, knowing that the quorum call is only going to take 15 or 20 minutes, rather than 40 minutes, when a Member comes to the floor, he would be far more likely to remain on the floor. That is the very purpose the gentleman from Iowa mentioned, under the present rule.

It seems to me it is obvious he would, and that is one of the strongest reasons for this amendment. A Member who has come over to answer the quorum will remain because he knows that it will not last very long and thus you will get back to business sooner.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. JACOBS. I yield to the gentleman.

Mr. GROSS. There is not any assurance whatsoever that in putting a paper down here for you to sign it will save any time. That can be stretched out from here way out to yonder with the time consumed in that.

Mr. JACOBS. Mr. Chairman, I take this time to say something which is rather unusual. In the normal case, accolades are normally reserved for the conclusion of debate and the conclusion of the passage of a bill and never in midstream, but this has been a pretty long swim, and so I would like to take this opportunity to say how much I admire the way in which the gentleman from California (Mr. SISK) and the gentleman from California (Mr. SMITH) have conducted the deliberations on this bill.

I have participated in a number of debates, as all Members here have, and I must say that I have never participated in one that seemed more reasoned and where more respect was paid to each individual Member than in the case of the bill which is before us now.

But above all, Mr. Chairman, I would like to pay my tribute and respect to the gentleman in the chair, the gentleman from Kentucky, because of the even-handed way in which he has conducted this debate and because of his patience. And when I say "the gentleman from Kentucky," I mean the gentleman from Kentucky.

AMENDMENT OFFERED BY MR. SMITH OF IOWA TO THE AMENDMENT OFFERED BY MR. WHITE

Mr. SMITH of Iowa. Mr. Chairman, I offer an amendment to the amendment offered by the gentleman from Texas.

The Clerk read as follows:

Amendment offered by Mr. SMITH of Iowa to the amendment offered by Mr. WHITE:

After the word "which" in line 16 of the White amendment, delete the words "it shall be in order to entertain a motion to dispense with further proceedings under the call and".

PARLIAMENTARY INQUIRY

Mr. HALL. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. HALL. Is this an amendment to the amendment offered by the gentleman from Texas?

Mr. SMITH of Iowa. Yes, it is.

Mr. HALL. Or does the line reference refer to page 39 of the bill?

Mr. SMITH of Iowa. It is to the amendment offered by the gentleman from Texas.

The CHAIRMAN. The gentleman from Iowa is recognized for 5 minutes in support of his amendment.

Mr. SMITH of Iowa. Mr. Chairman, judging from the discussion, the purpose of the amendment is to save time, but I say that without this perfecting amendment it can take more time. The reason for that is that we can have a quorum call and then have a motion and one could demand a quorum call on that motion. We can end up with more time wasted rather than less. All my amendment does is to delete from the amendment the requirement or the possibility of having a motion upon which there could be another rollcall demanded. In other words, when 100 Members answer, it stops. Members can still come up and sign if they want to, but at that time that proceeding stops and there is no motion intervening on which there could be another rollcall.

Mr. FRASER. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman.

Mr. FRASER. One of the problems with the gentleman's amendment, although I think it has a lot of merit to it, is that the call of the House serves other functions than simply establishing a quorum, because under the procedure of the call of the House you may require the attendance of every Member of the House. There may be occasions in which the House itself decides it wants to require every Member to be present unless excused officially with the consent of the House. That is the problem of your amendment. You are in effect stating that the proceedings of the call are automatically dispensed with after you reach a quorum. In probably 99 out of 100 cases that is the result you want, but there may be a few occasions where there is a desire on the part of the House to compel all of the Members to be present.

And you would have eliminated that possibility by automatically causing a call of the roll to be discontinued.

Mr. SMITH of Iowa. A quorum call does not require all Members to be present. That is another rule.

Mr. FRASER. There is no such thing as a quorum call in the rules. The rule provides that in the absence of a quorum the roll may be called.

Mr. SMITH of Iowa. But I say there are other rules that will require the presence of everyone if they are invoked. This has nothing to do with that at all.

Mr. FRASER. Mr. Chairman, if the gentleman will yield further, I have to differ with the gentleman. The rollcall, a call of the House, is a procedure which not only establishes and sets in motion the machinery, but the Sergeant at Arms can arrest people and the doors of the House can be locked. All of these matters are involved in a call of the House.

Mr. ADAMS. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from Washington.

Mr. ADAMS. We have only invoked this once in about 4 years, and I think some of the Members present will remember that I made a motion where the doors were really locked so that if everyone comes in, they cannot get out at that point. We do not usually do that, but as the gentleman from Minnesota (Mr. FRASER) has pointed out, there are a series of procedures that are set in motion that can go far beyond the simple signing in of the Members.

Mr. SMITH of Iowa. All I am trying to do is to perfect the amendment so it will save time. Otherwise, we may under the White amendment take up more time than is consumed at the present time.

Mr. FRASER. Mr. Chairman, will the gentleman yield further?

Mr. SMITH of Iowa. Yes; I yield further to the gentleman from Minnesota.

Mr. FRASER. It is the current practice that after the roll has been called twice and the Members have checked into the well, there is still in effect a motion which can be made to dispense with further proceedings even though you have not accounted for all the other Members and the Presiding Officer can say without objection further proceedings under the call are dispensed with, but someone can object. This changes that procedure, but it probably would not occur in 99 cases out of 100.

Mr. SMITH of Iowa. My amendment would not eliminate that procedure.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to my colleague from Iowa.

Mr. GROSS. Unfortunately I was answering a telephone call when the gentleman's amendment was read.

Does this provide that if, for instance, the House is in the Committee of the Whole, upon the signing of the paper by 100 Members, that the House then resumes its sitting?

Mr. SMITH of Iowa. Yes. As I have stated previously the purpose of the amendment is to save time. Either we must adopt this amendment to the amendment or it is going to take more time rather than less time. As the original amendment which has been offered is written now, it will end up taking more time because we could have a motion in the middle of the quorum call and we could have a rollcall on that.

Mr. GROSS. Mr. Chairman, if the gentleman will yield further, and if the roll, or whatever you want is taken, this signed paper roll was taken at 2 o'clock in the afternoon, you could come in at 6 o'clock and sign that sheet and be accounted for as having been present?

Mr. SMITH of Iowa. That provision for signing is in the White amendment. That is not in my amendment to his amendment.

Mr. GROSS. Then what do we do about the clocks? Do we put another light on the clocks to tell you what kind of a bobtailed affair is going on over here that I do not have to get here but I can sign in later? What kind of business is this?

Mr. REES. Mr. Chairman, will the gentleman yield?

Mr. SMITH of Iowa. I yield to the gentleman from California.

Mr. REES. Could I read from a copy of the amendment? It says that if for a period of 30 minutes from the commencement of said quorum call Members are not present before the expiration of said 30 minutes, may have their presence recorded on said tally sheets.

So, they ring the bell for a quorum call and a Member has 30 minutes to come here and either answer "present" or sign his name on a tally sheet and then the rolls are closed and there is no way the Member can be recorded.

Mr. SISK. Mr. Chairman, it is obvious that we are nearing 7 o'clock. I, therefore, ask unanimous consent that all debate on the pending amendment and all amendments thereto close at 7 o'clock.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

Mr. DINGELL. Mr. Chairman, reserving the right to object, may we have an understanding as to how many Members want to be heard on this?

The CHAIRMAN. The Chair observes eight Members standing.

Mr. DINGELL. Mr. Chairman, I must, regretfully, object.

Mr. SISK. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. NATCHER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 17654) to improve the operation of the legislative branch of the Federal Government, and for other purposes, had come to no resolution thereon.

SAFE BANKING ACT OF 1970

(Mr. PATMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. PATMAN. Mr. Speaker, since 1964, nine banks across the country have failed, primarily because they dealt too heavily in brokered funds and tie-in loans. In 1970 alone, three banks have failed for these reasons, the latest occurring only last month.

Because of this situation and several other unsound banking practices, I have today introduced the Safe Banking Act of 1970, which is designed to strengthen

the banking system and to return banks and certain other financial institutions to the business for which they were chartered.

Our investigation which led to this legislation has revealed a complicated network of financial maneuvering, including phoney stock, international check kiting schemes, bogus banks, transfers of large sums of questionably obtained money in foreign bank accounts and loans to finance gambling operations.

It is imperative that this legislation be enacted immediately since there are a number of banks across the country still in operation who have been victimized by brokered funds and other questionable transactions. And, although these banks are still operating, there is a possibility that they could all become casualties.

The use of brokered funds, accompanied by tied-in loans is not new in the banking industry, but recently has been put to its greatest use because of the continuing shortage of money and high interest rates.

BAD RISKS GET BANK LOANS

Quite simply, this is how the brokered fund scheme works. A borrower goes to his bank to borrow $100,000. The bank itself does not have that amount of money to loan or else does not feel that the borrower is a good credit risk or that the reason for the loan is not solid enough to justify such an amount. The potential borrower is then either steered or on his own makes contact with a money broker. The money broker agrees that he will arrange for deposits to be made in the bank so that the potential borrower can obtain the loan. For this service, the broker is to be paid a percentage of the loan as a fee. In order to obtain the money to put in the bank, the broker advertises an interest rate in excess of that allowed by regulation Q, the regulation of the Federal Reserve Board which sets limits on the interest paid by financial institutions on savings. For instance, the broker may advertise for deposits with an interest of 7½ percent providing a minimum deposit of $5,000 is made. Such a deposit would be limited to 5½ percent for 1 year under the terms of regulation Q. However, the 2-percent difference is made up out of the fee paid the broker by the potential borrower and the "kicker" money is normally paid by the broker in advance to encourage participation in the program.

Thus, the situation looks like this. The bank has $100,000 in deposits, the borrower has a loan for $100,000, a group of depositors have $100,000 in savings in the bank. They are receiving an interest rate of 7½ percent, a portion of which is paid by the broker who has collected a nice fee for putting the whole package together.

BIG LOAN CAN BREAK BANK

The first problem arises when the bank borrower is unable to repay the loan either because the project for which the money was borrowed did not materialize as expected or the borrower simply had no intention of repaying the funds. The bank is still obligated to pay the savers who deposited the money for the loan and since the bank received no income from the loan that went sour, it has to obtain the funds to repay the savers from other sources. And, of course, if the loan is large enough, it can break the bank. The money broker, who gets his fee in advance, merely sits back and waits for the next loan customer to come along.

Since the problem with brokered funds began developing and banks began to fold, the money brokers have taken the attitude of innocent bystanders. The brokers contend that they are merely performing a needed banking service and do not have anything to do with inducing the financial institution to make a loan or evaluating the credit worthiness of the borrower. Some bank supervisory officials support the position of the brokers, adding that brokered funds, on their own, are not cause for worry.

I reject all of these arguments. The brokered fund scheme will not work without the tie-in loan, since there must be a source of income above the legal savings interest rate in order to attract depositors. That kicker must come from the borrower who is willing to pay the fees in order to obtain the loan.

Mr. Speaker, one of the largest banks in the South, throughout the years, has refused to participate with the Small Business Administration in making loans available to small businessmen on a cooperative basis. The bankers' reasoning is that "if the loan is good enough to be made, I will make it on my own without getting a guarantee from SBA, but if the loan is not worthy enough to be made, I do not want to make the loan even with SBA in the picture." This type of reasoning should be more properly applied to loans involving brokered funds. The bank should either make or not make the loan based on the qualifications of the borrower, not whether or not the borrower can arrange for brokered funds to be put in the bank. This is why the Safe Banking Act of 1970 would prohibit banks and insured savings and loans from accepting brokered deposits. On their very face, these deposits cause problems and it is an unsavory aspect of the banking industry which must be eliminated.

The following table shows the extent to which brokered funds were involved in nine bank closings since 1964:

INSURED BANK CLOSINGS FROM SEPT. 5, 1964 TO JULY 21, 1970, WHICH INVOLVED BROKERED FUNDS

Name and location of closed insured bank	Date of closing	Approximate total of brokered funds	Primary money broker(s)
Brighton National Bank, Brighton, Colo.	Jan. 22, 1965	$1,015,000	See listing attached.
San Francisco National Bank, San Francisco, Calif.	do	17,000,000	Do.
Bank of Pine Apple, Pine Apple, Ala.	Jan. 31, 1967	150,000	Washington Capital Corp., 27 William St., New York, N.Y.
Morrice State Bank, Morrice, Mich.	May 5, 1969	949,000	Leo Freedman, Pasadena, Tex.; Greater Miami Financial Corp., Miami, Fla.
First State Bank, Aransas Pass, Tex.	Sept. 2, 1969	820,000	Meyers, Pollock, Robbins, Inc., New York, N.Y.; Bankers Financial Equity Co., Boston, Mass.
First National Bank, Coalville, Utah	Oct. 3, 1969	1,000,000	Seaboard Planning Corp.; Bankers Financial Equity Co.
State Bank of Prairie City, Prairie City, Iowa	Feb. 22, 1970	848,000	Seaboard Planning Corp.; Bankers Financial Equity Co.; Sumner Financial Corp., Jacksonville, Fla.
Peoples State Savings Bank, Auburn, Mich.	Apr. 18, 1970	2,725,000	See listing attached
Farmers Bank of Petersburg, Petersburg, Ky.	June 25, 1970	737,000	Do.

FARMERS BANK OF PETERSBURG, PETERSBURG, KY.—MONEY BROKERS

Nationwide Securities Corporation.
Bankers Financial Equity Company.
Lundy Associates.
Zenith Funding Corporation.
Financial Service Corporation of America.
C. H. Wagner Company.
H. Adams Company.

One of the prime examples of how the money broker operation works involves the closing of the Peoples State Savings Bank of Auburn, Mich., which went under on April 16 of this year. In the Auburn case, some $2.7 million in brokered funds were deposited in the bank by 545 investors from various parts of the country. The deposits were made in an 8-week period in the spring. The investors were talked into buying a $5,000 letter of credit—savings deposit—that would pay them $5,700 at the end of 2 years. According to FDIC reports, more than $2,300,000 of that amount has been paid out as follows. Some 30 percent went to a loan to Graham B. Alvey and his wife of Sanford, Mich.; 16 percent each to Frank Harris of Alabama and Robert K. Drake of New Jersey; roughly 2 percent each to James McConnel of Florida and James Dondich of Nevada; and some 34 percent to the Sumner Financial Corp. of Jacksonville, Fla., the original money broker in the scheme.

DEPOSITS WENT TO BROKER'S ACCOUNT

Actually, the deal started when Alvey, who was developing a resort property in Michigan, sought to obtain additional funds from the Peoples Bank to finish the project. When the bank was unable to extend him additional money, Alvey was steered through a complicated network of money brokers and finally wound up with the Sumner Financial Corp. Apparently Sumner agreed to obtain deposits for the Auburn Bank so that Alvey could get his loan. The funds were obtained by Sumner, although it appears that other money brokers helped in the deal. But, instead of the money going directly to the Peoples Bank, it was deposited in an account at the Bank in the name of the Sumner Financial Corp. From that account, the money was apparently channeled to Alvey and the other parties, although who actually disbursed the money is unclear. By depositing the funds from the letters of credit in the account of Sumner, the Bank of Auburn was now in the position of having a liability without a corresponding asset. The bank was obligated to repay the letters of credit, but apparently did not have the use of the funds as they were deposited in the Sumner account.

The Federal Deposit Insurance Corp. officials were amazed when they began looking through the bank records to find that there were no loan agreements between any of the parties who received funds from the Sumner account, including Alvey, who told a Banking and Currency Committee staff member that not only did he not sign loan papers with anyone, but that he never made a payment on the loan. In addition, none of the money which was funneled out of the bank was secured by collateral.

It is reported that some of the money obtained in the brokered deposit scheme in Auburn has been deposited in foreign secret bank accounts. It is known that two of the borrowers from Auburn traveled to Europe shortly after receiving the money but did not have the funds when they returned to this country.

Two of the men who received money in the Auburn case, McConnel and Dondich were charged in 1969 by the Securities and Exchange Commission with violations of the antifraud provisions of the Federal securities laws in connection with the sale of unregistered stock. The two consented to the issuance of a permanent injunction not to sell the stock. It is believed that the pair is involved with a link financing transaction with an Ohio bank that lost more than $1 million on brokered funds. Despite the Bank's losses, it is still operating.

QUESTIONABLE STOCK PLEDGED ON LOAN

Another bank which is still in operation but apparently has been hit hard by the money broker scheme is the Corbin Deposit Bank and Trust Co. of Corbin, Ky. and a related bank, the Bank of Williamsburg, Ky. The banks have filed a suit charging that a group of borrowers, a large money broker, Seaboard Corp., and numerous certificate of deposit holders engaged in a scheme with former bank officers to make $2.25 million worth of worthless and illegal loans. One of the individuals named in the suit is Samuel Calabrese of Los Angeles, who heads several companies, including Standard Computer and Picture Corp. of North Miami, Fla.

In 1969, the Securities and Exchange Commission suspended trading in Standard Computer and Pictures stock in an action filed in the U.S. District Court for the Southern District of Florida. The SEC also named Calabrese as a defendant in the action and charged that:

> He and some of the other defendants violated the antifraud provisions of the Federal Security laws in that they engaged in a scheme to have Standard acquire assets in non-arms-length transactions at inflated prices which were recorded on Standard's books as cost and, in furtherance of the scheme, prepared and disseminated a false and misleading report to shareholders.

In the case of the two Kentucky banks, Calabrese attempted to borrow $2.25 million to finance a deal with another company. Working through Seaboard, Calabrese apparently obtained deposits and a loan agreement was reached with Calabrese putting up as collateral for the loan 200,000 shares of Standard Computer and 300 shares of Photo Mark Computer Corp., which like Standard Computer, also had selling of its stock suspended for much the same reasons as applied to the Standard case. One of those named in the Photo Mark trading suspension injunction was Emanuel Lester, who in 1963 received a three-month $100,000 loan from the Citizens State Bank of Earth, Tex. The loan was made to Lester after he was able to secure $200,000 in deposits produced on his behalf by Sumner Financial Corp., the principal money broker in both the Auburn, Mich., and Prairie City, Iowa, banks which failed this year. When the Earth, Tex. bank loan came due, Lester had disappeared and the stock pledged as collateral on the loan turned out to be worthless. Lester, who has a police record dating from the 1940's, also is known as Emanuel Lieberman and is presently awaiting trial in Toronto, Canada, on charges of possession of stolen securities and in Baltimore on charges of mail fraud. In 1966, the Banking and Currency Committee conducted an investigation into the closing of the Crown Savings Bank of Newport News, Va. Although there were some brokered deposits in the bank, primarily the reason the bank failed was that it made out-of-territory, high-risk loans that were never repaid and also issued fraudulent certificates of deposit. Many of the loans that were obtained from Crown Savings Bank were used to finance loan sharking throughout the east coast of the United States and various

other illegal schemes. It is still too early to find all of the purposes for which the funds that have been obtained in the recent banking closings have been put to use.

However, it is interesting to note that Calabrese, who is one of the defendants in the Kentucky Bank suits, has made two loans totaling $800,000 to Circus Circus, Inc., a Las Vegas gambling casino. The first of these loans, for $300,000, was made in 1969 and carried an interest rate of 10 percent. And on February 23, 1970, Calabrese through one of his corporations, lent Circus Circus $500,000, also with a 10 percent interest rate.

DID BANK FUNDS GO TO GAMBLING CASINO?

Mr. Speaker, the American banking industry is indeed in a sad state when people cannot borrow money for homes and small businessmen are unable to secure loans in order to stay in business. But at the same time, banks are willing to lend to individuals of highly questionable background who may be turning around and lending the money to gambling casinos.

The Safe Banking Act of 1970 would outlaw brokered deposits by prohibiting a bank or savings and loan association from paying a broker, finder, or other person compensation for obtaining a deposit for a bank or savings and loan association. This prohibition would include a payment by anyone outside of the bank or S. & L. to a potential depositor.

If the money brokers are precluded from dealing with commercial banks, it is quite obvious that they will shift their attention to savings and loan associations, and, in fact, many of the brokers already deal with these institutions. While there are some regulations governing the acceptance of brokered deposits by savings and loan associations, it is felt that the regulations are not adequate to correct the situation if the money brokers shifted all their attention to S. & L.'s.

PREMIUM "GIVEAWAYS" ELIMINATED UNDER ACT

The Safe Banking Act of 1970 would also eliminate the so-called giveaways which banks and savings and loans use to attract deposits. These giveaways may take the form of a blanket, an alarm clock, a box of golf balls, or even ladies' wigs. The list of giveaway items is virtually endless and the use of such promotions has triggered what many believe to be unsound competition for deposits.

The Safe Banking Act of 1970 would do away with such premium giveaways, not only for savings deposits but also for demand deposits. Even though there are regulations governing the cost of the items which may be given away, these regulations are easy to get around and do not effectively curtail the practices. The premium giveaways are a form of unfair competition since the larger financial institutions are able to offer a better premium than the smaller institutions.

Depositors have also begun to "shop" financial institutions, seeking to deposit their money in institutions which offer the best gifts. Some financial institutions have been bothered by customers who make deposits, accept a gift, and promptly close their account and move the money to another financial institution and begin the process all over again.

To illustrate how expensive the premium giveaway program has become, it is reported that in New York City alone during the month of July, $40 million was spent in advertising premium giveaways. This figure represents only the advertising of the premiums in newspapers, radio, and television and does not include the cost of the premiums.

In this period of tight money when it is virtually impossible for a person to obtain funds for a home, it is strange that $40 million can be pumped into giveaway advertising.

EQUITY KICKER WOULD BE PROHIBITED

The Safe Banking Act of 1970 would also put a stop to another unsound and unwholesome financial practice. This involves the so-called equity kicker which is being used by many financial institutions, particularly since we have moved into the tight money period. The equity kicker goes under many names, such as equity sweeteners, a New York kicker, or a piece of the action. For virtually every name there is a different type of equity feature. For instance, the lender receives—either by his demand and as a tie-in transaction or by the borrowers offer as an inducement for the loan or for a reduced interest rate—a certain number of shares of the borrower's stock in addition to or in lieu of the maximum interest rate on the loan or in lieu of shares of stock, the lender may receive rights to buy stock, generally referred to as "warrants." These warrants will allow the lender to buy stock in the borrowers company at a predetermined price. If the value of the stock goes up, the lender will exercise his right to buy the stock but will pay the lower predetermined price, thus making an instant profit.

Another technique used is that of "shadow warrants." This is an arrangement under which the borrower agrees to pay the amount equal to the profit the lender would receive if he had received a certain number of warrants and exercised them on a certain date.

The borrower may agree to pay the bank or other financial institution a stipulated dollar amount for each point that the market price of the borrower's stock advances between the date of the loan and a specified date.

Under another type of equity arrangement, the lender may receive a percentage of gross profits, rents, or sales from the borrower.

Should the loan be in connection with land development, an equity kicker may provide that after repayment of the loan—with interest—the proceeds of the sale of a designated number of lots shall go to the lender as a bonus.

An equity arrangement apparently used by one bank in connection with a loan to a closely held corporation provided for additional interest charges of $15,000 at maturity or, in the event of prepayment or the making of a public offering; and provided further in the event of sale of stock by any stockholder the bank would receive the greater of, first, an additional sum computed on the basis of the time elapsed to the date of the sale, or second, the difference between the total price percentage of the borrowers total outstanding stock at the time of the sale and the State book value of the same percentage of stock at the time of the loan.

There are a number of reasons why financial institutions should not be allowed equity kickers when coupled with loans. These arguments include:

First. Lead to risker loans and possible impairment of safety of depositors' funds—as well as capital of bank. Loans should be based on credit worthiness and not on possibilities of speculative profits.

Second. Lender may take lower interest rate, lend larger amounts or make longer term loans if it gets an equity kicker. Lender's fixed income would be reduced; less money would be available for other borrowers.

Third. Lender may tend to deny credit to businesses competing with one in which lender has an equity interest.

Fourth. Borrowers who do not have bargaining power equal to that of lenders may be victimized. Lender may end up owning the borrower's enterprise in whole or in substantial or controlling part.

Fifth. Equity participations that are to be liquidated through additional money payments by the borrower may be so onerous as to lead to failure of the enterprise.

Sixth. Small business investment companies afford banks and holding companies an appropriate vehicle for assisting small businesses and for acquiring some equity interest in such businesses, subject to congressionally imposed limitations and Federal supervision.

Seventh. The argument that equity participation provides a hedge against inflation has little force in relation to bank loans inasmuch as they are, in large part, of relatively short duration. Besides, a hedge against inflation can be, and probably is, achieved through the rate of interest that lenders charge—and borrowers are willing to pay.

Eighth. Congressional policy is against banks and bank holding companies owning and engaging in nonbank businesses.

Ninth. Bank acquisitions of a substantial share of competing businesses may lead to violations of the antitrust laws.

Tenth. If banks may not take equity kickers, borrowers will have more incentive to seek loans from banks.

Eleventh. The spirit—if not the terms—of the usury laws is violated.

Under the Safe Banking Act of 1970, equity kickers would not be allowed in connection with a loan from any financial institution. This does not mean that equity type financing will not be made available, but rather that a lender must either make a loan or take an equity position, but cannot do both.

Mr. Speaker, there are a number of problems in connection with the operations of various types of financial institutions throughout the country and some of the most elaborate swindles and semilegal swindles ever devised are being

worked on these financial institutions even as I address this body today. In the coming days, I will from time to time have more to say about these questionable banking practices and it is my sincere hope that the Safe Banking Act of 1970 will be enacted quickly so as to return our financial institutions to the business for which they were established.

The text of the bill follows:

A bill to prohibit brokered deposits in banks and other financial institutions, to prohibit the use of so-called giveaways in the solicitation of deposits, and to prohibit lenders from acquiring equity participations in connection with loans, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

CHAPTER 1—GENERAL PROVISIONS

Sec.
101. Short title.

§ 101. Short title.

This Act may be cited as the Safe Banking Act of 1970.

CHAPTER 2—BROKERED DEPOSITS PROHIBITED

Sec.
111. Amendment of Federal Deposit Insurance Act.
112. Amendment of Federal Home Loan Bank Act.

§ 111. Amendment of Federal Deposit Insurance Act

Subsection (g) of section 18 of the Federal Deposit Insurance Act (12 U.S.C. 1828(g)) is amended by striking out the next to last sentence thereof, relating to penalties for violations of such subsection, by inserting "(1)" at the beginning thereof, and by adding thereto the following paragraphs:

"(2) No insured bank or officer, director, agent, or substantial stockholder thereof may pay or agree to pay a broker, finder, or other person compensation for obtaining a deposit for such bank. For the purposes of this paragraph, any payment made by any other person to induce the placing of a deposit in a bank shall be deemed to be a payment of compensation by the bank if the bank had or reasonably should have had knowledge of such a payment when it accepted the deposit.

"(3) Any violation by an insured bank of the provisions of this subsection or of regulations issued hereunder shall subject the bank to a penalty of not more than 10 percent of the amount of the deposit to which the violation relates. The Corporation may recover the penalty, by suit or otherwise, for its own use, together with the costs and expenses of the recovery.

"(4) For the purposes of this subsection, the term 'payment of interest' includes an agreement to pay interest and includes payments to the depositor or any other person directly or indirectly made by any officer, director, agent, or substantial stockholder of the bank in which the deposit is made if the bank had or reasonably should have had knowledge of the agreement or payment when it accepted the deposit. The Board of Directors shall by regulation prescribe definitions of the terms 'payment of compensation' and 'substantial stockholder' and shall prescribe such further definitions of 'payment of interest' as it may deem appropriate for the purposes of this subsection. The Board of Directors shall prescribe such rules and regulations as it may deem necessary to effectuate the purposes of this subsection and prevent evasions thereof."

§ 112. Amendment of Federal Home Loan Bank Act

Section 5B of the Federal Home Loan Bank Act (12 U.S.C. 1425b) is amended (1) by inserting "(a)" after "Sec. 5B." and (2) by adding at the end thereof the following:

"(b) No member which is an insured institution as defined in section 401(a) of the National Housing Act and no officer, director, agent, or substantial stockholder thereof shall pay or agree to pay a broker, finder, or other person compensation for obtaining funds to be deposited or invested in such member (hereinafter in this section referred to as deposits). For the purposes of this paragraph, any payment made by any other person to induce the placing of a deposit in such a member shall be deemed to be a payment of such compensation by the member if the member had or reasonably should have had knowledge of such a payment when it accepted the deposit.

"(c) Any violation by a member of the provisions of this subsection or of regulations issued hereunder shall subject the member to a penalty of not more than 10 percent of the amount of the deposit to which the violation relates. The Board may recover the penalty, by suit or otherwise, for the use of the Federal Savings and Loan Insurance Corporation, together with the costs and expenses of the recovery.

"(d) For the purposes of this section, the term 'payment of interest or dividends' includes an agreement to pay interest or dividends and includes payments to the depositor or investor or any other person directly or indirectly made by any officer, director, agent, or substantial stockholder of the member in which the deposit is made if the member had or reasonably should have had knowledge of the agreement or payment when it accepted the deposit. The Board shall by regulation prescribe definitions of the term 'payment of compensation' and 'substantial stockholders' and shall prescribe such further definitions of 'payment of interest or dividends' as it may deem appropriate for the purposes of this section. The Board shall prescribe such rules and regulations as it may deem necessary to effectuate the purposes of this section and prevent evasions thereof."

CHAPTER 3—CERTAIN GIVEAWAYS PROHIBITED

Sec.
121. Amendment of section 19(j), Federal Reserve Act.
122. Amendment of section 18(g), Federal Deposit Insurance Act.
123. Amendment of section 5B, Federal Home Loan Bank Act.

§ 121. Amendment of section 19(j), Federal Reserve Act.

Section 19(j) of the Federal Reserve Act (12 U.S.C. 371b) is amended by adding at the end thereof the following: "Except for the payment of interest on deposits subject to limitation under this section, no member bank may offer or deliver any merchandise or any certificate, stamp, ticket, or other obligation or memorandum which is or may be redeemable in merchandise, money, or credit as an inducement to any person to make or add to any deposit."

§ 122. Amendment of section 18(g), Federal Deposit Insurance Act

Section 18(g) of the Federal Deposit Insurance Act (12 U.S.C. 1828(g)) is amended by adding at the end thereof the following: "Except for the payment of interest on deposits subject to limitation under this section, no insured bank may offer or deliver any merchandise or any certificate, stamp, ticket, or other obligation or memorandum which is or may be redeemable in merchandise, money, or credit as an inducement to any person to make or add to any deposit."

§ 123. Amendment of section 5B, Federal Home Loan Bank Act

Section 5B(a) of the Federal Home Loan Bank Act (12 U.S.C. 1425b) is amended by adding at the end thereof the following: "Except in the case of interest or dividends subject to limitation under this section, no member may offer or deliver any merchandise or any certificate, stamp, ticket, or other obligation or memorandum which is or may be redeemable in merchandise, money, or credit as an inducement to any person to make, open, or add to any deposit or account."

CHAPTER 4—CERTAIN EQUITY PARTICIPATIONS PROHIBITED

Sec.
131. Definitions.
132. Prohibition on equity participations by lenders.
133. Civil liability.
134. Criminal penalty.

§ 131. Definitions

(a) The definitions and rules of construction set forth in this section apply for the purpose of this chapter.

(b) The term "lender" includes any commercial bank, trust company, mortgage banker, savings bank, building and loan association, savings and loan association, insurance company, or other person or organization engaged in the business of making or placing loans.

(c) The term "equity participation" refers to

(1) an ownership interest in any property or enterprise; or

(2) any right to any payment or credit which is proportionate to or contingent upon the net or gross income from any property or enterprise, including but not limited to

(A) a share in the profits, income, or earnings from a business enterprise of the borrower;

(B) warrants entitling the lender to purchase stock of the borrower at a fixed price; or

(C) shadow warrants entitling the lender to compensation based upon changes in the market price of the borrower's stock over a specified period.

§ 132. Prohibition on equity participation by lenders

No lender may accept any equity participation in consideration of the making of any loan.

§ 133. Civil liability.

Any lender which acquires an equity participation from a borrower in violation of this chapter shall, upon demand, assign all its right, title, and interest therein to the borrower and in addition be liable to the borrower in an amount equal to twice the fair market value of the equity participation at the time of its creation or at the time of demand, whichever is higher, and shall in addition be liable to the borrower for his reasonable attorney's fees and costs of suit as determined by the court in any action to enforce the liability created by this section. Any such action may be brought in any district court of the United States regardless of the amount in controversy, or in any other court of competent jurisdiction, within six years after the date on which the liability arises.

§ 134. Criminal penalty.

Whoever willfully violates the provisions of section 132 of this chapter, or willfully and knowingly participates in any such violation, shall be fined not more than $10,000 or imprisoned not more than one year, or both.

BOMB IS NOT "DISSENT"

(Mr. BEVILL asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BEVILL. Mr. Speaker, clearly one of the most important challenges facing Congress today is that of developing effective measures to stop terrorist bombings.

A recent editorial in the Birmingham

News offers some constructive thoughts on this problem. I am placing this article in the RECORD at this time, so that my colleagues may have the opportunity to read this article:

BOMB IS NOT "DISSENT"

Both the U.S. Senate and House of Representatives are investigating a new and dangerous phenomenon in this country—terrorist bombings.

New York Police Commissioner Howard Leary told a Senate panel last week, "We can say the present crop of explosive devices, in the main, represent distorted petitions for redress of grievance."

"Distorted" is an understated adjective. Persons who resort to random violence for political purposes are as wantonly criminal as those who would use the same tactics to commit theft. The victims of these "petitions" bleed just as freely as bystanders shot in the course of armed robbery.

The stakes are different, but the means are equally intolerable.

We hope the investigations will gather sufficient facts to guide the nation's lawmakers in drafting enlightened measures to deal with the problem.

Some senators have cautioned against legislation which prevents violence, but also tends to repress all political and social dissent. But their colleagues are not children, and realize the elemental danger of passing legislation which goes too far.

While some may call terrorism dissent, this does not change the nature of the act nor make it legitimate.

Effective countermeasures are needed to halt this madness which goes far beyond any rational person's definition of protest.

QUALITY EDUCATION FOR OUR CHILDREN

(Mr. MIZELL asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MIZELL. Mr. Speaker, today in communities throughout this Nation, parents of schoolchildren are perplexed. Wanting quality education for their children, they find instead disrupting experimentation. Wanting harmony, they find discord.

Why are parents caught in this trap? The reasons are clear: A generation of children has grown up since 1954, when the Supreme Court first declared that segregation of schools was illegal, that separate but equal education was no longer a valid policy.

Since that time, our Nation's courts have often disagreed with each other—and with their own previous decisions—as to the best strategy to be followed in desegregating our public schools.

Freedom of choice once enjoyed the favor of our courts, but despite the fact that such freedom still enjoys the favor of the American people, black and white, our courts have ruled that basic freedom illegal.

And they have proceeded to replace freedom with coercion. Parents no longer have the right to decide where their children should go to school. The courts have taken that responsibility upon themselves, and in their zealous exercise of this new power, they have very nearly made a shambles of public education in the United States.

Thousands of children who entered the first grade in 1954 were graduated from our Nation's colleges and universities this past spring. And after all this time, we still have no consistent and effective way of dealing with this most complex issue.

The basic question that faced this country 16 years ago—a question that has indeed begged for an answer throughout much of our history—still wants for a solution.

How shall we in this country live together in peace and in prosperity and in prospect for a brighter future?

Somehow, Mr. Speaker, we in this House have evaded that question, eluded our responsibility and brought much confusion down on the homes of American people throughout the country.

Too often, our silence on this issue has been deafening, but how long will that deafening silence muffle the storms of discontent that are growing in our land? How long will we be able to sit here, couched in our seeming indifference, when those storms begin to rage?

Must social chaos be the price of this Nation's social conscience? It need not.

Must the destruction of public education in the United States be the wages of our sin of neglect and decision? I think not.

Must another generation of children grow up to find their elementary and secondary education a mere testing ground for social projects only to see that testing ground shattered by explosive elements waiting to be detonated at this very moment? We cannot let that happen.

Mr. Speaker, our children have suffered long enough, our courts have taken enough blame, our public school systems have been in disarray long enough, and the voice of this Congress has stammered far too long.

Educators from eight States, inside and outside the South, met last weekend in Charlotte, N.C., in an effort to determine through their mutual experiences if a cogent policy for desegregation could be hewn from the maze of court decisions regarding the issue.

The sessions ended as they began, in confusion. These highly educated men and women, after hours of discussion and study, were still baffled by conflicting opinions offered by the courts.

But there was one resolution which came out of that conference which bears repeating here. The educators petitioned the U.S. Supreme Court to define what is needed for a unitary school system as quickly as possible. We must recognize this resolution as a cry for help, for that is what it is.

I believe it is the responsibility of this Congress to develop fair and enforceable guidelines—but above all understandable guidelines—leading to the solution of this problem.

Much valuable time has already been lost in following the haphazard policy of requiring a school system to devise a plan for desegregation, when as often as not, these plans are found unacceptable by the courts who commissioned them.

Let us waste no more time in resolving the issue.

I am convinced that the forcible busing of schoolchildren to achieve racial balance is not the answer. The conference in North Carolina last weekend said as much itself.

I am more convinced that forcible busing was an impractical and unworkable policy from the beginning, and the discontent and opposition it has encountered since its inception prove it is almost universally unpopular as well.

It makes no sense to me to force a little boy in the first grade to be transported 10 or even 20 miles away from home just to appease some bureaucratic conception of what real integration ought to be.

It is a harsh fact of life that not every child in the first grade can be driven to school by his mother or by his governess. Imagine the terror a little boy must feel when he boards a strange bus that keeps taking him farther and farther away from home. For many of them, the journey must seem like it will never end.

It is past time for our sons and daughters to serve as our guinea pigs—it is time for us to realize they are little boys and girls who need education. So let us educate them.

It is past time for antagonistic dialog—it is time for decisive action. So let us act.

I rise today not to oppose social progress, but to propose new policies to assure that progress; not to destroy our public school system, but to preserve it, and to improve it.

I rise to restore a measure of sanity to this highly emotional debate. I rise to assert the rights of men—not of one race, but of one Nation.

I rise to act.

Five months ago, I introduced a bill to establish nondiscriminatory school systems and to preserve the rights of elementary and secondary students to attend schools in their own neighborhood.

Today, 5 months later, that bill has still not been considered by the Committee on Education and Labor. Not one hearing has been held concerning this bill, and the beginning of what promises to be another turbulent school year is little more than a month away.

What shall we say to our constituents if this session ends without our having come to grips with this problem? Can we tell our people how much we favor quality education, or true equality among the races, and hope they will not search beyond our hollow words?

The people deserve more than that, and they are certain to demand more.

My bill provides that the right of elementary and secondary education students to attend their neighborhood schools shall not be abridged by any Federal authority because of race, creed, color, religion, or national origin of the student.

It provides that each local nondiscriminatory system shall have the right to determine its own attendance zones without interference from Federal authority as long as those zones are reasonably drawn to serve the needs of the community and no effort is made by drawing such attendance zones to force a student to attend a particular school because of his race.

It provides that each local nondiscriminatory system shall have the right to determine the placement of faculty

and administrative personnel without interference from Federal authority as long as such placement reasonably serves the needs of the school system and no effort is made through its placement to discriminate against any faculty or administrative member on the basis of race.

These proposals are neither revolutionary nor reactionary. They are reasonable approaches to the solution of this problem. They have been offered in good faith that this Congress is dedicated to education and to racial understanding, but more, that we are still dedicated to freedom.

I urge that consideration of the bill I have offered be swiftly arranged in the Committee on Education and Labor, and that this bill be reported out of committee at the earliest possible date so that this Congress may exercise its constitutional mandate and heed the people's will.

ELIMINATING AMPHETAMINES

(Mr. ROGERS of Florida asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROGERS of Florida. Mr. Speaker, I am today calling on Food and Drug Administration Commissioner Edwards to lay the foundation for eliminating amphetamines by conducting studies to show that they are necessary and effective in only very limited medical situations.

Amphetamines are one of the main characters in a large cast of abusable drugs. And if we can eliminate the black-market amphetamines, we will have gone a long way in controlling drug abuse in the United States. In fact, I think that if we controlled the abuse of amphetamines, we could reduce the drug problem by as much as 20 percent.

There are only two recognized medical uses for amphetamines. They are used to treat narcolepsy, sleeping disease, and hyperkinetic, overactive children. Between these two there is very little need for amphetamines. But we are seeing that there are more than 8 billion produced and it is estimated that half of these get into illegal traffic.

The overwhelming amount of the amphetamines are used for the treatment of obesity. Yet we do not have any store of evidence that amphetamines are effective. And herein lies one of the biggest problems.

We have allowed amphetamines for diet pills when we know that this has resulted in mass production far above actual medical needs. FDA should conduct, or have done, studies to show that amphetamines are not effective in obesity cases.

Several nations have banned amphetamines. Alternative substances for diet pills which do not affect the central nervous system have been found. I think that we are going to have to do something like that in this country.

The problem is not one that is situated entirely within the young population of our Nation. There are thousands and possibly millions of middle-aged adults who go to the medicine cabinet for diet pills to get picked up. Unfortunately, there are too many physicians who are loose about dispensing diet pills and, as a result, adults are just as much a part of the drug subculture as a hophead on some street corner waiting for a fix.

Earlier this year I asked FDA to label amphetamines so that the person taking diet pills would know that he is taking a pill which could have effects on his central nervous system and which could also develop a dependency.

THE CIVIL AERONAUTICS BOARD AND AIRLINE FARES

(Mr. MOSS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MOSS. Mr. Speaker, on Friday, a number of my colleagues and I filed a supplemental complaint with the Civil Aeronautics Board, seeking relief from the recent airline fare increase that a Federal appellate court earlier this month found to be illegal.

In this complaint, we are requesting that the Board promptly institute a proceeding, in which we plan to appear, to determine the amount of the overcharge to the traveling public and to establish a just means of compensating the public for the unlawful fares it has been required to pay.

The complaint which we filed follows:

[Before the Civil Aeronautics Board, Washington, D.C.]

IN THE MATTER OF DOMESTIC PASSENGER FARES ESTABLISHED BY THE BOARD AND HELD TO BE UNLAWFUL—DOCKET 21322

Supplemental complaint of Members of Congress and air transportation users with request for institution of appropriate proceedings for determining relief for the period beginning October 1, 1969.

Communications with respect to this document should be sent to:

The Honorable John E. Moss, Member of Congress, 2185 Rayburn Building, Washington, D.C. 20515;

Richard W. Klabzuba, 2185 Rayburn Building, Washington, D.C. 20515; and

Stanford G. Ross, Esq., Caplin & Drysdale, 1101 Seventeenth Street NW., Washington, D.C. 20036.

Dated: July 24, 1970.

SUPPLEMENTAL COMPLAINT

I

Complainants initiated the instant proceeding with a complaint filed with the Board on August 20, 1969, setting forth objections to certain tariffs that had been proposed by the domestic carriers. On September 12, 1969, the Board suspended those tariffs and ordered them investigated. At the same time, the Board set forth a fare formula of its own and announced that it would approve tariffs filed in accordance with that formula. Under the Board's proposal the carriers would be granted a fare increase estimated by the Board to produce an increase in industry revenue of approximately 6.35 per cent. When the carriers filed the tariffs that the Board had described, complainants again objected. The Board dismissed these objections and allowed the new tariffs to go into effect beginning October 1, 1969. Complainants then petitioned the United States Court of Appeals for the District of Columbia Circuit for review of the Board's decisions.

II

On July 9, 1970, the Court of Appeals rendered an opinion and judgment in this case. It sustained complainants' contentions that the Board's order of September 12 "determined" domestic passenger fares within the meaning of section 1002(d) of the Federal Aviation Act, and that the tariffs filed by the carriers on the basis of that order were the responsibility of the agency. This holding was founded on, essentially, five considerations:

(1) That, "as a practical matter, the Board's order amounted to the prescription of rates . . . ." (Slip op., p. 12);

(2) That the Court was aware of no case in which a regulatory agency "has set out such a complete and detailed scheme for making rates which it wanted filed and in which a court has held that the resulting rates were carrier-made rates." (Slip op., pp. 16–17);

(3) That "in the absence of . . . a retrospective remedy for reparation for air line passengers, the procedural safeguards provided in the Federal Aviation Act become the public's sole defense against unreasonable rates permitted by the Board." Therefore, courts need not share the "reparation concern" of courts construing I.C.C. precedents, a concern which has led such courts to find particular tariffs to be carrier-made and therefore subject to reparations even after a general increase in rates ordered by the agency. (Slip op., p. 30 n.14);

(4) That "if . . . the rates resulting from this procedure are carrier-made, rather than agency-made, the public would not only be forced out of its role in ratemaking, but judicial review of the Board's actions would be severely limited." (Slip op., p. 17);

(5) That the Board was incorrect in maintaining that "abdication from its proper supervisory role under the statute need be the result of today's holding requiring the Board to comply with the statute in rate-making." (Slip op., p. 20).

The Court of Appeals concluded its opinion as follows:

"Since the record shows, as the Board admits, that the public notice and hearing requirements of Section 1002(d) were not observed in issuing the order of September 12, that order is invalid and the tariffs filed by the carriers based thereon are unlawful. Under the circumstances, this case is remanded to the Board for further proceedings." (Slip op., p. 23).

III

The mandate of the Court of Appeals is scheduled to issue shortly. We assume that the Board will promptly take the necessary steps, in accordance with the Federal Aviation Act and the decision of the Court of Appeals, to remedy the presently prevailing fares, which are based on the Board's order of September 12 and therefore unlawful.

We recognize that the present situation with respect to fares is unprecedented and that the Board faces a most difficult and sensitive problem. As we view the situation, the Board cannot determine lawful fares for the future without holding a hearing and complying with the other procedural and substantive standards of 1002 (d) and (e) of the Act. Moreover, we do not believe that there can be any lawful tariffs on file until the Board corrects its errors and establishes legal fares.

In order to avoid a hiatus while the Board is determined lawful fares for the future, complainants suggest that the Board might re-establish the fares that prevailed prior to October 1, 1969. Those fares, never having been challenged, may be presumed to be lawful; they therefore might properly be ordered into effect following the most summary hearing under section 1002(d).

IV

The purpose of this supplemental complaint is to request that the Board promptly institute an adjudicatory proceeding for the purpose of determining appropriate relief for the period extending from October 1, 1969, through the date on which lawful domestic passenger fares are re-established. During that period the traveling public has been required to pay excessive fares, established pursuant to a Board-determined fare formula, without regard to the standards of sections 1002(e) and 102 of the Federal Aviation Act. The issue to be determined in the proceeding which complainants request—that is, the question of what relief is appropriate to remedy an illegal and excessive Board-determined rate—is apparently one of first impression. Complainants respectfully request that the Board, in order to discharge its statutory duties to the public, undertake to consider that issue on an expedited basis.

In the course of the requested proceedings, complainants suggest that the Board should examine, *inter alia*, the following issues relevant to forms of relief:

(a) *Calculation of the sum unlawfully exacted from the public by reason of the Board's order of September 12.*

In this connection, complainants would note that the amount of the overcharge may well be equal to the 6.35 per cent fare increase accorded by the Board; there may, however, be other methods of measuring the injury to the public. This is a matter that would be determined in the course of the requested proceedings.

(b) *The proper disposition of the overcharge.*

Complainants believe the Board has the duty, in fairness to the traveling public, to determine some use for the overcharge which compensates the traveling public for the unlawful fares it was required to pay. It might be appropriate, for example, to order that the carriers establish a form of refund procedure for those persons who are able to show that they traveled by air during the period in question.*

Alternatively, the Board might order the carriers to establish an appropriate fund or reserve in the amount of the overcharge, which would then be applied against such eventual future rates as may lawfully be established. *Compare Bebchick* v. *Public Util. Comm'n*, 318 F.2d 187 (D.C. Cir.), *cert. denied*, 373 U.S. 913 (1963).

It is essential under the circumstances of this case that the Board accord relief sufficient to compensate the traveling public for the Board's wrongful order of September 12. Sound administrative process requires that the wrong to the public be righted. It is only simple justice that the Board use its broad powers and expertise to fashion some equitable form of redress for the traveling public. We read the congressional purpose of the Federal Aviation Act, as reflected in the rule of ratemaking of section 1002(e) and the definition of public interest in section 102 of the statute, to require no less. *Compare J. I. Cas Co.* v. *Borak*, 377 U.S. 426 (1964); *NLRB* v. *Strong*, 393 U.S. 541 (1969). Because the domestic passenger fares that have prevailed during the period since October 1, 1969, were not determined by the Board in accordance with those sections, the Board should proceed forthwith to determine a proper form of redress.

Respectfully submitted,

RICHARD W. KLABZUBA,
STANFORD G. ROSS,
(For Complainants).

CERTIFICATE OF SERVICE

I hereby certify that I have this day served the foregoing document upon: Air West, Inc.; Allegheny Airlines, Inc.; American Airlines, Inc.; Braniff Airways, Inc.; Continental Air Lines, Inc.; Delta Air Lines, Inc.; Eastern Air Lines, Inc.; Frontier Airlines, Inc.; Mohawk Airlines, Inc.; National Airlines, Inc.; North Central Airlines, Inc.; Northeast Airlines, Inc.; Northwest Airlines, Inc.; Ozark Air Lines, Inc.; Piedmont Aviation, Inc.; Southern Airways, Inc.; Texas International Airlines, Inc.; Trans World Airlines, Inc.; United Air Lines, Inc.; Western Air Lines, Inc., by causing a copy of it to be mailed to such carrier or its agent properly addressed with postage prepaid.

RICHARD W. KLABZUBA.

JULY 24, 1970.

* Because the issue in the requested proceedings would be the appropriate form of relief for illegal and excessive Board-determined fares, the suggested remedy would be entirely distinguishable from the reparations which are awarded by other agencies for unlawful carrier-determined fares. Complaints are prepared to develop this point at the requested proceedings.

THE COAL MINER

(Mr. KEE asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. KEE. Mr. Speaker, coal mining is a dangerous occupation. Coal miners, more than most Americans, are prone to disabling injuries and disease.

The sight of disabled miners is a common one throughout America's coal fields. It is a tragic sight, one that calls for some action on the part of their countrymen to alleviate the distress which comes with disability.

At the present time disabled coal miners are entitled to complete hospital and medical care from the United Mine Workers of America welfare and retirement fund for 1 year after they have left the industry. This coverage is complete for the man, his wife, and all of his dependent children under 22 years of age.

Such coverage is unique in our Nation, and extends beyond that normally granted to men who become disabled from nonwork related disability.

But, it is not enough. Hospital and medical protection should be provided for disabled coal miners for life, or until they are once again productive citizens in our society.

The UMWA welfare fund does provide for such protection if the man suffering a disability is eligible for a pension. At the present time the retirement age for a coal miner is 55 with 20 years of service in the mines.

Unfortunately, there are still some miners not covered. Equity demands that protection be given them. But the resources of the welfare fund are not adequate to the task, given the other demands upon it.

I believe that the answer to this dilemma is given in a letter from the president of the UMW, Mr. Tony Boyle. Mr. Boyle suggests that disabled miners should be paid from the Treasury of the United States with supplemental payments from the welfare fund.

Mr. Speaker, I believe that this proposal is sound and merits the attention of the Congress. I have already directed my staff to begin drafting legislation which would implement the proposal made by Mr. Boyle. I hope to have such legislation ready for introduction in the next several days. Hopefully, the proposal by Mr. Boyle will receive the support of many other Members of the Congress so that it can be speedily enacted into law.

I am inserting the letter from Mr. Boyle into the RECORD for the information of the Congress, and so that this proposal may receive the wide publicity it deserves:

UNITED MINE WORKERS OF AMERICA,
Washington, D.C., July 28, 1970.

Hon. JAMES KEE,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN KEE: Disabled coal miners under 65 years of age face a serious problem of medical and hospital care which must be assumed by the nation. These miners have suffered disability as the result of employment under hazardous conditions in an industry vital to the nation's health, comfort and economic welfare. They richly merit assistance from the nation in their hour of need.

The United Mine Workers of America has sought to meet the hospital and medical care needs of these disabled workers through the UMWA Welfare and Retirement Fund which it negotiated with the coal industry. The Fund expended more than $55 million of a total income of $163 million, for hospital and medical care for mine workers during the fiscal year ending June 30, 1969. In the fiscal year ending June 30, 1970 the Fund spent over $65 million out of a total income of $174 million for hospital and medical care.

Because of the ever-escalating costs of medical and hospital care, the UMW Welfare and Retirement Fund has been forced to limit medical and hospital benefits to one year following disability for mine workers too young to qualify for a pension. Our union fully recognizes that this is inadequate to the needs of mine workers.

The UMW intends to win a much higher industry contribution to the Welfare and Retirement Fund in its 1971 negotiations. Even if the present forty cents per ton contribution were doubled, it would not be sufficient to provide indefinite hospital and medical benefits to disabled miners because of the need to increase pensions, survivors benefits and other benefits.

During recent weeks, mine workers who have been unemployed for more than one year because of disability have picketed and disrupted production of vitally needed coal in several mine fields. We recognize that the disabled miners' needs are urgent and very real. The UMW Welfare and Retirement Fund, however, cannot provide indefinite medical and hospital care for these disabled

miners without denying benefits to other working and retired members and survivors.

The real answer to this problem, especially in the face of soaring medical and hospital costs, is a program of hospital and medical benefits for disabled miners similar to Medicare which would become applicable one year after disability. Such a program should provide uniform benefits for continuing medical and hospital care costs resulting from disability. The UMW Welfare and Retirement Fund now provides certain supplemental benefits to retired members over 65 who are enrolled in the Medicare program and would attempt to provide similar benefits under a federal program for disabled mine workers who have exhausted benefits now paid from the Fund.

In the view of the UMW, such a program would best be supported from general taxation. We urge the immediate introduction of legislation to meet the health care needs of disabled mine workers following one year of disability. We will be more than pleased to work with your office in shaping a satisfactory legislative measure.

Sincerely yours,

W. A. BOYLE,
President, United Mine Workers of America.

RESIDUAL FUEL OIL EMERGENCY IN CHICAGO

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ROSTENKOWSKI), is recognized for 60 minutes.

Mr. ROSTENKOWSKI. Mr. Speaker, for some time now, the city of Chicago has been confronted with an energy crisis of the greatest magnitude. With the winter months fast approaching, the supply of low-sulphur-content residual fuel oil so necessary to the operation of the city, remains at an extremely precarious level. In simple terms, this shortage means that the recipients of this fuel; namely, the hospitals, the schools, the apartment buildings, as well as many industrial facilities, will be forced to face our famous Chicago winter weather without heat. This predicament is compounded by the fact that the city of Chicago, in order to conform to strict State antipollution guidelines, has recently enacted an ordinance which would require many industries to convert from their present fuel to this low-sulphur residual fuel.

The hard facts are that while the demand for residual oil in Chicago is increasing, the supply available in the United States is rapidly decreasing. At present, the national supply is more than 25 percent below last year's level. In Illinois, the supply on hand is 30 percent below last year's level. Last winter, the city of Chicago was down to a mere 5-day supply. We cannot allow this to happen again. For economic reasons, the domestic oil companies are just not producing this inexpensive residual oil. They find it more profitable to refine their crude oil into gasoline and other petroleum products.

In order to prevent a catastrophe, some 15 suppliers of residual oil to Chicago applied in June for an import license. This license, granted through the Oil Import Appeals Board of the Department of the Interior, would permit them to go anywhere in the world to locate residual oil. They are currently prohibited from doing so simply because they are residents of district 2—the Midwest. District 1—the east coast—has no such restriction. The entire United States is divided into five administrative districts plus Puerto Rico. These districts are the ones used for the regulation of petroleum during World War II.

The only distinction made within districts 1 through 4 is for residual oil which is, I repeat, effectively exempt from control only in district 1. As the result of a Presidential proclamation, allocations to importers in districts 1 through 4 are set at the level which each imported in 1957. In June, I wrote to the President, the Secretary of the Interior, and the Chairman of the President's Oil Policy Committee. Many of my colleagues in the House also did so. In my letters I urged them to use all the power of their respective offices to, first, grant the appeals in question and, second, end the discriminatory measures presently in effect against districts 2 through 4.

On July 20, the Oil Import Appeals Board granted the appeals of several of the Chicago petitioners on the grounds of "excessive hardship." This action will permit these companies to search the world market in order to obtain residual oil. They now have a "hunting license." I only hope that there is game available in the forest. As of last week, none of these companies had been able to purchase 1 gallon of foreign residual oil. The amount of oil released by the Board amounts to approximately 25 percent of what was asked for. If the full allotment had been granted and if the companies were able to obtain the foreign oil before the start of the winter season, then the crisis would have been greatly eased.

Mr. Speaker, if this allocation is not increased by the Board, I fear that the remaining amount will be insufficient to meet the needs of the city of Chicago. While I, in many ways, applaud the action taken by the Board, I cannot help but believe that this action will merely postpone the inevitable. Unless something is done to correct the inequitable situation that exists between district 1 and the rest of the Nation, Chicago's current energy crisis will become an annual one. The administration must direct itself to the crux of this problem. The midcontinent area—district 2—of our Nation must be placed on an equal basis with the east coast with reference to residual fuel oil imports.

It is interesting to note that the recent report of the Cabinet Task Force on Oil Import Control indicates that broad support already exists within the Nixon administration for applying district 1 policy uniformly across United States—see paragraphs 334 and 430b, pages 359 and 361 of the report.

Such action should be taken no later than September 1, 1970, in order to provide a permanent solution to the problem which plagues Chicago and the Middle West, and threatens the safety and comfort of their citizens in the coming winter.

I am enclosing for the RECORD, the text of my letter to the President as well as related correspondence, various charts, and newspaper articles.

JUNE 23, 1970.

Hon. RICHARD M. NIXON,
The President,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: The Midwest and, in particular, the City of Chicago, has been placed in an untenable position wherein the demand for residual fuel oil far exceeds available supply.

This domestic situation began approximately four years ago on the East Coast when air pollution control affected the sulfur limits of fuels. The aftermath was that the oil industry turned to other markets to dispose of the bottom-of-the-barrel residual fuel oil. Most of the refiners resorted to increasing the manufacture of asphalt and petroleum coke in place of residual fuel oil. This is understandable since asphalt and petroleum coke are not directly affected by a sulfur specification and high sulfur crude oil is a desirable low cost raw material for the refiner.

In the last two years, domestic refiners have altered their manufacturing process to the extent that approximately 59,300,000 barrels (2,490,600,000 gallons) of various grades of residual fuels have been withdrawn from the Midwest and, in particular, the Chicago market, per annum.

Today, the residual consumer is competing with the refiner who uses residual fuel as a feed-stock to make additional asphalt and coke.

District 1 (East Coast) recognized that an international energy crisis was approaching and applied to the Department of the Interior to import residual oils to offset the increased consumer demand and reduced domestic residual manufacturing. The Federal Government accepted the gravity of the situation and granted unrestricted residual oil imports to the East Coast (District 1). The Midwest is in the same desperate energy crisis, unfortunately, discrimination exists in that District 2 (Midwest Chicago) cannot import residual oils.

The new refineries being built in our area have not made any provisions for residual manufacturing. Chicago has become an island with an insufficient energy supply source, not only to combat freezing weather for the domestic consumer, but to allow for industrial and economic growth. If something is not done soon to remedy this intolerable situation, it will be a very cold winter in Chicago.

Mr. President, I urge you to use all the power of your office to remove the discriminatory measures now in effect against the Midwest, and in particular Chicago, so that we can avail ourselves of the residual oil in the world markets. The Oil Import Appeals Board has the ability and power to grant this request and end this discrimination and I pray that you will be successful in assisting us with this problem.

Respectfully yours,

DAN ROSTENKOWSKI,
Member of Congress.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., June 26, 1970.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Recently my colleague from Chicago, Congressman Dan Rostenkowski, has communicated to you the urgent need for additional sources of residual fuel oil for residents of Chicago. He asked that you use all the powers of your office to insure that the discriminatory prohibitions now in effect which prevent District 2 (Midwest/Chicago) from importing residual fuel oil produced abroad. District 1 (East Coast) now has unrestricted access to foreign produced residual fuel oil.

I support Congressman Rostenkowski's request. Under existing law, the Oil Import Appeals Board is authorized to modify existing petroleum import restrictions on the grounds of extreme hardship. No case of extreme hardship could be clearer than that which faces Chicago if the present discriminatory measures remain in effect.

In addition, I urge you again, as I and many of my colleagues have in the past, to put into effect the recommendations of your Cabinet Task Force on Oil Import Controls. The Task Force said in its report on February 2, 1970:

"We . . . recommend that residual fuel oil from [the Western Hemisphere], to be used domestically as fuel either directly or after desulphurization, be subject only to existing tariffs and that Eastern Hemisphere origin residual oil pay an increased tariff sufficient to offset the anticipated cost of desulphurizing Latin American residual fuel oil." (Para. 430b, P. 136).

If the existing quotas on importation of foreign residual fuel oil were replaced by tariffs, as the Task Force recommended, not only would citizens in the Midwest have access to now unavailable supplies, but they would be saving money on fuel oil costs as well. The Task Force estimated that an Illinois family of four pays almost $90 per year more for petroleum products because of existing import quotas than it would without them. If the quota system continues, this cost for such families may rise to almost $150 per year by 1980. This is not the price of fuel oil itself, but an artificial add-on caused by an out-moded quota system which the Task Force recommended be scrapped.

The existing quota system, which you could eliminate, raises the cost to consumers of all petroleum products. But the present situation relating to residual fuel oil is not only a matter of increased cost—it is a matter of the health and welfare of Chicago's citizens. For economic reasons, domestic manufacturers have reduced their output of residual fuel oil. Without access to supplies abroad, residents of District 2, especially residents of Chicago, will simply not be able to buy residual fuel oil when the cold weather arrives. It will be a cold winter for Chicago citizens unless you and the Oil Import Appeals Board act now.

I join Congressman Rostenkowski in urging your attention and action on this matter.

Respectfully,

ABNER J. MIKVA,
Member of Congress.

THE WHITE HOUSE,
Washington, June 30, 1970.

Hon. DAN ROSTENKOWSKI,
House of Representatives,
Washington, D.C.

DEAR MR. ROSTENKOWSKI: This will acknowledge and thank you for your letter regarding the availability of an adequate supply of residual fuel oil in the Midwest, particularly in the Chicago area. You may be assured that your letter requesting an increase in the level of import quotas of residual fuel oil for District 2 will be brought to the President's early attention.

With cordial regard.

Sincerely,

WILLIAM E. TIMMONS,
Assistant to the President.

[Department of the Interior News release, July 6, 1970]

LOW SULPHUR RESIDUAL FUEL OIL ALLOCATION LEVEL INCREASED TO MEET SUPPLY REQUIREMENTS

The Department of the Interior today announced an increase in the level of low sulphur residual fuel oil imports by 9.5 million barrels for the allocation period of April 1, 1970 to March 31, 1971.

The action was concurred in by the Oil Policy Committee.

The increase is restricted to Districts II–IV which consists generally of all states except those on the East and West Coasts.

Potential supplies of low sulphur fuel oil are not encouraging according to Bureau of Mines information, and the demand during the current allocation period cannot be accurately predicted. On this basis, a departmental decision was made to increase the level of imports into Districts II–IV.

The increase was assigned to the Oil Import Appeals Board in order for the Board to grant allocations and licenses only on the grounds of exceptional hardship caused by the mandatory oil import program.

During this period, the Department will take aggressive action to develop a program for review by the Oil Policy Committee which will offer (incentives) to domestic refiners to manufacture low sulphur residual fuel oil in the Midwest area.

EXECUTIVE OFFICE OF THE PRESIDENT, OFFICE OF EMERGENCY PREPAREDNESS,
Washington, D.C.

Hon. DAN ROSTENKOWSKI,
House of Representatives,
Washington, D.C.

DEAR MR. ROSTENKOWSKI: Because of my responsibilities as Chairman of the Oil Policy Committee, your letter of June 23, 1970, to the President regarding residual fuel oil availability in the Chicago area was sent to me.

Your letter refers to the ability of the Oil Import Appeals Board to remedy this situation. On this account, I have enclosed a copy of the July 6, 1970, Department of the Interior announcement of the increase of 9.5 million barrels in the level of low sulfur residual fuel oil which has been assigned to the OIAB for allocation in Districts II–IV.

Sincerely,

G. A. LINCOLN,
Director.

U.S. DEPARTMENT OF THE INTERIOR,
OIL IMPORT APPEALS BOARD,
Washington, D.C.

In the matter of Petro Products, Inc., Docket No. S–17 (resid); Thomas P. Reidy, Docket No. S–32 (resid); Torco Oil Co., Docket No. S–34 (resid); Apex Oil Co., Docket No. S–42 (resid); Joseph F. Reidy & Sons, Inc., Docket No. S–58 (resid); Bell Oil Co., Docket No. S–66 (resid); Osceola Refining Co., Docket No. S–71 (resid); Marine Fueling, Inc., Docket No. S–74 (resid); Phoenix Oil Corporation, Docket No. S–75 (resid); Industrial Fuel and Asphalt Corp., Docket No. S–76 (resid); Oils, Incorporated, Docket No. S–78 (resid); Ashland Oil, Inc., Docket No. S–86 (resid); W. O. Schock Co., Docket No. S–97 (resid); Central Petroleum Company, Docket No. S–104 (resid); Southern Missouri Oil Company, Docket No. S–112 (resid); Koch Industries, Inc., Docket No. S–119 (resid), Petitioners.

CONSOLIDATED DECISION

These petitioners have each requested an allocation to import No. 6 fuel oil into Districts II–IV during the April 1, 1970 to March 31, 1971 allocation period. None is now eligible for such a product allocation issued by the Oil Import Administration by reason that none was an importer of finished product in the year 1957. Their petitions to the Board are based on claims of exceptional hardship.

Although these petitioners differ in size, type of operation, degree of integration and geographic location, all are marketers of residual fuel oil in District II. All petitioners cite the shortage of residual fuel as their customer's hardship as well as their own.

Hearings were held on petitions, when requested, and this consolidated decision is based upon full record before the Board.

Against this background the Board finds the following as significant:

1. Residual fuel oil demand in areas served by the pettitioners has increased significantly due to curtailment of natural gas sales to industrial, commercial and governmental purchasers of gas. This applies to new as well as historic users.

2. New regulations to curb air pollution in many parts of the area served by these petitioners have necessitated the use of low sulfur fuels in facilities that had formerly used high sulfur coal. To meet fuel needs in the immediate future, oil must be imported because there is a general shortage of suitable domestic fuels, such as coal, natural gas, and residual fuel oils.

3. Neither the consumers, nor the suppliers of domestic fuels anticipated shortages of suitable fuels as evidenced by depressed market conditions during the immediately preceding several years. In turn, the depressed market conditions contributed to the severe shortages by further reducing incentive to produce these fuels.

4. The relaxation of East Coast residual fuel oil import control, announced in mid-1967, resulted in Gulf Coast residual prices being decreased to be competitive with foreign supplies. The economics then dictated that refiners develop more profitable markets for this material. This was accomplished by building refinery units such cokers, deasphalting units and hydrocrackers, that would utilize residual fractions as inputs. Construction of most of these new facilities was completed in 1969 and early 1970 coinciding in time with the sudden demand outlined above.

The Board concludes that the foregoing combination has created shortage of residual fuel oils of the desired quality in District II and has considered the requests of each petitioner to reach determination as to whether or not an exceptional hardship is suffered attributable to the limiting factors of the Mandatory Import Program. The Board has considered the physical capacity of the petitioner, its experience, and its record of sales.

The Board concluded that the following awards to import residual fuel oil into Districts II–IV were proper for the allocation period April 1, 1970 to March 31, 1971:

[Docket and petitioner]

	Allocations (barrels)
S–17, Petro Products, Inc	0
S–32, Thomas P. Reidy	0
S–34, Torco Oil Co	870,000
S–42, Apex Oil Co	1,320,000
S–58, Joseph F. Reidy & Sons, Inc.	0
S–66, Bell Oil Co	0
S–71, Osceola Refining Co	350,000
S–74, Marine Fueling, Inc	500,000
S–75, Phoenix Oil Corporation	0
S–76, Industrial Fuel and Asphalt Corp.	0
S–78, Oils, Incorporated	480,000
S–86, Ashland Oil, Inc	3,000,000
S–97, W. O. Schock Co	0
S–104, Central Petroleum Company	0
S–112, Southern Missouri Oil Company	0
S–119, Koch Industries, Inc	720,000

STANLEY NEHMER,
Member.

Chairman.

TOTAL REQUESTED ALLOCATION FOR RESIDUAL FUEL OIL BEFORE THE OIL IMPORT APPEALS BOARD, 1970 COMPANIES WHICH COULD MARKET OR USE SUCH ALLOCATION IN THE CHICAGO AREA

Petition No.	Company	Request (in barrels)	Allocation
S-15	Commonwealth Edition	6,000,000	4,500,000
S-34	Torco Oil Co	1,500,000	870,000
S-42	Apex Oil Co	3,000,000	[1] 1,320,000
S-66	Bell Oil (R. W. Troch)	1,300,000	0
S-74	Marine Fueling	2,500,000	[1] 500,000
S-75	Phoenix Oil Corp	600,000	0
S-78	Oils Inc	2,000,000	480,000
S-86	Ashland Oil	4,700,000	[1] 3,000,000
S-119	Koch Industries	1,900,000	720,000
	Total	23,500,000	11,390,000

[1] The major portion of this allocation is not likely to be used in the Chicago area.

DEMAND FOR RESIDUAL OIL,[1] CHICAGO AREA

[In millions of barrels]

	Total [2]	Heating only
1966	21.2	11.5
1967	23.4	14.0
1968	24.1	13.8
1969 (estimated)	25.0	14.5
1970-71 (July 1-June 30) (minimum projections)	26.0	15.0
Available under firm contract (estimated)	16.0	9.0
Present supply gap, Chicago area	10.0	6.0

[1] No. 5 and No. 6 fuel oil.
[2] Includes heating, industrial, railroad, utility use.

OILS, INC.,
Chicago, Ill., June 5, 1970.

Hon. DANIEL ROSTENKOWSKI,
Congressman, Chicago, Ill.
Attention: Mr. W. Nega,

DEAR SIR: This is to confirm that we and a group of interested citizens will meet in your office, Room 1724 of the Federal Building in Chicago, at 9:00 A.M. on June 12, 1970.

The purpose of this meeting, as you know, is to protest the oil import restrictions and to enlist your aid, in whatever manner you may believe appropriate, to make our various governmental departments aware of the total energy crisis we will be confronted with in Chicago during the 1970–1971 heating season. Further, to impress upon the Oil Import Appeals Board the need to give Chicago the same opportunity as the East Coast to import residual oil.

There is and will continue to be for some time, a total lack of energy for heating and processing. This shortage applies to all forms of energy and with local pollution laws regarding sulfur content compounding the fuel situation, we see an impending disaster for Chicago.

We have made several overtures to make people aware of the critical nature of energy supplies and are not encouraged with their response. We assure you that unless some action is taken by various governmental agencies, our city and its citizens will experience a very serious heating emergency during the oncoming winter.

We believe that Chicago cannot properly face the winter of 1970–1971 unless permission is granted to import residual fuel oil and, a reconsideration of the recently enacted Air Pollution Codes for Chicago and Cook County, as it relates to Sulfur Content.

We will appreciate the opportunity to review this matter with you and obtain your comments and counsel.

Very truly yours,

BYRON S. WEIL,
President.

TORCO OIL CO.,
Chicago, Ill., April 6, 1970.

Congressman DANIEL ROSTENKOWSKI,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN ROSTENKOWSKI: We at Torco Oil Company of Chicago, ask for your assistance for an urgent and serious matter!

Thursday, April 16, 1970 at 10:00 a.m. we are to appear before the Oil Import Appeals Board to request that we be granted an allocation to import No. 6 fuel oil. We understand that you as a Congressman, in such matter, regularly express support for your constituents, when you believe the cause to be a good one.

We now find ourselves in a "squeeze". The City Council of Chicago adapted amendments to the Air Pollution Control Ordinance. When they become law and go into effect on July 5, 1970, the first amendment limits sulphur content of coal and oil to 2.5% by weight. The State of Illinois is contemplating a law which would limit sulphur content by weight to 1.5%. With many coal burning plants converting to residual fuel oil because of these controls, the demand for residual fuel oil has greatly increased coupled with the major oil companies no longer making residual fuel oil domestically in the amounts to satisfy demands.

Approximately 90% of our business is done in the Chicagoland area. There is a severe likelihood, if not a certainty, that it if we are unable to supply our customers, we will lose them forever. Being the largest independent supplier of residual fuel oil in the Chicagoland area, approximately forty jobber companies we supply, plus City, State and Federal Institutions, such as the Chicago Housing Authority for the past two years, and City, State and County Facilities through jobber customers.

It is ironic that the entire East Coast is able to import residual fuel oil without restriction. Why should this be so, while the Midwest cannot get any in the period of severe shortage?

We would be deeply grateful to you, for any assistance you can give.

Sincerely,

ANTHONY M. TORTORIELLO,
President.

CARSON PETROLEUM CO.,
Chicago, Ill., June 9, 1970.

Hon. DANIEL ROSTENKOWSKI,
Congressman,
Chicago, Ill.
Attention: Mr. W. Nega.

DEAR SIR: This company is seriously concerned with the impending energy crisis confronting our industry for the winter season 1970–1971, as outlined to you in a letter from Mr. Byron S. Weil, president of Oils, Incorporated dated June 15th, 1970.

We the Carson Petroleum Company have contracts with the United States Government to supply the following grades of fuel oils and the quantities shown for the shipping period May 1, 1970 thru April 30th, 1971:

[In gallons]

No. 2 fuel oil	480,700
No. 5 fuel oil	2,000,400
No. 6 fuel oil	4,681,300
Total quantities on contract	7,162,400

The government contract number to cover these quantities is DSA-600-70-D-1084. The greater portion of the gallonage is to be delivered to various destinations within the Metropolitan Chicago area and must have a maximum sulphur content of 1%.

We firmly believe that the requirements of the United States Government are just as important as the requirements of utilities and steel companies and warrant even prior consideration in the importation of residual oils. Lack of supply of import residual oils might seriously handicap our shipping performance against schedules from the government during the season 1970–1971.

Very truly yours,

CHARLES W. EPHGRAVE,
President.

CEMENT TRANSIT CO.,
Cleveland, Ohio, June 16, 1970.

Hon. DANIEL ROSTENKOWSKI,
Congressman,
Chicago, Ill.

DEAR SIR: Last Friday, June 12, 1970, I was pleased to attend the meeting at the Federal Building with yourself and people in the Chicago area interested in the critical energy shortage that exists today. We, along with many other consumers of Number 6 fuel oil, are indeed alarmed at both the supply and the cost of this product.

Having a Great Lakes steamship that is run on residual fuel, we have the knowledge that this shortage is severe in at least the entire Great Lakes area and something must be done to allow the importation of this product into this zone. I certainly would think you will be able to gain support from other Congressmen and Senators in this area to help our cause.

I was certainly honored to meet you last Friday and I am confident you will be able to help the situation in Chicago and by doing this, help the entire Middle West portion of our country.

Very truly yours,

ROBERT B. SECRIST,
Marine Manager.

[From the Wall Street Journal, Mar. 5, 1970]

NEW RUCKUS ON FOREIGN-OIL IMPORTS TO PIN NIXON BETWEEN POLLUTION ISSUE, COAL GROUPS

(By Burt Schorr)

WASHINGTON.—Last Month, President Nixon sidestepped a possible collision with the oil industry over a Cabinet task force proposal to replace existing oil-import quotas with a system of tariffs. He adroitly delayed final action, possibly until after Election Day.

A new foreign-oil ruckus is heading Mr. Nixon's way, this time involving the coal industry, and it's doubtful the President will be as lucky in finding a safe neutral corner.

The conflict—currently working its way toward the White House through the Oil Import Appeals Board deep in the Interior Department—grows out of a request by Commonwealth Edison Co. to import foreign residual oil to fuel its Ridgeland generating station just outside Chicago's city limits. When Mr. Nixon approaches this question, however, he'll find his Administration uncomfortably pinned between two larger and politically more troublesome issues.

AIR POLLUTION RHETORIC

On one side is the credibility of Nixon Administration rhetoric about wanting to clean up the environment. Commonwealth, to meet a 1970 commitment to help improve the quality of the air Chicagoans breathe, wants to substitute low-sulphur-content imported oil or the high-sulphur-content domestic coal currently being burned at Ridgeland. Thus a rejection of the utility's import application could be interpreted as meaning the Nixon Administration really doesn't care much about clean air. Deferring final action—as was done on the task force proposal—could lead to much the same interpretation and hurt Republicans in the fall election.

On the other side are the coal industry and the fact that existing oil-import regulations dating back to 1959 have permitted only a relative trickle of foreign residual oil (the molasses-like end-product of some refinery

process) into the important 15-state mid-continent region known as District II, which includes Chicago.

Coal representives argue that once this barrier is breached, many other District II coal burners with air-pollution problems will flock to Washington to obtain foreign oil rights for their plants—the substantially higher cost of oil notwithstanding. This would mean a serious setback for coal demand in the 15 states, which currently accounts for more than half of total yearly U.S. coal use. As a result, the coal argument runs, promising techniques for removing most of the sulphur from stack emissions of coal-fired plants will languish for lack of interest and investors will be leery of risking their money in development of new coal mines.

COAL-INDUSTRY OPPOSITION

A number of Capitol Hill heavyweights from the coal states whose views can't easily be ignored by the White House, already have been mobilized behind these arguments by the National Coal Policy Conference and the National Coal Association, two major industry lobby groups. Together with the United Mine Workers union, they represent the chief formal opposition to the Commonwealth Edison application.

Rep. Edmondson (D. Okla.) chairman of the House Mines and Mining Subcommittee, for example wrote the Oil Import Appeals Board that "the precedent-shattering nature of Commonwealth's application if approved, will have seriously harmful effects upon our country's economic posture and national security. Apparently Commonwealth has not concerned itself with the far-reaching effects approval of their application would have on similarly situated industries. . . . It is difficult for me to see how the many, many additional applications which would inevitably follow could be treated differently."

For the oil import board, at least, such appeals don't seem to have had much effect. The panel's chairman, Lewis Flagg III, an Interior Department employe, hasn't released the Commonwealth ruling. The board's other two members, Stanley Nehmer, Deputy Assistant Commerce Secretary for Resources, and Paul H. Riley, Deputy Assistant Defense Secretary for Supply, who constitute the necessary majority, have signed a finding that the utility is faced with "exceptional hardship" and should get 4.5 million barrels of imported residual oil in the 12 months starting April 1.

OPINION DISMISSES OBJECTIONS

The majority opinion dismisses coal-industry objections and seems to open the door wide to other foreign-oil applicants. The opinion states that the "basic issue . . . is not one of coal versus oil since the petitioner has made a decision to discontinue burning coal as a basic fuel at the Ridgeland station under any circumstances." The opinion notes that Commonwealth did get a belated offer of domestic residual oil from Standard Oil Co. (Indiana), but this fuel would contain 70% more sulphur than the foreign oil and cost a third more.

A formal appeals board decision, however, will represent only a first step through the oil import labyrinth for Commonwealth. Next, it's up to Interior Secretary Hickel to lift the ceiling on residual oil imports into District II, currently set at a mere 219,000 barrels yearly. Presumably such action first would have to clear the President's new interagency committee on oil import policy and perhaps the White House itself. Routine issuance of an import license by the Oil Import Administration would follow.

Interior Department officials doubt, though, that this emergency relief procedure, provided under the original Eisenhower oil-import proclamation, is the proper way to handle the backlog of additional residual-oil applications building up rapidly in the appeals board office. So far, District II import license requests totaling more than 25 million barrels (equivalent to about six million tons of coal) are on file.

EXTENT OF DEMAND UNCLEAR

Just the other day, for example, Detroit Edison Co. asked for 3.5 million barrels in the 12 months beginning April 1 to provide back-up fuel for its Delray station. The plant normally burns pollution-free natural gas, but increasingly tight supplies of that energy source have increased the periods when its gas is diverted to home use. More critical, the utility says, is the fact that domestic refiners from which it formerly purchased residual oil aren't any longer offering to supply it.

There are strong indications, moreover, that the full extent of demand for foreign residual oil in the 15-state region has only begun to reveal itself. One District II case presently before the Oil Import Appeals Board involves a group of 12 oil-terminal operating companies, which hasn't specified how much residual oil its members would like to bring in. Elmer L. Hoehn, a member of the law firm representing the terminal operators (and formerly oil import administrator in the Johnson Administration) says his clients are still canvassing their customers' needs. Preliminary findings suggest that dozens of new local air ordinances will require "tens of millions" of barrels of foreign residual oil to satisfy them, Mr. Hoehn comments.

For the long term, it's obvious that the Administration must at least consider a broad policy change designed to make heavy industrial fuel oil as easy to obtain in District II and other districts as it is currently in the 16 eastern seaboard states comprising District I.

In prior years, when the environment wasn't a major issue, residual oil use hinged largely on its transportation costs. Because it had easy tanker access to Venezuelan refineries, therefore, District I started out under the import program with an "historic" right to import vastly more fuel oil than all the other districts combined. In 1966, controls on foreign residual oil into District I were loosened to the point that, in effect, importers could bring in all they were able to sell.

The recent report of the Cabinet task force on oil-import control indicates broad support already exists within the Administration for opening the entire country to foreign fuel oil. The panel majority, representing five of its seven members, questioned the rationale of allowing imported heavy oil access to one region but not others. It said this inequity would be ended in the overall change to a tariff system. The minority members, Commerce Secretary Stans and Interior Secretary Hickel, also suggested that "consideration should be given to applying (District I) policy uniformly across the U.S.," even though the two dissenters would retain other features of the present quota system.

Most Venezuelan and U.S. crude oils actually leave the ground with sulphur levels close to those in coal, and the troublesome mineral eventually ends up in the residual product. However, there are well-established commercial processes for desulphurizing oil—an advantage coal still lacks. A number of companies currently are working on ways to remove sulphur dioxide, the gas produced when high-sulphur-content coal is burned, but many experts in the field believe it will be at least several years before all of the wrinkles are out of these techniques.

[From the Energy Division of the New York Chase Manhattan Bank, Apr. 30, 1970]

THE PETROLEUM SITUATION IN MARCH 1970

DEMAND

The slowdown in the growth of the economy, which has received widespread attention in recent weeks, is certainly not reflected in the demand for petroleum products. The over-all demand gain in March was 6.9 percent above the year-earlier level. For the first quarter of 1970, the gain amounted to 5.2 percent, 800,000 barrels a day.

This rate of growth is higher than most oilmen have been forecasting for the year as a whole. The additional strength can be traced to substantially higher demand for residual fuel which was nearly 10 percent in March, and over 9 percent in the first quarter. Part of this growth undoubtedly reflects the colder than normal weather during the first quarter of 1970. The effect is twofold. Existing customers, of course, use more oil in colder weather. In addition, consumers who normally buy natural gas on an interruptible basis, found their supplies severely limited this winter, due to the shortage of gas. In consequence, they turned to fuel oil to a greater extent than they have ever done in the past. Of perhaps more importance than the weather is the effect of air pollution control regulations. This subject is discussed in more detail later in this report. Suffice it to say here that one outcome of these regulations has been to cause some consumers of coal to switch to residual fuel.

After a slow start early in the year, gasoline demand came back strongly in March and posted a 10 percent gain. This was enough to bring about a 5.3 percent increase above the year-earlier level for the first quarter as a whole. The second most important transportation fuel, jet grade kerosene, also performed strongly, registering an 11 percent gain both in March and for the first quarter of 1970. The residential and commercial uses of kerosene failed to equal the year-earlier level during the first quarter. Distillate fuel oil demand grew moderately, at about the rate anticipated for the year as a whole.

SUPPLY

New supply declined in March by 167,000 barrels a day below the February level, as a result of lower imports. Domestic production was continued at the same rate as in February. All classes of imports were lower in March than in February with the largest drop recorded by residual fuel oil.

Production of crude oil in the United States during the first quarter of 1970 was over 600,000 barrels a day above the year-ago level. More than half of this increase—380,000 barrels daily—occurred in Texas. It is important to note, however, that a much greater boost in the allowable production factor was needed to achieve this increase in production than was the case in earlier years. For example, the biggest first quarter increase in Texas production since the end of World War II occurred in 1951. In that quarter, production was raised by 686,000 barrels a day and required an 18 percent increase in the allowable production factor. In 1959, a 3 percent rise in the production allowable brought forth an extra 259,000 barrels a day. In the first quarter of 1970, on the other hand, the production allowable factor was 68 percent—24 percent above the year-earlier level. These numbers suggest that a further boost in production of the same magnitude as occurred this year would lift the allowable factor right up to the 100 percent level. And such an increase may only be one year away.

INVENTORIES

At the end of March, the over-all level of stocks amounted to 907 million barrels. The 15 million barrel drawdown of defined products in storage was partly offset by a 5 million barrel increase in crude oil stocks.

Gasoline stocks, although 12 million barrels higher than a year ago, represented fewer days' supply than in March, 1969. Kerosine and distillate stocks were also higher than a year ago, with the excess located in the East and West Coast regions. Residual fuel oil stocks were lower it all parts of the country, but most of the difference, relative to a year ago, was on the West Coast.

PRICE

The last few days of March saw the beginning of a general price increase for gasoline. As usual, this event received widespread unfavorable comment in the press. To see this move in perspective, it should be noted that during the first quarter of 1970 the average of retail gasoline prices in 52 cities around the nation was below the year-ago level. At the wholesale level, gasoline prices at the end of March were equal to, or below, year-earlier levels in the West Coast, Interior and Gulf Coast markets. Only in the east were they slightly higher.

Kerosine and distillate fuel prices declined moderately in the Gulf Coast market during March, and distillate was also priced lower in the Mid-Continent region. This is a normal seasonal movement, reflecting the end of the peak period of demand for heating oils.

In a contra-seasonal change, however, prices for residual fuel oil rose by 5 cents a barrel in the east, and by 25 cents a barrel on the West Coast. Stimulated by strong demand, particularly for low sulphur fuel, prices for residual fuel are firmer now than they have been for many years. (G. J. Shuttlesworth.)

POLLUTION CONTROL AND FUEL SUPPLY

Since this nation changed from an agricultural economy to the greatest industrial power in the world, the use of fuels to serve the various energy markets has grown enormously. Indeed, it is the intensive use of energy that has permitted the attainment of such an advanced level of industrial achievement. In the race for productivity, however, we have paid insufficient attention to the protection of our environment.

In consequence, the price that we are paying for our high standard of living, with its correspondingly high use of energy, is an increasingly unacceptable amount of pollution of our air and water resources. All segments of society are agreed that this situation must be corrected. The disagreements arise over the means to achieve this end. The purpose of this article is to consider in terms of the effect on our future supplies of energy what has been done in the fight against air pollution thus far, and what has been proposed.

There are two main forms of air pollution. The first is the emission of particulate matter, which can be readily observed by everyone, and which is probably the less harmful of the two, besides being the more easily controlled. The second, and more insidious form, is the contamination of the atmosphere by various chemical compounds. In the area of industrial air pollution, the main emphasis to date has been on the elimination of sulphurous compounds, principally sulphur dioxide. A more serious source of air pollution, representing half of the measured amounts, is the noxious compounds emitted by the exhaust systems of our various modes of transportation.

The elimination of these two forms of air pollution can be approached from two separate angles. In some cases the problem can be solved by the removal of the pollutants from the fuels before they are burned. Alternatively, the devices in which the fuels are burned can be modified to prevent the pollutants from being discharged into the atmosphere. Either method must inevitably lead to higher costs, since it must be presumed that in the absence of pollution control techniques industry was operating at the lowest level of costs attainable.

In view of the competitive nature of our society, it is not reasonable to expect industry to adopt air pollution control techniques voluntarily. To be sure, some firms will always take the lead in this kind of activity, but in so doing, they are immediately put at a disadvantage in terms of costs compared with those of their competitors who sit back and do nothing. Government, as the representative of the people, has a role to play.

There are those who believe that government should control the composition of our various fuels and the uses to which they may be put, but this approach has the disadvantage of introducing unnecessary rigidity into the efforts to fight air pollution. This is a new field of endeavor, and it would appear preferable to give free rein to this nation's great innovative ability. Let all possible solutions be examined with government acting as coordinator. In order to put the spur to industry's efforts, government should set goals and establish an appropriate timetable, but in this regard great care should be exercised to ensure that the timetable allows adequate time for the best solutions to be found rather than plunging the nation into a series of very costly crash programs.

The first air pollution control regulations imposed in this country have been directed toward the elimination of the 37 million tons a year of sulphur dioxide that is released to the atmosphere. And, in this instance, government has chosen to limit the sulphur content of the fuel before it is burned, rather than tackling the problem of eliminating the sulphurous gases produced by combustion.

These regulations have had a serious effect on the domestic coal industry. Although this nation has tremendous reserves of coal, these reserves vary considerably in quality, in location, and in sulphur content. Each grade has developed its own particular niche in the over-all market, and substitution of one grade for another is, in general, neither practical nor economic. Moreover, it is not feasible to improve the quality by removing sulphur from the coal before it is burned. Substantial reserves of low-sulphur coal exist, but current production from these reserves is largely committed to the steel industry and to export markets where it commands a premium price. There is very little available for use by coal's largest customer—the electric utility market.

In this fast growing market coal's share declined from 54 percent in 1967 to 51 percent in 1969, as many electric power plants, particularly in the east, turned from coal to other fuels. The most desirable fuel, from the point of view of air pollution, is natural gas, but supplies of this product are not plentiful enough to permit an expansion of its use by the electric utility industry. Moreover, in those areas where coal is widely used, gas is a very expensive alternative. Electric utility management has therefore turned to residual fuel oil to fill the void.

Residual fuel oil has traditionally been a high sulphur product, but, unlike coal, it can be further processed to remove most of the surphur. This is an expensive undertaking and the resultant product must inevitably be priced considerably above the level of high sulphur fuel oil. Low sulphur fuel oils can also be produced, of course, from crude oils which themselves have a very low sulphur content, but crude oils of this quality are not available in the western hemisphere. It would be imprudent, to say the least, to depend too heavily on low sulphur fuel oils from unreliable sources for a market as vital to our economic well-being as the production of electricity.

Because, in the past, ample supplies of underpriced natural gas were made available to industry, the market for domestically produced residual fuel oil dwindled. Domestic refiners could not profitably produce this product and sell it in competition with natural gas. In consequence, imports played an increasingly important part in the supply of residual fuel, and now account for two-thirds of the total supply across the nation. Since these imports are, in fact, concentrated in the east coast region of the United States, they account for almost 90 percent of the supply in that part of the country. Recently, there was evidence of an increased demand for residual fuel oil in the mid-western section of the country, where several companies have applied for licenses to import low sulphur oil, due to lack of alternative fuels which met air pollution control regulations.

Economics still do not favor a return to domestic residual fuel oil, so, to the extent that low sulphur fuel oil is the only available product capable of meeting air pollution control regulations, we must accept the fact that this segment of our energy needs will have to come increasingly either from foreign refineries or from plants located in the United States, but which are permitted to utilize a foreign feedstock. Even with the full use of foreign capacity, supply relative to demand is likely to remain tight, and there will be few bargain prices around for this product.

The question of ways and means to eliminate vehicles as a source of air pollution is still under discussion in government. Proposals have been made that gasoline be replaced, as our chief transportation fuel, by cleaner burning products such as propane or natural gas. While these products might be acceptable from a technical standpoint, limitations of supply make them impractical alternatives to gasoline. This nation's current gasoline consumption amounts to almost 12 trillion cubic feet a year in terms of natural gas. At a time when there is great doubt that present gas markets can be significantly expanded, it would appear out of the question to add a new market that is already more than half as large as the total natural gas market in this country, and which, if added to the existing market, would increase demand by more than 50 percent.

Most of our propane supply is extracted from natural gas, and currently amounts to three-quarters of a million barrels a day. There is not the slightest possibility that this source of propane could ever yield sufficient material to enable it to replace gasoline as our principal transportation fuel. In the battle against air pollution by vehicles the internal combustion engine may undergo considerable modification, or it may be scrapped altogether. But one thing is virtually certain and that is that petroleum products will continue to power the automobile for the foreseeable future. For over half a century, the refining industry has been geared to produce gasoline as its most important product. This situation cannot be changed overnight. Indeed, up to the present no practical alternative to gasoline has even been proposed. And if one were agreed upon in the near future, it would take well over a decade before such a product could be made available in sufficient quantity to satisfy the market. Enormous amounts of money would need to be invested to bring about such a change, and this investment would have to be recovered from the motorist in the form of higher prices.

Cleaner air is a most worthwhile goal and one that we cannot abandon, but in working toward that goal we must not lose sight of the cost, both in monetary terms and in terms of security of supply. (John D. Emerson.)

[From the Wall Street Journal, June 2, 1970]

POWER CRISIS: A SHORTAGE OF ENERGY THREATENS INDUSTRIES AND HOMES ACROSS THE UNITED STATES—DEMAND ALREADY TOPS SUPPLY IN SOME AREAS—ELECTRICITY, GAS, COAL, OIL ALL TIGHT—FOR SOME: LONG, HOT SUMMER

(By Thomas Lindley Ehrich)

This country—an insatiable, power-consuming culture of electric toothbrushes, power lawn mowers, gas-fired barbecues and air-conditioned homes with electric garage

doors—is suddenly faced with a broad energy shortage.

For the first time in history, the nation's energy supply is failing to keep ahead of the ever-growing demand. America's factories and consumers are increasing use of electricity, natural gas, coal and other fuels faster than the suppliers of energy can boost the output. Some analysts see the problem as temporary, but others view it as a historical turning point in which the energy resources that always have been taken for granted become a limiting factor in national growth.

The impact of this "energy gap" is spreading through industry and is beginning to touch consumers. Its scope and seriousness are emerging in scores of scattered but related symptoms:

—Fuel and power shortages are interrupting factory operations, increasing manufacturers' costs and hurting their profits. The shortages also are influencing corporate plant-location decisions and crimping industrial-expansion hopes of some areas.

—Consumers and homeowners are being threatened with less-reliable utility service, including the prospect of summer power failures. While rates rise and service grows chancier, some are beginning to wonder whatever happened to Reddy Kilowatt, that nearly vanished symbol of cheap, dependable, instant electricity.

—Utilities are cutting back on promotions they traditionally have used to increase their business. New York and Philadelphia power companies, for instance, have stopped promoting air-conditioner sales. Meantime, utility executives are scrambling to boost capacity and are hoping for breaks with the weather.

"CRISIS AMID ABUNDANCE"

The problem worries Washington officials. "What we have is a crisis amid abundance," declares S. David Freeman, director of the energy-policy staff of the White House Office of Science and Technology.

As the Federal Government's top planner in the energy field, Mr. Freeman lately has been raising provocative questions: Though doubling of power use every decade always has been a sign of progress, isn't it now a "mixed blessing"? Aren't utility salesmen "doing a better job than the producers"? Should utility rate structures, which have always favored the big customers (the more you use, the lower the rate) be changed to "flat or even regressive," which would penalize bigger volume users?

Some experts speculate that the energy gap, if it persists, will have major, long-range consequences. "Lack of energy is going to start inhibiting our economic growth and perhaps our standard of living," says E. F. Andrews, purchasing vice president of Allegheny Ludlum Industries, Inc., a steelmaker.

"You may have some industries that will be operating seven or eight months a year" due to energy shortages, speculates Robert M. Fletcher, Armco Steel Corp.'s director of raw materials purchasing.

THE GOOD LIFE

Presidential adviser Freeman suggests that the affluent society might have to curb its appetite for more goods that consume energy. "Electricity has helped bring the good life to many Americans," and it isn't possible to stop its growth, but "the rate of growth . . . is subject to discussion and action," he remarked in a recent speech.

The energy gap stems from what Mr. Freeman calls a "runaway market" for energy at a time when suppliers have been hit with a multiplicity of troubles ranging from construction delays and labor strife to bad weather and antipollution crusades that stall projects.

One big problem is that energy suppliers simply underestimated growth in demand. For many years, energy use had been growing at about 3% a year, but starting in 1965 demand growth jumped to 5% annually. Especially startling were the 9% annual spurts in electric-power use in 1968 and 1969.

The pinch affects all major sources of energy and has become an interlocking problem. Thus, attempts to switch from one energy source to another seldom help.

A lag in natural gas exploration, which producers blame on prices set "unrealistically" low by Government regulators, is tightening supplies. For the past two years, consumption of gas has outrun new discoveries, which puts a drain on the nation's gas reserves. Some major pipelines are strained to capacity. Last winter's extreme cold severely depleted supplies at some storage areas.

Coal shortages stemming from recurring labor trouble at the mines, a crackdown on mine safety that has closed some mines and a lag in new mine openings, have grown severe. Mining concerns are unable to boost production quickly, and users' stockpiles have greatly dwindled.

AN ILLUSTRATION

Antipollution pressures are affecting demand as well as supply. "Companies we've been trying to sell gas to for years without much success are now knocking at our door wanting gas to substitute primarily for coal," which pollutes the air more, says Robert E. Seymour, executive vice president of Consolidated Natural Gas Co. The company, like other gas distributors, can't fill all the orders. Similar requests are inflating demand for low-sulphur fuel oil, which also has become hard to get.

The severe disruptions that this situation can cause a big energy user can be seen in the case of PPG Industries, Inc., the Pittsburgh-based maker of paint, chemicals and glass.

This winter, PPG's glass division had gas service reduced at various plants on two dozen occasions; utilities had curtailed service to industrial customers to keep pumping fuel to homeowners on extremely cold days. In some cases, the PPG plants had to close and send workers home, and in others the plants hastily switched to fuel oil or liquid propane to keep operating—but that caused product-quality problems such as flaws in the glass, company officials say.

The cold-weather woes are behind it, but PPG is now is faced with hot-weather problems. John White, a vice president of the PPG glass division, says one major utility that supplies electric power to the plants recently called to ask what operations the company could close down in the event of power shortages this summer. So now the division, which has disaster plans for storms, fire and war, has had to draw up one for "a call from the electric company," says Mr. White.

That's not all. PPG is expanding its three fiber glass division plants, but it can't get gas to run the expanded plants. Facing the prospect of letting big new facilities sit idle, the company is considering the possibility of installing costly equipment, to use liquid propane or fuel oil—but both would be more expensive than gas and the changeover could delay the start-up of the facilities, officials say.

To top it off, PPG's fiber glass plants in Shelby and Lexington, N.C. just got a letter from Duke Power Co. saying their rates will be rising 18% because the utility, to fight pollution, is buying more-expensive low-sulphur coal to power steam generators.

A DRAIN ON EARNINGS

As the PPG case illustrates, the energy shortages can hit companies in many ways. It all adds up to another drain on profits. In reporting first quarter earnings this year, several companies blamed declines partly on higher fuel costs and on plant shutdowns due to gas shortages. U.S. Steel Corp., Koppers Co. and Republic Steel Corp. were among these companies.

Lukens Steel Co. blamed part of its 40% drop in first quarter earnings on operating troubles caused by fuel shortages. Out of 84 operating days in the first quarter, Lukens' gas supply was cut by as much as 45% on 26 days, forcing cutbacks in operations. "We certainly feel very strongly that there's a general energy shortage," says W. E. Mullestein, Lukens' president.

The gas shortage was one reason Armco Steel recently decided to build a steel plant in Texas—where gas from nearby fields is plentiful—rather than in the Midwest, where supplies are tight.

A number of gas suppliers have told industrial customers they're clamping a lid on new business. Usually, that means any customer can expect to receive only as much gas this year as he received in 1969. Some utilities are actually cutting back. Pittsburgh's Peoples Natural Gas Co., a unit of Consolidated Natural Gas, is holding industrial gas deliveries this year to 10% below last year's level.

The gas gap could hurt some communities' efforts to build up local industry, utility executives concede. UGI Corp., a Philadelphia-based gas distributor serving eastern Pennsylvania, figures that its need to exercise "selectivity" in taking on new business "will discourage industries from moving into the area," comments W. C. McElroy, vice president for operations.

While shortages of gas, fuel oil and coal are primarily affecting industry, consumers will feel the effects of the electric power pinch.

The strain on electric capacity could become severe this summer. "If we have a hot summer, people will really be astounded at the amount of outages that will occur," predicts Robert M. Taylor partner of R. W. Beck & Associates, a consulting firm for utilities. "Utilities are hoping for a cold summer."

In many places, utilities' reserve generating capacity is precariously low. "Generally speaking, electric utilities are all sort of treading on the edge of a precipice," claims one industry analyst.

The Federal Office of Emergency Preparedness, which normally worries about such things as nuclear holocaust and natural disasters, now is worrying about power failures. A recent OEP study identified numerous areas of the country where reserve electric capacity is dangerously slim. These areas include New York City, Chicago, St. Louis, Minneapolis-St. Paul, the Pennsylvania-Maryland-New Jersey area and all of the Southeast except Florida.

(Some utilities say their reserve position is stronger than the OEP figures indicate, but the utilities generally are counting new or unproved generating capacity that the OEP contends can't be relied upon.)

Some customers in these areas can't be sure their air-conditioners will keep humming through summer's heat waves. If power demands begins to strain capacity of New York's Consolidated Edison, for example, Con Ed plans to ask customers to turn off air-conditioners when nobody's home, to keep lights off during the day and even to stop opening and closing the freezer door so often—all to curb the power drain.

LOAD SHEDDING

Other strain-easing steps at Con Edison will include reducing voltage, which could cause light bulbs and motors to function inefficiently, and asking large industries to cut back their power use.

If such steps fail, the utility will turn to what industry men call "load shedding"—which simply means your power gets cut off

temporarily if you're in the area that's "shed." According to a plan adopted by the Public Service Commission of New York State, the blacking out would be done at substations, indicating large areas would be affected. Asked to give an example, Joseph Swidler, PSC chairman, replies: "Well, for instance, we might black out Westchester County"—a suburban area of about 900,000 residents.

Analysts say the Pennsylvania-New Jersey-Maryland power area is in worse shape than New York. Elaborate power pools designed to enable, say, Con Ed to buy excess electricity from as far west as Illinois will provide some relief this summer. But with capacity tight in nearly all Eastern states, a heat wave hitting several cities simultaneously would nullify these power-exchange arrangements.

The answer to the energy gap may be simple economics—making energy cost enough to encourage conservation in its use and greater investment in energy facilities. Presidential adviser Freeman suggests that a rate structure that increases according to volume used would help curb indiscriminate use of electric power, such as the practice of letting air-conditioners hum around the clock when they're not really needed.

"If energy began to cost more, people would think of better insulation, building houses to utilize the heat of the sun" and other steps to conserve energy, Mr. Freeman says.

Whether or not anything as drastic as a "regressive" rate structure materializes, it's clear energy costs will rise sharply as energy suppliers absorb higher costs and expand facilities to overcome shortages. Utilities have greatly increased the pace and amount of rate boosts over the past year or so, and many more increases are probable. Environmental considerations will boost fuel costs, too, as more users are pressured into switching to higher-cost, cleaner-burning fuels. Coal companies unable to keep up with demand and hit by higher costs due to new safety rules are making price boosts that industry sources figure may total 30% or more by year's end.

TONE OF THE MARKET: MOST AREA PRICES UNSTEADY

While the gasoline market place sputtered and assumed a topsy-turvy posture price-wise throughout most of the country last week, main actors on the petroleum product stage continued to be residuals and distillates.

Residuals which used to be practically give-away products (Number 5 and Number 6 fuels) are now in heavy demand. In fact, sources appear concerned about availability of supply next winter. Present stocks are over 45.5 million barrels or 25.8 percent under the inventory situation that existed this time last year. Reason for this significant popularity for product rests on several factors including the much discussed pollution problem. A problem that has increasingly drawn the attention of the public and government at all levels.

The industrial complex which in the main has used coal for fuel power realize that high-sulphur coal will not fit in with growing restrictions on pollutants. Big consumers of fuel for power such as utilities and steel mills are switching to Number 5 and Number 6 fuels. While natural gas is a very suitable power source, the industrial community is concerned about developing shortage of supply and dwindling reserves.

Another factor is that most modern refineries have erected coking plants and use residuals as feedstocks for manufacturing coke. Even some of the older refineries have converted facilities for making this product. With increasing emphasis in recent years toward higher output of gasoline from the incremental barrel of crude, production of residuals has fallen sharply at a time when a sudden appetite for product developed.

The transition between manufacture of residuals and coke is based on economics. Any large conversion phase is expensive and refiners must look at both sides of the coin to evaluate action.

As to distillates, present inventories are a little under 3 million barrels or 2.8 percent over this time last year. Stocks of product on the Gulf Coast are reported to be 1.25 million barrels under the same period last year with majority of product stocks now sitting on the East Coast. Prices of distillates, which are increasingly being used as a cutting fuel to blend with both Number 5 and Number 6, are reported solid with little or no discounting, and sources believe this situation will continue throughout the summer.

There is some talk in the field that an increase in foreign product quota may be necessary to meet needs of consumers, particularly next fall, but this probability is apparently one of speculation.

Meanwhile, gasoline markets can only be described as restless. Some price restoration moves in recent days appear to have held up while others have faltered. The Group 3 wholesale market dropped another 0.25 cents last week to a level of 11.75 cents.

In action at weekend, Continental Oil Co. announced that effective Friday, June 4, it eliminated temporary dealer allowances in Minneapolis-St. Paul to return normal dealer tank wagon level of 18.9 cents which supports suggested retail price of 37.9 cents for regular. Effective the same date, Conoco eliminated temporary dealer allowances in Oklahoma City, returning to its normal tank wagon price of 18.2 cents for regular which supports suggested retail of 35.9 cents. Prices had been as much as 8 cents off normal in that city.

In Tulsa, some independents were reported lowering their prices at the pump by as much as 5 cents. The majors were said to be holding the line at weekend.

TONE OF THE MARKET: RESID SUPPLY TIGHTENS

Extremely sharp buyer interest for residual fuel on the Eastern Seaboard continues, with the open market reported practically nonexistent. Supply of product is considered very tight with no relief in sight.

With this situation present at this time of year, observers are fearful of market conditions next fall. While showing a small percentage increase over last week, residual stocks continue to be considerably below inventories on hand at this time last year. Stocks are approximately 14.5 million barrels or 23.4 percent down.

The tight supply situation also exists in the Midwest, with resulting price strength. Buyers are eagerly seeking product. General feeling is that buyers will buy every barrel they can get their hands on.

Despite the fact that distillate stocks are over 4 million barrels or 3.7 percent over last year, price firmness of product is reported steady in all sectors of the country, with apparently no signs of any decline in the summer months.

Meanwhile, gasoline price improvement continues to accelerate, with major suppliers announcing almost daily the withdrawal of dealer allowances in spreading areas of formerly depressed markets. Gasoline stocks are currently at the 14 million barrel plus level or 7.1 percent over last year.

Motor gasoline demand during the February-April period of this year continued strong, averaging more than 5.5 million barrels daily, 308,000 or 5.9 percent higher than in same months of 1969. This figure should rise appreciably during the May-June period.

Gulf Oil Corp is removing dealer allowances in most of its marketing territory, with the exception of spotted areas, including Montana, Michigan, northern Illinois and Wisconsin.

American Oil Co has removed dealer allowances throughout Illinois. The move was effective at 5 PM Wednesday in all areas except Chicago; beginning Thursday morning, June 25, allowances were dropped in the Lake County, Ind. and throughout Michigan. Also effective Thursday, American Oil removed dealer allowances in Arkansas, Louisiana, Tennessee and Texas.

OPC SHOOTS DOWN HICKEL'S RESID IMPORT KITTY

(By Jim Collins)

WASHINGTON.—Interior Secretary Hickel's plan to establish a "kitty" of about 10 million barrels for imports of low-sulfur residual fuel oil for utilities in the midwest who can't obtain domestic "clean" fuel for their plants, has been stopped in its tracks by the Oil Policy Committee headed by director George Lincoln of the Office of Emergency Preparedness.

Hickel was ready to move a week ago (see The Oil Daily, June 15), but decided he should check the issue to the OPC. Hickel has authority under the current presidential proclamation to increase the level of residual imports in Districts II–IV at his discretion.

The Oil Policy Committee, however, has decided to take a detailed look at the whole residual import situation, as it might affect the Midwest, sources for the low-sulfur residual, the impact on shipments from Venezuela, the prospect that domestic low-sulfur residual requirements would be met more and more from foreign sources—some outside the Western Hemisphere—and how all of these factors are involved in "national security."

A subcommittee of the Oil Policy Committee has been set up to make the residual review. It is headed by Elmer Bennett, special assistant to Lincoln on oil import policy.

The breadth of the residual investigation indicates that policy recommendations to the White House, and revisions in resid import controls by President Nixon, will not be made for another month or two, despite the high-priority of the study.

Predictions at this early point are that the Oil Policy Committee will not recommend opening the import gates wider for foreign low-sulfur residual for the Midwest—either for utilities or for wholesale marketers who are also seeking import quotas.

The total amount of foreign low-sulfur residual sought by the utilities (some already granted to Commonwealth Edison at Chicago) comes to about 23,000 bd. Commonwealth was granted 3.5 million barrels for the year by the Oil Import Appeals Board, and this was approved by Hickel. Still pending are requests from Detroit Edison, for two million barrels; Cleveland Electric for about one million barrels; and Consumers Power in Michigan for about two million barrels.

Altogether, however, there are "hardship" requests now on file with the OIAB for about 105,000 bd—most of these from Midwest independent terminal operators and other wholesalers who are having difficulty obtaining domestic supplies of residual.

While the utilities and oil marketers are having trouble obtaining the residual they want, the coast industry is arming itself against the threat of a "flood" of imported residual in the Midwest.

After the report, in the Oil Daily, that Hickel was considering a 10 million-barrel kitty of residual for Midwest utilities, the National Coal Policy Conference fired off a telegram to Hickel urging that he hold up

action until "the whole question of fuels and energy" in the area could be discussed with him. They sent a copy of their message to President Nixon as well.

The Coal Conference told Hickel that "utilities are now giving very serious consideration to the construction of full-scale sulfur dioxide removal systems which will allow continued utilization of domestic fuels. Further imports of foreign residual oil would certainly retard this effort."

Some members of the Oil Policy Committee fear that opening the gates for low-sulfur residual would encourage shipments from the Eastern Hemisphere—if the oil is still available—while further depressing the market for Venezuelan high-sulfur residual in the United States.

Another complication is that foreign residual supplies are reported to be tight.

In the U.S., residual supply continued to drop as new hydrocracking equipment at refineries upgrades residual into more valuable products.

While the Oil Policy Committee is not expected to make a recommendation on residual imports to Nixon for some weeks, some officials are willing to predict now that the OPC will not favor opening the import gates in the Midwest for any substantial amount of low-sulfur residual fuel oil.

Rather, they predict, the committee will probably recommend opening the gates on a preferential basis for residual originating from Venezuelan crude oil, or offer bonus crude oil imports, limited to the Western Hemisphere, for imported high-sulfur residual that could be reprocessed in domestic plants to make low-sulfur fuel.

At the bottom of the concern by most Oil Policy Committee members is the very large dependence which now exists on the East Coast by utilities, and others, for foreign residual. If these supplies were reduced, or cut off, by any foreign emergency, some big-city utilities in the East, and other resid markets, would be thrown into a tailspin, threatening widescale brownouts and blackouts and fuel shortages by industrial consumers, apartment buildings, schools and hospitals.

The OPC wants to avoid the development of similar dependency on foreign residual in the Midwest.

It would not be exaggerating, some officials say, to describe the developing residual import situation as the "most sensitive issue involved in oil import national security at this time."

PETROCHEM, RESID STUDY LAUNCHED

WASHINGTON.—The Oil Policy Committee is now cranking up intensive studies of two big oil import issues, with recommendations for action on them expected to go to President Nixon within the next 90 days.

The issues cover imports of feedstocks for domestic petrochemical plants—particularly those owned by nonoil chemical companies—and what to do to relieve the apparent approaching fuel "crisis" facing electric utilities in the Midwest who can't get domestic supplies of low-sulfur fuel oil, coal or natural gas.

The situation has already become so tight that three utilities have appeals before the Oil Import Appeals Board for import quotas of low-sulfur residual—Consumers Power in Michigan, a Cleveland Utility and Detroit Edison—totaling about six million barrels.

Meanwhile, there are indications that top energy and air pollution control officials in the Nixon administration have reached a tacit agreement not to push hard this summer against utility use of sulfurous fuels—fearing this would have a serious impact on generation of electricity, which is expected to fall short of consumer requirements some days this summer, anyway.

As one administration official commented to the Oil Daily:

"What we are rapidly approaching is a confrontation between adequate supplies of electricity and the drive to cut down on air pollution—sulfur dioxide—from use of sulfurous fuels by the utilities and other big consumers.

"It's a question of the immovable object meeting the irresistible force—and there is a growing awareness within the government that you simply can not shut down utilities and other plants just because the technology is not yet available to remove sulfur from stack gases, and supplies of low-sulfur fuels are not available in the quantity required."

With gas short and residual output continuing to decline from domestic refineries—and technology not available to desulfurize stack gases—the only option open is to permit more imports of residual fuel oil in the Midwest, some officials believe.

But, they want to set up a program that will be equitable for all consumers and which will encourage an increase in domestic supplies of low-sulfur fuel oil—and which will not have an adverse impact on Venezuela.

The other big pending issue involves feedstocks for petrochemical plants in the U.S. and proposals by two groups of chemical firms for more imports to meet their requirements.

On this issue, too, it is expected the Oil Policy Committee will recommend opening the import gates wider—but the details still must be worked out.

The issue is so complex that officials believe recommendations to the White House will take several months and will not be ready for action until the next allocation year, 1971.

Meanwhile, the two groups of chemical firms—called the "Petrochem" and "Chemco" groups—have come up with a joint proposal on oil imports which has been presented to the Oil Policy Committee and to Congress.

Under this plan, petrochem producers would have the option on a plant-by-plant basis to elect between two alternatives.

(1) If a plant can not use foreign feedstocks directly it would be granted import allocations based on petrochemical output—up to a level of 20 percent—plus imports for exports of petrochemicals. The company would be granted the right to sell or exchange its imports for domestic feedstocks.

(2) If a plant is able to use foreign feedstocks directly it should be permitted to do so without limitations on imports—based on the amount converted into petrochemicals in the plant. Any flow of fuel by-products from the plant would be controlled under the oil import control program. In addition, plants would have the right to exchange imports for domestic feedstocks on a like-for-like basis. Downstream petrochemical producers who do not actually process feedstocks would be permitted to participate by means of a certificate of petrochemical end-use that would entitle their suppliers to import the petrochem feedstocks involved. This would permit the oil refining industry to operate competitively as merchant olefin manufacturers to sell feedstocks for petrochem use, the chemical companies say.

The Petrochem and Chemco firms assert that such a program would "separate" the petrochemical program from the energy program and "should satisfy the concern of the oil industry that the petrochemical program would result in competition in the energy market from raw materials obtained at world prices."

The chemical firms also argue that their plan would not injure domestic oil producers. The quota option would enable plants using domestic feedstocks to remain competitive and be a market for domestic producers. In addition, plants using foreign feedstocks would be built in the U.S. instead of abroad and their nonpetrochemical operations would create a market for domestic oil that would be lost if the plants were built overseas.

The chemical firms are pushing the Oil Policy Committee to move quickly, arguing that plant investment decisions are being held up awaiting a decision on feedstock costs but that many decisions can wait no longer. But OPC's decision is still several months away.

[From the New York Times, June 29, 1970]

A SHORTAGE OF POLLUTION-FREE OIL SEEN

(By Peter Kihiss)

Suppliers of low-sulphur fuel oil—needed to meet air-pollution controls—report that they probably will be able to fill only 80 to 90 per cent of the demand on the East Coast next winter, according to the city's Environmental Protection Administration.

Announcing an appeal to the Secretary of the Interior to liberalize Federal oil import quotas, Administrator Jerome Kretchmer said last week that large fuel consumers here had already sought permission to return to higher-sulphur fuels if shortages developed.

The higher-sulphur fuels have been blamed for putting sulphur dioxide into the air and for increasing respiratory ail-

ments. Mr. Kretchmer wrote Secretary Walter J. Hickel that "our population now breathes air with sulphur dioxide levels three times higher than those described as acceptable by the Department of Health, Education and Welfare."

KILLING EFFECT ALLEGED

Mr. Kretchmer cited a report by Ralph Nader, consumer protection advocate, as estimating that "air pollution—primarily sulphur dioxide—kills from 1,000 to 2,000 people per year in New York City." The Administrator said "that figure could well double if you do not cut through the politics of oil to protect the health and lives of our urban citizens."

The sulphur content of fuels was limited to 1 per cent last Oct. 1, with a scheduled further cut Oct. 1, 1971 to 0.3 per cent, for residual fuel oil—used in power and other large plant—and to 0.2 percent for distil late fuel oil—used in homes.

In his letter dated last Thursday, Mr. Kretchmer asserted that "the single reason for the shortage of low-sulphur fuel oil" was lack of Federal consideration of air pollution in setting oil import policies.

He said that sufficient low-sulphur fuel oils and natural gas were available abroad and that "vast quantities" of other oils could be obtained for desulphurization—except for the oil import barriers.

BONUS IMPORTS SUGGESTED

Mr. Kretchmer proposed a bonus plan for companies providing low-sulphur fuels, on a principle he said was in effect on the West Coast.

Under this, companies importing a barrel of low-sulphur residual oil or converting a barrel of high-sulphur imported crude oil to low-sulphur residual oil for this region would get a bonus import quota of one barrel of crude oil for each such barrel.

Companies importing natural gas from other countries or Alaska would get a bonus of a barrel of crude oil for every 3,000 standard cubic feet of gas. Crude or residual oil could be imported without limit to be converted to low-sulphur distillate oil.

Meanwhile the state's plans for environmental clean-up moved ahead yesterday, with Governor Rockefeller naming six private citizens to join the heads of nine state agencies as members of the new State Environmental Board. The new appointees are:

Joe G. Moore Jr., vice president of Eastman Dillon, Union Securities & Co., commissioner until last April for the Federal Water Pollution Control Administration.

Charles H. Callison, executive vice president of the National Audubon Society.

William H. Whyte, conservation leader and author of "The Organization Man" and "The Exploding Metropolis."

Dr. Lamont C. Cole of Trumansburg, professor of zoology at Cornell University.

Dr. E. Corrine Brown Galvin of Ithaca, author, teacher and civic leader.

Jerome Wilkenfeld, director of environmental health for the Hooker Chemical Corporation and member of the State Air Pollution Control Board since its start in 1957.

NEW STANDARDS DUE

The six, serving staggered terms, will be paid $100 a day, not to exceed $5,000 a year. They will be joined on the board by Henry L. Diamond, who on Wednesday becomes the state's first Commissioner of Environmental Conservation, and by the State Commissioners of Health, Agriculture, Commerce, Transportation, Local Government and Parks; the chairman of the Public Service Commission and the Industrial Commissioner.

The board is to act on environmental standards proposed by Commissioner Diamond, whose new agency will take over the present Conservation Department and the air and water pollution control responsibilities of the Health Department.

In interviews and a WCBS–TV Newsmakers telecast, Commissioner Diamond said yesterday that 880 of 1,700 water polluters identified by the state in 1965 had either cleaned up their problems or shut down. He predicted that a crackdown on others ordered by the Governor would show results in "60 to 90 days."

The state is pressing for increasing the Federal share of the cost of sewage-treatment projects—a share that Commissioner Diamond said has been only 7 per cent of the total expense. The state last spring appropriated $750-million as advances on the Federal share, Mr. Diamond said.

[From the Oil Daily, July 6, 1970]

INTERIOR RAISES LOW-SULPHUR RESIDUAL IMPORTS IN MIDWEST

WASHINGTON.—Interior Department Friday announced an increase in the level of low-sulphur residual fuel oil imports in the mid-west by 9.5 million barrels for the allocation period of April 1, 1970, to March 31, 1971, with the approval of the Oil Policy Committee.

The increase is restricted to Districts II–IV.

"Potential supplies of low-sulphur fuel oil are not encouraging according to Bureau of Mines information, and the demand during the current allocation period cannot be accurately predicted," Interior said. "On this basis, a departmental decision was made to increase the level of imports into Districts II–IV."

The increase was assigned to the Oil Import Appeals Board for allocations and licenses only on the grounds of exceptional hardship caused by the mandatory oil import program.

"During this period, the department will take aggressive action to develop a program for review by the Oil Policy Committee which will offer incentives to domestic refiners to manufacture low-sulphur residual fuel oil in the mid-west area," Interior said.

The additional 9.5 million barrels of residual is expected to go to utilities who are short of coal and natural gas. Detroit Edison is expected to be allocated 2.5 million barrels out of the "kitty." Quotas may also be granted to a Michigan utility and one at Cleveland.

[From the Oils & Gas Journal, July 6, 1970]

OILMEN TO GET BLAME FOR ENERGY SHORTAGE—UNLESS THEY ACT NOW

This nation is in the midst of an energy shortage. We don't have to wait until next winter. Or 10 years from today.

No less an authority than John Emerson, energy economist of Chase Manhattan Bank, bluntly says: "Never before in this century have we faced such serious and widespread shortages of energy. These shortages are upon us now."

There's one predictable result of this sudden crisis. Someone will get the blame. Guess who? It's a good bet that—when the politicians and the consuming public realize the predicament—they'll rough up the oil and gas industry.

Get ready for it. The critics will charge that as a supplier of 75% of the nation's energy oilmen should have foreseen the crisis and arranged supplies.

Such blame is unfair, of course. Oil authorities predicted the present high-level demand. That's no surprise. But oilmen had little control over the energy trends that account for the shortages.

What's the cause then? Failure of nuclear power to fulfill its expected role is one major cause. Cheap atomic energy was promised in 1964 with the economic analysis on the Oyster Creek plant in New Jersey. The TVA gave an even more glowing analysis 2 years later. As a result, orders for atomic energy generating units jumped dramatically. The electric power industry hailed the advent of the nuclear energy revolution.

These plants should be coming on stream right now. But they aren't. Why? Higher than expected construction costs. Delays in delivery of vital equipment. Bitter opposition to plant sites from neighbors afraid of radiation. Fear of thermal pollution of rivers and lakes. All these factors sent nuclear power costs into uneconomic orbit. The power industry then switched to ordering fossil-fuel plants. But the lost capacity was not recovered.

This failure of nuclear energy to live up to its prospects came at the same time a sudden national concern with pollution imposed unnatural burdens on oil, natural gas, and coal. Sulfur restrictions eliminated large supplies of oil and coal from use as fuel. In addition, the coal industry is suffering a series of nagging strikes that may continue indefinitely. Natural-gas supply, already suffering from low prices, just isn't sufficient to fill the gap.

All this makes it vital that oilmen, first, understand the factors that have brought on an energy shortage. It's then just as important that the industry start now educating the public on the reasons for the crisis.

Unless the consumer is made aware of why he has to suffer economic loss or inconvenience, his wrath easily can result in crippling legislation or adverse administrative decisions.

More political restrictions are not the answer. Instead, incentives to search for new reserves of oil and gas must be restored. The nation must adopt a realistic policy on the environment so that more of the already known reserves of fossil fuels are made available.

It's time now for oil to make its position clear in the energy crisis.

[From U.S. Oil Week, July 27, 1970]

RESIDUAL PRICES MAY ENCOURAGE CONGRESS' PROBE

Residual fuel oil is now worth as much as distillate in the greater Chicago market.

Postings for heavy oil have risen so sharply that agencies around the nation are finding suppliers refuse to respond with bids.

The sole bidder to supply the Elgin, Ill., Public School system was Standard Oil offering 10.55¢ a gallon for 450,000 gallons of regular #5 oil escalating with Standard's daily posting.

Last year Standard won the bid at 7.69¢.

Chicago posted price for low sulfur #5 is 10.5¢ with high sulfur #5 at 10¢ and *high* sulfur #6 at 8.75¢.

In the same market #2 oil is posted at 10.5¢.

The school system rejected the offer and scratched its head.

In the New York area bids for low-sulfur resid have been recorded recently at about $3.50.

Sen. Edward Kennedy (D., Mass.) last week fired off a letter to the President urging:

An emergency meeting of the Oil Policy Committee under the Office of Emergency Preparedness to find out why residual oil is in short supply, and convene a meeting with the oil industry and federal, state and local government leaders to seek a solution.

The Antitrust Division to learn whether international oil companies have been guilty of "collusion" in the present shortage.

Council of Economic Advisers to plan a halt to the residual oil price spiral.

Kennedy asked the White House to take the lead in solving the problem—even though residual imports to the east coast are not strictly controlled—because of the White House's "special relationship" with the oil industry.

Kennedy wanted to know why the oil industry, with its many subsidies and special

benefits allegedly based on national security needs, could allow such a shortage to occur.

Unless the supply picture brightens, he said, a disaster could take place as schools, hospitals and large buildings lose their heat this winter.

Meanwhile two frightened electric power industry executives have been pounding the pavement in Washington looking for heavy oil for their Massachusetts plants.

Both represent city-owned light companies that found no one wanted to bid to supply them #6 oil.

Alban Spurrell, manager of the Braintree, Mass., lighting department, and Francis King, manager of the Holyoke city light company, visited members of Congress and oil imports officials last week.

POLLUTION GOALS SUFFER

Unable to switch to coal (and that's in short supply anyway) and unable to buy natural gas, they sought help to keep the city lights from going out.

Braintree's oil contract runs out July 31.

Suppliers have agreed to come up with oil at prices over $3 per barrel.

The state of Maryland found no bidders to supply heavy fuel oil a few weeks ago.

In Baltimore where 1% sulfur maximum is now the limit, the city school system, with more than 50 coal-burning schools, is negotiating with air pollution officials in hopes of using 2% coal because of the resid shortage.

Formal applications for a "variance" haven't been asked, but they're in the offing.

State air pollution officials are expected to grant them too if the schools and six state-owned buildings agree to switch to oil or natural gas.

Two colleges in northern Virginia recently found suppliers wouldn't bid on their residual needs.

True local air pollution agencies are lowering the allowed sulfur content.

True, natural gas pipelines are cutting back on their dump gas contracts forcing big users over onto the residual market.

True, refiners in the U.S. aren't going to throw away their hydrocrackers and sharply step up production to meet the demand.

Some relief is in sight.

The Oil Imports Appeals Board last week allowed in 7.2 million barrels in the year ending March 31, 1971 in the midwest where you still otherwise can't get a residual imports ticket unless you were importing in 1957.

Even with tickets, marketers will find it tough getting a supply and finding ships to bring it in.

Closing the Suez Canal has caused a big tanker shortage and sky-high rates.

It seems as if the big refiners didn't take the Clean Air Act of 1967 and the natural gas tightness seriously.

If the shortage of heavy oil is truly worldwide and real, in addition to the valid tanker shortage, refiners may pay dearly for their poor planning.

State air pollution officials may be forced into granting exceptions to tightening restrictions on sulfur content to allow big buildings to continue to be heated this winter.

They don't like to do it and may accuse oil suppliers of collusion.

It won't be long before the Justice Department gum shoes start knocking on doors.

Congress isn't going to like the complaints from power, school, industry and apartment officials.

The industry's present public image won't gain from the experience and some of the ill-will may rub off on light oil marketers . . . some of whom find their supplies tight too.

A large segment of the public may get the idea that leaving supply and demand to private enterprise and government controls isn't in the public interest.

A particularly dangerous possibility for refiners and producers is the attempt by some residual-starved buyers is a growing interest in importing crude oil.

If refiners are asking 10.5¢ for the residuum, why not buy unrefined products available at $1.33 in Iraq or $1.27 in Kuwait.

That's about 3¢ a gallon.

As one public power devotee last week argued:

"What good's 'national security' if the lights go out?"

Here are a few recent bid offers from the midwest and east coast:

—Chicago's Transit Authority found *no bidders* to supply 3.2 million gallons of #5 oil and 1,290,000 gallons of #6 regular. Deliveries were to begin Oct. 8. Last year six firms bid.

—University of Illinois was to open bids at deadline for the third time on 8 million gallons of #6 oil "closet" to 2%. Earlier request for bids drew only one response that was rejected.

—Kingston, N.Y., school board found no bidders for 130,000 gallons of #6 oil and settled for 9¢ by negotiation.

—Phillips won a contract to supply Chouteau County, Mont., School Districts 2 and 11 65,000 gallons at 8.665¢ in 7000-gallon drops.

Union Oil, the only other bidder, offered 8.263¢ but Phillips was picked because of its specifications.

—Since no one bid to supply the Putnam, Conn., Housing Authority for 200,000 gallons of #6, negotiations produced two offers, $2.92 and $3.10 a barrel delivered.

Mr. KLUCZYNSKI. Mr. Speaker, I wish to commend my colleague from Illinois for his statement and for his diligent work on this important issue.

Rising concern over air pollution coupled with the oil industry's underestimation of demand will create a shortage of low-sulfur residual fuel oil this winter, industry sources say.

Residual fuel oil—the heavy oil left over after aviation fuel, gasoline, and higher grade products have been refined from crude oil—is used by electric utilities to power generators which produce electricity. It is also used to power industrial plants and to heat schools, hospitals, office and apartment buildings.

What might this shortage mean?

First, higher electric rates. Many utilities have fuel adjustment clauses which allow for rate increases when fuel prices rise. Some companies which do not have such contract provisions, such as Philadelphia Electric Co., are asking State legislatures for them.

Second, industries which can not get sufficient supplies of low-sulfur oil may be forced to choose between shutting down or using a high sulfur fuel and risking fines, an oil industry points out.

Third, municipalities faced with a choice between factory shutdowns and clear air may be forced to suspend low-sulfur limitations of clean air laws.

Industry observers say the speed with which many municipalities enacted strict air pollution regulations caught the petroleum industry unprepared.

The regulations limit the amount of sulfur in fuel. Their purpose is to cut down on sulfur dioxide, which is given off during the burning process.

One result is that many utilities and industries which were burning coal had to find another energy source. Coal is naturally high in sulfur and is difficult to desulfurize.

A $900,000, federally funded project is underway to remove sulfur from coal as it is burned, but this is expected to take at least 5 years.

Another result is that many utilities and industries using residual fuel oil to change to oil with less sulfur.

New York City laws, for example, insist on less than 1 percent sulfur content in fuel oil. Chicago allows 2 percent. Both are lower than the 2.5 to 3 percent sulfur found in much residual fuel oil.

Industry sources report that utilities and power plants are rushing to buy low-sulfur residual oil. They add that the demand is greater than the supply.

Coal was responsible for 51 percent of the electric power generated in the United States in 1969. Natural gas accounted for 23 percent, residual oil for 10 percent, nuclear power for 1½ percent, and hydroelectric power the rest.

I join my colleagues in the House in asking that the President, the Secretary of the Interior, and the Chairman of the President's Oil Policy Committee to use all the power of their respective offices to first, grant the appeals in question; and, second, end the discriminatory measures presently in effect against districts 2 through 4.

Mr. PUCINSKI. Mr. Speaker, Chicago faces a fuel oil shortage this winter of catastrophic proportions unless action is taken now to permit a more realistic reserve of residual fuel oil.

In recent months several Midwest oil firms have petitioned the Department of Interior's Oil Import Appeals Board for permission to import No. 6 fuel oil into the district serving the city of Chicago. Estimates are that the present national stocks of this oil are more than 25 percent below that of last year. In Illinois alone, these stocks are 30 percent below last year's levels.

Owing to existing oil import quotas, residual fuel oils are not permitted to be imported into the Midwestern States from overseas. This decision has, up until now, been maintained despite the fact that New England and the Eastern United States may import all the residual fuel oil needed to meet their needs.

On July 20 this year, the Oil Import Appeals Board agreed to permit seven of 16 petitioning firms to import residual fuel oil during the allocation period from April 1, 1970, to March 31, 1971. This undoubtedly will help somewhat to offset the demands of the coming winter. But it is not enough.

Mr. Speaker, there must be some modification of this unwarranted restriction for the Midwestern States. Chicago adopted, on July 1, 1970, a series of enforceable air-pollution laws. These laws sharply restrict the burning of high-sulfur residual fuels. Yet the oil companies, which surely do not want to add to the city's pollution problems at this late date, are not permitted to use low-sulfur residual fuel because it cannot be imported from abroad into the Midwest.

This Nation we all love must give up

its traditional proclivity to react to overwhelming crisis. Surely we have all learned in this kinetic age that we must anticipate calamities and take some logical preparations to avert or mitigate them. Too many lives have been lost in the past; too many people injured or needlessly inconvenienced; too many essential services have been curtailed or stopped merely because actions were not taken when they would do the most good—before disaster struck.

Chicago and the mid-west are plagued with severe winter storms that paralyze traffic and restrict everyone to the warmth and security of their homes and apartments. At one point in recent years, the reserves of available fuel were within 3 days of being expended. Divine providence and a few days of sunshine prevented almost certain disaster on that occasion. Surely we are not so naive as to believe a similar calamity may not occur again.

Mr. Speaker, it is my hope that this entire question of oil imports will be reviewed at the earliest possible date. Too many Americans are totally unaware of the shortages they face if action is not taken soon to make these various restrictions and quotas and allotments more responsive to the needs of the people they are ultimately intended to serve.

Mr. MIKVA. Mr. Speaker, I rise to join my colleague from Illinois (Mr. ROSTENKOWSKI) in deploring a situation which threatens the health and welfare of Chicagoans and all residents of the Midwest.

My distinguished colleague has described the events which led to the present residual fuel oil shortage in PAD District II and to the recent Oil Import Appeals Board decision to allow new imports of foreign residual fuel oil by Chicago distributors. We are, of course, gratified that the Board—after the intervention of members of the Chicago congressional delegation directly with the President—has seen fit to allow us a little relief from a potential disaster. In a decision dated July 20, the Board granted a hardship waiver to seven residual fuel oil distributors to locate and import for Chicagoans and Midwesterners some 7.24 million barrels of foreign residual fuel oil between April 1, 1970, and March 31, 1971. This is a step in the right direction, but it is not sufficient for several reasons.

First, the Board's decision authorizes only seven of the original 16 petitioners to import foreign-produced residual fuel oil for the needs of District II residents. While I am certainly not an expert on the capacities, experience, and sale records of the petitioners involved, and thus am not in a position to quarrel with the allocations made, I believe it is clear that when less than half of those requesting authority to import foreign-produced oil were denied that authority, the public interest has not been adequately served.

The second problem with the Board's decision is that it is only for a limited period and only for limited amounts based on this one-time showing of hardship. Why, as long as the Board was considering this problem, could it not have done for District II what has previously been done for District I—east coast—and remove all restrictions on the importation of foreign residual fuel oil. This would have solved the problem once and for all. Under the Board's decision, however, residents of Chicago and elsewhere in District II will likely be faced with precisely the same crisis situation next year—and will have to seek the same kind of crisis relief.

Finally, the Board's action falls far short of what American citizens have a right to expect by way of modification of the restrictive oil import quota system. The President's own Cabinet task force on oil import policy recommended early in 1970—February 2, 1970—that the present oil import quota system be scrapped in its entirety and replaced by a system of tariffs. This was a general recommendation which related to all petroleum products and to all parts of the country for an indefinite period in the future. There was no limitation as to time or geographical area, as is contained in the Board's latest ruling.

In addition to these general recommendations, which I and other Congressmen have often and loudly urged the President to implement for the good of the American consumer, the task force also made a specific recommendation relating to precisely the commodity we are discussing here—residual fuel oil produced abroad. This is what the task force recommended:

> We . . . recommend that residual fuel oil from [the Western Hemisphere], to be used domestically as fuel either directly or after desulphurization, be subject only to existing tariffs and that Eastern Hemisphere origin residual oil pay an increased tariff sufficient to offset the anticipated cost of desulphurizing Latin American residual fuel oil. (Para. 430b, p. 136).

If the existing quotas on importation of foreign residual oil were replaced by tariffs, as the task force recommended, not only would citizens in the Midwest have access to now unavailable supplies of residual fuel oil, but they would have access to them at reduced prices. They would be saving money on fuel oil costs as well as obtaining a product which is not available because of artificial trade barriers. The task force estimated that an Illinois family of four pays almost $90 per year more for petroleum products because of existing import quotas than it would without them. If the quota system continues, this cost for such families will go up even more, perhaps reaching nearly $150 per year by 1980. This is not the cost of the fuel oil itself, but an artificial, inflated add-on caused by an outmoded quota system which the task force has urged the President to abolish.

Recently, there has been an ominous development here in Congress related to the oil import quota system. That system was established by President Eisenhower in the early 1950's by Executive order. The system still operates under the authority of that Presidential edict and could thus be modified or eliminated merely by a stroke of the President's pen. However, the Ways and Means Committee of this House has voted to prevent the President from administratively modifying the oil import quota system. This may be a useful tactic for both the President and the oil industry—since it makes the task of eliminating the quota system more difficult and takes the pressure off the White House—but it is a disaster for the consumer. I sincerely hope that the committee will change its decision on the matter of oil import quotas, or at least that it will permit a vote on this important matter when the import quota bill reaches the floor of the House.

The existing quota system is bad because it is a special-interest device to protect domestic oil producers, which is tremendously costly to American consumers and which—so the task force found—is not necessary for our national security or to encourage domestic production. But as bad as the whole import quota system is, its effects are visible mostly in terms of increased costs. The restrictive policy on residual fuel oil holds an even greater danger—it poses a risk to the very health and welfare of the residents of Chicago and the Midwest. For this reason, the President and the Oil Import Appeals Board should act immediately to preclude the disastrous results which would follow from a residual fuel oil shortage in Chicago this winter.

Mr. MURPHY of Illinois. Mr. Speaker, I wish to join with my colleagues in focusing attention on a serious problem that faces Chicago and the entire Midwest. The problem is the declining supply of residual fuel oil available in this area of the country. One cause of the decreasing supply of residual fuel oil is that air pollution regulations have restricted the use of high-sulfur fuel and increased the need for the low-sulfur residual fuel oil. A second cause is that, for economic reasons, domestic oil companies have reduced their production of residual oil. As a result, the Midwest is now confronted with an insufficient supply of residual oil and an increasing demand for it by consumers and industries.

Recently, the Oil Import Appeals Board of the Department of Interior awarded certain oil companies the right to import residual fuel oil into Districts 2 to 4 in the Midwest. But the amounts of oil allowed to be imported were only 25 percent of the amounts requested and far below the amount that will be needed. To remedy this situation, there must be a substantial increase in these allocations. When a similar crisis developed in the east coast—District 1—several years ago, the Federal Government granted unrestricted residual imports to that area. District 2, in which Chicago is located, has not been granted that same privilege. I, therefore, want to add my support to Congressman ROSTENKOWSKI's efforts to see that this discriminatory situation is changed. We feel that the policy of importing residual oil should be applied uniformly throughout the country and that the Midwest should be placed on an equal basis with the east coast. The removal of import restrictions from District 2 is needed to

alleviate the shortage of residual fuel oil that threatens the Midwest.

Mr. ANNUNZIO. Mr. Speaker, I rise today to join the gentleman from Illinois, Hon. DAN ROSTENKOWSKI, who has taken this special order to discuss the residual fuel oil shortage in the 15-State midcontinent region, including Chicago, which is known as District II.

For many months I have been directing my efforts toward securing relief for the hard-pressed dealers and users of residual fuel oil in District II. Consequently, I was pleased and gratified that the Oil Import Appeals Board on July 20 did provide some relief in the Midwest area by assigning allocations to several District II companies to import residual fuel oil during the period April 1, 1970, to March 31, 1971.

This action on the part of the Appeals Board will immediately make available to the Chicago area several million barrels of residual fuel oil which are desperately needed to meet the heating and energy needs of the people of Chicago during the coming winter. I want to commend and congratulate Lewis S. Flagg III, as well as co-members of the Board, Stanley Nehmer and George H. Schueller, for taking this very constructive action. This is definitely a step in the right direction, because it provides immediate relief in the critical residual fuel oil shortage that exists in the Midwest area, but unfortunately, long-term solution to the shortage remains to be found.

Presently oil importers in the 16 eastern seaboard States, comprising District I, in effect, can import all the residual oil they are able to sell, while those in District II, the Midwest region, are severely restricted in their import quotas.

The basis for this inequitable situation was established when the mandatory oil import program came into being in 1959. At that time a flood of low-cost imported crude oil and finished petroleum products were threatening to disrupt domestic oil exploration and production operations, and it was felt that this, in turn, was a threat to our national security. When voluntary controls failed, mandatory controls were imposed restricting, with certain exceptions, to 12.2 percent of domestic production, imports of crude oil, unfinished oil, finished petroleum products, and residual fuel oil.

The Interior Department has already granted unrestricted residual oil imports to District I—east coast—because of the fuel crisis that was developing there. District II—the Midwest—now finds itself in the same critical fuel crisis which has been alleviated to some extent by the recent decision of the Appeals Board.

However, the situation that caused the shortage still exists, and unless some long-term solution is found, the shortage shall continue to exist in the future despite the temporary corrective action that has been taken by the Board to relieve the crisis.

I want to point out that Chicago air pollution officials are continuing to push for use of low-sulfur fuels in order to cut down on sulfur dioxide air pollution. At the same time, because of economic advantages, oil refineries are continuing to switch to the manufacture of asphalt and petroleum coke in place of residual fuel oil. Simultaneously, the industrial community is becoming concerned over a developing shortage of supply and dwindling reserves of natural gas which is a suitable low-sulfur power source.

Consequently, with a threatening gas shortage, with high-sulfur content coal unacceptable, with domestic residual fuel output declining and with increasing demand for low-sulfur residual fuel as a result of the fight on air pollution, the only long-term solution to the fuel crisis in the Chicago area is to permit more imports of residual fuel oil into the Midwest.

The report issued in February by the Cabinet task force on oil import control questioned the rationale of allowing imports of oil to one region but not to others and indicated support by five of the seven panel members for opening the entire country to foreign fuel oil. Even the minority members, Commerce Secretary Maurice Stans and Interior Secretary Walter J. Hickel, agreed that "consideration should be given to applying—District I—policy uniformly across the United States."

In the Seventh Congressional District of Illinois, which I have the honor to represent, more office buildings, more hospitals, more universities, more hotels, and more industrial facilities are located than probably any other district in the United States. These facilities, as well as thousands upon thousands of families residing in the area, rely on residual heating oil—No. 6 fuel oil—and I am still deeply concerned about their source of heat for the coming winter.

Mr. Speaker, in order to be certain that our people in the Chicago area will not suffer, I urge the administration to provide equity between District I and District II so that the Midwest region as well as the east coast region will not be restricted in importing residual fuel oil so desperately needed as a heat and energy source during the coming winter.

GENERAL LEAVE TO EXTEND

Mr. JONES of Tennessee. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks and to include therein extraneous material on the special order given today by the gentleman from Illinois (Mr. ROSTENKOWSKI).

The SPEAKER pro tempore (Mr. LOWENSTEIN). Is there objection to the request of the gentleman from Tennessee?

There was no objection.

THE 200TH ANNIVERSARY OF SOUTHWICK, MASS.

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. CONTE) is recognized for 5 minutes.

Mr. CONTE. Mr. Speaker, in southern Massachusetts, along the Connecticut border, lies a small town of approximately 6,300 people. With an historic past reflecting the same troubles and glories experienced by our Nation itself, the town of Southwick is this month celebrating 200 years of existence as an incorporated entity.

Southwick, like many towns in the First Congressional District of Massachusetts, was first settled during the period of the French and Indian War. It officially came into existence during the same traumatic period of upheaval that witnessed the coming of the American Revolution. Such a tradition shapes a town and its people, providing them with a rich and full understanding of America's past.

Prior to its incorporation, Southwick was part of Westfield. Being located on the outskirts of the main town, it was known as the Outer Commons. For many years, the people of this area journeyed to Westfield for their Sunday religious services and for their town meetings. Since the trip was quite difficult and often dangerous, the settlers petitioned the Massachusetts General Court for separation from the mother town.

The difficulties of travel do not fully explain, however, the true motivation which compelled the citizens of the Outer Commons to establish their own town. I am inclined to believe that, to a large degree, the spirit of the times prompted the petition for separation. Men of the frontier were men of independence, and in the 1960's Massachusetts was decidedly a frontier region. It would have been difficult, if not impossible, to convince these men to remain an adjunct to a neighboring town when they had all the potential to become a town on their own.

Thus it was, on November 7, 1770, that Southwick was incorporated as a district separate from Westfield. Within 5 years, Southwick was granted full town powers. It was during this period that the town got its present name, being called Southwick because of its southern location with regard to Westfield.

One of the first acts following election of town officers was a vote to raise a company of 25 minutemen. At the same time, a delegate was chosen to the provincial congress.

When talk of a revolution came to a head, and news of the battle of Lexington reached Southwick, the town responded quickly. The 25 minutemen were dispatched to Roxbury on the 21st of April 1775, where they were assigned to a regiment. Some of these men served for the entire war, others for a shorter period of time.

The town continued to support the revolutionary conflict throughout the duration. In 1780, Southwick voted to pay a bounty of $1,000—in continental bills—to each of three men who would enter the army. Later, in 1781, the town supported nine soldiers in the regular army, having offered $1,000 bounty for enlistments, and 20 shillings per month as pay. For a town of roughly 800 people, Southwick made a substantial contribution to the birth of our Nation.

Throughout the years, the people of Southwick have always responded vigorously when this Nation needed them. For example, during the period of the War Between the States, 125 of Southwick's men, out of a population of 1,188, saw service.

During its early years, Southwick was involved in a border dispute with the State of Connecticut. Six square miles of Southwick jutt into Connecticut interrupting what is, otherwise, nearly a straight line between the two States. This came about when the colonial surveyors made an error and set the Massachusetts-Connecticut border too far north, to the detriment of Massachusetts. The error was discovered while they were working in the Southwick region, and to compensate Massachusetts, a little extra land was allowed in this area. By 1800, the dispute was settled peacefully in the New England spirit of cooperation.

Along with its rich heritage of history, Southwick has often been praised for its scenic beauty. The Congamond Lakes, three in number, are located there. With their gently sloping and thickly wooded banks, and their shoreline of inlets and coves, these lakes have for years attracted visitors and provided recreation for the people of Southwick.

The lakes derived their name from the Congamuck Indians who lived in the area and often gathered at the lakes for tribal meetings. Later, when the colonial settlers came, they used the lakes as a source of food, for recreation, and as a source of waterpower to run their mills.

At one time, ice was harvested from the lakes and this became an additional source of revenue for the town. The ice was stored in five buildings, two of which were the largest of their kind in the United States. With the coming of manufactured ice and the refrigerator, the industry, of course, became obsolete.

Eventually, the Congamond Lakes became a favorite spot for people to relax and enjoy themselves. A railroad brought people to the lakes from nearby cities and towns. A large pavilion and hotel were built to accommodate visitors. When they were there, they found many picnics and parties to attend, and, for the sporting-minded, regattas were held. A great favorite was the steamboat ride on the lake.

Today, the lakes are a great year-round recreational area and they continue to attract and charm visitors from far and wide. The residents of Southwick have the advantage of having access to facilities for ice skating, fishing, boating, swimming, and camping. Such opportunities to enjoy nature and breathe clean air are just a couple of the many good reasons for living in Southwick.

The town of Southwick has long been proud of the fine quality of education it provides for its children. One-room schoolhouses were the rule until 1928 when the consolidated school was built. The small one-room schoolhouse provided a good education, but as the population grew it made more sense to bring everyone together.

Today, the children of Southwick continue to receive a high quality education. The three schools, consolidated school, Woodland School, and Southwick Senior High School, serve the growing student population.

The excellence of Southwick's public education can be illustrated in many ways. For example, in 1966 Southwick could boast that one of its teachers, Mrs. Leah Benway, was named the "Massachusetts Teacher of the Year." This year, the quality of the Southwick High School graduating class is shown by the fact that out of 87 seniors more than half are continuing their education and 14 received the great distinction of being selected for the National Honor Society.

Southwick has always been known as an agricultural town and its early fortunes were accumulated by the persevering efforts on the part of thrifty husbandmen, especially in the area of the tobacco crop.

Today, as in the past, tobacco continues to be Southwick's main crop. Other small industries and services have grown up, however, and these have helped contribute to and support Southwick's growing population. In 1947 the population was 1,885, in 1955 it was 4,479, in 1960 it was 5,139, and, as I mentioned, the 1970 census estimated the population to be 6,329.

More importantly, Southwick continues to thrive in spirit. It is a town made up of the finest people—industrious, warm, friendly, community minded—people we can all be proud of. Each man, woman, and child in Southwick can justifiably sing the praises of their town as they join together in celebration.

Mr. Speaker, I am sure I speak for all Members of the House as I honor today the town of Southwick, celebrating its 200th anniversary.

THE PRESIDENT AND THE SCHOOL PROBLEM

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Alabama (Mr. EDWARDS) is recognized for 30 minutes.

Mr. EDWARDS of Alabama. Mr. Speaker, much of the South is in turmoil today. We are told that the last vestiges of school segregation will disappear this September. I think our people are willing to accept that. It has taken awhile to get used to this change in our lives, but change must come and, as law-abiding citizens, the people of the South are prepared to do what is right.

But, Mr. Speaker, when you read the headlines this fall and you get the impression that the "old segregationist South" has not changed, look deeper before drawing any conclusions. Because the courts and the bureaucrats in HEW and Justice have not been satisfied with desegregation. With an almost vindictive, arrogant attitude that has passed through all bounds of reason and proceeded out into space, they continue demanding not only desegregation but racially balanced integration, contrary to law. Mr. Speaker, in a county such as Mobile, Ala., where the population is about 60 percent white and 40 percent black, there is only one way to so thoroughly mix up the school population and that is by drawing gerrymandered attendance zones. We have now witnessed a horrible example of this in the most recent court order in the Mobile school case. Children living a block or two from a school are required to attend another school 5 or 6 miles away. Apparently there is some question as to whether the Mobile County School Board is in a position to provide transportation for these students. And the unfortunate thing is that those who are hurt the worst are the poor, both white and black students, in many cases. What does a parent do with a child who must go 5 miles to school and has no transportation?

The frustrating thing about all this, Mr. Speaker, is that the President set out some rather clear policies on the school problem back in March of this year. At that time he said:

> The neighborhood school will be deemed the most appropriate base (for a school) system.

He also said:

> Transportation of pupils beyond normal geographic school zones for the purpose of achieving racial balance will not be required.

But Mr. Speaker, how do you get the President's words translated into reality? Here I believe President Nixon has let the country down. The Mobile school plan is basically the brain child of the Department of Justice. Many other improper and illegal plans are the product of HEW dreamers. It is not good enough any more to just blame the courts, because the courts are not school boards, they do not have the expertise to draw school zones. But the courts all too often accept almost without question the plans submitted by HEW and the Department of Justice.

It is not good enough to say that the HEW and Justice bureaucrats have done these things, and somehow absolve the administration.

It is not good enough for the President to speak and then forget it.

It is not good enough for the President to blame the courts when his own people are writing the basic decisions for the courts.

No, Mr. Speaker, if the President really really means what he said in March; if he was not just trying to lull the good people of the South into a sense of apathy; if the President really believes in the neighborhood school concept; then he will put a stop once and for all to the dreamy-eyed plans of those in the executive branch. He can do it. He can see that his policies are carried out. He can see that the vindictiveness of those who work for him comes to an abrupt halt—if he really means what he says.

Now, Mr. Speaker, I know that the President cannot look over every school plan that is proposed by those in HEW and Justice. But, by gosh, he can make it clear that if anyone submits a plan that disregards basic educational needs, that requires considerable transportation, that has as its sole purpose the racial balance of the students, that ignores the neighborhood school principle, then heads will roll.

The President must understand that those under his control are not carrying out his policy.

Take, for example, the question of the expected invasion of Federal lawyers and U.S. marshals into the South. The President rather promptly said loud and clear that he was not going to have "vigilantes" moving into the South. As a matter

of fact, the President reiterated this point to me very forcefully last week. But on the same day that the President made his "vigilante" statement, the papers in my district carried an adjoining article saying that the Justice Department was not really worried too much about what the President said, they are going to send their 100 lawyers and marshals down anyway. Well after that little gem I have been trying to get a clear-cut statement out of the White House as to who is really running this railroad and I get nothing but confused responses because nobody seems to know whether we are going to have our vigilantes or not.

Mr. Speaker, I have no doubt about the President's sincerity when he made his vigilante statement. But again, if the bureaucrats are unwilling to carry out the President's policies and orders, then some heads should roll. And I suspect that some of those heads are presently connected to bodies very near to the President.

Mr. Speaker, it is an open secret that the President is very upset that some of his so-called close advisers led him down the primrose path on the question of tax exemptions for private schools. Private schools have been in existence in this country for generations. Legitimate contributions to these schools have been exempt for as long as I can remember. Some of the best schools in our Nation are those which are privately endowed, some private schools are run by churches which learned a long time ago that Sunday schoolrooms could be put to good use during the week by organizing a private school. Sure, some private schools are springing up as a result of the integration of public schools. Some will survive and some will not. But there is no legitimate basis at all for denying a tax exemption to these schools if they serve a useful purpose in educating our children. The public schools in most cases are already overcrowded as it is.

The issue of tax exemption of private schools is before the courts now. That is where it should stay.

But how unfortunate that with the already explosive situation that is resulting from the unreasonable court decisions we must also have thrown at us the vigilantes and at the same time suffer attacks on the private schools of the South.

Mr. Speaker, if the President does not have staff people and Cabinet officers who are willing to implement his policy, then he ought to replace them. I think President Nixon has been generally realistic in his approach to the school problems of the South, but he is failing in his job if he does not assure himself that his orders are being carried out. The sin of omission is just as serious in my book as the sin of commission.

There was a time when we in the South used to accept statements of those highly placed in the administration. We used to go back home and say, "See, there is a difference, this administration does have compassion for our school problems." But no more do we grab this bait and run with it. We have been burned too many times. Only this morning the Associated Press reported that new HEW Secretary Elliott L. Richardson, in an address to the National Association of County Commissioners, said yesterday:

Requirements of school desegregation must be judged by educational standards rather than on the basis of racial balance.

Mr. Speaker, there was a time when this type of statement would give us hope. But how can I go back home and praise Elliott Richardson when my people know from personal experience that the Federal Government, the courts and the bureaucrats have in fact thrown "educational standards" out the window in order to achieve a "racial balance?"

We have been getting many encouraging words, but actions speak the loudest in a time of turmoil.

OIL RESOURCES AND THE UNITED STATES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Maryland (Mr. MORTON) is recognized for 5 minutes.

Mr. MORTON. Mr. Speaker, the article appearing in the Sunday, July 26, New York Times by William D. Smith, sheds a good deal of light on the controversy involved in the importation of oil to the United States.

The fact that this country is facing the possibility of a severe energy shortage means that political and special interest considerations must be overridden. We must protect our energy supplies with a national policy for increasing and further developing our petroleum resources, not only for our national security, but also for the well-being of our citizens.

I believe this article is worthy of note and would be informative to the reader. It deals with a very complicated subject and yet one of the more important facing us today.

U.S. Oil Industry Regrets It Was Right

(By William D. Smith)

If an industry could have a facial expression, the United States oil industry would be wearing a bittersweet smile.

The smile would be a result of having seen recent events prove some of its serious forecasts and urgent warnings correct.

The pleasure, however, is mitigated by the pain that the industry is nonetheless suffering from having seen its predictions come true.

Throughout the long and heated political controversy over oil imports, the industry has maintained that foreign sources of petroleum were relatively undependable and that their lower-than-domestic price levels could be quite ephemeral. For this thesis oilmen were raked over the political coals. The price of Middle East crude oil is now at least 75 cents a barrel more than domestic.

For more than a decade oil and gas producers have warned that Federally set "low" natural gas prices would dampen the incentive to look for gas and thus produce a future shortage. Again this was treated as a totally self-serving ploy.—"There is a shortage of natural gas today," Secretary of the Interior Walter Hickel reportedly explained.

John Emerson, energy economist of the Chase Manhattan Bank recently went even further, "Never before in this century have we faced such serious and widespread shortages of energy. These shortages are upon us now."

The industry warned that rushing into low-sulphur, anti-pollution legislation and regulations might produce supply problems.—There appears a very good chance that there will be a shortage of low-sulphur residual fuel oil this winter, forcing cities and corporations to choose between lack of heat and power and the present practicality of recent anti-pollution laws.

Being correct, at least on the surface level, gives the industry no reason to gloat. In each instance it is costing the oil companies money. If they pass on the cost, as they probably will have to, it cuts into what little affection the public has left for the industry.

"No one will remember that Senator Kennedy or Senator Muskie and other so-called consumer representatives have advocated policies that have often ultimately resulted in higher costs. They will only blame us for raising the price of gasoline or heating oil," a vice president and counsel for a major company commented last week.

The executive's statement is probably too one-sided. The present situations are the result of many complex forces; some alterable, some not.

Nonetheless, some politicians and academicians, past and present, may have been guilty of thinking that a big desk and pet theories were a substitute for the hard facts of industrial life.

There is a very good chance that by fall the American consumer may be paying more for gasoline, natural gas and residual fuel. This means that the cost of running his car, his home and his factory will cost more.

These major impacts on the battle with inflation have not gone unnoticed in Washington although it appears that no major constructive actions have as yet occurred.

The leap in the price of overseas crude oil is a result of soaring tanker costs. Few analysts expect costs to go down in the very near future.

But if tankers are the central reason, the Arab-Israeli war is the underlying cause.

On May 3 in Syria, the Trans Arabian Pipeline was knocked out of commission by an errant or deliberately aggressive bulldozer. The Syrian Government has not allowed its repair, preventing 500,000 barrels a day of Saudi Arabian crude from reaching the Mediterranean.

At the other end of the Mediterranean the Libyan Government cut back oil production by 15 per cent, or 500,000 barrels a day.

The loss of almost 1 million barrels a day of oil west of Suez and close to world markets has strained tanker capacity. Replacement of this oil with oil from the Persian Gulf around South Africa takes six to eight times the tanker capacity.

CHARTER RATES RISE

Spot charter rates have risen to their highest level since the 1956 Suez crisis and are more than 50 per cent higher than during the 1967 Arab-Israeli war.

Persian Gulf oil is now coming into the United States at about $4.50 a barrel compared with Louisiana crude delivered to East Coast refineries at $3.75.

There is no chance of a shortage, however, because Texas and Louisiana will increase their production to meet the need. There is a very real chance of consumer price increases.

The Oil and Gas Journal, a trade publication, reports that Professors Phillip Areeda and James McKie, two of the chief advocates of sharply increased oil imports, have now backed off considerably from that position.

F.P.C. REGULATION UPHELD

The natural gas supply and demand controversy is a far older argument. In 1954 the Supreme Court ruled that natural-gas producers were subject to Power Commission. In 1960 the regulatory agency began

fixing well-head prices for all gas sold interstate. The Supreme Court upheld this right again in 1965 despite vigorous cries of outrage from producers, who said it would kill incentive to drill.

Time has proven the oilmen right. Wildcat drilling dropped 40 per cent between 1956 and 1968. Geophysical activity fell 56 per cent.

Some of the drop off may have been artificial; just to show the Government. Nonetheless the results are uncontestable. In 1969 the United States proved reserves of natural gas fell 12,241 trillion cubic feet, the largest in the nation's history.

The previous record drop was in 1968, when they fell 5,548 trillion cubic feet. These are the only declines in the history of the industry.

POSITIONS CHANGED

The F.P.C. is now trying to rectify the situation by raising prices. Some of the people who supported the lower prices several years ago are now in the forefront of those pushing higher prices.

The Interior Department is trying to speed up lease sales of suspected gas fields, but is running into opposition from Conservationists. But even if this opposition is overcome, it will take from three to seven years for these areas to begin producing.

In the meantime Canadian sources of gas can be tapped although Canadian American relations on energy matters are at an all-time low. Liquefied natural gas quite possibly will reach this country from Algeria, Nigeria or Venezuela. Contracts have already been signed to import Algerian L.N.G., but the Algerian Government's recent nationalization of American oil company properties puts this source of L.N.G. in a very questionable position.

SUPPLY OUTLOOK TIGHT

The supply outlook for this winter is tight. Industry sources say that there will be enough to heat homes, but that the industrial market, which accounts for about 50 per cent of total sales, may be in bad shape. Many distributors already have been forced to impose severe limitations on new industrial loads, and there is a real possibility that deliveries to existing customers may have to be curtailed, according to J. W. Heiney, president of the American Gas Association.

It would seem almost certain that consumer prices will have to go up, and possibly sharply.

The crude oil reserve situation is not much better, according to the American Petroleum Institute. Last year crude oil reserves dropped to 29,632 billion barrels, the lowest level in 15 years.

The A.P.I. explained the situation simply by saying that lack of incentives had led to a long and steady decline in exploratory drilling during a period of mushrooming production and consumption.

The oil industry in recent weeks seems to have won a lot of points, but through no fault of its own, it well may be losing the game.

FEDERAL DISASTER ASSISTANCE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. PRICE) is recognized for 15 minutes.

Mr. PRICE of Texas. Mr. Speaker, I introduce, for appropriate reference, legislation to provide additional assistance to the State of Texas for the reconstruction of areas damaged by tornadoes occurring on April 17 and 18, and May 11, 1970.

I have waited until now to introduce this bill because I wanted to work out the details of it with the executive branch, because similar legislation introduced earlier by some of my distinguished colleagues in both bodies did not fully bring the vast resources of the Federal Government to bear adequately on the victims of natural disaster.

My particular concern for the State of Texas stems from the wave of killer tornadoes that swept this spring across my district, the 18th District of Texas, as well as the district of the distinguished chairman of the Appropriations Committee (Mr. MAHON).

To the credit of this Nation, appropriate relief agencies have been doing a tremendous job in promoting recovery in the blighted areas. Their work, however, would be greatly facilitated by the passage of the bill I am introducing today.

A PROPOSAL TO HELP LIMIT AIR POLLUTION

The SPEAKER pro tempore. Under a previous order of the House the gentleman from New York (Mr. WOLFF) is recognized for 10 minutes.

Mr. WOLFF. Mr. Speaker, July 28. Look outside your office window. Take a deep breath of air, or do you dare to?

Tokyo, July 28. Look outside your window. Take a deep breath. Or have you heard that police are warning citizens to stay inside because of air pollution.

New York, July 28. Look outside your window. The clouds over the city, the ones blotting out light and sunshine are the same clouds of pollution blackening your lungs.

This is just part of what is going on today.

We have had our Earth Day, our funding to fight pollution and our citizens groups keeping this issue before the Nation. We have had all this, but what is hanging over the Nation's head is a blanket of dead air.

If we do not act soon to strictly enforce pollution laws and clean up the atmosphere we will be wrapping victims of pollution in blankets of dead air.

If we can ban cars from city streets during snow removal, I feel we can take it upon ourselves to institute a temporary limitation, on a voluntary basis, on driving, to prevent a health hazard which has far greater implications than snow drifts ever had. I therefore urge all motorists to help fight the pollution by commuting to work for the next few days by car pool or mass transit.

Antipollution experts have noted that strong sunlight, only light winds and car exhaust fumes have combined to create a photochemical smog. We have our reason to reduce auto travel for the next few days. If we believe in the fight to end pollution let us act accordingly.

There are, of course, long-range approaches to fighting this problem. However, this is an emergency and there is the possibility of this situation occurring again in the future.

We institute one side of the street parking and limited city travel when our cities are faced with emergencies prompted by traffic problems or snow. Our citizens have always responded and thus helped to ease the emergency.

If we are to eradicate the blanket of smog that is covering our cities let us voluntarily limit our travel to cities for the next few days.

PANAMA CANAL: SOVEREIGNTY AND MAJOR MODERNIZATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 30 minutes.

Mr. FLOOD. Mr. Speaker, during the past decade many resolutions urging retention by the United States of its full sovereignty and ownership of the Canal Zone and Panama Canal have been adopted by various civic and governmental bodies. These include the legislatures of seven States, the American Legion and other patriotic organizations. That their views have been heard is shown by the introduction in the present Congress by more than 110 Representatives of identical House resolutions opposing any surrender at Panama with respect to sovereignty over either the Zone Territory or Canal, House Resolution 593 and others.

The latest comprehensive statement on the Panama Canal question is a "Memorial to the Congress" prepared by competent and experienced experts on the subject, which was quoted by me in an address to the House in the CONGRESSIONAL RECORD, June 16, 1970, and by Senator STROM THURMOND in a statement to the Senate in the RECORD of July 16, 1970.

A second crucial issue in the complicated canal subject is the major modernization of the existing Panama Canal, which would be provided under current identical measures now before the Congress: S. 2228 introduced by Senator THURMOND and H.R. 3792 introduced by myself.

In an article in the August 1, 1970 issue of Human Events, Senator THURMOND comments at length on the previously mentioned memorial emphasizing that our Government should not even be thinking about negotiating basic new canal treaties for the Panama Canal. With this view, I believe that I reflect the position of many Members of the Congress who oppose any surrender at Panama.

Because of their pertinence to the current hearings now being conducted by the Subcommittee on Inter-American Affairs, I quote the previously cited memorial and identical measures as parts of my remarks:

QUALIFIED EXPERTS UNITE TO DEFEND PRESENT PANAMA CANAL

(By Senator STROM THURMOND)

Many members of Congress are disquieted by the recent appointment of Ambassador Daniel W. Hofgren as a Special Representative for Panama Canal negotiations [see *Human Events*, July 11, page 8]. Hofgren is a young man (33), and a former White House aide. He will be the principal assistant to Robert B. Anderson, the former secretary of the treasury who has handled Panama Canal negotiations since the talks began in 1964.

But Hofgren's personal qualifications are not so much the issue. The real objection is to the fact that the talks are being reopened at all.

To put it bluntly, the Nixon Administration should not even be thinking of negotiating basic new treaties, after the debacle brought about by President Johnson.

The Johnson draft treaties were referred back for ratification in 1967, but neither country would accept the work of the negotiators. Panama said that they didn't go far enough; but from the American point of view, they were a surrender of our sovereignty and our necessary control over the canal.

In the resulting storm over the treaties, I managed to get copies of the secret text from sources in Panama and printed them in the *Congressional Record*. Hundreds of congressmen led by Rep. Daniel J. Flood (D.-Pa.), went on record against the proposals. As a result, President Johnson did not even dare submit the drafts to Congress.

The discredited Johnson treaties ought to be scrapped in their entirety, along with the whole negotiating team. Anderson, who devised the 1967 treaties, is still in charge of the negotiations. He is also in charge of the Atlantic-Pacific Inter-Oceanic Canal Study Commission, which is supposed to be making an independent study of the best routes and the best methods for a new canal.

The Study Commission, like the negotiating team, starts out with the assumption that we need a new canal and new treaties. When the commission reports in December, we may expect a biased conclusion, based upon these assumptions. Ambassador Anderson is engaged in an apparent conflict of interest in sitting as chairman of both the Study Commission and the negotiating team.

But at the very moment when the State Department seems to be reopening the discredited treaty issue, a group of experts has come forward to denounce the idea that our sovereignty in the Canal Zone is negotiable. Two weeks ago they announced the formation of the Committee for the Continued U.S. Control of the Panama Canal.

What makes this committee so different from most such organizations is that every member is especially qualified in some aspect of canal affairs. It is easy to get "big names" for a committee, but usually such big names are sounding off in an area far removed from their field of expertise. In such cases, their opinion is no better than the ordinary citizen's.

The Panama Canal, however, is a complex issue involving engineering, navigation, diplomacy, international law and commerce, economics, ecology and, most important, national defense. The committee reflects all of these fields of competency, and others as well.

Dr. Karl Brandt, for example, is a former chairman of the President's Council of Economic Advisers, and continues to write widely in the field of the economics of Central America and other underdeveloped regions. Dr. Lev Dobriansky, a professor at Georgetown University, is also an economist and in addition is a noted expert on Soviet imperialism.

Dr. John C. Briggs, who is chairman of the Department of Zoology at the University of Pennsylvania, similarly has pointed out the unresolved difficulty of rockslides in the unstable substrata of the Isthmus of Panama.

Engineers of the panel include William B. Collier, of Santa Barbara, Calif., Maj. Gen. Thomas A. Lane, and Brig. Gen. Herbert D. Vogel. Gen. Vogel is a former deputy governor of the Panama Canal Zone. Also included is a naval architect, Cmdr. Carl H. Holm, an aviation executive, Capt. C. H. Schildhauer, and William E. Russell, the publisher of a respected maritime journal.

Other authorities are the noted historian and authority on Latin America, Dr. Donald M. Dozer, of the University of California, who has written several articles on the canal for *Human Events;* Prof. Richard B. O'Keeffe, of George Mason College; and Harold Lord Varney, who is also chairman of the Committee on Pan American Policy. Dr. Walter D. Jacobs, the professor of Government and Politics from the University of Maryland who made an incisive on-the-spot report from Panama at the time when the treaties were revealed, has also joined the group.

The strategic naval value of the canal is a prime consideration in any discussion of its future. The committee includes two officers of flag rank, Rear Adm. Charles J. Whiting, and Vice Adm. T. G. W. Settle. Adm. Settle was formerly commander of the Amphibious Forces in the Pacific.

The list is completed by two more distinguished professors, Dr. Leonard B. Loeb, a physicist from the University of California, and Dean Edwin J. B. Lewis, of George Washington University, who is also president of the Panama Canal Society of Washington, D.C.

The conclusion of these experts is that the most reasonable plan for the future is the major modernization of the present canal facilities according to the so-called Terminal Lake-Third Locks plan, a proposal embodied in my bill, S. 2228. This enlargement of the present facilities could provide all the capacity needed without disruption of traffic or negotiating new treaties.

The Administration should heed these experts, and break off the discussions about new negotiations.

H. RES. 593

Whereas it is the policy of the House of Representatives and the desire of the people of the United States that the United States maintain its sovereignty and jurisdiction over the Panama Canal Zone; and

Whereas under the Hay-Pauncefote Treaty of 1901 between Great Britain and the United States, the United States adopted the principles of the Convention of Constantinople of 1888 as the rules for the operation, regulation, and management of said canal; and

Whereas by the terms of the Hay-Bunau-Varilla Treaty of 1903, between the Republic of Panama and the United States, under the authority of the perpetuity of use, occupation, control, construction, maintenance, operation, sanitation, and protection for said canal was granted to the United States; and

Whereas the United States has paid the Republic of Panama almost $50,000,000 in the form of a gratuity; and

Whereas the United States has made an aggregate investment in said canal in an amount of over $5,000,000,000; and

Whereas said investment or any part thereof could never be recovered in the event of Panamanian seizure or United States abandonment; and

Whereas under article IV, section 3, clause 2 of the United States Constitution, the power to dispose of territory or other property of the United States is specifically vested in the Congress; and

Whereas 70 per centum of the Canal Zone traffic either originates or terminates in United States ports; and

Whereas said canal is of vital strategic importance and imperative to the hemispheric defense and to the security of the United States; and

Whereas, during the preceding administration, the United States conducted negotiations with the Republic of Panama which resulted in a proposed treaty under the terms of which the United States would shortly relinquish its control over the Canal; and

Whereas there is reason to believe that the present dictatorship in control of the Government of Panama seeks to renew negotiations with the United States looking toward a similar treaty; and

Whereas the present study being conducted by the Atlantic-Pacific Interoceanic Canal Study Commission may result in a decision to utilize the present canal as a part of a new sea level canal; and

Whereas any action looking toward an agreement with the Government of Panama which would affect the interest of the United States in the Canal would be premature prior to the submission of the report of the Commission in any event: Now, therefore, be it

Resolved by the House of Representatives, That it is the sense of the House of Representatives that the Government of the United States maintain and protect its sovereign rights and jurisdiction over said canal and that the United States Government in no way forfeit, cede, negotiate, or transfer any of these sovereign rights or jurisdiction to any other sovereign nation or to any international organization.

H.R. 3792

A bill to provide for the increase of capacity and the improvement of operations of the Panama Canal, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Panama Canal Modernization Act".

SEC. 2. (a) The Governor of the Canal Zone, under the supervision of the Secretary of the Army, is authorized and directed to prosecute the work necessary to increase the capacity and improve the operations of the Panama Canal through the adaptation of the Third Locks project set forth in the report of the Governor of the Panama Canal, dated February 24, 1939 (House Document Numbered 210, Seventy-sixth Congress), and authorized to be undertaken by the Act of August 11, 1939 (53 Stat. 1409; Public Numbered 391, Seventy-sixth Congress), with usable lock dimensions of not less than one hundred and forty feet by not less than one thousand two hundred feet by not less than forty-five feet, and including the following: elimination of the Pedro Miguel Locks, and consolidation of all Pacific locks near Miraflores in new lock structures to correspond with the locks capacity at Gatun, raise the summit water level to its optimum height of approximately ninety-two feet, and provide a summit-level lake anchorage at the Pacific end of the canal, together with such appurtenant structures, works, and facilities, and enlargements or improvements of existing channels, structures, works, and facilities, as may be deemed necessary, at an estimated total cost not to exceed $850,000,000, which is hereby authorized to be appropriated for this purpose.

(b) The provisions of the second sentence and the second paragraph of the Act of August 11, 1939 (53 Stat. 1409; Public Numbered 391, Seventy-sixth Congress), shall apply with respect to the work authorized by subsection (a) of this section. As used in such Act, the terms "Governor of the Panama Canal", "Secretary of War", and "Panama Railroad Company" shall be held and considered to refer to the "Governor of the Canal Zone", "Secretary of the Army", and "Panama Canal Company", respectively, for the purposes of this Act.

(c) In carrying out the purposes of this Act, the Governor of the Canal Zone may act and exercise his authority as President of the Panama Canal Company and may utilize the services and facilities of that company.

SEC. 3. (a) There is hereby established a board, to be known as the "Panama Canal Advisory and Inspection Board" (hereinafter referred to as the "Board").

(b) The Board shall be composed of five members who are citizens of the United States of America. Members of the Board shall be appointed by the President, by and with the advice and consent of the Senate, as follows:

(1) one member from private life, experi-

enced and skilled in private business (including engineering);

(2) two members from private life, experienced and skilled in the science of engineering;

(3) one member who is commissioned officer of the Corps of Engineers, United States Army (retired); and

(4) one member who is a commissioned officer of the line, United States Navy (retired).

(c) The President shall designate as Chairman of the Board one of the members experienced and skilled in the science of engineering.

(d) The President shall fill each vacancy on the Board in the same manner as the original appointment.

(e) The Board shall cease to exist on that date designated by the President as the date on which its work under this Act is completed.

(f) The Chairman of the Board shall be paid basic pay at the rate provided for level II of the Executive Schedule in section 5313 of title 5, United States Code. The other members of the Board appointed from private life shall be paid basic pay at a per annum rate which is $500 less than the rate of basic pay of the Chairman. The members of the Board who are retired officers of the United States Army and the United States Navy each shall be paid at a rate of basic pay which, when added to his pay as a retired officer, will establish his total rate of pay from the United States at a per annum rate which is $500 less than the rate of basic pay of the Chairman.

(g) The Board shall appoint, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, a Secretary and such other personnel as may be necessary to carry out its functions and activities and shall fix their rates of basic pay in accordance with chapter 51 and subchapter III of chapter 53 of such title, relating to classification and General Schedule pay rates. The Secretary and other personnel of the Board shall serve at the pleasure of the Board.

SEC. 4. (a) The Board is authorized and directed to study and review all plans and designs for the Third Locks project referred to in section 2(a) of this Act, to make on-the-site studies and inspections of the Third Locks project, and to obtain current information on all phases of planning and construction with respect to such project. The Governor of the Canal Zone shall furnish and make available to the Board at all times current information with respect to such plans, designs, and construction. No construction work shall be commenced at any stage of the Third Locks project unless the plans and designs for such work, and all changes and modifications of such plans and designs, have been submitted by the Governor of the Canal Zone to, and have had the prior approval of, the Board. The Board shall report promptly to the Governor of the Canal Zone the results of its studies and reviews of all plans and designs, including changes and modifications thereof, which have been submitted to the Board by the Governor of the Canal Zone, together with its approval or disapproval thereof, or its recommendations for changes or modifications thereof, and its reasons therefor.

(b) The Board shall submit to the President and to the Congress an annual report covering its activities and functions under this Act and the progress of the work on the Third Locks project and may submit, in its discretion, interim reports to the President and to the Congress with respect to these matters.

SEC. 5. For the purpose of conducting all studies, reviews, inquiries, and investigations deemed necessary by the Board in carrying out its functions and activities under this Act, the Board is authorized to utilize any official reports, documents, data, and papers in the possession of the United States Government and its officials; and the Board is given power to designate and authorize any member, or other personnel, of the Board, to administer oaths and affirmations, subpena witnesses, take evidence, procure information and data, and require the production of any books, papers, or other documents and records which the Board may deem relevant or material to the performance of the functions and activities of the Board. Such attendance of witnesses, and the production of documentary evidence, may be required from any place in the United States, or any territory, or any other area under the control or jurisdiction of the United States, including the Canal Zone.

SEC. 6. In carrying out its functions and activities under this Act, the Board is authorized to obtain the services of experts and consultants or organizations there in accordance with section 3109 of title 5, United States Code, at rates not in excess of $200 per diem.

SEC. 7. Upon request of the Board, the head of any department, agency, or establishment in the executive branch of the Federal Government is authorized to detail, on a reimbursable or nonreimbursable basis, for such period or periods as may be agreed upon by the Board and the head of the department, agency, or establishment concerned, any of the personnel of such department, agency, or establishment to assist the Board in carrying out its functions and activities under this Act.

SEC. 8. The Board may use the United States mails in the same manner and upon the same conditions as other departments and agencies of the United States.

SEC. 9. The Administrator of General Services or the President of the Panama Canal Company, or both, shall provide, on a reimbursable basis, such administrative support services for the Board as the Board may request.

SEC. 10. The Board may make expenditures for travel and subsistence expenses of members and personnel of the Board in accordance with chapter 57 of title 5, United States Code, for rent of quarters at the seat of government and in the Canal Zone, and for such printing and binding as the Board deems necessary to carry out effectively its functions and activities under this Act.

SEC. 11. All expenses of the Board shall be allowed and paid upon the presentation of itemized vouchers therefor approved by the Chairman of the Board or by such other member or employee of the Board as the Chairman may designate.

SEC. 12. There are hereby authorized to be appropriated to the Board each fiscal year such sums as may be necessary to carry out its functions and activities under this Act.

SEC. 13. Any provision of the Act of August 11, 1939 (54 Stat. 1409; Public Numbered 391, Seventy-sixth Congress), or of any other statute, inconsistent with any provision of this Act is superseded, for the purposes of this Act, to the extent of such inconsistency.

LEGISLATION TO REQUIRE THE OPEN DATING OF PACKAGED FOODS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. FARBSTEIN), is recognized for 30 minutes.

Mr. FARBSTEIN. Mr. Speaker, last November, I introduced H.R. 14816, legislation to require the last date a food can safely be kept on a grocer's shelves to appear on the label of all perishable, semiperishable and canned foods.

Early in April, I released the results of two surveys of District of Columbia supermarket dating practices which uncovered large amounts of out-of-date food being sold in area stores. Such practices are, unfortunately, not limited to the District of Columbia; but exist throughout the country. The large number of articles on local food coding practices which have appeared in newspapers across the country, document this.

I have previously inserted in the RECORD a few of these articles. They include on page 11689 of the April 14 RECORD the feature by Marguerite Kelly, which appeared in the Potomac section of the Washington Post of October 19, 1969; on page 12580 of the April 21 RECORD, the Washington Post April 20 editorial endorsement of my legislation; and on page 14503 of the May 6 RECORD, the April 4 and 7 Cleveland Plain Dealer feature and editorial endorsement.

I would like to insert at this point in the RECORD several other articles which appeared on food dating in newspapers in Washington, D.C.; Detroit, Mich.; Rochester, N.Y.; Richmond, Va.; Phoenix, Ariz.; Philadelphia, Pa.; Denver, Colo.; New York City; Camden, N.J.; Louisville, Ky.; and Chicago. Tomorrow, I intend to insert a three-part series which appeared in the Miami, Fla., News.

The articles follow:

CODED DATES

(By Peter Weaver)

WASHINGTON.—Supermarkets and food manufacturers are weaving an intricate web of number code so they can tell the date when a product, like packaged cheese or luncheon meat, might be ready to rot but you, the customer, cannot.

These coded dates are on almost every perishable and semiperishable food product you buy but usually are stamped on a corner or on the back of the package so you won't notice them.

Next time you go shopping, take a pad and pencil and start looking at things like yogurt, ricotta cheese, packaged baked goods and plastic packed turkey slices. You'll discover some have purplish-blue numbers or letters stamped on them. Others have the numbers indented in the plastic and are even harder to spot.

Let's say the coded number on a packaged bakery product reads 0926. That's a simple one. The 09 means the ninth month, September. The 26 means the 26th. To the store's bakery department manager, this indicates that the product should not be sold after that date.

Now that you've mastered the simplest of codes, how about trying some others that are harder? Pick up a package of bacon. It could have a little number stamped such as 3047. Stamped? Just add the first and last numbers. That gives you 10 which equals October, the 10th month. The 04 is the 4th.

Further down, you might pick up a metallic cup of cream cheese and find the number 89. Is it the eight or ninth day of August or September? Can't be, unless that's awfully stale cheese.

Aha! You've just hit onto the third basic code system—calendar subtraction. Subtract 89 days from Dec. 31 and you get October 4, the date the cheese should be removed from the shelf.

Most of these coded numbers are stamped on packages by manufacturers or outside packers. The supermarkets often use letters such as C or I stamped in front of the price. If it's a really perishable item, C stands for Wednesday, the day it's brought in. If it's a long shelf-life item like coffee, the I stands for September ninth month, ninth letter.

The stores also use those little twist things, that seal bread in plastic wraps, as a color code. For example, a red twist is Monday, white twist Tuesday, blue twist Wednesday. If you run against a new puzzler, ask the store manager. Once he knows you know what's going on, he'll probably reveal the key.

It's obvious from all this tangle that they don't want you to know when the food might be nearing the time to be thrown out. But it's vital that you know the date because, on occasion, out-dated food is left on the counters or in the coolers and you unwittingly pick it up. It could harm your health or, more likely, leave you with mysteriously spoiled food a couple of days after you bought it.

These dates are essential information that the shopper has a right to read in plain English—Oct. 4, not a cryptic 89 or 3047. Yet a Food and Drug Administration spokesman says: "No federal agency requires dates on foods . . . if they were required, the (food) companies claim nothing would move except products with the latest dates."

Nonsense. Film manufacturers have been putting "stale date" deadlines on film boxes for years, and some food companies already clearly mark dates on such products as refrigerated rolls in tubes and Liederkranz cheese. Some states require clearly stamped dates on milk, bread and eggs. The New Jersey Assembly recently passed a bill which would require labels to indicate the date food was frozen and the maximum time it should be kept.

These coded dates are an important area of food packaging and labeling that Congress apparently overlooked when the Truth in Packaging Act was passed. They should be looked into now. If you agree, write your congressman or senator.

Meanwhile, armed with pencil and calendar, you'll have to do your own undercover crytography work.

CONSUMER

(By Peter Weaver)

Q. Baking companies identify the day bread is baked for a store by attaching colored, twist clips at the end of the loaf. What is the color code used? I wrote several large baking companies but so far no replies.—W. A. B.

A. Every bakery uses its own code. One popular code is: Monday—white, Tuesday—blue, Wednesday—pink, Thursday—grey, Friday—yellow. Saturday—green. Others switch these colors around. Safeway says it is doing away with stale bread codes and will have bread delivery dates plainly marked on each loaf. Other supermarket chains may be forced to follow suit.

Rep. Leonard Farbstein (D-N.Y.) has introduced a bill to force food manufacturers to print all food dates plainly on each package or can. Your letter has been passed on to him. Anyone who wants to support Rep. Farbstein's food-date decoding efforts should write to him c/o Rayburn Building, Washington, D.C.

[From the Detroit Free Press, March 2, 1970]

TO TEST FOOD FRESHNESS, CRACK THE GROCER'S CODE

(By Trudy Lieberman)

Quick now. What do 21, 21049, 2B1, and 2210QA mean?

Answer: They mean Feb. 21 in those secret supermarket codes which consumers aren't supposed to understand.

These codes, stamped on most food you buy, are especially important on perishable products. The codes indicate either "pull date," the day food is to be removed from the shelf, or the day the food was packaged.

Grocers and food industry spokesmen maintain that it's not necessary for consumers to know what the codes mean since they exist only to help the store with product rotation.

In a grocer's rotation system, the fresher items are pushed to the back of the shelf while the not quite so fresh ones are in front.

Says one local supermarket manager, "Codes are a way of ensuring that customers get a fresh product."

Codes are not uniform—there are hundreds in the supermarket and they change from time to time. And some codes are more or less standard—like the Supermarket Institute code, the calendar subtraction code and the day of the year code.

I broke the codes at a local Farmer Jack with the help of the store manager and his department heads.

We started with bread, most commonly coded by the color of the tie on the end of the wrapper.

The color usually indicates the day bread was brought into the store. For example, red is for Monday, white for Tuesday, yellow for Thursday, orange for Friday and green for Saturday. This Farmer Jack gets no bread from this bakery on Wednesdays.

Bread has a two-day shelf life so a yellow tie (Thursday) loaf ought to be offered at a reduced price on Saturday.

At a Wrigley's, I found yet another bread code. Taystee bread was marked A19 and Mel-O-Crust was coded 1902 and 193. Since I was shopping on Feb. 16, I concluded these loaves should be out of the store by the 19th.

The pick-up date is usually used on bakery sweet goods. Cherry rolls marked "21" should be out of the store by Feb. 21. Some other kinds of snack items marked 2B3 should be out by Feb. 23. The "B" in this code means February.

At the Farmer Jack meat counter, I found bacon coded with the date it was packaged. Each company code is different.

Swifts 0192 means Feb. 19; Rath's 2100 translates to Feb. 10 and Tennessee Brand's 213 means Feb. 13.

"We try to get the bacon out of the case a week to 10 days after it was packed," the meat manager explained.

Chicken was coded F23 meaning it should be pulled out of the case on the 23rd. The "F" indicated the employe who packed the food.

Fresh meat is coded with letters. NW might mean the meat was packaged Wednesday, W indicating the day of the week and N indicating the employe.

At another store, Monday is indicated by a KK.

"However, people aren't supposed to know these," one reluctant meat manager said. "I wish instead you'd tell your readers that we don't let any meat stay in the counter more than 48 hours."

The produce counter has the fewest codes and the most easily understood ones. Vegetables like tomatoes, lettuce and celery aren't coded at all because they have a rapid turnover. Retailers say coding them doesn't pay.

Some bags of fruit like oranges, lemons and apples are marked with a single number like "3" indicating the fruit was packaged on Wednesday. In this code, Monday is "1," Tuesday is "2" and so forth. Some packages might be marked with the day of the month, for example one stamped "17" means it was packaged on the 17th day of the month.

Coding in the frozen food case is simple, too. Retailers maintain that frozen food lasts a year in the case and is designated by a letter standing for the month it was put in the case. An "A" means January and so on.

Processed meats like bologna and sausage follow the Supermarket Institute's four digit code. The month is indicated by the total of the first and last digits. The middle two numbers designate the day. Bologna stamped 1240 means it was packaged Jan. 24.

But another company's bologna stamped 1281 meant it should be pulled off the shelf by Feb. 28.

Sometimes you can't tell whether the numbers are the pull dates or packaging dates. Bologna coded 1240 might have been very stale. But here's where the store manager comes in handy. Ask him if you're not sure.

Milk codes are hard to spot. They are generally numbers indented into the wax at the very top of the carton. A 24 would mean the milk was supposed to be off the shelf by Feb. 24.

Sour cream coded 306 means it is good until March 6. A carton of Fairmont cottage cheese had a more complicated code—0925. The nine was the quality control number, the 25 meant the carton was to be removed by Feb. 25.

Many food processors complicate the codes by throwing in quality control and plant numbers. Manufacturers claim the additional numbers help them find products that should be taken off the market because of manufacturing deficiencies.

Kraft's Cracker Barrel Cheese reads 028–CGO. The 028 is the day of the year the cheese was packaged, C stands for the Chicago plant, G is the vat number and O means it was made in 1970.

Another coding system uses numbers 1 to 365 to indicate the day of the year food was packaged or should be pulled. W3301 on a can of Borden's Frosted Shakes means it was packaged on the 301st day of last year. The W3 are quality control indicators.

Eggs often are marked with the day of the year they were handled and packaged. A carton with a 43 on the side means the eggs were packaged on the 43rd day of the year.

This method could be confused with the calendar substraction system. Suppose you see a package marked 308. It might mean Feb. 28. To unlock this method, you'll need to substract 308 from Dec. 31, giving you Feb. 26.

Consumers Union and other consumer spokesmen long have advocated open dating and abolishing codes in favor of plainly readable dates like the ones used by film makes and some frozen biscuit companies.

I found some brands of eggs plainly marked "exp. Feb. 3." I was shopping on Feb. 13 and realized that these eggs weren't very fresh.

Some congressmen think there should be a law requiring open dating. Rep. Leonard Farbstein of New York has introduced an amendment to the 1966 Truth-in-Packaging Act which would require perishable foods to be clearly marked with the date they should be taken off the shelf.

Farbstein's staff has conducted surveys in the Washington, D.C., area and report quantities of food kept beyond the expiration date.

"We found that some meat managers are paid bonuses based on gross sales. So it is to their advantage not to reduce food prices commensurately with age," a staffman said.

Indeed, Consumers Union, the non-profit testing organization, found a store selling a brand of fish sticks that had been discontinued two years before.

Consumer Federation of America (CFA) is supporting the Farbstein measure and urges consumers to write their congressmen to support the open dating.

CFA and Farbstein's office hope to set up a code bank. Shoppers who succeed in breaking codes would feed this information would then be available to everyone.

In Detroit, a city ordinance once required milk cartons to show an expiration date. The ordinance was repealed in 1966 when the Michigan Grade A milk law went into effect.

Proponents of open dating argue that America is already 20 years behind European countries on food dating.

A few years ago Consumers Union received the following letter from a reader of Consumer Report:

"We recently visited a supermarket where the freshness of all articles was really controlled. The packages were dated when they were received in the store and set out for display. I suggest that this practice become a more general one.

The supermarket was in Ljubipana, Yugoslavia."

MORE DATA ON LABELS PREDICTED

WASHINGTON.—Growing consumer pressure will force processors to put more information on labels of food containers, an Agriculture Department official has predicted.

Pressure for more informative labeling and more grading of foods is expanding because the woman of the house "wants to know exactly what she is buying, and what effect it will have on her family's diet," said Roy W. Lennartson.

Lennartson, administrator of the Agriculture Department's Consumer and Marketing Service, told the Department's annual "Outlook" conference:

"Without question, the marketing system will either respond voluntarily or be induced to respond to many of the recommendations made at the White House Conference on Food, Nutrition and Health.

"I am reasonably certain that we will see more descriptive labeling . . . more official grading and grade-labeling of foods."

Lennartson's agency operates several food inspection and grading programs.

YOU CAN CRACK THE FOOD CODES—MARKINGS ON PERISHABLES

(By James R. Blakely)

Almost all perishable items sold in grocery stores bear stamps indicating when they were packaged or when they should be taken off the shelf.

But except in rare instances these dates are in codes which all but defy the uneducated to determine if he is getting fresh eggs or year-old cheese.

Why is this? Why don't they simply stamp on the product, "packaged March 5, 1970?" Or "remove from shelf on April 15, 1970?"

Consumer advocates, Consumers Union and various Congressmen would like to have it this way through an amendment to the 1966 Truth-In-Packaging Act, and legislation to do just this has been introduced in the House of Representatives by Rep. Leonard Farbstein of New York.

Manufacturers and the grocery industry oppose the idea on the ground that consumers would always try to buy the newest items, thus defeating the normal rotation of "first in, first out."

But with a little bit of coaching the average consumer can get some idea of how old or fresh things are. With help from supermarket managers at a Star market and a Wegman store last week, I made my first attempt to crack the supermarket code.

Here's an easy one for openers. On the bottom of a one-pound carton of Bison Brand creamed cottage cheese is the number 0310. What does it mean?

That's right. You got it. It means it should be removed from the shelf no later than March 10, third month, 10th day.

A bit more complex code is found on milk cartons which translates into a very simple explanation once you know it. On the tab at the top of a carton of All Star chocolate drink are stamped (look closely because it is pressed into the wax, not printed) the following—B10.

This means the milk was packaged in the 10th week of the year on Tuesday or March 3. A is for Monday, B is for Tuesday, etc. Single letters on highly perishable items usually designate the day of the week. But on items which have a long shelf life, such as coffee, the letter may mean the month, hence H would be the eighth letter of the alphabet and the eighth month, or August.

Let's try another simple one. Items packaged by Wegman's such as meat and cheese have the week of the year they were packaged stamped on the label.

A package of sliced cooked salami was marked 09 or the ninth week of the year. I bought a Wegman-packaged medium sharp cheddar cheese stamped 07, which means it was packaged the second week in February.

How about 1022 on a package of Tobin's First Prize bockwurst? It gets a little more complex here. The manager wasn't sure what the code meant, but in all likelihood it is the Supermarket Institute's four digit code.

You add the first and last digit, in this case 3 or the third month or March. The middle two digits are the day of the month, or in this case March 2, the date it was packaged.

Most all bread is also coded for the day it was baked. Bakeries use different colors for the plastic-coated wire twists used to seal the ends of the plastic wrapper bread comes in. A different color is used for each day.

I encountered a wall of opposition from bakeries in my efforts to find out what code was in use here. The plant manager of one of our largest bakeries told me:

"I have no authorization to give out that information. These codes are for our use to insure that bread is fresh. It is a matter of policy not to give out the coding system, not even to our customers."

Another bakery insisted that I call the chief legal counsel for his bakery in New York City.

However, the bakery manager for Wegman's was kind enough to explain the color coding system in use for Wegman-baked white bread. (Special variety breads have varying codes). Their code is as follows:

Monday, red twist; Tuesday, white; Wednesday, blue; Thursday, yellow; Friday, orange. Consumer reporters in Detroit and Los Angeles report that exact same codes are in use in those cities, so the code probably is in general use here.

Code dating gets more complex as we move down the supermarket aisle. Consider 0506HM on a package of Food Club (Star market) sliced country swiss cheese. A Star executive, who helped me unscramble the code, noted that this was another variation on the four digit-type code.

The first two numbers indicate the month—May in this case—and the second two, the date, or the sixth. In plain language, this cheese is good until May 6. The letters indicate the factory where the cheese was produced.

Calendar day of the year dating is sure to stump the uninitiated. For instance, try 029GO on a 10-oz. package of Kraft Cracker Barrel cheddar cheese. Think hard.

The first three digits are for the day of the year starting with 001 for Jan. 1 and the last digit is the last digit of the year. This translates into Jan. 29, 1970, the date the cheese was packed. The G stands for the plant.

Calendar subtraction can stump the experts. You may find a 56 stamped on a product. That's not May 6 or November (by adding the two numbers to get the 11th month). It means you have to subtract 56 from 365 to arrive at the fact that the product was packaged on the 309th day of the year. Or maybe that was the date the product should be removed from the shelf. Frequently store managers are woefully ignorant of code dating translations. And even if they can read the code, sometimes it's hard to decide if the date is a package date or a "pull date", the date the item should be removed from the shelf.

Certain salad dressings and many vegetable oils use slash mark cuts on the edges of labels to indicate dates. Beer bottles also carry this type of code. I called Genesee Brewery to ask what all the marks meant and quickly found out.

On the left side of the label were nine slash marks. I learned that this code indicated the day of the year the bottle was filled. The first series of three indicated 300, the next series of four marks indicated 40 and the last series of one small mark and a fat one indicated six, which all added up to 346, the day in 1969 the bottle was filled.

The first series is a "hundreds" series, the second is for tenths and the last series is for single number. Double width slash marks indicate five.

A Genesee executive said, "We want our customers to know the age of our beer . . . we have nothing to hide." He explained that it was "almost impossible" to stamp the date on the labels because of the volume of bottles handled.

"We use these slash marks because they are cut by the thousands at a time and it is far more economical," he said.

The shelf life of domestic beer is around six months and Genesee says any beer that is still in the case by that time is pulled out of sale.

Then I came upon a package of Borden's Camembert cheese which bore the simple printing "Apr. 9," the date the cheese is to be removed from the shelf. Simple? Most consumer advocates are seeking legislation to require most of all perishable items to be labeled in this simple fashion.

Rep. Benjamin S. Rosenthal of Long Island is presently conducting a formal study of code dating with a view to hearings on the matter before his special consumer inquiry subcommittee of the Committee on Government Operations. A staff member said, "We've had complaints from a fairly sizable number of consumers that they have purchased food products which have gone bad shortly after purchase because they were left on the shelf too long. We've had some meetings with industry and food manufacturers have acknowledged that there is a problem.

"I don't know why, but some of these manufacturers guard their codes as secretly as the CIA guards its codes."

[From the Richmond Times-Dispatch, March 29, 1970]

BUYING SLEUTH CRACKS FOOD "PULL" CODE—A SPECIAL REPORT ON THE METHODS OF FOOD CODING

(By Estelle Jackson)

Ever wonder how fresh the food you buy really is? Ever suspect that the food you're eating may have been standing overly long on the grocery shelf?

The answer to your question is probably marked right on your grocery packages.

Most perishable food products found in supermarkets are marked with a date, either the date of packaging or the date the item is to be withdrawn or "pulled" from the store counter or shelf.

The problem is that most of the dates are in code—and most of the codes are secret.

What's more, the food industry prefers to keep them that way. Industry spokesmen say that codes help food retailers guarantee fresh food for the customers, but they maintain that the codes are not the customers' business.

Many housewives have long realized that

older merchandise is placed in the front of the counter, so that it will move out of the store first.

SIGNIFICANCE OF NUMBERS

But what is the significance of the numbers marked in purple or black on the undersides of boxes and cans?

In an effort to find the answer, I visited stores of several supermarket chains in Richmond during the past several weeks. I found some help and encountered some resistance. But I did manage to crack quite a few codes.

A carton of potato salad, one of my first targets, was coded in a fairly common, but baffling, manner. The numbers on the underside of the container read 2081. The manager of the store told me to add the first and last numerals together to learn the month—the third month, March. The "08" represented the day of the month, he said. So, I concluded, the package should be pulled March 8.

"Is that package still back there on the counter?" suddenly asked the manager, and he took off as though both Virginia H. Knauer and Ralph Nader were in hot pursuit. The date, you see, was March 11.

During my days of sleuthing, there were times of great excitement, like the day I cracked the codes for two brands of bread on my seventh visit to a bakery department.

The bread is coded by means of colored plastic ties on the ends of the loaves. A bakery department clerk told me that both bakeries delivered every day except Wednesday. Therefore, I was able to figure out their color coding for delivery days: one bakery had red for Monday; yellow, Tuesday; orange, Thursday; green, Friday; and white, Saturday. The other bread was coded as follows: red, Monday; white, Tuesday; yellow, Thursday; orange, Friday; and green, Saturday.

MILD DEPRESSION

There were also times of mild depression, as when I thought I would never be able to decode the meat symbols in one store. It was a Monday, and the code on the meat package label simply read, "AA." A clerk came to my aid, although very reluctantly ("I'm not supposed to tell this to anyone") by explaining that the second "A" stood for Monday, "B" would be Tuesday and so on. The first "A" referred to the current week, which was the week of March 16.

Meat codes vary from chain to chain. They vary from store to store within the same chain. They even vary within the same store of the same chain.

A friendly meat department manager at one store freely explained his coding system to me. Fresh meats were marked "23." The "2" stood for the man who wrapped the meat, my informant said, and the "3" represented the day of the week—Wednesday—the meat was wrapped.

Another store also had a simple coding system—or so it seemed after a butcher explained it. The meat is coded by the day it's wrapped. "3M" stands for the third Monday of the month, "3T" the third Tuesday, and so forth.

The chicken at one chain was another roadblock for a code-breaker. A meat-cutter at one store denied any knowledge of the meaning of markings on chicken packed outside his store.

"We have our own coding system, and I don't know what these packages mean," he said. But the meat manager of another store told me all of the chain's meats and chickens are coded by their expiration dates.

Fresh meat with a code reading "311," for example, is to be pulled on the 31st day of the month. The last digit in the three-figure series represents the wrapper. A mysterious chicken package turned out to have another code: a package that reads F17 will be pulled on the 17th. The "F" represents the wrapper.

MILK CARTON CODE

Finding the codes on a milk carton can be a strain on the eyes, as they are usually embossed colorlessly on the lip of the wax container. Most milk is coded by pull date—"31" would indicate the carton will be withdrawn on the 31st. One brand codes by the bottling date, a deliveryman told me. A letter represents the week, and a number indicates the day. "B4" means the fourth day of the second full week of the month, for example.

There were few codes to break in the produce department. Few fruits and vegetables are coded, since grocers theorize that the merchandise turns over rapidly, eliminating the need for time markings. A bag of kale was stamped 3A11, and a clerk told me that meant that the packing date was March 11, 1970. The "A" represented this year, he said. At another store, the produce manager told me an "04" marked on a package of celery hearts indicated March 4 was the packing date. Bags of carrots had numbered tags tied around their openings, and the same produce manager said these numbers—"5" and "14"—meant the packing day was March 5 or March 14.

Eggs packed in cartons generally bore clear markings of their expiration dates. "Exp. 3 16" or "Exp. March 16" had a message loud and clear. To a decoder whose head had begun to whirl slightly, refrigerated baking powder biscuits and other packaged rolls were also a relief—as their cans were imprinted clearly on the metal ends with expiration dates, sometimes by numbers, as in "324," or, more explicitly, by "March 24."

Codes can contain more than dates. Some codes also contain symbols representing cities, packing plants, vat numbers and even shift numbers. Processors say this must be done to identify specific batches for checking the validity of consumer complaints, as in cases where food products must be recalled.

One coding system uses the numbers 1 to 365 to indicate the day of the year the food is packaged or to be withdrawn. The marks W3327 on one dairy product means the food was packaged on the 327th day of the year. The W3 is a quality control indicator.

LETTER CODES

Letter codes can really be perplexing. One technique is to employ a six-letter word, like NEWARK, in which no letters are repeated. Using NEWARK, an "N" could represent Monday, "E" Tuesday and so forth. Some manufacturers prefer a 10-letter code, using a word combination like NOURISH EAT. When they reach the end of the 10-day cycle with a "T," they can simply start all over again with an "N."

Easily understood codes, in which the packaging or expiration dates are written in plain English, fall into the category of "open coding."

And open coding is what various consumer organizations want. It would be mandatory if a bill now before Congress is passed.

Rep. Leonard Farbstein (D-N.Y.) is the author of the bill, an amendment to the Fair Labeling and Packaging Act, which would make open coding on all packages and cans mandatory. The bill, which has 47 sponsors in congress, includes provisions for open dating by uniformly using the products "pull" or expiration date.

Preliminary results of surveys made for Farbstein's office by women investigators in the Washington area were disclosed by Ellis Levin, the congressman's legislative assistant.

"Everything sold is not stale, but a significant amount of food is older than the codes say it should be," said Levin. "We're finding this especially in milk, bread and meat. The greatest abuse is in low income areas. However, middle-income area housewives are concerned, too, about paying a lot of money for stale food."

A number of consumer organizations are committed to the principle of open coding. Consumers Union, the nonprofit product testing organization has repeatedly urged compulsory dating in closely legible form on perishable foods.

Food industry spokesmen maintain that open coding would add to the cost of food and contend it is not necessary because the purpose of coding is to help stores rotate products.

S. Frank Straus, executive vice president of the Virginia Food Dealers Association, says that coding would "create more problems than it solves, and would destroy the basic food store principle of first merchandise in, first out. Consequently, prices would rise."

NEWEST AND FRESHEST

"Housewives would buy things with the newest and freshest dates," he said. "The last merchandise in would be the first out. This would create a vast problem in that much merchandise would have to be destroyed and credited. Imagine what that would do to the cost of food.

"Housewives would paw through the food, looking for the newest, and we would have a terrible mess . . . It's just not a real practical approach to achieve what they want to achieve."

Straus continued, "Everybody makes mistakes. And if once in a while you do find food that isn't quite fresh, you take it back and get your money back. I doubt if we can outlaw errors by passing a law in Congress."

An official of the Virginia Department of Agriculture and Commerce also questioned the benefits to the consumer of open coding of perishable food. The department has no jurisdiction over coding.

Proponents of open coding counter industry arguments by saying that open dating would not be an extra cost, since the industry is already coding food. They argue that open dating has existed for years in some European countries.

[From the State Press, April 7, 1970]

THIS PRIVATE EYE SPYS SPOILED FOOD

(By Bill Young)

Fast cars. Fast women. Imminent danger. A murder, rape or a theft of the Queen's jewels. Right there is enough—quite enough—to serve as a season's material, with variations, for a television show about a private investigator.

But then there's the case of Arthur McBrayer.

McBrayer, a prelaw student and candidate for state senator, is a private detective.

This private detective drives a 1952 Chevy, which is not exceptionally fast, has a family and is not in any particular danger.

Milk, bread and other perishable foods are the targets of McBrayer's investigation.

True, this may be disillusioning to a generation that grew up with 77 Sunset Strip and watched the tides go in and out for Troy Donahue at Surfside Six.

Yet, McBrayer's investigation into a couple of food stores in South Phoenix has inspired The Arizona Republic to run a series, the first story appeared Thursday, on the sale of bad merchandise, especially perishables, in Valley stores.

The understaffed State Health Department is seemingly unable to control the situation. McBrayer quoted them as saying, "We have no one working on Pure Food Control. We handle emergency cases only."

McBrayer feels the discovery of unhealthy food conditions in South Phoenix may indicate a Valley-wide problem, including Tempe.

"Arizona State students are possibly the most uneducated consumers," McBrayer said. "Many are away from home for the first time and many are on limited budgets."

Last Thursday, McBrayer went to two Tempe food stores. At a surplus bread store, a loaf of bread was found with the letter "d" on it. The "d" means that this loaf was baked on a Friday. State law requires that any bread sold over three days old must be labeled "stale."

"This is an example of state laws not being enforced," McBrayer said. "I hope someday

the actual date of the day a food product should be pulled from the market will be clearly written on the package."

[From Newsday, April 9, 1970]

STALE FOOD SOLD, LAWMAKER SAYS

Washington—Rep. Leonard Farbstein (D-Manhattan) said today that two recent surveys of supermarket practices show that consumers are sold food that is stale and unfit for human consumption.

Surveys conducted by his own staff and by the Democratic Central Committee of Washington, D.C., showed, he said at a press conference, that 15 of 18 supermarkets here belonging to the Safeway, A&P and Giant food chains were found to be selling stale food. Staff shoppers checked 10 items, including milk, eggs, cottage cheese, chicken and bread, and found that seven stores had one stale item and eight had between two and five. Two successive trips to one store yielded $100 worth of stale items. The staleness was determined by checking each item for the code numbers which instruct store managers when a product should be removed from the shelves because it is no longer fresh.

"The results of the two surveys demonstrated that many of the current food codes are subjectively determined and provide the consumer with little if any guarantee of food freshness," Farbstein said. "One store manager said he ignored the codes and removed poultry from the shelves when it began to smell or changed color or developed growths." Farbstein said he believed that such practices were common in all areas of the country. "This means," he said, "that the consumer is getting food that is unfit for human consumption, that has lost nutritional value, smells and tastes bad or is unhealthy."

Stale items were found in stores regardless of the income levels of nearby neighborhoods, he said.

Clarence Adamy, president of the National Association of Food Chains, said that Farbstein's surveys "do not make sense." He said, "There is no reason for us to want to sell stale stuff, because the only way we can keep our customers is to sell fresh goods. It's very seldom a problem." Adamy denied that any health hazard existed.

Farbstein introduced legislation last fall to require food packages to be marked clearly with the cutoff date for freshness. Food packages are marked with such "pull dates," as they are called, but only in the form of codes which can be read by store personnel. Farbstein's staff was able to decode the dates on the items checked (which were all store brands) but was unable, for example, to figure out the 10-digit code numbers on Kellogg's Corn Flakes.

Adamy said that he opposed the legislation, which is expected to be the subject of hearings soon. "It would create an immense amount of waste," he said, "because customers would pick out only the freshest items to buy, and that would increase the cost to everyone."

[From the Philadelphia Inquirer, Apr. 12, 1970]

HOW TO KNOW WHETHER YOU'RE BUYING FRESH FOOD

(By Carol Schlageter)

It's a little like playing spy.

Your mission: To crack the codes that tell the age of products on the grocery store shelf. The codes are on slews of products, and range from simple to nearly Pentagon-proof.

Men at the three major Philadelphia chains contacted—Penn Fruit, A&P and Acme—say they don't see what all the secrecy is about anyhow. Snorted one: "I don't know why in God's world we don't put 4–14–70, because it would ease the problem with everybody."

Spokesmen for all three chains were candid about the codes—but occasionally were baffled themselves. One executive was a month behind the times and didn't know his stores had changed codes.

And in one center city market, a novice detected packages of luncheon meat that should have been pulled from the shelf a week before.

Why bother with it all? Code-cracking is a way you can make sure the product you're buying hasn't outlived the grocery shelf life, and won't go bad the day you get it home. That knowledge is particularly useful if you're buying an item you don't plan to use for a week or so.

Virtually every national name-brand product goes by its own code—resulting in a maze of cryptic symbols. Local stores add their own codes. In addition, after you crack a code there's the problem of figuring out whether it was the date it went on, or should be taken off the shelf. But to start your translations, here are the codes put on items in the local chains.

If you're shopping Penn Fruit, you should know about their perishable code. You'll find it on produce and meat items particularly.

They use A, B, C, D, E, F, G, H, J and AK to indicate the first ten days of the month—in that order. You're right, the letter I is left out.

For the next ten days, they put an A in front of every letter. And for the third ten days they put a B in front of every letter. If the code on your hamburger or bottled orange juice says A, that means it was put out the first day of the month, AA means it was put out the 11th and BA means it was put out the 21st.

There's another little matter to contend with—sometimes on meats a K is put before the code. In that case, ignore the K and proceed.

B-R-E-A-Dt is the secret to freshness on Penn Fruit's own brand goods. If there's no code letter on the label, that means it went on the shelf Monday, B stands for Tuesday, R for Wednesday and E, A and D for Thursday, Friday and Saturday in that order.

When it comes to Penn Fruit's milk, get out your bifocals. The dates are pressed, not printed, into the wax at the top of the carton. The numbers 413 means—you guessed it—that the shelf life expires April 13.

LUNCHEON MEAT

At the top of Oscar Mayer brand luncheon meat you'll find a number. The 26 means it's good until the 26th of the month . . . good for the grocery shelf, that is.

The expiration dates refer to grocery shelf life—and are based on the idea that you'll be keeping most things at home for additional refrigerator life. For example, milk is good several weeks—22 days, one grocer said—after the grocery date expires.

So much for the easy codes. A Penn Maid Cottage Cheese container had A2102 stamped on the bottom. Forget about that A. Add the next two digits and you get 3. That stands for the third month—March. Reverse the next two digits and you get 20. That means it went on the shelf the 20th day of March.

COULDN'T TRANSLATE

There were others that the Penn Fruit man couldn't translate. He pointed to a jar of salad dressing coded 0044K. "I have to depend on the Pfeiffer salesman to pull it off the shelf on time," he said.

"There's no excuse to have something go stale on my shelves," he added, explaining that most companies will give a market full refund for products that live on the shelf to old age.

He favors what some products already do and what legislation introduced in Congress would have all products do: Tell it in English. Items including hair colorings, dinner rolls in tubes and an occasional cheese wear their expiration dates proudly.

SINGLE CODE

At A & P, Ann Page products—including some 185 items from meat tenderizer to mayonnaise—have a single code. That 3B2 on the tenderizer, for example, means March 2, 1971—the date the product should be taken from the shelf. The 3 stands for 1971 (1970 is A under a system using A through J to denote each year in the decade) and the 2 stands for the day of the month.

A & P milk is coded the same way—the 4A13 pressed into the waxy carton top means the grocery shelf life expires April 13.

REAL DAY

Items like bread, cake and cupcakes have a code on the label—say 0409. It stands for the fourth month, ninth day—and April 9 was the date marking the end of the shelf life.

Items including coffeecake or pie have the day—the real day, such as "Wednesday"—printed on the label.

A & P doesn't code meat because, a spokesman said, "meat gives itself away" by its appearance. "If you don't have a bright red color you have an old piece of meat." If you do spot a number on the label of A&P meat, it identifies the meat man who packaged it. Produce also is uncoded at A & P, under the theory that its freshness speaks for itself.

At Acme, pre-packaged meats such as luncheon loaf and dried beef have a four-digit code. The secret to unraveling it is to add the first and last digits to come up with the month and the middle ones to get the date. If the code reads 4041, the month is the fifth, May, and the date is the 4th. And May 4 is the expiration date.

DECODER SURPRISED

One novice decoder was in for a surprise with Acme's own Lancaster brand olive luncheon loaf. At least a dozen packages of the product on shelves of the store at 15th and Spruce sts. bore the expiration code 2012 last Wednesday. That means, shelf life had expired April 1—or eight days before the shopper cracked the code.

The reaction of a meat section employe at the store was that the code isn't always accurate—that the luncheon meat had come in that same morning. The reaction of an executive at Acme headquarters was "I'm quite embarrassed—or chagrined." He said a quality control man was on the way down to check it, and said that even if meat is coded wrong it will be removed from the shelf on a better-safe-than-sorry basis.

Acme's own meat, like A&P's, isn't dated on the grounds that "onces the bloom gets off" it gives itself away. If you see letters on the meat label, they's the initials of the meat man who packaged it.

TWIST OF WRIST

Acme's own bread is closed and coded with a twist of the wrist. Those twists are color coded: Red, white, blue, green yellow and black for Monday through Saturday in that order.

Produce, including apples in see-through cellophane packages, has a code on the price tag indicating expiration date—A through F for Monday through Saturday. And the Virginia Lee baked goods line is coded with a P (for Philadelphia) and a number from 1 to 31 indicating the day of the month it should be removed from the shelf.

A milk carton with 0411 pressed into the wax has a shelf life ending April 11.

And, said an Acme spokesman, they're working on a five-digit code: 13–31–0 would mean, simply, March 31, 1970. Some of their cheeses already are dated 5–23–70 in a similar approach.

Said the Acme spokesman:

"You don't sell a customer stale merchandise more than twice. He just won't come back."

If you're ready to try your hand at cracking a code at the supermarket, the first step is easy: Ask.

[From the Denver Post, April 13, 1970]

SO THAT'S HOW THE COOKIE CRUMBLES

Some consumer problems have such obvious solutions that their existence seems ridiculous. Take the matter of stale food. Why can't produce be labeled with the date beyond which it's no longer fresh?

The fact is that many major chain stores do date their food—but in code to keep it a secret from the innocent shopper.

Rep. Leonard Farbstein, D-N.Y., has introduced a bill—with 44 co-sponsors—that would require food to be marked clearly with the last day it's safe to eat or aesthetically pleasing.

Farbstein's legislative assistant, Ellis Levin, told The Post that the National Association of Food Chains defends the codes as an economy measure: if they can't sell aging food, prices will go up. But impartial marketing experts say that experienced store managers know how much they can sell of each item. Overstocking is due to incompetence, which the public shouldn't have to pay for.

There's no consistent national coding system. Some chains mark the "pull" date, when food should be taken off the shelf. Others, use the "push" date, when it was packaged. Farbstein's office reports that many stores ignore the codes, and some even repackage food that's out of date but still looks and smells palatable. A buyer who plans to serve it later in the week is out of luck.

Levin and others studying the problem broke some codes, and found a complex variety. A major chain embosses the simplest one on its milk and egg cartons. If you see "409," the "push" date is April 9. (Another chain marks the "pull" date.) On the inside overlap of the hamburger wrapper at the same store, "00094" means April 9 again—reading this time from the right.

Meat varies from store to store even within the same company. The ghettos predictably get the worst bargain—12 days of shelf life isn't unusual. But Levin stresses that abuse is universal; in a store patronized by congressmen, he bought bologna that should have been disposed of a month earlier.

Farbstein has received nation-wide support for his bill, and not just from consumers. A member of a small food store association said he and his colleagues were interested because the big outfits won't explain their codes to them. These merchants, unblushfully ignorant like the rest of us, often get stuck with stale food. Let's hope plain English wins the day.

[From the New Republic, Apr. 25, 1970]

SMELL IT, THEN SELL IT

Supermarkets depend for their profits on clearing the shelves of merchandise whether it is fresh or not. Store managers get bonuses for high turnover and are docked when they have to throw away bad meat or return goods whose shelf life has elapsed. Unsold food is money lost, so it is to their advantage to sell everything. Grocers, therefore, customarily put fresh merchandise behind the older stock on the shelves. And they keep the true age of foods a carefully guarded secret so that customers can't discern freshness for themselves. Nearly all food products are coded in some way to show their shelf life, the date beyond which they are unsafe to eat, or the date they were packaged.

The number "606" on a carton of milk in one store, for instance, means that the milk should not be offered for sale after June 6. The code "5121" tells when a package of hamburger will likely be rotten. (Add the first and last digits to get the month; the middle digits represent the day. The expiration date on the ground meat is June 12.) The codes get complicated. The number "031" on pork chops in the store may indicate that they will be good until the first of the month and that they were packed at 3:00 p.m. May 30 on a carton of eggs reveals that they were packed on that date; their shelf life is seven days. A red mark on a loaf of bread means it was baked on a Monday or a Thursday. White means Tuesday or Friday. Blue signifies Wednesday or Saturday. "6029" on bologna means it was processed by packer number 9 and that it should not be sold after June 2.

The codes vary from product to product and store to store, even within a chain, and grocers claim that sometimes even they are in the dark about what the cryptic messages mean. In such cases manufacturers' or distributors' representatives come around now and then to decipher the codes and, presumably, remove the old stuff from the store.

The food industry does not want customers understanding the codes, because then it would not be possible to unload the stale food. Clarence Adamy, the president of the National Association of Food Chains, said recently that if customers could read the codes they would "tend to buy only the freshest products and that would create monumental waste." If housewives got picky, Adamy says, there would be a substantial increase in costs, hence prices. He feels the stores should be the sole judges of what is fresh enough to market. Should they?

New York Congressman Leonard Farbstein and the District of Columbia Democratic Consumers Action Committee have just completed a survey of stores belonging to the three major chains operating in Washington (Safeway, Giant and A&P). Some of the stores are in poor black neighborhoods, some in principally white suburbs and upper middle class areas. Eighteen stores were monitored. Ten products were watched, including milk, eggs, bread, ground beef and chicken. On the days the survey was conducted all but three of the stores were offering for sale merchandise that was by their own standards too old to sell.

Ignoring code dates, one store manager said he discarded chickens only after they began to smell, "turn reddish or yellowish or when little growths began to appear." Another manager said that when a package of ground beef begins to look too old he "reworks it and repackages it." Only if it looks "too bad" does he throw it in the garbage. A third store manager kicked the survey team out.

One market, during the survey, changed its bread code so that it indicated not the date it was stocked but a date two days hence. One store put too-old beef on sale at half price, while it sold equally antiquated pork (cheaper meat thought to be bought more often by poor customers) at full, original price. Lunch meat in one place was found to be two months past its "pull date." Some meat products were found recoded with new dates after original pull dates had passed. Pork one place had an anticipated life of two days. The same pork in another store was considered saleable for four days.

Although conditions seemed worse in some of the slum stores, there were abuses in all but three of the surveyed supermarkets, in affluent neighborhoods and poor alike. Safeway plans to experiment in certain stores with "open dating" which could be read with understanding by customers as well as supermarket cryptologists. Rep. Farbstein, sensibly, has introduced legislation, cosponsored by 52 members of Congress, that would compel open dating.

[From the Arizona Republic Forum, Apr. 30, 1970]

PROBE INTO THE COMPLEXITIES OF FOOD CODING: BREAD, MILK, AND MEAT

(By Frankie Manley)

The interest in coding of such foods as meat, bread and milk follows a rash of inquiries nationally and locally about the freshness of such foods and the possible need for consumer-protection legislation.

Rep. Leonard Farbstein, D-N.Y., three weeks ago introduced a bill in Congress which would require supermarkets to state the spoilage date on every food item subject to deterioration. (New York law presently requires dating on all milk sold in the state.)

Such a system would do away with the present, rotating "employes-only" code which is purposely created to keep shoppers from knowing or assessing a product's freshness.

Farbstein said two surveys taken by his staff and by the national Democratic Consumer Action Committee indicate that supermarkets "deliberately deceive consumers."

He said many store managers ignore the codes dates on meat and poultry and make personal decisions on when to remove items.

"The food industry appears to hold the belief that ignorance is bliss," Farbstein said.

Phoenix company spokesmen point out codes were devised as a consumer protection measure, a company key to stock rotation. The product has two or three days of use left after the date runs out. If customers knew the code, they'd shuffle the merchandise, always taking the freshest, a county health director said.

In a Women's Forum probe, bread was found in a major market that was a week old—in contradiction to State law which requires bread over three days old to be marked and sold as stale.

This reporter, calling as a consumer, asked Phoenix milk and bread companies for the codes and their interpretation. There is no uniformity of codes and any conformity from company to company is accidental, because one reason for codes, is, as one spokesman said, "to fool the competition."

Local bread companies responded as follows:

Serv-Us Bakers.—"It's company policy not to give out that information."

Sunbeam-Baird.—"We don't give our codes out to the people."

Rainbow.—"We change that code around regularly. I'll tell you the color for tomorrow (Wednesday.) It's blue. We have no more than two colors (of wire closures) on a shelf at a time—to make sure our bread is no older than 24 hours."

Holsum.—"We'll be glad to give you the code: A blue wire closure means the bread was baked Monday; white, Tuesday; red, both Wednesday and Thursday, and green, Friday."

Milk companies were cooperative with the exception of Foremost Milk.

Foremost.—"That information isn't given out. We have one code for Basha's and one for Lucky. Our milk always has five to seven days' life left. We make four deliveries per week."

Sarival.—"The number on the gable of the carton indicates the day of the current month. A number 28 has 8 days left, meaning the company should pick it up May 6."

Meadow Gold.—"The number indicates the day of the current month, but the numbers are far apart, example 1: No. 3, for May 13."

Shamrock.—"ABC hyphenated with a number, skipping the letter I and proceeding through nine more letters of the alphabet. Example: A10 means January 10 is the pick-up date."

Cow Palace.—"The codes change often. I know A was for January, but I don't even

know what letter has been chosen for May. The code, as most are, is imprinted in the gable of the carton."

Carnation.—"We use ABC for January, February and March and then start over with A standing for April, then the day of the month. Example: A10—April 10. This is the pickup date. The milk was processed 10 days prior to this date."

Borden.—"The 02 is for Arizona, the next 2, the plant number and the last number, the day of the current month. Ten days may be subtracted from this number to find the processing date. Example: 02.2—12 means Arizona—Borden Plant No. 2—May 12 (the pickup date.)

The Maricopa County Health Department, the meat inspection division of the U.S. Department of Agriculture, and other bread and milk companies refused to comment on how perishable foods are dated for shelf-life length.

The complex "codes aren't considered public information," said Dr. Donald Ford, supervisor in the meat inspection division of the USDA.

"Meat freshness is also determined by appearance, unbroken seals and other things," he said.

Robert Greene of Maricopa County Health Department's sanitation division has 27 inspectors, whose number hasn't been increased since 1963.

Besides 6,000 restaurants and 2,200 licensed retail food stores in the county, the same men are responsible for inspecting septic tanks, hotels, motels, meat markets, ice manufacturers, food caterers, warehouses and a variety of other places. The time they have available to check for product freshness is obviously limited.

Greene refused to reveal the food dating codes: "It's a confidential code and is printed to tell the company when stock needs rotating."

"Milk lasts up to 30 days because of a new pasturizing process," Greene said, adding that temperature of 45 degrees F. must be maintained to insure this type of freshness. Routine opening and closing the refrigerator could thus hamper temperature constancy.

"Bread is not really coded," Greene said. "Often companies add vitamins to prolong shelf life. If word got out, customers would shuffle things around and always take the freshest dated product and leave the oldest to die on the shelf."

Larry Sherry, sanitarian in the State Department of Health, said, "We have no copy of food codes and currently have nobody in charge of pure food control."

[From the New York Times, Apr. 16, 1970]

FIFTY-FIVE MEMBERS OF HOUSE SPONSOR BILL TO REQUIRE DATING OF PACKAGED FOODS

WASHINGTON.—Fifty-five members of the House joined today in sponsoring a bill to require the "open" dating of packaged foods sold by supermarkets and other retailers.

Each package, under the proposed legislation, would carry the latest date on which the food could be purchased with confidence that it was fit for consumption, assuming it had been stored under proper conditions.

Most packaged food in supermarkets already carries a coded date to guide the store manager. But the codes are meaningless to consumers. The proposed "open" or uncoded dating would give consumers the same information now available to the managers, according to the bill's chief sponsor, Representative Leonard Farbstein, Democrat of Manhattan.

Mr. Farbstein said he was introducing the bill—identical to one that he had filed earlier in the session—to demonstrate broad bipartisan support for the measure. Cosponsors of the new text include 48 Democrats and six Republicans.

"Open dating," he said in reintroducing the measure, "gives consumers personal policing power of the sale of stale food by their local supermarkets. It is self-enforcing."

TWO SURVEYS MADE

Last week, Mr. Farbstein made public reports on two surveys indicating that much out-dated food was being sold in District of Columbia supermarkets. In one store, over $300 worth of stale food, including three-month-old bologna, was discovered. The surveyors were armed with keys to dating codes.

"I believe the same situation exists throughout the country," the Manhattan Representative said. "Surveys are planned for New York and other cities in the near future."

Food industry spokesmen have expressed opposition to uncoded dating on the ground that consumers would buy only the freshest items, leaving others to spoil, and price increases would result.

Backers of the proposal contend that this could be avoided by proper store management, with items rotated from storage areas to display shelves and bins in an orderly manner. Special sales of food nearing the end of its shelf life would be stimulated, possibly resulting in lower prices on the average, they contend.

Dates for each item under the bill would be established by regulation of the Health, Education and Welfare Department. They would be based on industry criteria now used in coded dating.

A companion bill has been introduced in the Senate by Senator Joseph M. Montoya, Democrat of New Mexico.

FOOD CODE GUIDE TO CLIP

Arthur McBrayer, an announced Democratic candidate for State Senator, District 8-F, has printed the following dating code in a leaflet now being distributed to Arizona housewives.

It has been made available to members of the House and Senate at the request of Bob L'Ecuyer, counsel for the Senate Democratic minority.

Other groups are using the codes in consumer education classes for low-income groups.

The codes match those assembled by Women's Forum staff writer Frankie Manley. McBrayer code was accurate at the time of its April printing.

Bread is coded, in most cases, by color of wire used to close mouth of loaf. Color tells day of week that bread is first offered for sale. Sealed loaves are coded by a capital letter. Colored plastic tab is used on buns.

	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
Baird	Red	Black	Orange	Yellow	Blue	White	Orange.
Serv-us (bread)	Black	White	Blue	Pink	Yellow	Green	None.
Servus (sealed items)	T	A	Y	L	E	R	None.
Holsum	Blue	White	None	Red	Green	Yellow	None.
Baird Buns	Pink	Green	None	Yellow	White	White	None.
Orowheat (loaves)	Yellow	None	Red	Green	White	None	Blue.
Orowheat (sealed)	N	L	E	None	D	A	None.
Orowheat (muffins)	Green	None	White	Blue	Yellow	None	Red.

Carnation milk

Capital letter indicating month with numbers for day of month. A15=April 15th; A=Jan; B=Feb; C=Mar; A=Apr; B=May; C=Jun; (repeats etc.) (put on sale about 8 days before pull-date)

Shamrock milk

Capital letter followed by number for day of month. D20=April 20th A=Jan/B=Feb/C=Mar / D=Apr / E=May/ F=Jun/ G=Jul/ H=Aug/J=Sep/K=Oct/L=Nov/M=Dec

Milk put on sale 10 days before pick up date

Cottage cheese on sale 12 days before pick up date (same code)

Sour cream on sale 15 days before pick up date (same code)

Borden milk (half gallons)

First two numbers indicate state, next number is plant number, and last two numbers are pick up date.

EXAMPLE 02209 02 is state, 2 is plant and 09 is pick up date (9th of current month).

Borden (pints, quarts and ½ pints)

1st number is machine number. Capital letter is week of month.

B=1st week; O=2nd week; R=3rd week; D=4th week; and E=part of 5th week. Last number or numbers indicate day in month.

Borden yogurt

A=Jan; B=Feb; etc so on through the alphabet. The numbers show the day of month for pick up.

eg 1C7=pick up on March 17.

Note: All milk cartons are coded for pick up date by numbers and letters impressed into the gable of the carton on the top edge. Most companies use the letters of the alphabet in combination with numbers. All cartons having a small 02-5 in the corner are bottled by Shamrock.

Laura Scudder Products: All coded by day and month using numbers such as 4/20=April 20th.

Jay's frozen desert: 1016=Oct 16th & 420=April 20th etc.

Frito Lay: 112S represents Jan 12 and S is for San Jose plant. 202L represents Feb 2 and L is for Los Angeles, 3-Mar; 4=Apr; etc, thru 9 for Sept. O=Oct; N=Nov; and X=Dec.

[From the Camden (N.J.) Courier-Post, May 4, 1970]

SECRET DATES IN SUPERMARKETS SPOTLIGHTED: CONSUMER-FOOLING CODES MAY SNAP CRACKLE, AND POP

(By Kathleen Rowley)

Some legislators—like most consumers—are fed up with the secret messages being passed in our supermarkets.

In New Jersey, food dating, coding and labeling practices are coming under hard, cold scrutiny.

In Washington, 55 Congressmen already have joined in introducing into the House legislation that would snap, crackle and pop some supermarket secrets wide open.

Their bill—and companion legislation introduced in the Senate—would require that packaged perishable foods be stamped with a "pull" date. This means that consumers would be able to tell at a glance the latest date on which foods should be offered for sale.

Actually, some foods are labeled with that message already—but usually in codes of letters, numbers, colors, and notches which are incomprehensible to the consumer, sometimes even to the supermarket manager.

Some codes vary from food chain to food chain and are often changed, especially when somebody succeeds in cracking them.

What's more, food codes do not always flash the same message. Some codes are pegged to the date a food is packaged, some to the date the food's shelf life should be over.

The legislation introduced into the House with Rep. Leonard K. Farbstein, D-N.Y., as chief sponsor, is linked to the end of shelf

life. If that bill becomes law, the "pull" date will read "May 1" instead of "A–5–1," which to most consumers sounds like sheer gibberish.

In New Jersey, some changes in coding, dating and labeling requirements also may be in the offing.

For one thing, the results of a year-long study of consumer protection methods probably will reach the public eye early next month. The findings are expected to include recommendations to guide New Jersey health officials and legislators.

Now, New Jersey requires dating on only one product—milk—and coding on nothing though it recommends the practice.

Now nearing completion, the Rutgers University study of consumer protection methods may even recommend changing the state's controversial milk dating system, according to Francis A. Timko, chief of the state's Bureau of Food and Drugs.

Under the present system there are two alternatives: Milk may be marked with the actual day of pasteurization, or it may bear an indication that it was pasteurized in the 24-hour period ending 6 a.m. on the particular day. The day may be spelled out or abbreviated in no less than the first three letters.

Under the present system there's plenty of confusion—particularly when a milk company serves customers in other states besides New Jersey.

For example, this happened:

On April 28 a customer in Cherry Hill purchased a carton of Penn Brook milk from a vending machine. The date on the carton was 0502 (May 2). The following date appeared above the following legend:

"In New Jersey pasteurized during the 24 hour period ending 6 a.m. of day stamped on carton."

On April 29 (a Wednesday) the same customer purchased another carton of milk from the same machine. This carton has THU (for Thursday) stamped on the label.

A company spokesman said any one of a number of factors could have caused mix-up, including the fact that Penn Brook dates milk for use not only in New Jersey but in Pennsylvania and Delaware. Most likely, the 0502 is a "pull"—rather than a "pasteurization"—date and the carton bearing it was intended for Pennsylvania, the spokesman suggested.

There are also, according to the spokesman, several possible explanations for the carton marked THU. Among the explanations: the milk may be several days old; or it may have been incorrectly dated.

Other milk industry spokesmen say there are other problems created by New Jersey's milk dating requirements.

They say if a carton is marked "THU," you can't tell whether it was pasteurized last Thursday, or the Thursday before that, or the Thursday before that . . .

New Jersey milk processors would like to see the use of a yearly code of numbers ranging from 1 to 366 indicating on which date the milk was processed (with 1 standing for Jan. 1 and 365—or 366 if it's Leap Year—for Dec. 31.)

New Jersey once had that system. The state discarded it a couple of years ago because consumers complained they had to have calendars at hand to interpret the numbers.

The milk producers' second choice according to Dan Wettlin Jr., executive vice president of the New Jersey Milk Industry Association, is a system of numbers ranging from 1 to 31—with 24, standing for May 24.

There are some legislators who would like to see still another change in the way milk is marked in New Jersey.

A bill introduced into the Assembly three months ago would require that the pasteurization day on milk caps, tags, or labels be "legibly marked in dark ink."

This, explains Timko, would make it easier for consumers to read the milk pasteurization day. The way the date is stamped now, it's often difficult to see it.

Another consumer protection Assemblyman John J. Horn and James J. Florio, of District 3-D (covering parts of Camden County) and Paul Poliscastro of District 11-A (covering parts of Essex County) would make a change in frozen food labeling.

The bill would forbid retail sales of foods which have been frozen and thawed—unless the container or package bears a label stating: "This article of food was frozen and permitted to thaw."

If the bill becomes law, says * * * protected from deception. They will not be fooled into buying thawed fish fillets or thawed Thanksgiving turkeys thinking they are fresh products. Consumers would also, says Timko, be better protected because they would know that the fillets and the turkeys had been frozen and thawed—and therefore should not be refrozen.

Among consumer protection bills introduced into the 1970 legislature in New Jersey is one which would make state requirements and standards regulating processing, packaging, storage, and sale of food supercede conflicting local standards. This, says Timko, would prevent the proliferation of different good standards.

Practical politicians say this bill has more chance of passing than the others. The bill is sponsored by Assemblyman Harold C. Hollenback, a North Jersey Republican.

All three measures now are before the Assembly's committee on air, water pollution and public health.

Backers of the federal measure hope, says Ellis Levin, Farbstein's legislative assistant, that it will pass this year.

Though the Nixon administration to date has taken no stand on the bill, the legislation has, says Levin, both Democrat and Republican backers.

The bill's co-sponsors include 48 Democrats and six Republicans. Support for the measure, says Levin, is mounting. But, he adds, in Washington one can "hope" for but not "expect" a bill's passage.

The Farbstein bill (identical to one he introduced last November) now is before the House subcommittee on commerce and finance. A companion bill, introduced by Sen. Joseph D. Montoya, D-N.M., is also in the subcommittee stage. Hearings on the consumer protection proposal, says Levin, will probably start first in the Senate.

If the bill becomes law one major compromise affecting canned goods may be made in it.

Processors, explains Levin, say canned food has a long shelf life and that the condition of the can has a lot to do with food quality and safety.

Some experts also say temperatures at which foods are kept often are more important than ages.

Under the Farbstein bill, the U.S. Department of Health, Education and Welfare would establish expiration dates for each of the regulated foods. These regulations for foods which deteriorate rapidly would be based on standards now used for coded dating.

Many food industry spokesmen long have opposed use of codes and dates comprehensible to consumers. They say buyers would purchase only the freshest foods, passing up older foods that still are of good quality.

Waste would result, say these spokesmen, and the cost of the waste would be passed on in higher prices to consumers.

Levin counters with this argument: The real price of food is, he says, higher than the price marked on it.

Suppose, he suggests, you buy a food item for ten cents. Suppose that a third of the time you have to throw that food out because of lack of freshness. You are then paying, he says, more than you think you are for the food that actually reaches your table.

In Levin's opinion, you'll actually pay less in the long run if you buy the item for 11 cents and can count on its freshness.

In Farbstein's opinion, outdated foods are being sold in some supermarkets throughout the nation!

The Congressman and his legislative assistant point to two surveys recently conducted in supermarkets in the District of Columbia.

One survey, done by the D.C. Central Democratic Committee, covered 18 stores operated by three major chains. Safeway, Giant, A&P. Teams of women shoppers, armed with keys to codes, purchased ten items in each store.

The shoppers, says Levin, found that in all but three of the stores at least one of the ten items was being sold beyond the date the stores' own codes indicated sales should be halted.

The second survey, conducted by Farbstein's own staff, involved five stores. During that survey, Levin "personally" found an estimated $300 worth of "stale food—meat, poultry, cold cuts." In one store, says Levin, he found A&P chain bologna with a "pull" date of Feb. 5 on sale on April 4.

"The bologna," says Levin, "was all white."

To prevent such incidents, Farbstein has introduced the consumer protection legislation.

According to his legislative assistant, the Manhattan congressman is also mapping other strategy.

Farbstein will, says Levin, take his case against coded dating of food to the Federal Trade Commission.

The core of the case, according to Levin:

Coded food dating is a deceptive practice. It deceives the consumer about food freshness.

[From the Washington Post, May 7, 1970]

TRYING TO CRACK THE "FRESHNESS" CODE IN GROCERY STORES

(By Elizabeth Shelton)

Cracking the codes printed on perishable foods in the grocery store requires more than the skill of a cryptographer.

Not all the numbers and/or letters are decipherable by the store manager himself. As in the case of processed meats, the codes are placed there by the packager who knows what colorings and preservatives his brand of bologna contains and makes an educated guess how long they will keep it fresh.

Instead of printing a "pull date" to notify the store manager when to remove the item from sale, the packager may have used a "push date."

The "push date" tells the store when the item left the packager and entered into trade. But then again, it may represent the date the packager guessed in advance the item would arrive in the meat counter of a particular store. This is the store manager's clue as to how long it has lain there.

But this is only one type of coding.

The big chain grocery stores have various methods of coding their own brands of perishables, and the coding varies from store to store within a chain.

In one meat counter, cold cuts might be marked 0424, meaning that April 24 is the last safe date to sell the package without running the risk that it will spoil before it is used in the home within a reasonable time.

At another, cold cuts might bear a four-digit designation, 2242. This also means April 24 is as late as the store should continue to offer the item for sale. The outside numbers are added to get 4 for the fourth

month, April. The interior numbers represent the day, 24.

There may also be letters representing days of the week, months of the year, or years of the decade. (In case of longer lasting foods, such as bottled salad dressing, "A" represents 1970, the start of this decade.)

Other letters simply designate the packer.

Bread may be dated on the sticker at the end of the loaf with 1 for Monday, 2 for Tuesday, or with letters, not necessarily spelling anything intelligible to the buyer. Again, the color of the twist that ties the wrapper will indicate the day the bread was first put on sale; red for Monday, etc.

The shelf expiration date of cottage cheese is usually stamped on the lid. Often the shopper is lucky enough to find it in readable form. The date on the cardboard carton of milk is less legible. It is usually embossed at the top, and may very well be white on white.

Rep. Leonard Farbstein (D-N.Y.) thinks it is important for the buyer, from a standpoint of safety as well as family finances, to be able to read the code. He has introduced a bill to require packaged perishable food to bear a label specifying the date after which it is not to be sold for consumption as food. This is called "open date coding."

Surveyors from his office and from the Democratic Central Committee visited chain grocery stores here and found many foods that were over the hill as far as codes were concerned.

Worse, they found a common practice of repackaging chicken and putting on a new code label. Some of the chicken had been soaked in a solution to freshen its appearance. One way to tell it from the fresher poultry was that it bore no U.S. Department of Agriculture seal.

They also found repackaged meats, from which unattractive parts had been trimmed before new code dates were added.

They think they have proof that nearly obsolete food is ending up at ghetto stores—and not at reduced prices.

The chain-store grocers claim that spoiled goods seldom seep through to the consumer. They say that the cost of "open date coding" (Exp. 4–24–70) for all of the thousands of perishable items they sell would increase food prices. At a HEW employees' session Wednesday, one of them likened it to using atomic power "to squash a mosquito."

[From the Long Island Press, May 16, 1970]

"FRESH GROCERIES" MAY BE ANYTHING BUT

(By Patricia Agnew)

WASHINGTON.—Those "fresh" groceries you just purchased may include:

Eight-day-old milk.

Chicken repackaged several times but considered edible because it has not yet turned green or begun to sprout growths.

Month-old processed meat.

Re-ground ground beef that wasn't picked up the first time around but offered once again at regular prices because it didn't smell too bad.

Alarmed consumer groups report that all of these abuses—and many more—are common in the chain grocery stores where most housewives, concerned about getting quality food at reasonable prices, do their shopping.

Under current practices of monitoring the freshness of perishable foods, even the most careful consumer has little or no way to avoid them.

Most perishable foods contain freshness codes purportedly designed to advise store employes when an item is unfit to be sold for human consumption.

But evidence is mounting that the confusing array of codes is deliberately contrived to hide the true age of a spoilable food item from the consumer, to permit the packager to make "educated guesses" about the lifespan of his product and to allow retail store employes to do as they wish.

A bipartisan "open dating" bill, introduced by Rep. Leonard Farbstein, D–N.Y., and co-sponsored by 58 House members, would give the confused consumer a fighting chance, its supporters believe.

The Farbstein bill, to be taken up in hearings this summer, would require that perishable food contain a package label specifying simply and clearly the date after which it must not be sold for human consumption.

It practically takes the skill of a cryptographer to get that information today.

Three surveys—two in Washington, D.C., and another in the Chicago area—have uncovered a variety of freshness codes in common use. Many of these change as rapidly as the public "gets on" to them.

Some codes indicate the date of spoilage as determined by the market (the "pull" date), while others were assigned by the packager as his estimate of when the product would get to the store and how long it would last (the "push" date).

In one Washington chain store, milk was coded "406"—which meant the fourth month, sixth day, or an April 6 "pull" date. At another grocery on April 2 "pull" date was indicated by the code "0402."

One grocery used colored plastic ties on loaves of bread to indicate the day they were baked. On the week a survey team visited, a red tie meant Monday or Thursday, white Tuesday and Friday and blue Wednesday and Saturday.

"Contrary to consumers' popular belief that bread is delivered fresh in the morning and sold by evening," the team said, "it was learned that bread is considered a two-day item, and that bread delivered any morning is considered fresh until the close of business the following day."

The "pull" dates of cottage cheese at two stores were variously labeled "406" (April 6) and "0405" (April 5).

One of the D.C. surveys was conducted by staff members for Farbstein and the other, a more extensive investigation of 18 chain stores, by the democratic consumer action committee of the D.C. Democratic Central Committee.

The D.C. Central Committee concluded that the codes overall "are clearly designed to prevent the ordinary housewife from ascertaining when products should have been removed from the shelf.'"

That study found from one to five of the 10 basic product lines surveyed—milk, eggs, cottage cheese, ground beef, pork chops, chicken, bologna, hot dogs, national brand sausage and bread—to be out of date in 15 of the 18 stores.

Further, the survey team found the freshness of some food products, especially poultry, subject to the guess of the store manager.

"One manager," the survey team reported, "referring to all types of meat, stated that he daily looks at the meat and pulls whatever does not look good. When his attention was called to some greenish tinted meat, he admitted to not having inspected the meat that day.

"This same manager stated that he did not reduce the price of ground beef—if he thinks it is bad he pulls it out of the case, reworks it, and re-packages it. 'If it's too bad' he throws it away."

Other findings included a store that did not code its meat or poultry at all and several store managers who ignored coded dates and substituted their own judgments of freshness.

The Farbstein bill would have the Department of Health, Education and Welfare determine the safe lifespan of perishable foods.

A legislative aide to the congressman said the only objection from the food packaging industry was that the bill would encourage shoppers to select only the freshest products, even though many foods can last several days and weeks.

"The way we see it, the aide said, "if a store manager is doing his job, he'll be rotating his foods to maintain freshness anyway. The bill would only cause trouble to the lazy manager who is not doing his job.

"We think the bill would encourage store managers to offer older foods at lower prices."

He said Farbstein was "confident" the measure would become law. The mail response has been "extremely favorable," he said.

"We got a letter the other day from a lady in New Orleans," he added. "She said she had just bought a jar of baby food and found out it had been manufactured in 1961."

[From the Louisville (Ky.) Courier-Journal, June 4, 1970]

F08 3163 2W OV 3S: TO CRACK THE GROCERY CODE. YOU HAVE TO LEARN THE ALPHABET

(By Irene Nolan)

Nearly every item in a supermarket has a code stamped on it—a series of numbers and/or letters that have nothing to do with the price or weight.

The codes are put there by the manufacturer, the distributor or the store for their own information. They tell them what a lot of consumers would like to know—when the meat was packaged, whether the cottage cheese (or the milk or sour cream) is at the beginning, near the end or past its shelf life.

Some codes indicate the "pull date," the day the item should be removed from the shelf, others represent the packaging date. Grocery industry representatives maintain that how to read the codes should be known only to them. And in the case of many canned goods, the store manager does not know what the code means. Periodically he receives a list of code numbers from the manufacturer telling him which cans to take off the shelf.

"They (the customers) tear up things bad enough now," said the manager of a Louisville A&P store. "If they could read the codes they would tear the whole stack up to find the freshest."

And a representative of the National Association of Food Chains in Washington said that if the codes were general knowledge, food prices might go up. The consumer would choose the freshest items, which would lead to increased spoilage and higher prices, he said.

There are no laws or regulations governing how long an item may remain on the store shelf.

The consumer is protected, said several store managers, because stock boys or deliverymen rotate the items and remove the items with expired code dates. In this age of advanced processing and storing, there is little danger of spoilage, and, they say, the customer can always return the item and get it replaced or get her money back.

SHOPPERS WANT TO KNOW

But most grocery shoppers would like to have a clue as to how old a product is when they buy it, particularly the more perishable dairy items and meat. This helps them determine how long they can safely keep it after they get it home.

The codes can provide that clue, and I set out to find out how to read them.

I visited 16 supermarkets, including Kroger, A&P, and Winn-Dixie, GES, A Mart, and Giant. Some stores were visited twice. I began at the meat counters.

At the Kroger stores, I found meat to be stamped with a number and then a letter.

I visited the Kroger store on a Tuesday and the meat was stamped 1M and 1T. It seemed safe to assume that the meat had been cut on Monday and Tuesday. I asked

an authoritative looking figure in a white apron if this were the case. He confirmed the theory so I felt safe asking him about the numbers.

He said that Kroger divides the year into periods. The weeks in each period are numbered 1, 2, 3, etc. Thus 3W would mean the meat was cut on Wednesday of the third week of that period. A package stamped 2S, would indicate the meat had been cut on the previous Saturday.

I meant to ask how many weeks were in each period, but at this point he was beginning to look suspicious so I thanked him and left. I found the same system of coding in five other Kroger stores in the Louisville area.

Next was the A&P. The first store I visited had three numbers on its packaged meat. It was Tuesday and the majority of the meat was coded 023. I just rang for the butcher and asked what the numbers meant.

The butcher was very obliging. He told me the second number was the day of the week and the last number was the person who weighed it. He didn't tell me about the first number and I didn't push my luck.

At another A&P I found only one number on the package. This was just the day of the week—1 for Monday, 2 for Tuesday, etc. At another store I found two numbers on the package. The first, the butcher said, was the day of the week and the second was the person who weighed the package.

Winn-Dixie has a tough code to crack . . . and some secretive butchers. Finally I did find a butcher who was willing to share his secrets.

The days of the week are represented by the letters S T O P V X for Monday through Saturday. The weeks of each period are also lettered S T O P V X. Thus Monday of the first week of a given period would be SS. Tuesday of the same week would be ST.

The butcher also volunteered that the distributor stamps his own code on some of the chicken. This code is just a date such as 29 for May 29. He said the packer guarantees the chickens for eight days after arrival in the store, but he wouldn't recommend I keep it that long at home.

A Mart codes its meat in the same way that the A&P stores do. At Giant, an employe told me that 100 was for the first day of the week, Monday, 200 for Tuesday, through 600 for Saturday.

Among the stores visited, GES has the most confusing meat code. I couldn't see a pattern nor could I find a cooperative employe. When a code is uncrackable, it seems a good bet to look at the code on the hamburger, which you can see being freshly ground, and then choose meat with a similar code date.

At the groceries with prepackaged produce, I usually found the same code used for the meat applies to the produce. However, at Giant a stock boy said the produce is marked with the month and the day it was put on the shelf. Apples with a 525 on them meant they were put up for sale on May (fifth month) 25.

At all stores, luncheon meat, bacon, and hot dogs seemed to be stamped with a series of either three or four numbers. To crack most of the four-number codes, add the first and last numbers for the month. The middle numbers are the day of the month. A package of Fischer's luncheon meat stamped 2293, for example, would be May 29. The numbers 3013 on a package would be June 1. With three-number codes, the first number was usually the month and the last two the day of the month. For example, 611 would be June 11.

Clerks at several stores said that these numbers were the pull date or date that the luncheon meat should come off the shelf. However a spokesman for the Fischer Packing Company said that the numbers actually represent the last day that the company will guarantee the vacuum container in which the meat is packed. On the 2293 meat, the company guarantees the vacuum from the day it goes on the shelf until May 29. After that date, he said the store is on its own. The meat will remain fresh in the vacuum for many months, the spokesman added.

A merchandiser for the Kroger Company said that in the Louisville area, most retail grocers buy items with "guarantees." That is, if the product becomes outdated it is returned to the manufacturer. In some cases, items reaching the end of their shelf lives are reduced for quicker sale—especially baked goods, produce, and meat.

DAIRY COUNTER IS EASIER

At the dairy counters, most of the codes are easier to figure out. For example, the milk code is usually at the very top of the waxed carton. It is not in ink, but colorlessly embossed and usually hard to read. One side has a long series of numbers, and the other side has two or three numbers.

The long series, one clerk said, is "the plant where it was processed or something." The shorter series is of more interest. In the case of most of the milk it is the date the milk should be pulled from the case. For example June 5 could be just 5, 05, or 6 05.

Such products as sour cream and cottage cheese are also in most cases stamped with a pull date. Sealtest stamps its products on the bottom 5 15, meaning May 15 the item should be removed. Kroger stamps it on the top. A code date of E 15, a clerk in one Kroger store said, means that that item should be removed on the morning of May 15. A&P codes are just a date on the bottom, such as 26 for May 26.

A clerk at one A&P store said that the number stamped on the cheese was the day it was made. But, she said, don't worry about it. The manufacturer sends lists periodically of which packages should be pulled. Some cartons of eggs and refrigerated biscuits or coffee cake mixes are legibly stamped with an easily read code, such as May 29.

The bakery products at the A&P are plainly marked with the day the item was baked. Other stores and bakers mark their bread with a different color sticker or plastic twister for closing for each day of the week. For example, the twisters on the end of Rainbo bread are red, white, blue, green, yellow and orange for Monday through Saturday.

[From the Louisville (Ky.) Courier-Journal, June 4, 1970]

OPEN CODES WOULD HELP CONSUMERS

After I had learned to read some of these codes, I began taking note of how old the items in the cases really were. For the most part, no store had an abundance of items with expired codes, but at each store I found some items that should have been pulled. In each case, I pointed out the item to a clerk, who studied the numbers and then apologetically began removing the items.

In almost all stores, most of the meat in the cases had been cut that day. However, in all of them, there was meat that was several days old—sometimes four or five days old.

The one exception was a Kroger store in the western part of Louisville. It was a Thursday, May 21. There were perhaps a dozen pieces of meat coded 1 Th, meaning it had been cut fresh that day. Most of the beef was 1W, and most of the pork was coded 1M and 1T. Also there seemed to be a larger number of expired dairy products than in other stores. I asked a clerk if the products were outdated. He said they were and began removing them as I left.

The manager of this store was later contacted by telephone. He had no comment.

In fact, most of the local store managers when contacted for their comments on outdated items or codes in general had no comment.

Those who did comment, attributed outdated items to carelessness.

"We're not always perfect, but we try to be," one manager said.

To help the consumer know how long she may keep a product, some consumer organizations advocate a system of open coding in grocery stores. Open coding means that the codes would be written in plain English.

WANTS FRESHNESS KNOWN

Mrs. Oscar Sowards, chairman of Gov. Louie Nunn's Commission on Consumer Affairs, said that the commission has been planning to take up the matter of codes for some time and probably will soon. However, she said, she is in favor of open coding so that the "freshness will be spelled out clearly for the consumer." She said she believes this information is vital to the consumer.

Rep. Leonard Farbstein (D–NY) has introduced a bill in the Congress that includes provisions for a system of open coding that would use the product's pull date. The bill was introduced last November and re-introduced in April. It has 59 cosponsors, and hearings are pending.

Ellis Levin, the congressman's legislative assistant, said that a survey of the major food chains in Washington showed a large amount of food being sold beyond the expiration date of the code."

Levin said that most abuses took place in stores in poverty neighborhoods. In the stores serving middle class areas, he said, the codes had four, five, or six days left. In the low-income areas, the items had zero shelf life (day of expiration) or were out of date.

Levin said that several European countries already have open coding and the system is working successfully. He doesn't feel such a system would cause prices to rise.

This is not necessarily so, says Kemp Christensen, vice-president of the National Association of Food Chains. The association, he said, is not "opposing" the open coding bill. It is just trying to raise some questions about the feasibility of such coding.

"If you put in open codes, the customers would take the very freshest. There would be a certain amount of loss due to pawing over of items. Older items wouldn't sell as well. There would be extra cost involved, and we think the customer might have to pay. We are asking: 'Is it worth it in light of the quality of product the customer gets now?' "

REFUNDS ARE GIVEN

Christensen said that most stores are eager to please customers and keep their business. This means, he said, most managers are careful about code dates and willing to give refunds for spoiled merchandise.

Most codes do take into account, he said, that there has to be a shelf life after purchase for the customer. For example, if milk is coded to expire June 5, that date takes into account that the milk might be in a home refrigerator for a time after that date.

Shelby Johnson, director of environmental services for the state Department of Agriculture, said that there are no state regulations governing codes or the length of time a product may remain on the shelf. A. P. Bell, director of environmental services for the Louisville-Jefferson County Department of Health, said that before pasteurization Louisville did have a law regulating the shelf life of dairy products. With improved processing methods, he said, there was no longer any need for such a law.

Johnson said that with the better quality product, better marketing, and better distribution there is no need for legislation governing codes.

Levin says that the outlook for the open coding bill is very good. Christensen says that consumers "should put the pressure on the merchants, not the legislators."

[From the Chicago Sun-Times, July 10, 1970]

JEWEL DECODES SYSTEMS FOR DATING FOOD

(By Camille Jilke)

Jewel Food Stores announced Thursday it will translate the codes that food companies use to indicate the freshness of a product.

Joseph F. Grimes, Jewel's vice president of sales, said customers would be able to determine for themselves whether food was outdated. He said Jewel would discard any outdated food customers found.

An aide to Rep. Leonard Farbstein (D-N.Y.), who has introduced legislation that would require simple dates, said Jewel is the first major food-store chain in the nation to translate the codes for customers.

Grimes said the codes of some of the most popular items in the fresh meats, processed meats, dairy and snack departments will be explained on signs in the stores.

He said books listing the codes of all products sold at Jewel will be available to use at customer service desks.

The codes indicate to retail stores the date a food product was manufactured or the date it should be taken off the shelf.

For example, a Nabisco pretzel box that has "1L103" written on it was manufactured by shift 1 at plant L on the 103d day of the year, or April 13.

For Jewel Maid bread with "kwik-lok" seals, the color of the seal indicates the day of delivery.

The symbol "0057" on a Hillfarm milk carton means the milk should be taken off the shelf at midnight on the fifth (05) day (middle two digits) of the month in Chicago or the seventh (07) day (first and fourth digits) in the suburbs.

At a press conference at Jewel headquarters, in Melrose Park, Grimes said Jewel has strictly observed the codes even though they were unknown by the public.

Grimes said he did not expect translation of the codes to result in the sales of only the freshest merchandise.

Farbstein's proposed legislation would require labels on all food that could deteriorate to have clear letters and numbers announcing the last day the item would be safe to sell.

Ellis Levin, Farbstein's legislative assistant, said the legislation would cost nothing to enforce because consumers would enforce it.

Levin said his investigation showed outdated food is sold throughout the country to all socio-economic levels.

[From the Washington Post, July 12, 1970]

BREAKING THE FOOD CODE SYSTEM

(By Peter Weaver)

Wouldn't it be nice if the bacon or cottage cheese you buy had this vital information printed on the package: not for sale after—July 24.

As you may already know, the removal date is printed on most food packages but it's in code. I broke a number of these codes in a column last year, hoping it would bring some action.

Unfortunately, the number and complexity of the code systems are increasing. The most common one, used by members of the American Meat Institute and others, employs four numbers such as 3244. You add the outside numbers to get "7" which stands for the seventh month, July. The two inside numbers "24" stand for the 24th day—July 24.

Some companies use the number of the day of the year which would make "205" into July 24. Others use letters for months—A for January, G for July. Still others use color codes on packages or make little marks over their brand name letter to indicate removal dates. The list is endless.

There are some faint signs of hope, however. Rep. Benjamin Rosenthal (D-N.Y.), chairman of a special consumer inquiry on the House Government Operations Committee, has collected an extraordinary pile of detailed, coded date systems from some 20 major food processors. He's preparing to launch a national survey, probably to be done by Department of Agriculture shoppers, to see how well—or how poorly—our food dating and marketing system is working.

Rep. Leonard Farbstein (D.-N.Y.) introduced a bill last fall which would require food removal dates marked in plain English. The bill has been stymied so Farbstein has asked the Federal Trade Commission to take direct action.

State legislatures in California, Delaware, Florida, Maryland, Massachusetts, New Jersey and New York have all been bombarded with bills proposing that food dates be plainly marked. No laws yet, but pressure for "open" food dating is mounting.

Theoretically, supermarket or packer employees are supposed to police counters and shelves to remove products which have gone beyond coded removal dates. Sometimes this works, sometimes it doesn't. If consumers had a chance to see plainly marked removal dates, they could take over much of this policing job themselves.

Almost all the food companies are opposed to the "open" dating idea. They claim consumers would always pick products with the latest date, letting perfectly usable food go to waste. According to a top USDA food plant inspector, the companies could solve this problem with "block dating" and a system of discounts by dates.

On highly perishable items such as poultry and meats, for example, Monday and Tuesday packing dates could be lumped into a system with one "block" removal date. This would be continued through the week. On less perishable items, even a week's production might safely be lumped into one removal date.

Food companies usually put on removal dates to give the consumer anywhere from a few days to two weeks use of the product even if it's bought on the last day before removal.

A bacon processor, for example, knows his product is good for, say, 30 days after packing. So, using block dating, he would put a removal date on three days' production for 23 days from the first day's production. This gives plenty of flexibility for his marketing system and still protects the customer.

In the store, when a customer is faced with the choice of two or more plainly marked removal dates on packages of bacon, the discount system could be used. If the customer wants to use the bacon over a period of two weeks, then the package with the latest removal date could be selected at the regular price or even a premium price.

If the customer knew that the bacon would be used within the next couple of days, then an earlier dated package (one nearer the removal date) could be selected because the price would be lower.

With education and promotion, this system of plainly marked food dates would give us a choice based on our needs and would insure that our food can be readily used before it spoiled. At least one major supermarket chain will soon try this kind of plainly marked food dating on an experimental basis. Hopefully, others will follow.

MRS. HELEN ROGERS REID

(Mr. BINGHAM asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BINGHAM. Mr. Speaker, it is with sorrow that I take note of the death of Helen Rogers Reid. Mrs. Reid was a great lady and a great American.

I will not take the time of the Members to recount the facts of her long and full life and many achievements, which were duly recorded in the New York Times article which I shall append at the end of my remarks.

I do want to express to the members of her family, including particularly her sons, our colleague, the gentleman from New York and Mr. Whitelaw Reid, both of whom have been my friends for many years, the profound sympathy of my wife and myself. The end of a life is never easy to accept, even when it comes, as in this case, many years after the allotted Biblical span.

I have only the fondest personal recollections of Mrs. Reid. Among her many active interests was her great involvement in the activities of young people. Mrs. Reid twice gave me the opportunity to serve as an occasional correspondent for the New York Herald Tribune, a very great newspaper, writing articles for the Sunday edition on youth movements in Germany, Italy, and the Soviet Union in 1935, and on conditions in Japanese-occupied China in 1938.

Helen Rogers Reid will be sorely missed by a host of friends in New York and around the world.

The article follows:

[From the New York Times, July 28, 1970]

MRS. OGDEN REID IS DEAD AT 87; EX-PRESIDENT OF HERALD TRIBUNE

Mrs. Helen Rogers Reid, former president of The New York Herald Tribune, died of arteriosclerosis yesterday at her home, 834 Fifth Avenue.

Mrs. Reid, who was 87 years old, was the widow of Ogden Reid, president of The Herald Tribune until his death in 1947.

In her 37 years on The Herald Tribune and its predecessor, The Tribune, Mrs. Reid was an unflamboyant but powerful force in the newspaper world and in the city's civic and social life.

Her business acumen, first displayed as an advertising salesman, and her editorial judgment, in making the paper attractive to women and suburban readers, helped to transform The Herald Tribune into a modern newspaper.

Entering journalism as a byproduct of her marriage to Ogden Mills Reid, whose father, Whitelaw, had acquired The Tribune from Horace Greeley, its founder, Mrs. Reid gradually established herself as a newspaper personality in her own right. Never overtly aggressive, she won her reputation by quiet tenacity, dowagerlike charm, and a clear and orderly mind.

There was little in Mrs. Reid's appearance to suggest the influence she wielded, nor the force of her character. She stood only an inch over 5 feet; and she looked as fragile as a piece of expensive china. Her hair, at first brown, then gray and later white, was a fine soft fuzz that curled close to her head. Her large green eyes, however, were alert and probing. According to advertising salesmen who dealt with her, they could be quite unnerving.

In dress Mrs. Reid was feminine but not fancy. Her taste ran to bright colors, with various shades of purple predominant. Day in and day out she wore a plain beret-like hat embellished with pearls, a diamond clip, sequins, flower petals or feathers.

Although she was pleasant and informal in conversation in the office or at dinner, her talk did not run much to chit-chat, and she did not encourage it in others for long. For many years Mrs. Reid included her editors and columnists at luncheons, dinners and

weekend parties she gave for guests notable in national and world affairs.

A gathering might include a Presidential aspirant, an international statesman, a best-selling author, an economist, an editor and a few couples from the Reids' social circle on the upper East Side. With dessert, Mrs. Reid would swizzle a glass of champagne with a piece of melba toast and throw out a general question on current affairs.

DINERS SUMMONED TO SPEAK

Going around the table, she would call on the diners, one by one, for their views. According to one account of these affairs, some gave their opinions seated, but a number were wont to rise and address Mrs. Reid as though she were a public meeting.

Mrs. Reid's interest in the political and economic forces that shaped the world about her was reflected in the establishment, in 1930, of The Herald Tribune's annual Forum on Current Problems. Although the Forum was at first a promotional device aimed at clubwomen, it was expanded to include the public generally.

With Mrs. William Brown Meloney, the Forum director for many years, Mrs. Reid took a hand in choosing and obtaining prominent speakers, many of them from abroad. She presided at the big sessions in the Waldorf-Astoria, and published the proceedings in a special supplement for high school and college students.

Mrs. Reid's own politics were Republican, but the forums were nonpartisan and dispassionate presentations of world news and issues. They were discontinued after 1955, for emphasis on the paper's Youth Forum.

At The Herald Tribune Mrs. Reid raised her voice for moderate Republicanism and for internationalism. In 1952 she supported Dwight D. Eisenhower for the Presidency; she had backed Thomas E. Dewey in 1948.

Mrs. Reid was a leader in civic affairs. She served for nine years as chairman of the board of trustees of Barnard College, her alma mater. A dormitory built in 1963 with funds she helped to raise is named for her. She was a trustee of the Metropolitan Museum of Art. She was active in the New York Newspaperwomen's Club, and she was president of the Reid Foundation, established by her husband in 1946 to give fellowships to journalists for study and travel abroad.

NEEDY CHILDREN HELPED

Another of Mrs. Reid's civic interests was her newspaper's Fresh Air Fund, which raised public contributions to send needy children to summer camps and homes in the country.

As a society figure Mrs. Reid was far less formidable than her mother-in-law, a vigorous matriarch who died in 1931. Mrs. Reid's style in entertaining was informal—and indefatigable. There was a constant round of guests at her 15 East 84th Street apartment, a 30-room Ophir Cottage in Purchase, N.Y., at a summer place in the Adirondacks and at a hunting lodge in North Carolina.

To those who sought to assay her career, Mrs. Reid appeared as a Cinderella who became Queen Helen. She was born in Appleton, Wis., on Nov. 23, 1882, the youngest of 11 children of Benjamin Talbot Rogers and Sarah Louise Johnson Rogers. Her father died when she was 3. Although the family was not poverty stricken, she was obliged to earn part of her way through boarding school and then through Barnard, which she entered in 1899.

EARNED DEGREE IN ZOOLOGY

She enrolled to study Latin and Greek and perhaps to become a teacher, but she shifted her interest in zoology and took her degree in that. She established a reputation among her classmates as a crisp, attractive, enterprising girl who could even turn a profit on the senior yearbook. The class poet summed her up in this quatrain:

We love little Helen, her heart is so warm
And if you don't cross her she'll do you no harm.
So don't contradict her, or else if you do
Get under the table and wait till she's through.

In June 1903, when Helen Rogers received her Bachelor of Arts degree, she heard that Mrs. Whitelaw Reid, one of the city's grande dames, was seeking a social secretary. She applied, was accepted and went to work in the Reid's sumptuous Florentine fortress on Madison Avenue, across from St. Patrick's Cathedral. Mrs. Reid, who had a dinner table seating 80 people and the wealth to festoon it with elegant viands, never lacked for social engagements; a secretary to handle this facet of her life had few idle moments.

SECRETARY FOR 8 YEARS

Helen Rogers was in Mrs. Reid's employ for eight years, dividing her time between the United States and London, where Whitelaw Reid was Ambassador to the Court of St. James's from 1905 to his death in 1912. During this time she met the Reid's only son, Ogden Mills Reid, fresh out of Yale. The couple were married in Wisconsin March 14, 1911.

Tall, handsome, genial and convivial, Oggie Reid was deeply interested in swimming, tennis, shooting and sailing—activities in which his wife learned to excel by putting her mind to them.

She at first took only a passing interest in The Tribune, which her husband inherited on his father's death. In the first six years of her married life she devoted herself to her children, Whitelaw, Elisabeth, who died in childhood, and Ogden. Her chief outside concern was women's suffrage. She helped raise $500,000 for suffrage campaigns in New York.

"When I was at Barnard, working my way through," she explained later, "the necessity for complete independence of women was borne in on me."

JOINED PAPER IN 1918

Mrs. Reid's newspaper career began in 1918, when she became an advertising solicitor for the palsied Tribune, into which the Reid family was reported to have poured $15-million since 1898. "Come down to the office," Ogden Reid asked his wife, "and work the paper's success out with me." Within two months she was its advertising manager, a post she held under slightly different titles on The Herald Tribune until she became its president in 1947.

Immensely loyal to the Reid name and eager to make The Tribune a great, self-supporting paper, Mrs. Reid channeled enormous energy into advertising salesmanship. Between 1918 and 1923 the paper, competing in the morning field with The Times, The World, The American and The Herald, more than doubled its linage.

Then and later she was relentless in pursuit of space buyers.

"She had the persistence of gravity," an associate once remarked. She called on advertisers or had them to luncheon. Banter, deft flattery and an array of voluminous and precise facts constituted her arguments.

ADVERTISING STAFF DRIVEN

She was as unsparing of the paper's other ad solicitors as she was of herself. "You get so you sneak up the back stairs rather than confess you're not a wonder boy," a member of her harried but admiring staff once said.

On The Herald Tribune in the nineteen-thirties and forties, Mrs. Reid was accustomed to hold advertising staff meetings on Mondays at 9 A.M. sharp to get an accounting of each salesman's work. At one point she presided from a platform decorated with a cardboard apple tree and red cardboard apples. Each apple represented an account the paper was seeking.

She called up the salesmen by turn, and whenever one announced a new account she would remove the appropriate cardboard apple from the tree with a ceremonious flourish to the accompaniment of the assemblage's applause.

By means of this and other encouragements to salesmanship, including at one time impromptu choral singing, Mrs. Reid kept the advertising flowing in. For her doggedness and for her conviction that The Herald Tribune was the finest advertising medium in the city she was much admired by her sales staff.

INFLUENCE ON PAPER STRONG

Mrs. Reid had a pervasive influence on the paper's news and editorial content, although its precise demarcations were a matter of speculation.

One story is that Mrs. Reid once protested to her husband about a news article and that he retorted:

"Helen, will you get the hell back to your department and run it while I run mine."

She is said to have departed meekly.

Mrs. Reid always denied the story. "In the first place," she once explained to an interviewer, "my husband wouldn't speak to me that way. In the second, I wouldn't leave meekly. Besides, nothing like that ever happened."

Actually, when Mrs. Reid put her mind to it, she usually got her way. One exception was in trying to make the paper dry during Prohibition. On this point her husband was unyielding.

SPURNED DEAL FOR HERALD

Mrs. Reid's editorial presence was felt especially after The Tribune, at her prompting, acquired Frank Munsey's Herald in a $5-million deal in 1924.

Shortly after the purchase, The Herald Tribune moved uptown from Nassau Street to quarters at 230 West 41st Street, and began to expand its news coverage and increase its circulation.

Mrs. Reid was generally credited with being responsible for its concentration on the suburban, middle-class field of circulation. She frequently suggested story ideas and advised on coverage of others. The paper devoted, under her stimulus, much space to the news of gardening and allied interests of suburban dwellers and women.

STAFF MEMBERS RECRUITED

Mrs. Reid's influence was also reflected in the appointment of the late Mrs. Irita Van Doren as editor of Books, the Sunday literary supplement, and of the late Mrs. Meloney as editor of This Week, the Sunday fiction and articles supplement. She added the late Dorothy Thompson and Walter Lippmann, the commentator, to the staff. She was also responsible for the paper's Home Institute, a widely known experimental kitchen that devised and tested recipes for publication.

When Ogden Reid died in 1947 his widow succeeded him as president of The New York Herald Tribune, Inc. She became chairman of the board of directors in 1953. Her elder son, Whitelaw, who had joined the staff in 1940 and had been named vice president in 1947, succeeded to the presidency.

In 1955, at the age of 72, Mrs. Reid resigned as chairman but continued as a member of the board. Whitelaw succeeded her as chairman, and her other son, Ogden, who had joined the staff in 1950, became president, publisher and editor.

RETIRED IN 1958

For some time The Herald Tribune had not been gaining sufficient circulation and advertising in a period of rising costs and intense competition. A loan of $2.5-million from the Massachusetts Life Insurance Company in the fall of 1954 proved insufficient to restore the paper to prosperity. In September of 1957 John Hay Whitney, the financier, invested $1.2-million in the paper with an option to buy. He took up the option a year

later, leaving the Reid family with a minority interest. Mrs. Reid retired at that time from the board of directors.

Mr. Whitney ran The Herald Tribune until 1966, when it merged with The Journal-American and The New York World-Telegram and The Sun. The new paper, The World Journal Tribune, expired in May, 1967.

In retirement Mrs. Reid lived quietly in her apartment at 834 Fifth Avenue, entertaining her friends and members of her family and venturing out socially from time to time.

Many organizations honored Mrs. Reid. In 1935 she received the medal of award of the American Women's Association "for professional achievement, public service and personality." The Cuban Red Cross gave her the Comendador Cross of the Order of Honor and Merit for her "helpful understanding of world problems and friendliness toward Latin America."

At the annual dinner of the Hundred Year Association of New York, an organization of business institutions with more than a century of unbroken existence in New York, she was awarded a gold medal in 1946 for services in behalf of the welfare and prestige of the city. The 1949–50 seal of the Council Against Intolerance was presented to her for "outstanding service in the cause of tolerance and equality."

ELECTED TO ARTS ACADEMY

She was elected by the editors of "The Book of Knowledge" as one of 12 women who are "inspiring examples of intelligence and accomplishment." She was one of four women elected fellows of the American Academy of Arts and Sciences in 1950. In 1951 she was listed among 10 notable women in industry, communications, labor and the professions in New York State.

Mrs. Reid was also the recipient of a number of honorary degrees, and she was a member of the Colony Club, the Women's City Club, the Women's University Club, the New York Newspaperwomen's Club, the River Club, and, in Paris, of the University Women's Club.

She is survived by her sons, Whitelaw Reid and United States Representative Ogden Reid of Westchester, and by 10 grandchildren.

A funeral service will be held Thursday at 10 A.M. at St. Thomas Episcopal Church, Fifth Avenue and 53d Street.

WCBS–TV EDITORIAL

(Mr. GERALD R. FORD asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GERALD R. FORD. Mr. Speaker, it happens now and again that television editorials are noteworthy for their incisiveness and their exposure of the truth. Just such an editorial was aired by WCBS–TV of New York City on July 8, 1970. I think the content of that editorial should be made available to all those who were not privileged to hear it when it was telecast. With the permission of the House, I include the editorial at this point in the RECORD. The editorial follows:

LOYAL OPPOSITION

People in politics have long recognized the importance of television as a means of reaching the people. But not until recently have our national leaders displayed much mastery over the medium. President Nixon, for one, has shown great skill in using film clips to buttress his televised claims about the success of the Cambodian adventure. And last night, the Democrats showed off their video virtuosity with an elaborate electronic rebuttal starring anchorman Lawrence O'Brien, Chairman of the Democratic National Committee.

While we were impressed by the technical skill displayed, the message by Mr. O'Brien was a narrow partisan one for the most part, overblown and underdeveloped. Despite the clever use of videotape footage, what the Democratic National Committee had to say was about as novel as what party stalwarts normally hear at those rubber-chicken dinners.

On the big issues, Mr. O'Brien soared to rhetorical heights, sometimes into thin air. The divisions in our society, he said, were greater now under the Republicans than they had been 18 months ago under the Democrats. Divisions remain great, of course, but the current administration inherited national polarization from previous administrations. President Nixon has moved steadily—although too slowly—in reducing American combat forces in Vietnam, thus lowering the level of bitter conflict over the war in this country.

And the O'Brien message was disappointing in other regards. On Cambodia, he seemed to suggest that everything was going well there before the combined American-South Vietnamese invasion, a serious distortion of the facts. On the question of reordering national priorities, he gave a Democratic Congress credit, ignoring the fact that House Democrats, particularly those from the South, are the chief champions of bloated military budgets.

Our point here is not to suggest that the Nixon Administration should be above criticism. There is a great need for effective criticism from the opposition through a national forum. But the quality of debate offered by the opposition must be better than that offered by Mr. O'Brien last night. The Democrats should worry less about the medium and more about the message.

TESTIMONY BY HON. WILLIAM A. STEIGER BEFORE COMMISSION ON CAMPUS UNREST

(Mr. GERALD R. FORD asked and was givern permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GERALD R. FORD. Mr. Speaker, on July 24 our colleague, Rep. WILLIAM STEIGER, of Wisconsin, testified before the Scranton Commission on Campus Unrest. Mr. STEIGER made an excellent statement, which I feel would be of interest to all Members of the House. With the permission of the House, I include Mr. STEIGER's statement at this point in the RECORD. The statement follows:

TESTIMONY OF CONGRESSMAN WILLIAM A. STEIGER BEFORE THE SCRANTON COMMISSION

Chairman Scranton, distinguished members of this Commission, I am honored to have the opportunity to appear before you this morning, you are charged with examining a very serious crisis facing our nation—the alienation of many young Americans—as reflected on our college and university campuses. This situation is part of a larger crisis involving divisions among our people—divisions strengthened by misunderstanding and fear, divisions that inspire the unfortunate episodes of violence that we have witnessed on our campuses and in our cities in recent years.

On June 17 of last year, along with twenty-one of my colleagues in the House of Representatives, I presented a task force report on campus unrest to the President. I preface my remarks by noting that while I quote extensively from this Campus Task Force Report my statement, with the exception of direct quotes taken from the Report, does not necessarily represent the views of the 21 other members of the Task Force. I was not notified that I was scheduled to appear this morning until 6:15 yesterday evening and thus had no time to confer on this statement with my colleagues. This report was the product of a volunteer tour of over fifty American campuses which occurred as a result of our "desire to know and understand the factors which appear to threaten the destruction of many of our most respected institutions and the alienation of many of this nation's finest students."* The "report reflects our impressions of students attitudes and problems, along with some proposed solutions applicable at local, state and national levels." (Copies of this report are included with this statement and I hope would be made a part of the record.)

The keynote conclusion of our report was that the "critical urgency of the problem cannot be overstated." Today, one year after that report was released and while we still have fresh in our memories the tragedies of Kent State and Jackson State, we can appreciate that "critical urgency."

I should like this morning to discuss my feelings about this problem we face, in light of the conclusions of the Task Force Report and the subsequent events on our campuses.

The problems on our campuses go far beyond the efforts of organized revolutionaries. While there is a small group of dedicated anarchists who do contribute to the unrest and disorder I am persuaded that these men and women (both students and non-students) are not the primary cause of the problem. Within the past year, I have been impressed anew, as the Task Force members were, by the "candor, sincerity and basic decency of the vast majority of students" attending college in this country. These students are for the most part deeply concerned about their campus and their society—wishing to find solutions to the problems of both without resort to violence. But many of these same students, because of the frustration of their attempts to work through channels which they view as unresponsive, have been attracted to confrontation as a last resort in implementing the change they deem important.

While I do not claim to be able to identify each and every cause of campus unrest, I can with some certainty identify many external and internal factors which are important. I should like to discuss first the internal factors contributing to campus unrest:

1. COMMUNICATION

On many campuses there are not adequate channels of communication between the three elements within a university community, i.e., students, faculty, and administration. The students, though a transient element in the university community, believe that they are an integral part of that community and therefore should be given the opportunity to express their opinions and affect the processes by which their university is run as well as the type of education they receive. "Operating within a large bureaucracy, administrators find it easy or necessary to avoid definitive answers to student inquiries." "Charges of communication gaps are leveled against faculty, administrators, and governing boards alike." "Many students charge that there is no attempt by these groups to consult with students in any decisions, including those decisions which directly affect the students."

Faculties are criticized for being cloistered by the "publish or perish" doctrine which prevents them from having, or in some cases affords them the opportunity not to have,

*(Unless otherwise noted, the quotes are from the Campus Task Force Report, Congressional Record, vol. 115, pt. 13, p. 17409, W. E. Brock.)

contact with students. The task force concluded that "the non-teaching activities of some faculty members, particularly in large universities, are excessive."

2. RESPONSIVENESS

In many cases this lack of communication between the three elements on a campus causes a lack of responsiveness to student opinions. This situation is further "aggravated where there is a lack of agreement, or a shared perspective, between administration and faculty." Thus, one may see a situation develop where the three elements are all fighting each other—causing polarization of interests and alienation of individuals. The result, in some instances, is protest and confrontation.

3. INTOLERANCE

Student intolerance is a factor in campus unrest. "Frequently students are strong in framing ideal solutions and weak in analyzing the factors involved in the problem and in its solution. Some demand immediate solutions and failing that, reach into confrontation as the 'only alternative course.' They may resort to 'non-negotiable demands.'" In the past year, we have seen the unfortunate success of such tactics.

4. HYPOCRISY

Students complain of the hypocrisy of the university today—preaching "academic freedom" and "neutrality" while involved with the so-called "military-industrial complex," preaching social concern while expanding into ghetto neighborhoods through programs students call "urban removal;" preaching a commitment to the pursuit of knowledge while its faculties make efforts to reduce teaching loads in order to have more time for research. These paradoxes are apparent to students today, and they have, in some instances, relevant grounds for complaint.

Many students believe that a university must be a committed progressive social force within the community. They see this sentiment lacking on the part of the administration and faculty. They see their universities cloistered and parochialized—unresponsive to the needs of the nation. The student seems to demand the university take a stand on nearly every issue of the day. One sympathizes with the demand for commitment, but I would suggest perhaps we all need to realize the serious risk. The university, if it is to propagate and expand knowledge with true academic freedom, must necessarily maintain a certain neutrality. If I may digress here for a very personal opinion, I would add that I frankly do not like the concept of politicizing the university. In my view that presents a very real danger to the needed "sifting and winnowing" of all views which is essential for a college or university if it is not to be simply a place for the presenting of what is fashionable today.

5. OVERREACTION

The student today voices deep concern over the methods used to respond to student confrontation. "Many feel that the university has over-reacted with excessive force." The use of local police and National Guard on our campuses—and the resultant tragedies—clearly indicate a need for reform. In some cases administrations have not even explored alternative methods of dealing with confrontation. This over-reaction in many cases causes a radicalizing of otherwise moderate students.

Solutions to internal factors contributing to campus unrest must be, by their nature, unique to each campus, but certain guidelines can be generalized:

1. There must be increased attempts to open channels of communication. Students have a right to have their opinions heard and their suggestions acted upon with regard to policies which affect them as citizens within the university community.

While college administrators have made strides in recent months to provide appropriate channels for communication, more can, I believe, be done. It's vitally important for college administrators, faculty and students to take steps at the very beginning of the school years in September to determine how communications can be improved. Student concerns should be identified and possible courses of action to be taken should mass demonstrations or violence occur freely discussed.

Students should have a clear idea of how the university decision making process operates and how certain situations will be dealt with—they should know their rights and responsibilities. Administration and faculty should take great pains to be open and available to students. In short, these three groups should work together from the beginning to avert crisis situations and should carry on a continuing dialogue.

I would suggest the following possible mechanisms, realizing that each campus must develop a plan which suits its needs best:

a. certain hours when ranking college officials are available to students to discuss problems;

b. greater access to faculty, include evening and weekend sessions;

c. seminars on campus and national problems focusing on how to bring about constructive change;

d. referendums on major campus issues. It is most desirable to have campus-wide discussion of issues before with particular consideration to the rights of the minority to express its views.

2. Students must appreciate the decision-making process at their universities. They cannot do so, however, if information regarding such processes is not made available to them. Perhaps this knowledge and clear assurance of their ability to make their views heard at various levels of decision-making will help to dissuade students from resulting to confrontation tactics.

3. Positive contact between the campus community and the community-at-large should be encouraged: "increased social action programs, volunteer projects and similar activities" can be beneficial supplements to classroom activities—rejuvenating a curriculum and making courses more relevant for the students.

A closer relationship between courses and societal problems should be encouraged as well. Today's student wants the tools to help him in finding solutions to the problems of his society. The university can help to provide these tools.

4. Many students have suggested that university involvement with the military-industrial complex, i.e., campus recruitment by defense-oriented corporations, ROTC programs, military research on campus—be replaced with new commitments to support urban improvement and the extension of civil rights. I seriously question the assumption that this must be an either/or situation. Would the nation's interest really be served by replacing all university defense effort study and research with in-house Pentagon efforts? It would however seem fully justified if we insisted that a commensurate commitment to solving our social ills, including urban problems, be made by both government and the university.

5. Whenever possible, alternative methods to police force should be employed on campuses if disturbances occur. One such alternative that has met with some success is the ordering of a court injunction against occupation of a building, and the peaceful and quiet arrest of demonstrators by the use of a court order. Violent confrontation must be avoided.

It is important to note, however, that the campus is not an isolated society. It exists within a city, a county and a state. It should be obvious that responsible officials at all levels must be aware of the universities action blueprint in case of problems. Agreement as to proposed actions seems essential as does cooperation.

Finally, it is not, I think too much to ask that students assume greater responsibility for the avoidance of violence. Too often, it has seemed a campus "silent majority" has existed—and has failed to use its voice to stem a radical outburst.

6. It is also clear that we must reassert the fact that violence "is not a legitimate means of protest or mode of expression—and that it can no more be tolerated in the university community than in the community at large." Clearly there are administrations and faculty members who appear to justify violence both by students and the police. I urge this commission to recommend appropriate measures to insure proper training for policemen and National Guardsmen so that if they are required they will be fair, even-handed, and use only that force which is appropriate to the situation.

Students, however, must also be cognizant of the fact that the campus is not a sanctuary and actions which break the law will be punished.

Now I should like to discuss the external factors contributing to campus unrest:

One cannot deal with external forces impinging on academic unrest without mentioning at least briefly the television media. It can give instant graphic coverage to any event, simultaneously linking the entire nation in the realization of this event. Given the necessary limitations of time, television also is a great force in favor of the instant, necessarily simplified reply—as any good politician who has perfected the 45 second answer for the evening news show can testify.

Finally, it can and does iconize the individual, freezing one voice or image as a prototype for a viewpoint for better or worse.

Such larger than life force and speed has had a galvanizing effect on campus ferment. This is not to judge or to criticize but to suggest it may be time to focus on this effect and to make clear its limits as well as its strengths.

To move on to more specific and less nebulous factors, college students today are for the most part "better educated and more vitally concerned with contemporary problems in our country than at any previous time in our history." A result of this reflective concern is a profound despair over the paradox of promise and performance in America.

There are numerous issues facing our society which trouble young and old alike:

1. POVERTY-HUNGER-ILLITERACY

The student knows that ours is a society of affluence which has within it hungry and illiterate children—a society that has the resources to cure disease, feed the hungry, teach the ignorant—yet a society that appears to lack the commitment to solve these problems.

2. RACISM

America is a society which promises equal rights and opportunities to all its citizens and dignity to the individual. The student perceives many unfulfilled promises and is impatient.

3. MILITARY-INDUSTRIAL-UNIVERSITY COMPLEX

Many students are deeply disturbed by a seeming alliance between business, education and the military. They see us as a country voicing dedication to the highest values, yet dominated by a complex which is building the implements of destruction of life rather than finding solutions to human needs.

4. FOREIGN POLICY

To the student, ours is a government that has too often neglected to even attempt to understand the cultures and values of other

peoples of the world; a government that has in fact taken actions which reject the significance of those factors. He sees a foreign policy controlled by economic interests rather than humanitarian interests—a foreign policy that unwittingly condescends to other nations of the world.

5. UNRESPONSIVENESS AND LACK OF INFLUENCE

The student today believes he lacks sufficient and effective impact on the processes which govern him. He feels a remoteness from those processes and believes his governmental leaders are isolated. The appeal to work within the system has lost much of its strength because many young people have rejected the system which works they feel so tediously and is based on what they perceive to be compromise of principle.

6. POLICE STATE

The student claims that ours is a society where "official violence" is increasingly sanctioned and even praised. "As violence grows, and as counter-violence escalates, the student views his relationship with both the university and the outside world as increasingly beset by the police and National Guard." The student perceives himself as a target for repression.

7. VIETNAM AND THE INDOCHINA WAR

Our involvement in Vietnam and increased involvement in Indochina is "one of the major factors in radicalizing students." "Many consider the war to be immoral and unjust," and not in the interests of this country. "An increasing number vow to take any steps necessary to avoid military service."

8. SELECTIVE SERVICE

There is the related issue of the draft. As students enjoy student deferments, they view the impact of an action in Vietnam on their peers. This, I believe, produces a double edged sword of a sense of guilt and a sense of injustice as a result of the selective service system.

9. EDUCATION

To paraphrase John Gardner—a society which values mediocre philosophy above plumbing will discover that neither its philosophy nor its plumbing will hold water.

We are perilously close to this discovery right now. If this commission does nothing more than explode the myth of the necessity of college education for all, it will have performed a great national service.

There are many students in our universities who should not be there. This mismatch of ability and educational opportunity is I believe very relevant to the problem of academic ferment.

We have failed miserably as a nation first to accord well deserved dignity and status to skilled blue collar jobs, and secondly to provide high quality education for such work.

Until we are willing to finance a full range of educational choices and offer counseling to all students regarding these opportunities we will have failed in preparation for the future. More importantly, we will, indeed, have failed the children of a democratic society.

Many of the young, then, are questioning the whole fabric of our society. They see misplaced priorities, lack of commitment to human needs, pre-occupation with rhetoric, hypocrisy, inaction, complacency. All of these ills are overstated by the young—but the obvious paradoxes of this society *do* stand out against equally obvious ideals. The distance between our goals and our realities are, indeed, facts of life with which we must deal. We must attempt to understand and appreciate the student perspective. If we do not, their distillusionment and their frustration with the system will continue to grow, as will confrontation and division.

What are the solutions to this multiplicity of external factors contributing to campus unrest?

In a representative democracy we find individuals of opposite points of view on many issues facing the society. In such a system progress can be made only through compromise—a slow process. Solutions take time. Many of our young people do appreciate that fact. If we are to hold on to those who are willing to work in the struggle and reattract the alienated we in government must demonstrate at least a vigorous commitment to solutions, not rhetoric.

At this point, Mr. Chairman, let me add a caveat. There are those who might exploit the issue of academic unrest for short term political advantage. Such a course is in my view wrong and would result in further polarization and alienation. Political parties and candidates should welcome the participation of young people in the political process and heed the negative result of driving intelligent young men and women away from the process of change.

Having said that, Mr. Chairman, let me say we must manifest: a humanitarian commitment to solve the problems of poverty, disease, hunger, illiteracy.

A moral commitment to fulfill the ideal of equality through law and justice.

A technological commitment to re-balance the environment we have neglected.

A compassionate commitment to listen to the young and the minorities of this society—rejecting repression and unresponsiveness.

In light of the crisis of campus unrest, our task force, one year ago, presented a number of policy proposals to the President:

We rejected repressive legislation against universities as penalizing innocent and guilty alike. We stated that the "fundamental responsibility for order and conduct on the campus lies with the university community."

President Nixon deserves high praise for his direct and forceful refusal to empower the federal government as the policeman of the nation's campus. I would hope that this Commission would support President Nixon and the Task Force in this position.

We called for the lowering of the voting age and the reform of the draft.

While the Congress has passed a statute to lower the voting age to 18, there remain serious Constitutional questions. I believe the Congress should commence action on a constitutional amendment to accomplish this goal.

Reform of the draft is coming slowly, but I'm pleased that President Nixon has initiated the lottery and recommended ending deferments. I would hope this Commission would support the findings of the Gates Commission on the advisability of ending compulsory military service and instituting a volunteer army as one means of alleviating student unrest.

We encouraged student participation in politics.

The students have responded vitally by mobilizing to meet with elected officials, to work in political campaigns, and to institute dialogues with people in all facets of our society. I do not think it necessary to ask this Commission to join us in encouraging such participation.

We recommended the establishment of a National Youth Foundation which would create models of community involvement by young people—taking advantage of their desire to improve their society.

To date no action has been taken on this recommendation, but I would request your careful consideration of the concept.

We recommended the establishment of a Student Teacher Corps to provide the opportunity for youth to work with the disadvantaged.

Such a program has been passed and begun to be implemented, but not to the extent that we had hoped.

We recommended increasing Congressional support of the College Work-Study Program, National Defense Student Loan Program, and the Educational Opportunity Grant Program—all of which were budgeted far below authorization levels.

As educational costs rise, it is imperative that more funds are made available particularly to low income students if we are to offer equality of educational opportunity.

We recommended the establishment of a central office in the Federal Government to coordinate all national youth programs . . . providing continuity of purpose.

This recommendation has not been acted upon. However, the Task Force is continuing its study of federal agencies in order to fully ascertain the policies and programs of the Federal Government which pertain to youth.

Finally, we recommended the establishment of a Presidential Commission on Higher Education to include students, faculty, and administration together with the general public—a Commission which would help create rapport among the members of the academic community as well as the community at large. Today we look to you for help in the establishment of such rapport.

Alfred North Whitehead said:

"The art of a free society consists first in the maintenance of the symbolic code and secondly in the fearlessness of revision. Those societies which cannot combine reverence for their symbols with freedom of revision must ultimately decay."

The balance between revision and reverence is at best tenuous and delicate. Assuming, as I do, that the young in America are a powerful and hopeful force for fearless revision, I must add a word for the other end of the tightrope—reverence for our symbols.

I do not mean blind, uncritical faith—none can ask that—but I do mean that both old and young must through tolerance and compassion learn to allow for fallibility and retain faith at least in our goals.

To enjoy freedom—academic or national—the students will have to allow it to others. Ours is a government by majority. Faith in the ability of the minority to influence the majority toward the pursuit of the highest goals is the strongest and most important tool the student can have. Respect by the majority, by the leadership for the views of those who question and challenge and protest is equally essential. The minority must be given justification for such faith.

It would be well to add a further note in conclusion. I cannot agree with those who say ending the Vietnam war will end academic ferment. I have tried to suggest that its sources are even farther reaching. They touch the fabric of our society and the direction of inevitable change.

The solution to one problem—however major—will not see ferment evaporating. We face years of strain ahead on the balance between revision and reverence. It would be my hope that we could begin now to provide the channels for change we will need—not just today, but for generations to come—if we are to endure as a people in a democratic society.

THE NEED FOR A REAPPRAISAL OF OUR CHINA POLICY

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, as Congressmen, we will be called upon to discuss and offer our opinions about the final direction of our policy toward China. Because of the importance of this matter, within the next few months, Congress will be undertaking a major review of American foreign policy. One

of the most important areas of our policy which will come under this review will be U.S. relations with China.

Several vital questions must be raised as to the nature of our China policy. Should we extend diplomatic relations to mainland China? Should we admit the Chinese into the United Nations? Should the United States continue arms shipments to Taiwan?

I would like to acquaint you with some of the specific issues involved, and with the positions I am considering on these issues.

American relations with China have remained virtually unchanged for the last 21 years. Since 1949, we have followed a policy of containment, isolation, and military encirclement of mainland—Communist—China. This containment policy had its origins in the obsessive anti-Communist concern that developed in the McCarthy era of the early 1950's. At that time, we established the Truman Doctrine, which advocated containment of the Soviet Union in Europe. Under the Truman Doctrine, the United States supplied aid to the Greek and Turkish Governments in their successful struggles against Communism. Later, the Truman Doctrine provided a basis for the establishment of NATO as a permanent barrier to Soviet expansion in Europe.

When the Communists triumphed in the Chinese revolution of 1949, the United States attempted to apply the methods and assumptions of the Truman Doctrine to the situation in Asia. Adhering to a policy of containment and isolation, we refused to extend diplomatic relations to the Chinese government, and refused to allow China's entrance into the United Nations. This policy is still in effect today, and for the last 21 years we have had official negotiations, talks, or other diplomatic contact with the Chinese.

The policy of isolation has also been carried over into economic areas, and as a result we have not engaged in any trade or commerce with China since 1949.

A third major facet of the containment policy has been the military encirclement of mainland China by American forces. The Korean war, and American involvement in Vietnam, Cambodia, and Laos have all been outgrowths of the policy of military encirclement.

Presently, the United States has over 800,000 men stationed in military bases on the borders of China. On the eastern and southern border, from Japan to Thailand, the line of American bases stretches from Okinawa through South Korea, Thailand, the Philippines, Vietnam, Cambodia, and Laos.

The United States has attempted to augment the policies of political isolation and military encirclement by officially recognizing and supporting the forces of Chiang Kai-shek on the island of Taiwan—Formosa. Congress has given $2.7 billion in military aid to Chiang since he was exiled to Taiwan. Among the most modern weapons we have entrusted him with are several squadrons of F–5A supersonic jet fighters, and the new Bell Uh-1H—Huey—helicopters. We are also building a helicopter factory for Chiang in central Taiwan.

In addition to the aid we have officially given to the Nationalists, the Pentagon, without public knowledge or congressional consent, has unofficially given to Chiang—free of charge—millions of dollars of surplus American equipment. Last year alone, these "gifts" totalled over $157 million, and included four destroyers, a Nike-Hercules missile battery, 35 F–100 Super Sabre jets, 20 F–104 Starfighters, 30 C–119 Flying Boxcars, 50 medium tanks, 120 howitzers, and thousands of rifles and small arms.

Furthermore, the U.S. 7th Fleet continuously patrols the Taiwan Straits, and provides logistical support for the Nationalists on Quemoy and Matsu.

Thus, the situation and our analysis seems to have changed very little from 20 years ago when our original China policy was established.

There has, however, been some talk on the part of the Nixon administration as to a change in this policy. As an indication of good faith, the President has reduced the Taiwan Strait patrol of the Seventh Fleet. Yet, a I previously pointed out, the administration continues its policy of unlimited military assistance to Formosa. At this time, approximately 10,000 American troops remain on Taiwan, and there are repeated rumors that a large American air base is being secretly built on that island.

Several Congressmen, mostly from the ranks of the Republicans and conservative Democrats, favor continuing our present 21-year-old China policy. Advocates of this course claim that because mainland China is a Communist nation, she must be cognizant of American strength at all times. Such a policy of confrontation has entailed continued military encirclement of China, continued political and economic isolation, and continued support for any and all governments in opposition to the Communists—even dictators such as Chiang.

This entire policy of containment, isolation, and encirclement is based upon the premise that as a Communist nation, China is naturally aggressive, and if left unchecked, will expand at the expense of her neighbors. This theory may have been valid 21 years ago. However, the world situation has changed greatly since 1949. No longer is "communism" considered a monolithic menace, threatening to devour the entire world. There are now tremendous differences between the Communist parties of the various "red" nations. Prime examples of these differences are the ideological split between Russia and China, and the independent, liberal stances taken by the Communist parties of Yugoslavia and Rumania.

Recent military studies have shown that China in particular is not in a position to conduct a war of aggression against any of her neighbors.

There has been no sizable shift in China's deployment of troops in the last few years. Those troops that have been moved have been transferred to the Sino-Soviet frontier. Approximately one quarter of the army is deployed on the coast between Shantung and Hong Kong in anticipation of an attack from Taiwan. Another quarter of the army is located along the axis of the Canton-Wuhan Railroad. The third quarter of the army resides in Manchuria and around Peking. The fourth quarter of the army is divided between Tibet—three divisions—Sinkiang—four divisions—Inner Mongolia—four divisions—Hainan Island—three divisions—Western China—11 divisions—Szechuan and Yunnan—12 divisions. There are approximately eight to nine additional divisions not included in the above figures which are situated along the Sino-Soviet border.

It is generally agreed that the Chinese forces are deployed in a basically defensive manner, and would have great difficulty mounting an offensive, especially on more than one front.

In addition, the Institute for Strategic Studies' Military Balance for 1969–70 states:

> China's conventional arms industry would be in no position to produce weapons on a scale needed for war; neither could Chinese-produced nuclear arms be a substitute for them.

Furthermore, prominent members of the Nixon administration have indicated that China's foreign and military policy over the last few years has been very cautious, and essentially one of nonintervention. Although the Chinese have supported various wars of liberation, at the present time they do not have troops involved in any foreign wars. In a famous 1965 speech, Marshall Lin Piao advocated not direct involvement in foreign revolutions, but only generalized support—logistical and moral.

Thus, while the Chinese Government has engaged in some violent revolutionary rhetoric, its actions have been of a much more passive, defensive nature.

No one is more repelled by the totalitarian nature of the Chinese Government than I am. However, we must face the facts, and realize that whether we like it or not, the Communists are the rulers of China, will remain the rulers of China, and must be dealt with as such. We must make an effort now to peacefully settle the differences between our nations before the violent rhetoric of China has a chance to become violent actions. This means establishing diplomatic relations with the Chinese, sitting down at the bargaining table, and beginning immediate negotiations.

American policy toward Taiwan also deserves close scrutiny. Our present policy of unlimited military support is based upon the theory that Chiang's regime is, and should be the ruler of all the Chinese people. Such an assumption, however, seems to be quite unrealistic.

In his memoirs ex-Secretary of State Dean Acheson described the decay and exile of Chiang's government:

> Chiang Kai-shek had emerged from the War (World War II) as the leader of the Chinese people, opposed by only one faction, the ragged, ill-equiped small Communist force in the hills. Chiang controlled the greatest military power in Chinese history, supported and given economic backing by

the United States. Four years later, his armies and his support, both within the country and outside it had melted away. He was a refugee on a small island off the coast . . . The most inexhaustible patience of the Chinese had ended. They had not overthrown the government. *There was nothing to overthrow. They had simply ignored it.* The Communists were not the creators of this situation, this revolutionary spirit, but had mounted it and ridden to victory and power.

In other words, for 4 years after World War II, Chiang was the ruler of China. During those 4 years, however, he did so little for the Chinese people, that his popular support dwindled to nothing. He was then exiled to Taiwan, and the Communists took control of the Chinese mainland.

Thus, it is self-deluding and foolish for the United States to insist that Chiang still rules China. We are, in effect, recognizing a government that no longer exists, and not recognizing one that does.

As I have pointed out, we have given over $2.7 billion in military aid to the Nationalists. Little of this money has been used to help the people of Taiwan. Most of it has been used to support Chiang's delusion that someday he will return to the mainland. It is time to stop wasting the American taxpayer's money on the personal fantasies of Chiang Kai-shek.

It must also be made known that Chiang's regime on Taiwan rules as a military dictatorship. There have been no free elections, and Chiang has declared himself ruler for life. The extremely large amount of our previous military support to Taiwan has caused us nothing but trouble in our relations with other Asian nations. Such unlimited support must be substantially modified and reduced.

President Kennedy, in his famous address at the American University in 1963 quoted a Chinese saying:

A journey of a thousand miles begins with a single step.

It is time to break with the past, and take that one bold step along the path of reconciliation between two great powers—the United States and China. Peace in Asia, and peace in the world make it imperative that we move now.

I am, therefore, proposing a five-point program for the reordering of our relations with China:

First. Immediately extending diplomatic and economic relations to the Chinese Government.

Second. Admitting China to the United Nations.

Third. Immediately moving to organize formal peace talks between the United States and China.

Fourth. Restricting military aid to Taiwan to the sale of purely defensive weapons.

Fifth. Strictly prohibiting gifts of military supplies by the Pentagon without the consent of Congress.

I am hopeful that this program will provide the one bold step that will lead to peace in Asia.

VIETNAM AND THE MIDDLE EAST: A STUDY OF WHAT IS WRONG WITH AMERICAN FOREIGN POLICY

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, while the crisis in the Middle East continues on an explosive course, there is growing recognition by all policymakers in this country that the Russian offensive threatens the existence of Israel as well as the achievement of any peaceful solution to the crisis.

The Nixon administration continues to express its strong support for Israel's efforts against the Arab and Soviet aggressors. But, at this point in time, deeds rather than words are required. America's verbal commitment to the preservation of Israel as a free and independent nation must be acted on. I believe that our deeds must include both the sale of planes to Israel as well as the pursuit of meaningful peace initiatives—initiatives that would be realistic in the context of the aims of the aggressors.

As we all know, the territorial gains that Israel made in 1967 are merely an Arab excuse for the continuation of the conflict. The cause of the conflict remains much more basic. The Arab nations with encouragement, the help, and the tactical support of the Soviet Union continue to challenge the right of Israel to exist. This real motive must be given its true weight when America considers her next policy moves.

I believe that America today requires a new foreign policy—one that is both flexible enough to meet the continuous stream of new challenges brought before it and sufficiently well-defined to enable America to pursue goals consistent with its own democratic principles. Because present policy is weighted down by policies and values relevant to yesterday's world, it has not been a useful instrument to deal with the challenges posed by the Middle East.

Our foreign policy presently teeters on the brink of two equally dangerous extremes. One extreme views America as the world policeman ready to fight communism wherever it seems to threaten in the world. The other sees America within a framework of neoisolationism. Those who subscribe to the latter seem unwilling to come to the aid of any country no matter what the circumstances. This attitude is an overreaction to the ill-conceived and prolonged American involvement in Southeast Asia.

In this country, a new group has advocated that America abandon its support of Israel. The new left, in ill-defined rhetoric and shortsighted interpretations of the crisis, wants America to abandon the only democratic nation in the Middle East. They wish to capitulate to the forces that represent the antithesis of freedom—forces that will settle for no less than Israel's destruction. They ignore the fact that it was the Arab States—Egypt, Syria, and Jordan—that first began the aggression. They ignore the fact that these states are unwilling to settle the conflict in any peaceful manner. I say that we must ignore the rhetoric of the new left while redefining and rethinking our own goals.

The existence of these extremes in American foreign policy reflects a more pervasive malaise: the unwillingness or the inability of the United States to reexamine and redefine its goals in the world. There is need to recognize that goal selection involves considering and defining basic values. For too many of our policymakers, an ambiguous discussion of an ill-defined "American interest" has been sufficient.

Because we have tended to view opposition to communism as the only goal of American policy, we have continued to have an unduly negative foreign policy. Armed with only this conception as a guide, the United States has become a "reactor" in a world that requires a positive "actor." In the process, the reputation of America as a protector of the rights of man has been lost. We may have fought communism where we found it, but in the process we have supported military dictatorships or equally undemocratic regimes. The tragedy of the Vietnam war revolves around this very fact.

At this time, the situation in the Middle East poses new problems and challenges. Our policy of watchful waiting for that area cannot be deemed a true policy alternative. We have watched Israel, the only democratic country in that area, fight a war for her own survival on three fronts. We have watched and patiently waited while the Soviet Union has armed the Egyptians and sent their own troops to operate the equipment. The time is ripe for American reappraisal of the situation.

Yet, today, American policy is hamstrung by discussions of parallels existing between our Indochina involvement and the present Middle East situation. Many who strongly oppose our Indochina policy warn against any sympathy with the Israel cause. Tending toward the neoisolationist extreme, they warn against any further American involvement in any conflict and on any level. On the other side, many who support our policy in Vietnam point up the basic similarity of the threat to both areas. Here again is the specter of national messianism.

Both interpretations do Israel an injustice. I believe that the Middle East situation differs fundamentally from the situation in Indochina. It is not inconsistent, therefore, to oppose American involvement in Vietnam and Cambodia, and at the same time, argue that America must immediately sell Israel the aircraft she was promised.

In what follows, I would like to elaborate on the basic differences between these two situations, offer an alternative American response in terms of range and reasons for commitment, and in the process, define a new direction for American policy.

In her traditional view taken of the

world, America has refused to accept the existence of political pluralism. Despite protestations to the contrary, American action reaffirms this point. Although we have often intervened to support military dictatorships, we have continued to bill each conflict as the crucial test of the viability of American values and the true test of American will.

In Vietnam, although faced with a government that lacked the support of its own people, that imprisoned its opposition and stifled dissent, and had a fighting force that was both unwilling and unable to defend its country, America sent her own troops and 5 years later continues to fight.

America, armed with what is considered an acceptable mixture of land, military, and administrative reforms, $100 billion in weapons and supplies, and 500,000 troops to carry out its mission, intervened in what was basically a civil war among the Vietnamese people. Working under faulty assumptions about the nature of the conflict, we supported a corrupt government because it cloaked itself in the verbiage of anticommunism.

Now in the Middle East, the United States is again faced with another test of its foreign policy. The American policymakers conditioned by past experience are basing their analysis on that past experience, and our policy as a result is failing miserably.

It is here that I would argue that in our support for Israel we must break out of the shackles of the assumptions of yesterday's world and the policies that they have fostered. There must be a choice of new goals and new policies to realize these goals. These goals in turn must be examined carefully in order to insure their consistency with America's belief in freedom and democracy.

I believe the survival of the State of Israel is directly consistent with such a set of principles. Here the means and ends are not at irreconcilable odds as they are in Vietnam. Israel today is asking only that America sell her the promised military hardware so that she may defend herself against the aggressor nations bent upon her destruction. Unlike the case in Vietnam, Israel is not asking for American manpower. Rather she is asking only to buy American airplanes and hardware—hardware that we have dispensed with almost reckless abandon to countries ruled by military juntas and dictators.

We are being asked by a government that has not silenced its opposition, that has not imprisoned its detractors, but that rules in the spirit of the principles of democracy. It is a country that has welcomed all people to live within its borders.

When created in 1948, Israel gave the Moslems the option of living in peace and freedom within the borders of the State of Israel. Those who remained have been allowed to do just that. Those that left are being used as a political football by the Arab States, who have total disregard for the welfare of these people. Had they remained in Israel, peace and freedom would have been theirs as well.

We are being asked to sell arms to a nation not fighting an internal war, not a war where countrymen are pitted against one another. Rather this is a clear case of outside aggression by a group of nations bent upon Israel's destruction.

The introduction of Soviet missiles, planes, and men add a new urgency to this situation. The balance has clearly turned against the side of Israel. She is losing men and planes at a rate that endangers her survival. Her archaic equipment that remains is not up to doing battle with the latest in Soviet supplies.

Israel's well-being is crucial to the security of the United States. The Middle East is indeed the crossroads of the world. That point, of course, is crucial to the entire argument. But this fact is further strengthened by the fact that there is a clear case of aggression; unlike in Vietnam, there is a clear case of the rights of a people being endangered from outside aggression. There is none of the internal conflict that we find in the Indochina situation.

Also, if the United States is in fact anxious to counteract the spread of Soviet influence and aggression, we will be doing it in support of freedom, not at the expense of it. Here, we do not have to give lipservice to an anticommunistic, but undemocratic regime. Rather, we are dealing with a true democracy whose government speaks for the people and whose actions are completely consistent with the democratic principles that we so often talk about.

At this point in time, America has the opportunity to strike an important new note in its foreign policy. Vietnam and the Middle East are two very different situations. The former symbolizes an American policy weighted down by the nearsighted assumptions of the past. The latter can symbolize a new direction for American foreign policy free from those shackles that have bound it and flexible enough to meet new challenges that may arise. America can act in the world arena to further the implementation of humanitarian ideals. Israel provides an opportunity to translate such policy into reality.

LEGISLATIVE REORGANIZATION ACT OF 1970

(Mr. MIZE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MIZE. Mr. Speaker, if we are able to complete our work today on schedule, the House will pass an historic bill, the Legislative Reorganization Act of 1970.

The bill before the House is the work product of some of our most capable and dedicated Members; it is the result of years of consideration and exhaustive analysis.

This bill is a good bill, and should be passed by the House and receive prompt and favorable consideration in the other body.

When I cosponsored the Legislative Reorganization Act nearly 18 months ago, my remarks in the CONGRESSIONAL RECORD of February 26, 1969, outlined the following goals for this legislation:

First. More penetrating and effective congressional review of important legislative business.

Second. More comprehensive, thorough, and manageable control over the fiscal affairs of the Nation, through increased use of electronic data processing equipment, and modern management techniques.

Third. A qualitative and quantitative improvement in the information available to Members of Congress as a basis for important decisions which must be made by Congress alone.

Fourth. Improvement of Congress as an institution, through the establishment of a permanent Joint Committee on Congressional Operations, the removal of postmasterships and rural mail carriers from the patronage system, appointment to service academies on a merit basis, and other measures appropriate at this time.

Fifth. Increased supervision of lobbying activities involving the work of the Congress, and the transfer of lobbying records and responsibility for their publication to the General Accounting Office.

Some of these reforms, particularly the removal of the Post Office from politics, have been accomplished in other legislative or executive action taken in the recent past.

The legislation before us today moves to further additional worthwhile reforms, for it establishes improved staffing procedures for the committees of the House, legislative oversight and program analysis assistance for the Congress, improved data processing service to the Congress, procedures for adequate review of important reports and hearings by each Member before he must cast his vote, and many other important reforms.

This bill provides for a free tour of the Capitol Building, available to all citizens when they visit the Nation's Capital.

ON THE RECORD

Important reforms have been adopted on the floor of the House in the nature of amendments to the bill. The most important reform, which I sincerely hope will survive to enactment, provides for record votes to be taken on all important floor amendments to bills.

The system of teller votes, which amounts to secret voting on important amendments, is a practice which has endured throughout the history of the House of Representatives. Yesterday, by voice vote, this body committed itself to going on record when as many as 20 Members so demand.

Currently, no amendment defeated in the Committee of the Whole House on the State of the Union can be put to a record vote later in the House. Members may vote anonymously to kill amendments they might feel politically compelled to vote for if on the record.

Last year, the House took 73 nonrecord votes by teller. Such items as funds for the ABM, funds for the SST, and the question of continued American

troop presence in Cambodia were dispatched by nonrecord vote. The citizens deserve to know how their Representatives vote on such crucial issues; therefore, I believe the House has acted in the public interest by approving the discontinuance of nonrecord teller votes, except on wholly noncontroversial questions.

MEASURES TO RESTORE PUBLIC CONFIDENCE

Mr. Speaker, this legislation represents a dramatic, yet cautious attempt to facilitate professional competence on Capitol Hill, and promote professionalism in the discharge of the public duty. Further, this bill, through its modest initiatives, sets a course for the Congress which will lead to bolder initiatives, and ultimately to a restoration of public confidence in the Congress as a vital institution.

We have been told that these times are an era of decline for parliamentary democracy. Instant communications, the demands of society, the imponderable measure of sufficiency and proper employment of the forces of national defense, and the seemingly unlimited capacity of technology to achieve long-cherished goals in science and commerce, have all led to increased dependence on the executive branch of the Government for direction in human affairs. Congress, in contrast, has been viewed as cumbersome and inefficient.

CONGRESS IS COEQUAL YET UNEQUAL

The executive must never be permitted to retreat from the challenges of the times—everyone would agree to that. But the Congress, by the same token, should not be permitted to fail in its constitutional responsibility as a coequal branch of the Government of the United States. By failing to provide itself with the means to maintain the historic balance as an independent, coequal partner, the Congress has in effect fallen short of its constitutional duty.

This failure is exemplified by a review of the most basic congressional prerogative: control of the Nation's fiscal affairs. The White House has at its command the most modern management cost-control techniques, electronic data processing, and a host of other tools to aid in preparing the budget. The Congress, in whom is vested the responsibility of appropriation for the public welfare, has no comparable machinery for review of that same budget.

We all know, Mr. Speaker, as a practical matter, that the Federal budget is sufficiently complex to frustrate any individual Member's systematic analysis. Members of Congress can only grasp at straws in their review of Presidential requests for funds.

Corporate executives could not manage modern business without fully competent personnel for assistance and advice, nor could they manage private enterprise without the aid of management technology.

Coequal, yet unarmed, the Congress enters the contest each year at hopeless disadvantage. The President, his advisers, and the vast machinery of the executive branch represent our competitors in determining the proper level and direction of Federal expenditure. Without staff or equipment to advise realistic alternatives, and without the capacity to exercise fine-tuned management control, the Congress can only react with quill-and-ledger crudeness to the electronic data sophistication of the executive advocates.

If it has not been in the national interest for the Federal budget to have increased 500 percent in the past 25 years—and I do not think that it has been—the Congress must bear the constitutional responsibility for the increase. That the Executive has advanced these requests with persuasiveness is irrelevant. The simple fact is that the Congress has been incapable of responding to the requests of the Executive with well-developed, constructive, convincing arguments in the alternative.

Congress must bear full responsibility, as the Founding Fathers intended, for review and control of the spending policies of the Federal Government. But the dominant influence of congressional opinion on the fiscal policies of the Nation has diminished because Congress has neglected to equip its Members with the proper administrative weapons for their tasks.

Mr. Speaker, the Legislative Reorganization Act of 1970 will provide the management tools Members must have to do the job.

CONGRESSIONAL VITALITY MUST REFLECT NATIONAL VITALITY

No doubt those Founding Fathers of imaginative mind and boundless spirit, such as Jefferson, Washington, and Franklin, who were scientists and engineers as well as statesmen, could foresee the possibility—at least—of the modern technological explosion. The vast western expanse of the land, the restless imagination and industry of the people, and the evident national desire to create an empire on the North American Continent, could never be expected to become stagnant.

One crucial institution adopted at the Constitutional Convention was the Congress. That body was to reflect the habits and ambitions of the people, and provide a national atmosphere of energy and commitment to just causes for all time. It was further to provide a check upon the executive branch, through elected representatives of the people. The Founding Fathers of this Nation no doubt believed that the people would never be disappointed in the Congress as an institution, for the Congress was made continuously responsible to the people.

Today, we cannot permit ourselves to frustrate that historic purpose through failure to adopt reforms which will facilitate the reestablishment of our proper congressional role.

Mr. Speaker, the essence of congressional responsibility is fiscal control. Today, we cannot adequately perform that task, and that is the most compelling case for adoption of the Legislative Reorganization Act of 1970.

CONGRESSIONAL REFORM CAN INSPIRE THE NATION

Many young men and women in this Nation and abroad are disillusioned. They feel the institutions upon which society is based cannot provide a forum for the debate of their most heartfelt views.

Perhaps if Congress were to initiate substantive reform, and thus demonstrate that institutions can perfect themselves from within, the lesson would not be lost upon the community at large. With evolution, not revolution, lies our best hope for meeting the challenges ahead.

Those that truly love their country, and its cherished system of government, will surely applaud efforts to perfect that system. Static government stagnates, and the restless energy of the people will not long tolerate such inaction. These are pressing problems to be resolved.

THE AMERICAN COMMITMENT IN SOUTHEAST ASIA

(Mr. GERALD R. FORD asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GERALD R. FORD. Mr. Speaker, I wish to call the attention of my colleagues in the House to a series of five television programs dealing with the American commitment to Southeast Asia, to be aired over channel 14 in Washington from 8 to 9 p.m. on Tuesdays beginning August 4. I think Members of the House would find viewing of these programs worthwhile. Charles A. Moser of the Department of Slavic Languages, George Washington University, is the series coordinator. The complete schedule for the series is as follows:

August 4: "Southeast Asia in Constitutional and International Law." Robert H. Bork (Yale Law School), John Norton Moore (University of Virginia Law School).

August 11: "The Issues in Vietnam." Dolf Droge (AID, detailed to National Security Council).

August 18: "Dissent and the Vietnam War." Morton Kaplan (University of Chicago).

August 25: "Cliches of the Southeast Asian Debate." Charles Stephens (American Youth for a Just Peace).

September 1: "Prospects for the Future in Southeast Asia." Frank Johnson (American Security Council).

PARTNERSHIP CORPORATION ON PENNSYLVANIA AVENUE—A BILL TO CREATE THE FEDERAL CITY BICENTENNIAL DEVELOPMENT CORPORATION

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SAYLOR. Mr. Speaker, joined by the distinguished chairman of the House Interior and Insular Affairs Committee, the Honorable WAYNE N. ASPINALL, I am introducing today a bill to establish the Federal City Bicentennial Development Corporation, to provide for the preparation and carrying out of a development plan for certain areas between the White House and the Capitol, and to further the purposes for which the Pennsylvania Avenue National Historic Site was designated.

It is no secret, Mr. Speaker, that I have

been downright cold to the idea of creating another group, commission, organization, or amalgamation to have anything to do with Pennsylvania Avenue in the District of Columbia. I have been critical—some would say that is a mild term—of the activities of the President's Council on Pennsylvania Avenue, appointed by President Kennedy, and the Temporary Commission on Pennsylvania Avenue, appointed by President Johnson.

The record will show that my opposition to the activities of those two amalgamations was predicated mainly on their "tear it down and hang history" attitude toward the national historic sites lying within the boundaries of the proposed national square. My opposition was also based on the heretofore total disregard for the economics of development within the Federal City and the assumption that private investment capital would freely flow on the basis of a prettily packaged group of models, plans, studies, and press releases. Investment decisions are not made of such stuff in the private arena and as a consequence, the area under consideration has steadily deteriorated.

The bill which Chairman ASPINALL and I are introducing today seeks to make a partnership of the planning and development of the area. The new public/private corporation will cover the spectrum of opinion and experience in the Federal and District governments and in the private investment community. The Corporation would seek to develop the area from the viewpoint of need and practicality.

Plans and development for the revitalization of the Pennsylvania Avenue area which takes into account the needs of the Federal Government, the Federal City, the citizens of the immediate area and the Nation, and which, at the same time, works from a basis of economic reality, is necessary if Washington, D.C., is to achieve the realization of a 200-year-old dream in time for the celebration of the bicentennial in 1976.

Chairman ASPINALL and I believe that the means to such development is embodied in the language of our bill to create the Federal City Bicentennial Development Corporation and we urge its adoption. We are confident that, after public hearings and public discussion, the new partnership Corporation can lead the way to the realization of L'Enfant's dream for the Nation's No. 1 city.

A copy of the bill follows:

H.R. 18677

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal City Bicentennial Development Corporation Act of 1970."

SEC. 2. The Congress finds and declares—

(a) That the bicentennial of the founding of this country as an independent Nation provides a fitting occasion for undertaking to restore the area adjacent to Pennsylvania Avenue between the Capitol and the White House to a condition befitting the most historic and significant area of the Capital City;

(b) That it is in the national interest that this area, most of which was designated on September 30, 1965, a National Historic Site under the Historic Sites Act of August 21, 1935 (16 U.S.C. 461 et seq.), be developed, maintained and used in a manner suitable to its ceremonial, physical and historic relationship to the Legislative and Executive branches of the Federal Government and to the governmental buildings, monuments, memorials and parks in or adjacent to the area;

(c) That a portion of the area adjacent to Pennsylvania Avenue between the Capitol and the White House, because of its blighted character, imposes severe public, economic and social liabilities upon the District of Columbia as the seat of the Government of the United States, thereby impeding its sound growth and development and constituting a serious and growing threat to the public health, safety, morals and welfare of its inhabitants;

(d) That to insure suitable development, maintenance and use of the area and the elimination of blight, it is essential that there be developed and carried out as an entirety plans for this area which will specify the uses, both public and private, to which property is to be put, the programming and financing of necessary acquisitions, construction, reconstruction and other activities;

(e) That the recommendations of the President's Council on Pennsylvania Avenue as developed by its successor, the President's Temporary Commission on Pennsylvania Avenue, having been approved in principle by the National Capital Planning Commission, the Commission of Fine Arts and other interested departments and agencies, shall be seriously considered as a guide for such development plans;

(f) That such development plans can best be developed and carried out by vesting the requisite powers, duties and responsibilities in a Federal corporation which can take maximum advantage of the private as well as the public resources which will be necessary;

(g) That the powers conferred by this Act are for public uses and purposes for which public powers may be employed, public funds may be expended, and the power of eminent domain and the police power may be exercised, and the granting of such powers is necessary in the public interest; and

(h) That the area thus to be developed, maintained and used in accordance with the provisions of this Act (hereinafter referred to as the Development Area) shall be the area bounded as follows:

Beginning at a point on the southwest corner of the intersection of Fifteenth Street and E Street Northwest, thence proceeding easterly along the southerly side of E Street to the southwest corner of the intersection of Thirteenth Street and Pennsylvania Avenue Northwest;

Thence southeasterly along the southerly side of Pennsylvania Avenue to a point being the southeast corner of the intersection of Pennsylvania Avenue and Sixth Street Northwest;

Thence northerly along the east side of Sixth Street to the northeast corner of the intersection of E Street and Sixth Street Northwest;

Thence westerly along the north side of E Street to the northeast corner of the intersection of E Street and Seventh Street Northwest;

Thence northerly along the east side of Seventh Street to the northeast corner of the intersection of Seventh Street and F Street Northwest;

Thence westerly along the north side of F Street to the northwest corner of the intersection of F Street and Ninth Street Northwest;

Thence southerly along the west side of Ninth Street to the northwest corner of the intersection of Ninth Street and E Street Northwest;

Thence westerly along the north side of E Street to the northeast corner of the intersection of E Street and Thirteenth Street Northwest;

Thence northerly along the east side of Thirteenth Street to the northeast corner of the intersection of F Street and Thirteenth Street Northwest;

Thence westerly along the north side of F Street to the northwest corner of the intersection of F Street and Fifteenth Street Northwest;

Thence southerly along the west side of Fifteenth Street to the point of beginning being the southwest corner of the intersection of Fifteenth Street and E Street Northwest.

SEC. 3. (a) There is hereby created a body corporate to be known as the Federal City Bicentennial Development Corporation (hereinafter referred to as the "Corporation").

(b) The Corporation shall be dissolved upon completion, as determined by the Board of Directors, of its implementation of the development plan provided for in section 5 of this Act. Upon dissolution, assets remaining after all the obligations and indebtedness of the Corporation have been fulfilled and paid or satisfied shall be the assets of the United States.

(c) The powers and management of the Corporation shall be vested in a Board of Directors consisting of 21 members, as follows:

(1) The Secretary of the Interior;

(2) The Secretary of the Treasury;

(3) The Secretary of Housing and Urban Development;

(4) The Secretary of Transportation;

(5) The Chairman of the Senate Interior and Insular Affairs Committee;

(6) The ranking minority member of the Senate Interior and Insular Affairs Committee;

(7) The Chairman of the House Interior and Insular Affairs Committee;

(8) The ranking minority member of the House Interior and Insular Affairs Committee;

(9) The Administrator of General Services;

(10) The Commissioner of the District of Columbia;

(11) The Chairman, District of Columbia Council; and

(12) Ten appointed by the President from private life, at least five of whom shall be residents and registered voters of the District of Columbia, who shall have knowledge and experience in one or more fields of history, architecture, city planning, retailing, real estate, construction, or government: *Provided, however,* That none shall be or have been members or employees of the President's Council on Pennsylvania Avenue or its successor, the President's Temporary Commission on Pennsylvania Avenue.

(d) Each member of the Board of Directors specified in paragraphs (1) through (11) of subsection (c) may designate another official to serve on the Board in his stead if unable to serve in person.

(e) Each member of the Board of Directors appointed under paragraph (12) of subsection (c) shall serve for a term of six years from the expiration of his predecessor's term; except that (1) any director appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and (2) the terms of office of the directors first taking office shall begin on the date of the enactment of this Act, and shall expire as designated at the time of appointment, two at the end of two years, three at the end of four years, and five at the end of six years. A director may continue to serve until his successor has qualified.

(f) The President shall designate a Chairman and a Vice Chairman from among the members of the Board of Directors, chosen from private life.

(g) The Chairman, upon his appointment, shall invite to serve on the Board of Directors as non-voting members the following:

(1) The Chairman of the Commission of Fine Arts;

(2) The Chairman of the National Capital Planning Commission;

(3) The Secretary of the Smithsonian Institution;

(4) The Director of the National Gallery of Art;

(5) The Architect of the Capitol;

(6) The Archivist of the United States;

(7) The Chairman of the District of Columbia Commission on the Arts; and

(8) The Chairman of the District of Columbia Redevelopment Land Agency.

(h) Members of the Board of Directors who are officers or employees of the Federal or District of Columbia Government shall receive no additional compensation by virtue of their membership on the Board. Other members of the Board, when engaged in the activities of the Corporation, shall be entitled to receive compensation at the daily equivalent of the rate for GS–18 of the General Schedule, and travel expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 5703(b)-(d) and 5707) for persons in the Government service employed intermittently.

(i) The Board of Directors shall meet at the call of the Chairman, who shall require it to meet not less often than once each three months. A majority of the voting members of the Board of Directors (or their designated alternates) shall constitute a quorum.

SEC. 4. (a) The Board of Directors shall have the power to appoint and fix the compensation and duties of an Executive Director and such other officers and employees of the Corporation as may be necessary for the efficient administration of the Corporation; the Executive Director and two other officers of the Corporation may be appointed and compensated without regard to the provisions of title 5 of the United States Code governing appointments in the competitive service and chapter 51 of subchapter 53 of title 5 of the United States Code.

(b) Administrative services shall be provided by the General Services Administration on a reimbursable basis.

SEC. 5. (a) The development plan for the Development Area shall include, but not be limited to: (1) the types of uses, both public and private, to be permitted; (2) criteria for the design and appearance of buildings, facilities, open spaces and other improvements; (3) an estimate of the current values of all properties to be acquired; (4) an estimate of the relocation costs which would be incurred in carrying out the provisions of section 8 of this Act; (5) an estimate of the cost of land preparation for all properties to be acquired; (6) an estimate of the re-use values of the properties to be acquired; (7) a program for the staging of proposed development, including a detailed description of the portion of the program to be scheduled for completion by 1976; (8) a determination of the marketability of such development; (9) an estimate of the development costs, both public and private; (10) a thorough study of the economic impact of such development; and (11) the procedures (including both interim and long-term arrangements) to be used in carrying out and insuring continuing conformance to the development plan.

(b) The development plan provided for in subsection (a) shall be prepared with the cooperation of the Department of the Interior, the General Services Administration and the District of Columbia Government with the maximum feasible use of their staffs and other resources on a reimbursable basis by the Corporation.

(c) The development plan shall, to the extent practicable, conform to the comprehensive plan for the National Capital proposed pursuant to the National Capital Planning Act of 1952.

(d) After the development plan has been completed and approved by the Board of Directors of the Corporation, the plan shall be transmitted to the Secretary of the Interior, the National Capital Planning Commission and the District of Columbia Government. The Secretary of the Interior shall notify the Coporation of his approval, disapproval, or recommended modifications from the standpoint of the plan's compatibility with his responsibilities for the administration, protection, and development of the areas within the Pennsylvania Avenue National Historic Site. Both the National Capital Planning Commission and the District of Columbia Government shall hold public hearings on the plan and each shall notify the Corporation of its approval, disapproval, or recommended modifications: *Provided*, That, in the event that the Secretary of the Interior, the National Capital Planning Commission or the District of Columbia Government has not notified the Corporation of approval, disapproval, or recommended modifications of the plan within 60 days after the date of transmittal, he or it as the case may be shall be deemed to have approved the plan.

(e) Upon approval by the Secretary of the Interior, the National Capital Planning Commission and the District of Columbia Government, the Corporation shall transmit the development plan to the President of the Senate and the Speaker of the House of Representatives. Following the expiration of 60 days after the date of such transmittal, the Corporation may proceed with the execution and implementation of the plan as authorized by the other provisions of this Act.

(f) Activities under the development plan shall be carried out in accordance with the approved development plan. The Corporation may alter, revise or amend the plan, but any such alteration, revision, or amendment which is a substantial change from the approved development plan shall take effect only upon compliance with the procedures set forth in subsections (d) and (e) of this section.

(g) To avoid duplication and unnecessary expense the Corporation shall, to the maximum feasible extent in conducting its operations, utilize the services and facilities of other agencies, including the Department of the Interior, General Services Administration, the National Capital Planning Commission, the District of Columbia Government, and the District of Columbia Redevelopment Land Agency.

SEC. 6. In carrying out its powers and duties, the Corporation shall have all necessary and proper powers for the exercise of the authorities vested in it;

(1) shall have succession in its corporate name;

(2) may adopt and use a corporate seal which shall be judicially noticed;

(3) may sue and be sued in its corporate name. All litigation arising out of the activities of the Corporation shall be conducted by the Attorney General;

(4) may adopt, amend, and repeal by-laws, rules and regulations governing the manner in which its business may be conducted and the powers vested in it may be exercised;

(5) may acquire (by purchase, lease, exchange (within the development area), gift, condemnation (except personal property) or otherwise), hold, maintain, use and operate, and may sell, lease or otherwise dispose of, such real and personal property and any interest therein as the Corporation deems necessary for the carrying out of the development plan; and may lease, repurchase or otherwise acquire and hold any property which the Corporation has theretofore sold, leased or otherwise conveyed, transferred or disposed of: *Provided*, That prior to acquiring any property there shall be a finding of assurance of adequate replacement housing consonant with the requirements of section 105(c) of the Housing Act of 1949, as amended, 42 U.S.C. 1455(c)(1);

(6) may enter into and perform such contracts, leases, cooperative agreements, or other transactions with any agency or instrumentality of the United States, the several States, or the District of Columbia or with any person, firm, association, or corporation (including agreements with private utility companies with respect to the relocation of utility lines and other facilities in the Development Area) as may be deemed necessary or appropriate to the conduct of activities authorized under this Act;

(7) may establish (through covenants, regulations, agreements, or otherwise) such restrictions, standards, and requirements as are necessary to assure development, maintenance, and protection of the Development Area in accordance with the development plan;

(8) may borrow money from the Treasury of the United States in such amounts as may be authorized in appropriation acts. The Corporation's borrowings shall have maturities agreed upon by the Corporation and the Secretary of the Treasury but not in excess of 40 years. Such borrowings may be redeemable at the option of the Corporation before maturity in such manner as may be stipulated in such obligations. Borrowings shall bear interest at a rate determined by the Secretary of the Treasury, taking into consideration the average market yield on outstanding marketable obligations of the United States of comparable maturities during the month preceding the issuance of the obligations of the Corporation. The interest payments on such obligations may be deferred with the approval of the Secretary of the Treasury but any interest payment so deferred shall bear interest. Said obligations shall be issued in amounts and prices approved by the Secretary of the Treasury. The authority of the Corporation to issue obligations hereunder shall expire June 30, 1980, except that obligations may be issued at any time after the expiration of said period to provide funds necessary for the performance of any contract entered into by the Corporation, prior to the expiration of said period. The Secretary of the Treasury is authorized and directed to purchase any obligations of the Corporation to be issued under this paragraph and for such purpose the Secretary of the Treasury is authorized to use as a public debt transaction of the United States the proceeds from the sale of any securities issued under the Second Liberty Loan Bond Act, as amended, and the purposes for which securities may be issued under the Second Liberty Loan Bond Act, as amended, are extended to include any purchases of the Corporation's obligations under this paragraph;

(9) may invest any funds held in reserve or sinking funds, or any moneys not required for immediate use or disbursement, with the approval of the Secretary of the Treasury, in obligations of the United States Government, or obligations the principal and interest of which are guaranteed by the United States Government: *Provided*, That this authority shall not extend to moneys obtained by borrowing from the Government or through appropriations to the Corporation;

(10) may procure insurance against any loss in connection with its property and other assets and operations;

(11) may contract for and accept any gifts or grants or property or financial or other aid in any form from the Federal Government or any agency or instrumentality thereof, or from any State or any agency or instru-

mentality thereof, or from any source, and comply, subject to the provisions of this Act, with the terms and conditions thereof;

(12) may determine the character and necessity for its obligations and expenditures, and the manner in which they shall be incurred, allowed and paid, subject to provisions and laws specifically applicable to wholly-owned Government corporations;

(13) may prepare or cause to be prepared plans, specifications, designs and estimates of cost for the construction, reconstruction, rehabilitation, improvement, alteration or repair of any project, and from time to time to modify such plans, specifications, designs or estimates;

(14) may acquire, construct, reconstruct, rehabilitate, improve, alter or repair or provide for the construction, reconstruction, improvement, alteration or repair of any project;

(15) may grant options to purchase any project or may renew any leases entered into by it in connection with any of its projects, on such terms and conditions as it may deem advisable;

(16) may manage any project, owned or leased by the Corporation and may enter into agreements with the District of Columbia Government or any agency or instrumentality thereof, or with any person, firm, partnership or corporation, either public or private, for the purpose of causing any such project to be managed;

(17) may utilize or employ the services of personnel of any agency or instrumentality of the Federal Government or of the District of Columbia, with the consent of the agency or instrumentality concerned, upon a reimbursable basis, or utilize voluntary or uncompensated personnel;

(18) shall publish and disseminate information and make known to potential users, by advertisement, solicitation or other means, the availability for development of lands in the Development Area;

(19) may execute all instruments necessary or appropriate in the exercise of any of its functions under this Act, and may delegate to members of the Board or the Executive Director such of its powers and responsibilities as it deems appropriate and useful for the administration of the Corporation; and

(20) shall be entitled to the use of the United States mails in the same manner as the Executive departments of the Government, and shall have all the rights, privileges, and immunities of the United States with respect to debts due from insolvent, deceased or bankrupt debtors.

SEC. 7. (a) Nothing in this Act shall preclude other agencies or instrumentalities of the Federal Government or of the District of Columbia from exercising any lawful powers in the Development Area consistent with the development plan or the provisions and purposes of this Act; but no such agency or instrumentality shall release, modify, or depart from any feature or detail of the development plan without the prior approval of the Corporation.

(b) After the date of the enactment of this Act, no new construction (including substantial remodeling, conversion, rebuilding, enlargement, extension, or major structural improvement of existing buildings, but not including ordinary mantenance or remodeling or changes necessary to continue occupancy) shall be authorized or conducted within the Development Area except upon prior certification by the Corporation that the construction is, or may reasonably be expected to be, consistent with the carrying out of the development plan for the area: *Provided*, That if the development plan for the area does not become effective under the provisions of section 5 within sixteen months of the date of enactment of this Act, this subsection shall be of no further force and effect until such time as the development plan does become effective under that section.

SEC. 8. (a) Condemnation proceedings for the acquisition of any real property (including interests therein) which may be necessary or appropriate for the carrying out of the development plan shall be conducted in accordance with the procedural provisions of 16 D.C. Code, Chapter 13, Subchapter IV.

(b) The title to any real property (or interest therein) acquired under the authority of this Act shall be taken by and in the name of the Corporation and proceedings for condemnation or other acquisition of property shall be brought by and in the name of the Corporation.

(c) No award of compensation shall be increased or decreased by reason of any increase or decrease in the value of real property caused by the actual or proposed acquisition, use or disposition by the Corporation of any other real property for corporate purposes.

(d) The District of Columbia Redevelopment Land Agency shall, at the request of the Corporation, develop or cause to be developed a relocation program or programs for existing businesses and residents within any area to be acquired pursuant to this section, and no property shall be acquired by the Corporation until such plan has been prepared by the Corporation or by the District of Columbia Redevelopment Land Agency at the Corporation's request. Thereafter the District of Columbia Redevelopment Land Agency shall, at the expense of the Corporation, provide relocation payments in accordance with section 114 of the Housing Act of 1949, as amended, 40 U.S.C. 1465, and provide relocation services as authorized by the Act of October 6, 1964, 5 D.C. Code 728, to individuals, families, business concerns and non-profit organizations which may be or have been displaced from real property by actions of the United States or of the District of Columbia. Relocation services performed on behalf of the Corporation shall be coordinated with the District of Columbia's central relocation programs.

SEC. 9. (a) In effectuating the purposes of this Act, the Corporation:

(1) shall consult and cooperate with District of Columbia officials and community leaders at the earliest practicable time;

(2) shall give primary consideration to local needs and desires and to local and regional goals and policies as expressed in urban renewal, community renewal and comprehensive land use plans and regional plans; and

(3) shall foster local initiative and participation in connection with the planning and development of its projects.

(b) The Corporation shall comply with all District of Columbia laws, ordinances, codes, and regulations in constructing, reconstructing, rehabilitating, altering and improving any project: *Provided*, That the provisions of 5 D.C. Code 428 shall apply to all the constructing, reconstructing, rehabilitating, altering and improving of all buildings by the Corporation. The construction, reconstruction, rehabilitation, alteration and improvement of any project by non-Government sources shall be subject to the provisions of the District of Columbia Code and zoning regulations.

SEC. 10. (a) Since the exercise of the powers granted by this Act will be in all respects for the benefit of the people, the Corporation is hereby declared to be devoted to an essential public and governmental function and purpose and shall be exempt from all taxes and special assessments of every kind of the United States and of the District of Columbia.

(b) To the end that the District of Columbia may not suffer undue loss of tax revenue by reason of the provisions of subsection (a), the Corporation, in connection with any real property acquired and owned by the Corporation in carrying out the provisions of this Act, is authorized, empowered and directed to pay an annual amount to the District of Columbia Government equal to the amount of any real property tax which would have been payable to the District of Columbia government had such real property remained in private ownership.

SEC. 11. The Corporation shall transmit to the President and the Congress, annually each January and at such other times as it deems desirable, a comprehensive and detailed report of its operations, activities, and accomplishments under this Act.

SEC. 12. (a) The Corporation shall contribute to the civil service retirement and disability fund, on the basis of annual billings as determined by the Civil Service Commission for the excess, if any, of the Government's share of the normal cost of the civil service retirement system applicable to the Corporation's employees and their beneficiaries over the agency contributions required by section 8334(a) (1) of title 5, United States Code.

(b) The Corporation shall include in the annual billings provided for under subsection (a) above, a statement of the fair portion of the cost of the administration of the fund, which shall be paid by the Corporation into the Treasury as miscellaneous receipts.

SEC. 13. The Corporation is authorized to use in the conduct of its business all its funds and other assets and all funds and other assets which have been or may hereafter be transferred to, allocated to, borrowed by, or otherwise acquired by it.

SEC. 14. (a) All general penal statutes relating to the larceny, embezzlement, or conversion of public moneys or property of the United States shall apply to the moneys and property of the Corporation.

(b) Any person who, with intent to defraud the Corporation, or to deceive any director, officer, or employee of the Corporation or any officer or employee of the United States, (1) makes any false entry in any book of the Corporation, or (2) makes any false report or statement for the Corporation, shall, upon conviction thereof, be fined not more than $10,000 or imprisoned not more than five years, or both.

(c) Any person who with intent to defraud the Corporation (1) receives any compensation, rebate, or reward, or (2) enters into any conspiracy, collusion, or agreement, express or implied, shall, on conviction thereof, be fined not more than $5,000 or imprisoned not more than five years, or both.

SEC. 15. Section 101 of the Government Corporation Control Act is amended by inserting "Federal City Bicentennial Development Corporation," after "Farmers Home Corporation;".

SEC. 16. If any provision of this Act or the application thereof to any body, agency, situation, or circumstances is held invalid, the remainder of the Act and the application of such provision to other bodies, agencies, situations, or circumstances shall not be affected thereby.

SEC. 17. There are hereby authorized to be appropriated such funds as may be required to carry out the purposes of this Act.

THE IMPORTANCE OF THE PETROLEUM INDUSTRY

(Mr. BURLESON of Texas asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. BURLESON of Texas. Mr. Speaker, the petroleum industry is our country's principal source of energy. It is

no exaggeration to say that without it, our commerce and industry would come to a grinding and abrupt halt. In spite of this, our petroleum industry has become the object of mounting criticism, some of it constructive, but most of it accusatory.

On Sunday, July 26, the New York Times published a story which is remarkable both for its information and its evenhandedness. I am inserting it in the RECORD and commending it to the attention of my colleagues.

U.S. OIL INDUSTRY REGRETS IT WAS RIGHT

(By William D. Smith)

If an industry could have a facial expression, the United States oil industry would be wearing a bittersweet smile.

The smile would be a result of having seen recent events prove some of its serious forecasts and urgent warnings correct.

The pleasure, however, is mitigated by the pain that the industry is nonetheless suffering from having seen its predictions come true.

Throughout the long and heated political controversy over oil imports, the industry has maintained that foreign sources of petroleum were relatively undependable and that their lower-than-domestic price levels could be quite ephemeral. For this thesis oilmen were raked over the political coals. The price of Middle East crude oil is now at least 75 cents a barrel more than domestic.

For more than a decade oil and gas producers have warned that Federally set "low" natural gas prices would dampen the incentive to look for gas and thus produce a future shortage. Again this was treated as a totally self-serving ploy.—"There is a shortage of natural gas today," Secretary of the Interior Walter Hickel reportedly explained.

John Emerson, energy economist of the Chase Manhattan Bank recently went even further. "Never before in this century have we faced such serious and widespread shortages of energy. These shortages are upon us now."

The industry warned that rushing into low-sulphur, anti-pollution legislation and regulations might produce supply problems.—There appears a very good chance that there will be a shortage of low-sulphur residual fuel oil this winter, forcing cities and corporations to choose between lack of heat and power and the present practicality of recent anti-pollution laws.

Being correct, at least on the surface level, gives the industry no reason to gloat. In each instance it is costing the oil companies money. If they pass on the cost, as they probably will have to, it cuts into what little affection the public has left for the industry.

"No one will remember that Senator Kennedy or Senator Muskie and other so-called consumer representatives have advocated policies that have often ultimately resulted in higher costs. They will only blame us for rising the price of gasoline or heating oil," a vice president and counsel for a major company commented last week.

The executive's statement is probably too one-sided. The present situations are the result of many complex forces; some alterable, some not.

Nonetheless, some politicians and academicians, past and present, may have been guilty of thinking that a big desk and pet theories were a substitute for the hard facts of industrial life.

There is a very good chance that by fall the American consumer may be paying more for gasoline, natural gas and residual fuel. This means that the cost of running his car, his home and his factory will cost more.

These major impacts on the battle with inflation have not gone unnoticed in Washington although it appears that no major constructive actions have as yet occurred.

The leap in the price of overseas crude oil is a result of soaring tanker costs. Few analysts expect these costs to go down in the very near future.

But if tankers are the central reason, the Arab-Israeli war is the underlying cause.

On May 3 in Syria, the Trans Arabian Pipeline was knocked out of commission by an errant or deliberately aggressive bulldozer. The Syrian Government has not allowed its repair, preventing 500,000 barrels a day of Saudi Arabian crude from reaching the Mediterranean.

At the other end of the Mediterranean the Libyan Government cut back oil production by 15 per cent, or 500,000 barrels a day.

The loss of almost 1 million barrels a day of oil west of Suez and close to world markets has strained tanker capacity. Replacement of this oil with oil from the Persian Gulf around South Africa takes six to eight times the tanker capacity.

CHARTER RATES RISE

Spot charter rates have risen to their highest level since the 1956 Suez crisis and are more than 50 per cent higher than during the 1967 Arab-Israeli war.

Persian Gulf oil is now coming into the United States at about $4.50 a barrel compared with Louisiana crude delivered to East Coast refineries at $3.75.

There is no chance of a shortage, however, because Texas and Louisiana will increase their production to meet the need. There is a very real chance of consumer price increases.

The Oil and Gas Journal, a trade publication, reports that Professors Philip Areeda and James McKie, two of the chief advocates of sharply increased oil imports, have now backed off considerably from that position.

F.P.C. REGULATION UPHELD

The natural gas supply and demand controversy is a far older argument. In 1954 the Supreme Court ruled that natural-gas producers were subject to Power Commission. In 1960 the regulatory agency began fixing wellhead prices for all gas sold interstate. The Supreme Court upheld this right again in 1965 despite vigorous crys of outrage from producers who said it would kill incentive to drill.

Time has proven the oilmen right. Wildcat drilling dropped 40 per cent between 1956 and 1968. Geophysical activity fell 56 percent.

Some of the drop off may have been artificial; just to show the Government. Nonetheless the results are uncontestable. In 1969 the United States proved reserves of natural gas fell 12.241 trillion cubic feet, the largest in the nation's history.

The previous record drop was in 1968, when they fell 5.548 trillion cubic feet. These are the only declines in the history of the industry.

POSITIONS CHANGED

The F.P.C. is now trying to rectify the situation by raising prices. Some of the people who supported the lower prices several years ago are now in the forefront of those pushing higher prices.

The Interior Department is trying to speed up lease sales of suspected gas fields, but is running into opposition from Conservationists. But even if this opposition is overcome, it will take from three to seven years for these areas to begin producing.

In the meantime Canadian sources of gas can be tapped although Canadian-American relations on energy matters are at an all-time low. Liquefied natural gas quite possibly will reach this country from Algeria, Nigeria or Venezuela. Contracts have already been signed to import Algerian L.N.G., but the Algerian Government's recent nationalization of American oil company properties puts this source of L.N.G. in a very questionable position.

SUPPLY OUTLOOK TIGHT

The supply outlook for this winter is tight. Industry sources say that there will be enough to heat homes, but that the industrial market which accounts for about 50 per cent of total sales, may be in bad shape. Many distributors already have been forced to impose severe limitations on new industrial loads, and there is a real possibility that deliveries to existing customers may have to be curtailed, according to J. W. Heiney, president of the American Gas Association.

It would seem almost certain that consumer prices will have to go up, and possibly sharply.

The crude oil reserve situation is not much better, according to the American Petroleum Institute. Last year crude oil reserves dropped to 29.632 billion barrels, the lowest level in 15 years.

The A.P.I. explained the situation simply by saying that lack of incentives had led to a long and steady decline in exploratory drilling during a period of mushrooming production and consumption.

The oil industry in recent weeks seems to have won a lot of points, but through no fault of its own, it well may be losing the game.

WHO CARES WHAT PRICE I PAY?

(Mr. BURLESON of Texas asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. BURLESON of Texas. Mr. Speaker, the following is a poem by a 20-year-old Vietnam veteran who lost his life in battle a few weeks ago:

WHO CARES WHAT PRICE I PAY?

Take a man and put him alone,
Thousands of miles away from home.
Empty his heart of all the blood,
Make him live in sweat and mud.

This is all the life I have to live,
My soul to God I give.
You peace boys rant from your easy chair
But you don't know what it's like here.

You burn your draft cards, march at dawn,
Chant your songs on campus lawns.
You all want to **"Ban the Bomb."**
The real war is in Viet Nam.

You use your drugs and have your fun;
Then you refuse to use the gun.
There's nothing else for you to do,
And I'm supposed to die for you.

I'll hate you 'til the day I die,
Because you made my buddy cry.
I saw his arm a bloody shred,
I heard them say, "This one is dead."

It's a large price to pay,
Not to live another day.
He had the guts to fight and die,
He paid the price, but what did he buy?

He bought your life by losing his,
But who gives a damn what a soldier gives.
His wife does, his mother, his father, and sons,
But they're about the only ones.

Victor DeFoor somewhat addresses his sentiments to all of us in some degree or other. Unlike other wars in which our country has been involved, this one is different in that it is undeclared; had no beginning in any formal way; has no ending in sight—in any formal way. Most of all its purpose, its goals, and objectives are vague and not clearly identifiable.

Specifically, however, Victor DeFoor addressed the draft dodgers, the draft

card burners, the rabble rousers—who use the Vietnam war as an excuse—who would be protesting something else if it were not for the war.

It is sad that a clean-cut, loyal, and dedicated boy like Victor had to give his life for such as this—and things move on as usual. Of course the world is going to continue to turn, and its not going to slow down for any of us to get off but only the comparative few who are touched so directly by a tragedy which befell this boy really seem to know that a war is going on in Southeast Asia—and for what; for whom and for why, is past the argument stage.

It is understandable that Victor, those who grieve for his loss; those whose sons, husbands, brothers—are prisoners of the enemy—feel deeply his words: "Who cares what price I pay?"

"Mene, mene, tekel, upharsin"—the "handwriting on the wall"—should have been clear 5 years ago. We could have won this conflict then—in short order. But then we found out we were not supposed to "win" in that sense. As a result, the loss of Victor and other fine young men—needlessly.

The handwriting is still there; the warning that still others will die unless we win or tuck tail and get out. And what of approximately 1,500 prisoners we cannot abandon? We do—we must—care what price they pay.

ANOTHER TREASURY RAID?

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, there follows a revealing column in the July 28, 1970, Washington News, written by John Herling:

ETHICAL CONFLICT

Joseph P. Rauh, the Washington attorney for the dissident coal miners, has resumed his charges of conflict of interest against Edward Bennett Williams and John Connolly, who have been representing the United Mine Workers Union and its officers.

Last May, Mr. Rauh raised the point in federal court that Messrs. Williams and Connolly were in conflict of interest by serving as representatives of both the United Mine Workers and the officers who are charged with dereliction of duty in connection with UMW affairs.

Because of this alleged conflict, Mr. Rauh told the court, Messrs. Williams and Connolly should be disqualified as attorneys for both the UMW officers and the union itself.

About a week later, Mr. Williams phoned Mr. Rauh and said he would like to discuss the matter of the "motion to disqualify counsel." They met on May 13. At that time Mr. Williams professed unfamiliarity with the various matters affecting the UMW and actually had never talked to Mr. Boyle, but was now going to do so.

To indicate his grasp of the situation, he said he would suggest to Mr. Boyle whose election is being contested by the Labor and Justice departments as well as by the dissident miners that the UMW consent to a new election. All he had to do was to persuade Mr. Boyle.

Because Mr. Williams believed the contested election was the jugular factor in the dispute, he thought a consent election would serve to resolve several of the problems raised in the motion to disqualify him and Mr. Connolly as counsel for both the UMW and the officers charged with misusing the union treasury.

Under such conditions, Mr. Williams implied that it might not be necessary for his firm to respond to Mr. Rauh's motion in court, or to agree to depositions which Mr. Rauh required.

On May 21, Mr. Williams informed Mr. Rauh that he had at last talked to Mr. Boyle. Mr. Williams, however, made no reference to the matters of a consent election.

At any rate, Mr. Williams said it was decided that his firm would remain as counsel for the union but not for the individuals.

Such an arrangement Mr. Rauh would not agree to. In his original motion he had foreseen such an attempt at separation of representation, and warned that Messrs. Williams and Connolly could not do indirectly what they are barred from doing directly. Mr. Rauh insisted that Mr. Connolly start preparing to make his deposition.

On June 9 Mr. Connolly said he would not consent to the taking of a deposition and filed a response in federal court to the original Rauh motion to disqualify him on charges of conflict of interest.

Mr. Rauh then served notice, on July 8, on Mr. Connolly to take deposition on July 30, but Mr. Connally responded by filing a motion to quash the motion for the taking of the deposition.

According to Mr. Rauh, this insistence on a deposition grows out of his need for "discovery", a process of disclosure which he says would prove that Messrs. Williams and Connolly are and will be paid huge sums out of the UMW treasury for legal services for the benefit of the individual defendants. Their representation of the union and its officers, he said, is not separable.

PUT THE BLAME WHERE IT BELONGS

(Mr. SCHERLE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHERLE. Mr. Speaker, my Democrat colleagues from California have been wringing their hands over the economic plight of Orange County, Calif. I do not believe their blame shifting should go unchallenged.

We are told 32,000 people are out of work in their county. I wonder if they would tell us who is to blame for the inflation whose cure has brought on unemployment in some areas.

They complain about 800 aerospace workers laid off. I wonder if they would tell us which party is demanding bigger and bigger cuts in defense and space spending.

They tell us of building craftsmen out of work. I wonder if they could tell us whose economic policies during the 1960's is responsible for that.

Mr. Speaker, there is a constant effort by the Democrats to shift the blame for their poor performances onto the Republicans. But there is one fact that all the fancy footwork in the world will not let them escape—they have been in control of the Congress for 36 of the last 40 years and of the White House for 28 of the last 38 years. They have never conquered unemployment without a war. They have put us into three wars in 30 years. And they have brought on the worst inflation in our history.

Let the Democrats defend that record.

TAKE PRIDE IN AMERICA

(Mr. MILLER of Ohio asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MILLER of Ohio. Mr. Speaker, today we should take note of America's great accomplishments and in so doing renew our faith and confidence in ourselves as individuals and as a nation. From 1950 to 1968 the total number of technicians, engineers, and scientists in the United States increased from 851,000 to 2,500,000. This was four times the annual growth rate for the entire employed civilian labor force.

CONFERENCE REPORT ON H.R. 17548, INDEPENDENT OFFICES AND DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT APPROPRIATIONS, 1971

Mr. EVINS of Tennessee submitted the following conference report and statement on the bill (H.R. 17548) making appropriations for the independent offices and the Department of Housing and Urban Development, 1971:

CONFERENCE REPORT (H. REPT. No. 91-1345)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 17548) "making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, offices, and the Department of Housing and Urban Development for the fiscal year ending June 30, 1971, and for other purposes," having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 3, 10, 11, 15, 23, 26, 28, 29, 40, 43, 44, 47, 48, and 49.

That the House recede from its disagreement to the amendments of the Senate numbered 2, 13, 16, 20, 22, 24, 27, 32, 37, 41, 45, and 52, and agree to the same.

Amendment numbered 1: That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$47,577,000"; and the Senate agree to the same.

Amendment numbered 4: That the House recede from its disagreement to the amendment of the Senate numbered 4, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$340,350,000"; and the Senate agree to the same.

Amendment numbered 5: That the House recede from its disagreement to the amendment of the Senate numbered 5, and agree to the same with an amendment as follows: In lieu of the sum proposed by said amendment insert "$133,560,300"; and the Senate agree to the same.

Amendment numbered 6: That the House recede from its disagreement to the amendment of the Senate numbered 6, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$59,974,800"; and the Senate agree to the same.

Amendment numbered 17: That the House recede from its disagreement to the amendment of the Senate numbered 17, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$2,565,000,000"; and the Senate agree to the same.

Amendment numbered 18: That the House recede from its disagreement to the amend-

ment of the Senate numbered 18, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$24,950,000"; and the Senate agree to the same.

Amendment numbered 21: That the House recede from its disagreement to the amendment of the Senate numbered 21, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$511,000,000"; and the Senate agree to the same.

Amendment numbered 31: That the House recede from its disagreement to the amendment of the Senate numbered 31, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$500,000"; and the Senate agree to the same.

Amendment numbered 33: That the House recede from its disagreement to the amendment of the Senate numbered 33, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$2,000,000"; and the Senate agree to the same.

Amendment numbered 34: That the House recede from its disagreement to the amendment of the Senate numbered 34, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$2,100,000"; and the Senate agree to the same.

Amendment numbered 35: That the House recede from its disagreement to the amendment of the Senate numbered 35, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$293,500,000"; and the Senate agree to the same.

Amendment numbered 36: That the House recede from its disagreement to the amendment of the Senate numbered 36, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$50,100,000"; and the Senate agree to the same.

Amendment numbered 38: That the House recede from its disagreement to the amendment of the Senate numbered 38, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$1,350,000,000"; and the Senate agree to the same.

Amendment numbered 42: That the House recede from its disagreement to the amendment of the Senate numbered 42, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$43,500,000"; and the Senate agree to the same.

Amendment numbered 46: That the House recede from its disagreement to the amendment of the Senate numbered 46, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$55,000,000"; and the Senate agree to the same.

Amendment numbered 50: That the House recede from its disagreement to the amendment of the Senate numbered 50, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$8,000,000"; and the Senate agree to the same.

Amendment numbered 51: That the House recede from its disagreement to the amendment of the Senate numbered 51, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$14,000,000"; and the Senate agree to the same.

Amendment numbered 53: That the House recede from its disagreement to the amendment of the Senate numbered 53, and agree to the same with an amendment, as follows: In lieu of the matter proposed by said amendment insert:

"INTEREST ADJUSTMENT PAYMENTS

"For payments to Federal Home Loan Banks for the purpose of adjusting the effective interest rates charged by such banks, as authorized by section 101 of the Emergency Home Finance Act of 1970, $85,000,000."

And the Senate agree to the same.

Amendment numbered 54: That the House recede from its disagreement to the amendment of the Senate numbered 54, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$118,775,000"; and the Senate agree to the same.

The committee of conference report in disagreement amendments numbered 7, 8, 9, 12, 14, 19, 25, 30, 39, and 55.

JOE L. EVINS,
EDWARD P. BOLAND,
GEORGE E. SHIPLEY,
ROBERT N. GIAIMO,
JOHN O. MARSH, Jr.,
DAVID PRYOR,
GEORGE MAHON,
CHARLES R. JONAS
(except as to amendments 17 and 38),
JOSEPH M. McDADE,
Managers on the Part of the House.

JOHN O. PASTORE,
WARREN G. MAGNUSON,
ALLEN J. ELLENDER,
SPESSARD L. HOLLAND,
CLINTON P. ANDERSON,
GORDON ALLOTT
(reservations on No. 44),
MARGARET CHASE SMITH
(except as to No. 44),
ROMAN L. HRUSKA
(reservations on No. 44),
MILTON R. YOUNG
(reservations on No. 44),
Managers on the Part of the Senate.

STATEMENT OF THE MANAGERS ON THE PART OF THE HOUSE

The managers on the part of the House at a conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 17548) making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, offices, and the Department of Housing and Urban Development for the fiscal year ending June 30, 1971, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report as to each of such amendments, namely:

TITLE I—INDEPENDENT OFFICES

Civil Service Commission

Amendment No. 1: Appropriates $47,577,000 for salaries and expenses instead of $45,800,000 as proposed by the House and $47,800,000 as proposed by the Senate.

Federal Communications Commission

Amendment No. 2: Appropriates $24,900,000 for salaries and expenses as proposed by the Senate instead of $24,725,000 as proposed by the House.

Federal Power Commission

Amendment No. 3: Appropriates $18,210,000 for salaries and expenses as proposed by the House instead of $18,350,000 as proposed by the Senate.

General Services Administration

Amendment No. 4: Appropriates $340,350,000 for operating expenses of the Public Buildings Service instead of $335,250,000 as proposed by the House and $344,153,000 as proposed by the Senate.

Amendment No. 5: Appropriates $133,560,300 for construction of public buildings projects instead of $142,024,300 as proposed by the House and $120,672,500 as proposed by the Senate.

Amendment No. 6: Authorizes reprogramming of $59,974,800 for construction of public buildings instead of $48,473,200 as proposed by the House and $70,512,600 as proposed by the Senate.

Amendment No. 7: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment with an amendment reprogramming funds previously appropriated for projects at Honolulu, Hawaii, Indianapolis, Indiana, Albany, New York, and Bronx, New York, for funding of projects approved in the 1971 construction program, instead of reprogramming funds for eight projects as proposed by the House and seven projects as proposed by the Senate.

Amendment No. 8: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment to change the citations from 1964, 1967 and 1968 as proposed by the House to 1967, 1968 and 1970 as proposed by the Senate.

Amendment No. 9: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment to appropriate an additional $2,694,000 for the post office and Federal office building, Augusta, Georgia.

Amendment No. 10: Appropriates $1,500,000 for the courthouse and Federal office building, Alton, Illinois, as proposed by the House.

Amendment No. 11: Appropriates an additional $850,000 for the courthouse and Federal office building, Frankfort, Kentucky, as proposed by the House.

Amendment No. 12: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment to appropriate an additional $2,064,000 for the post office and Federal office building, Houma, Louisiana.

Amendment No. 13: Deletes $3,076,000 for the Charles A. Buckley Post Office and Federal office building, Bronx, New York, as proposed by the Senate.

Amendment No. 14: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment to appropriate an additional $1,355,600 for the post office and Federal office building, Providence, Rhode Island.

Amendment No. 15: Appropriates $1,000,000 for expenses, United States court facilities as proposed by the House instead of $1,463,000 as proposed by the Senate.

Amendment No. 16: Appropriates $1,215,000 for salaries and expenses of the Office of Administrator as proposed by the Senate instead of $1,000,000 as proposed by the House.

National Aeronautics and Space Administration

Amendment No. 17: Appropriates $2,565,000,000 for research and development instead of $2,500,000,000 as proposed by the House and $2,606,100,000 as proposed by the Senate. The Administrator has flexibility to use funds as desired, including the Apollo and Skylab programs.

Amendment No. 18: Appropriates $24,950,000 for construction of facilities instead of $18,275,000 as proposed by the House and $34,478,000 as proposed by the Senate. The Committee of conference has added to the proposed House amount $1,250,000 for the isotope thermoelectric systems application laboratory at the Jet Propulsion Laboratory; $1,925,000 for the earth resources technology laboratory at Goddard; and $3,500,000 for the nuclear engine test stand No. 2 in Nevada.

Amendment No. 19: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the amendment of the Senate making $10,000,000 available for use at certain NASA facilities to accommodate earth environmental studies for Federal agencies on a non-reimbursable basis.

The committee of conference is agreed that not less than $1,000,000 of the funds provided for NASA shall be utilized for research, development and testing at the Arnold Engineering Development Center in fiscal year 1971.

National Science Foundation

Amendment No. 20: Authorizes $20,500,000 for expenses of program development and management as proposed by the Senate instead of $19,500,000 as proposed by the House.

Amendment No. 21: Appropriates $511,000,000 for salaries and expenses instead of $495,000,000 as proposed by the House and $520,500,000 as proposed by the Senate.

Amendment No. 22: Inserts provision that earmarks not less than $9,500,000 for first-year graduate traineeships as proposed by the Senate.

Amendment No. 23: Deletes language proposed by the Senate to include other programs of supplementary training within the funds earmarked for summer institutes.

Renegotiation Board

Amendment No. 24: Appropriates $4,235,000 for salaries and expenses as proposed by the Senate instead of $4,110,000 as proposed by the House.

Securities and Exchange Commission

Amendment No. 25: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the amendment of the Senate to authorize the use of funds to complete the institutional investors study.

Selective Service System

Amendment No. 26: Deletes language proposed by the Senate for official reception and representation expenses.

Veterans Administration

Amendment No. 27: Appropriates $1,857,200,000 for medical care as proposed by the Senate instead of $1,777,200,000 as proposed by the House.

Amendment No. 28: Authorizes $1,000 for official reception and representation expenses as proposed by the House instead of $2,000 as proposed by the Senate.

Amendment No. 29: Appropriates $59,000,000 for construction of hospital and domiciliary facilities as proposed by the House instead of $79,000,000 as proposed by the Senate. The unobligated balance carried forward from fiscal year 1970 is $78,907,000, providing a total of $137,907,000 for hospital construction by the Veterans Administration for 1971.

TITLE II

Council on Environmental Quality and Office of Environmental Quality

Amendment No. 30: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the language proposed by the Senate with an amendment to appropriate $1,000,000 for the Council on Environmental Quality and Office of Environmental Quality instead of $1,500,000 as proposed by the Senate and $650,000 as proposed by the House for the Council on Environmental Quality. The committee of conference suggests that further hearings should be conducted in connection with any request for supplemental appropriations if further funds are required after pending reorganization plans are finalized.

National Aeronautics and Space Council

Amendment No. 31: Appropriates $500,000 for salaries and expenses instead of $400,000 as proposed by the House and $560,000 as proposed by the Senate.

Office of Emergency Preparedness

Amendment No. 32: Appropriates $5,890,000 for salaries and expenses as proposed by the Senate instead of $5,290,000 as proposed by the House.

Amendment No. 33: Appropriates $2,000,000 for salaries and expenses of telecommunications management instead of $1,795,000 as proposed by the House and $3,300,000 as proposed by the Senate.

Office of Science and Technology

Amendment No. 34: Appropriates $2,100,000 for salaries and expenses instead of $2,000,000 as proposed by the House and $2,175,000 as proposed by the Senate.

Appalachian regional development programs

Amendment No. 35: Appropriates $293,500,000 for Appalachian Regional Development Programs instead of $291,500,000 as proposed by the House and $295,500,000 as proposed by the Senate.

Department of Defense

Civil Defense

Amendment No. 36: Appropriates $50,100,000 for operation and maintenance of civil defense instead of $50,000,000 as proposed by the House and $51,000,000 as proposed by the Senate.

Department of Health, Education, and Welfare

Public Health Service

Amendment No. 37: Appropriates $3,755,000 for emergency health activities as proposed by the Senate instead of $3,500,000 as proposed by the House.

TITLE III—DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Amendment No. 38: Appropriates $1,350,000,000 for urban renewal programs instead of $1,000,000,000 as proposed by the House and $1,700,000,000 as proposed by the Senate.

Amendment No. 39: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the amendment of the Senate with an amendment to appropriate $10,000,000 for the housing for the elderly or handicapped fund instead of $25,000,000 as proposed by the Senate, and incorporates technical changes in language to conform with existing law.

The committee of conference directs that housing for the elderly or handicapped be given appropriate priority in allocating contract authorization provided pursuant to Sec. 236 of the Housing and Urban Development Act of 1968, so an equitable portion will be utilized for such housing where needed in conjunction with the funds appropriated for this revolving fund.

Amendment No. 40: Deletes funds proposed by the Senate for grants for tenant services. The committee of conference agrees that it is not necessary to provide a separate appropriation for grants for tenant services as adequate authority exists under present statutory authorizations to make provision for these services in low rent public housing projects.

Amendment No. 41: Provides annual contract authorization of $9,300,000 for college housing as proposed by the Senate instead of $7,200,000 as proposed by the House.

Amendment No. 42: Appropriates $43,500,000 for salaries and expenses, renewal and housing assistance, instead of $41,000,000 as proposed by the House and $45,000,000 as proposed by the Senate.

Amendment No. 43: Appropriates $8,000,000 for salaries and expenses, metropolitan development, as proposed by the House instead of $8,700,000 as proposed by the Senate.

Amendment No. 44: Appropriates $30,000,000 for urban research and technology as proposed by the House instead of $55,000,000 as proposed by the Senate.

Amendment No. 45: Authorizes $1,700,000 for administrative expenses for urban research and technology as proposed by the Senate instead of $940,000 as proposed by the House.

Amendment No. 46: Provides annual contract authorization of $55,000,000 for the rent supplement program instead of $50,000,000 as proposed by the House and $75,000,000 as proposed by the Senate.

Amendments Nos. 47, 48 and 49: Restore citations as proposed by the House and delete those proposed by the Senate, and appropriate $3,500,000 for salaries and expenses, Federal Housing Administration, as proposed by the House instead of $6,290,000 as proposed by the Senate.

The conferees suggest that any needed counseling services can be provided by voluntary groups and existing community services, but where such services are not provided they may be made available as part of the normal mortgage insurance initiation and servicing activities.

Amendment No. 50: Appropriates $8,000,000 for fair housing and equal opportunity instead of $7,000,000 as proposed by the House and $11,300,000 as proposed by the Senate. No funds are provided for reimbursing local communities under this program.

Amendment No. 51: Appropriates $14,000,000 for regional management and services instead of $13,500,000 as proposed by the House and $14,500,000 as proposed by the Senate.

TITLE IV—CORPORATIONS

Federal Home Loan Bank Board

Amendment No. 52: Provides $6,625,000 for administrative expenses as proposed by the Senate instead of $5,750,000 as proposed by the House.

Amendment No. 53: Appropriates $85,000,000 for interest adjustment payments to Federal Home Loan Banks instead of $250,000,000 as proposed by the Senate. The amount provides funds for the first year of this new program. A request for additional funds can be considered when there is demonstrated need for additional funding and specific plans are developed.

Department of Housing and Urban Development

Amendment No. 54: Provides $118,775,000 for non-administrative expenses of the Federal Housing Administration instead of $112,000,000 as proposed by the House and $125,550,000 as proposed by the Senate.

TITLE V—GENERAL PROVISIONS

Amendment No. 55: Reported in technical disagreement. The managers on the part of House will offer a motion to recede and concur in the Senate amendment relating to procurement of hand or measuring tools not produced in the United States or its possessions, with an amendment making it applicable only to solicitations for bids opened after its enactment. This brings government procurement policy of GSA in line with procedures prescribed for defense procurement of such articles.

JOE L. EVINS,
EDWARD P. BOLAND,
GEORGE E. SHIPLEY,
ROBERT N. GIAIMO,
JOHN O. MARSH, Jr.,
DAVID PRYOR,
GEORGE MAHON,
CHARLES R. JONAS
(except as to amendments 17 and 38),
JOSEPH M. McDADE,
Managers on the Part of the House.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. RUPPE) to revise and extend their remarks and include extraneous material:)

Mr. CONTE, for 5 minutes, today.
Mr. HOSMER, for 15 minutes, August 3.
Mr. EDWARDS of Alabama, for 30 minutes, today.
Mr. MORTON, for 5 minutes, today.
Mr. PRICE of Texas, for 15 minutes, today.
(The following Members (at the request of Mr. JONES of Tennessee) to revise and extend their remarks and include extraneous material:)
Mr. WOLFF, for 10 minutes, today.
Mr. FLOOD, for 30 minutes, today.
Mr. GONZALEZ, for 10 minutes, today.
Mr. FARBSTEIN, for 30 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. MAHON, to revise and extend his remarks and to include extraneous material.
Mr. BOW (at the request of Mr. MAHON), to revise and extend his remarks and to include extraneous material.
Mr. BURTON of California, to address the House for 1 minute, and to revise and extend his remarks following those of Mr. HAWKINS.
Mr. CLEVELAND, and to include extraneous material immediately following his remarks during debate in the Committee of the Whole today on the Reuss and Schwengel amendments.
Mr. PHILBIN in five instances, and to include extraneous material.
Mr. PEPPER, his remarks that appear in the Committee of the Whole on Monday, July 27, immediately prior to the Committee rising, to appear immediately before the vote on the O'Neill-Gubser amendment on Monday, July 27, in the Committee of the Whole, in the permanent RECORD.
(The following Members (at the request of Mr. RUPPE) and to include extraneous matter:)
Mr. LANGEN.
Mr. JOHNSON of Pennsylvania in two instances.
Mr. DICKINSON in three instances.
Mr. WYMAN in two instances.
Mr. MICHEL.
Mr. DEL CLAWSON.
Mr. MCCLORY.
Mr. SNYDER in two instances.
Mr. NELSEN.
Mr. DAVIS of Wisconsin.
Mr. LUJAN.
Mr. DERWINSKI in two instances.
Mr. SCHMITZ in two instances.
Mr. WYDLER.
Mr. WHALEN.
Mr. DON H. CLAUSEN.
Mr. SCHWENGEL.
(The following Members (at the request of Mr. JONES of Tennessee) and to include extraneous material:)
Mr. WILLIAM D. FORD.
Mr. OBEY in six instances.
Mr. TAYLOR in two instances.
Mr. BOLAND in two instances.
Mr. GONZALEZ.
Mr. RODINO in three instances.
Mr. FUQUA in two instances.
Mr. ROSTENKOWSKI.
Mr. CLAY in six instances.
Mr. HULL.
Mr. MONAGAN in three instances.
Mr. CHARLES H. WILSON.
Mrs. CHISHOLM.
Mr. DORN in two instances.
Mr. O'NEILL of Massachusetts in two instances.
Mr. ROONEY of New York.
Mr. SHIPLEY.
Mr. NEDZI in two instances.
Mr. SIKES in five instances.
Mr. DENT in two instances.
Mr. FASCELL in two instances.
Mr. BOGGS in two instances.
Mr. BENNETT.
Mr. STOKES in two instances.
Mr. ALBERT.
Mrs. HANSEN of Washington.
Mr. BURKE of Massachusetts.

ADJOURNMENT

Mr. JONES of Tennessee. Mr. Speaker, I move that the House do now adjourn.
The motion was agreed to; accordingly (at 6 o'clock and 56 minutes p.m.), the House adjourned until tomorrow, Wednesday, July 29, 1970, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

2255. Under clause 2 of rule XXIV, a letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting a report on the use of the parole authority contained in section 212(d)(5) of the Immigration and Nationality Act during the 6 months ending June 30, 1970, and on the implementation of section 203(a)(7) of the act for that period, was taken from the Speaker's table, referred to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. STAGGERS: Committee of conference. Conference report on H.R. 15733 (Rept. No. 91–1337). Ordered to be printed.

Mr. PERKINS: Committee of conference. Conference report on S. 1076 (Rept. No. 91–1338). Ordered to be printed.

Mr. CELLER: Committee on the Judiciary. S. 2455. An act to authorize appropriations for the Civil Rights Commission, and for other purposes. (Rept. No. 91–1339). Referred to the Committee of the Whole House on the State of the Union.

Mr. BARING: Committee on Interior and Insular Affairs. H.R. 13125. A bill to amend section 11 of the act approved February 22, 1889 (25 Stat. 676) as amended by the act of May 7, 1932 (47 Stat. 150), and as amended by the act of April 13, 1948 (62 Stat. 170) relating to the admission to the Union of the States of North Dakota, South Dakota, Montana, and Washington, and for other purposes, with amendments (Rept. No. 91–1340). Referred to the Committee of the Whole House on the State of the Union.

Mr. RIVERS: Committee on Armed Services. H.R. 14373. A bill to authorize the Secretary of the Navy to convey to the city of Portsmouth, State of Virginia, certain lands situated within the Crawford urban renewal project (Va–53) in the city of Portsmouth, in exchange for certain lands situated within the proposed Southside neighborhood development project; with amendments (Rept. No. 91–1342). Referred to the Committee of the Whole House on the State of the Union.

Mr. MANN: Committee on the Judiciary. H.R. 17695. A bill to amend section 2735 of title 10, United States Code, to provide for the finality of settlement effected under sections 2733, 2734, 2734a, 2734b, or 2737 (Rept. No. 91–1343). Referred to the Committee of the Whole House on the State of the Union.

Mr. DONOHUE: Committee on the Judiciary. H.R. 15937. A bill to curtail the mailing of certain articles which present a hazard to postal employees or mail processing machines by imposing restrictions on certain advertising and promotional matter in the mails, and for other purposes; with amendments (Rept. No. 91–1344). Referred to the Committee of the Whole House on the State of the Union.

Mr. EVINS of Tennessee: Committee of conference. Conference report on H.R. 17548 (Rept. No. 91–1345). Ordered to be printed.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. FEIGHAN: Committee on the Judiciary. H.R. 1508. A bill for the relief of Drago Miklausic; with an amendment (Rept. No. 91–1335). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H.R. 3436. A bill for the relief of Matyas Hunyadi; with an amendment (Rept. No. 91–1336). Referred to the Committee of the Whole House.

Mr. BARING: Committee on Interior and Insular Affairs. H.R. 14421. A bill to provide for the conveyance of certain property of the United States located in Lawrence County, S. Dak., to John and Ruth Rachetto; with amendments (Rept. No. 91–1341). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ASPINALL (for himself and Mr. ROGERS of Colorado):

H.R 18665. A bill to amend the act of June 11, 1966 (80 Stat. 199) to provide rules and regulations for the protection and management of the lands and waters covered by said act and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. ASPINALL (for himself, Mr. SAYLOR, Mr. UDALL, Mr. O'HARA, Mr. JOHNSON of California, Mr. ROGERS of Colorado, Mr. SKUBITZ, Mr. RHODES, Mr. FASCELL, Mr. ULLMAN, Mr. KEE, and Mr. MOLLOHAN):

H.R. 18666. A bill to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure, through maximum use of indigenous resources, that the U.S. requirements for low cost energy be met, and to reconcile environmental quality requirements with future energy needs; to the Committee on Interstate and Foreign Commerce.

By Mr. BURTON of Utah:

H.R. 18667. A bill to amend section 4182 of the Internal Revenue Code of 1954; to the Committee on Ways and Means.

H.R. 18668. A bill to provide for orderly trade in iron and steel mill products; to the Committee on Ways and Means.

By Mr. BUTTON:

H.R. 18669. A bill to establish a commission to study the usage, customs, and laws

relating to the flag of the United States; to the Committee on the Judiciary.

By Mr. JACOBS:

H.R. 18670. A bill to prohibit the use of interstate facilities, including the mails, for the transportation of salacious advertising; to the Committee on the Judiciary.

By Mr. LANGEN:

H.R. 18671. A bill to amend section 700 of chapter 33 of title 18 of the United States Code to provide penalties for showing disrespect for the flag of the United States; to the Committee on the Judiciary.

By Mr. LOWENSTEIN:

H.R. 18672. A bill to amend title 39, United States Code, to establish a procedure by which postal patrons may be relieved of the burden of receiving commercial advertisements transmitted in the mails, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. MINISH:

H.R. 18673. A bill to amend chapter 3 of the Foreign Assistance Act of 1961, relating to U.S. contributions to international organization and programs, to provide for a program to control illegal international traffic in narcotics, and for other purposes; to the Committee on Foreign Affairs.

H.R. 18674. A bill to promote and protect the free flow of interstate commerce without unreasonable damage to the environment; to assure that activities which affect interstate commerce will not unreasonably injure environmental rights; to provide a right of action for relief for protection of the environment from unreasonable infringement by activities which affect interstate commerce; and to establish the right of all citizens to the protection, preservation, and enhancement of the environment; to the Committee on the Judiciary.

By Mr. NELSEN:

H.R. 18675. A bill to amend the Interstate Commerce Act in order to provide for the rail transportation of freight for the Department of Defense in general purpose boxcars owned by the United States; to the Committee on Interstate and Foreign Commerce.

By Mr. PATMAN:

H.R. 18676. A bill to prohibit brokered deposits in banks and other financial institutions, to prohibit the use of so-called giveaways in the solicitation of deposits, and to prohibit lenders from acquiring equity participations in connection with loans, and for other purposes; to the Committee on Banking and Currency.

By Mr. SAYLOR (for himself and Mr. ASPINALL):

H.R. 18677. A bill to establish the Federal City Bicentennial Development Corp., to provide for the preparation and carrying out of a development plan for certain areas between the White House and the Capitol, to further the purposes for which The Pennsylvania Avenue National Historic Site was designated, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. WATTS:

H.R. 18678. A bill to amend the Internal Revenue Code with respect to ammunition recordkeeping requirements; to the Committee on Ways and Means.

By Mr. HOLIFIELD (for himself, Mr. PRICE of Illinois, and Mr. HOSMER):

H.R. 18679. A bill to amend the Atomic Energy Act of 1954, as amended, to eliminate the requirement for a finding of practical value, and for other purposes; to the Joint Committee on Atomic Energy.

By Mr. DADDARIO:

H.R. 18680. A bill to establish a system for the sharing of certain Federal tax revenues with the States; to the Committee on Ways and Means.

By Mr. DINGELL:

H.R. 18681. A bill to amend section 138 of title 23 of the United States Code to require certification relating to air and water pollution; to the Committee on Public Works.

By Mr. HANNA:

H.R. 18682. A bill to provide protection for the fish resources of the United States including the fresh water and marine fish cultural industries against the introduction and dissemination of diseases of fish and shellfish, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. MILLS (for himself and Mr. BYRNES of Wisconsin):

H.R. 18683. A bill to amend section 4216 of the Internal Revenue Code of 1954; to the Committee on Ways and Means.

By Mr. PRICE of Texas:

H.R. 18684. A bill to provide additional assistance to the State of Texas for the reconstruction of areas damaged by tornadoes occurring on April 17 and 18, and May 11, 1970; to the Committee on Public Works.

By Mr. ST GERMAIN:

H.R. 18685. A bill to provide Federal assistance for special projects to demonstrate the effectiveness of programs to provide emergency care for heart attack victims by trained persons in specially equipped ambulances; to the Committee on Interstate and Foreign Commerce.

By Mr. WAMPLER (for himself, Mr. MIZELL, Mr. TAYLOR, and Mr. BROYHILL of North Carolina):

H.R. 18686. A bill to authorize the lease and transfer of Burley tobacco acreage allotments; to the Committee on Agriculture.

By Mr. ASHBROOK:

H.J. Res. 1330. Joint resolution to proclaim "National Good Grooming Week"; to the Committee on the Judiciary.

By Mr. CLANCY (for himself and Mr. DEVINE):

H.J. Res. 1331. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. ESHLEMAN:

H.J. Res. 1332. Joint resolution establishing good grooming week; to the Committee on the Judiciary.

By Mr. GERALD R. FORD:

H.J. Res. 1333. Joint resolution to authorize the President to designate November 16 through November 22 as "National Good Grooming Week"; to the Committee on the Judiciary.

By Mr. ROBISON (for himself, Mr. ANDERSON of Tennessee, Mr. HAWKINS, and Mr. SMITH of Iowa):

H. Con. Res. 692. Concurrent resolution relating to the treatment and trial of military and political prisoners in Vietnam; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. McDONALD of Michigan:

H.R. 18687. A bill for the relief of Henry L. Trombley; to the Committee on the Judiciary.

By Mr. ZABLOCKI:

H.R. 18688. A bill for the relief of Yohko Suzuki Reifenberg; to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII,

432. The SPEAKER presented a memorial of the Legislature of the State of California, relative to housing, which was referred to the Committee on Banking and Currency.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

558. By the SPEAKER: Petition of the Village Assembly, Ie, Okinawa, relative to the removal of poison gas weapons from Okinawa; to the Committee on Armed Services.

559. Also, petition of the Village Assembly, Kamimotobu, Okinawa, relative to the removal of poison gas weapons from Okinawa; to the Committee on Armed Services.

560. Also, petition of the Village Assembly, Ozato, Okinawa, relative to the removal of poison gas weapons from Okinawa; to the Committee on Armed Services.

561. Also, petition of Herbert F. Shaysning et al., Bronx, N.Y., relative to the regulation of pornographic movies; to the Committee on Interstate and Foreign Commerce.

REGULATION OF LOBBYING ACT

In compliance with Public Law 601, 79th Congress, title III, Regulation of Lobbying Act, section 308(b), which provides as follows:

(b) All information required to be filed under the provisions of this section with the Clerk of the House of Representatives and the Secretary of the Senate shall be compiled by said Clerk and Secretary, acting jointly, as soon as practicable after the close of the calendar quarter with respect to which such information is filed and shall be printed in the CONGRESSIONAL RECORD.

The Clerk of the House of Representatives and the Secretary of the Senate jointly submit their report of the compilation required by said law and have included all registrations and quarterly reports received.

REGISTRATIONS*

*All alphanumeric characters and monetary amounts refer to receipts and expenditures on page 2, paragraphs D and E of the Quarterly Report Form.

The following registrations were submitted for the first calendar quarter 1970:

(NOTE.—The form used for registration is reproduced below. In the interest of economy in the RECORD, questions are not repeated, only the essential answers are printed, and are indicated by their respective letter and number.)

FILE ONE COPY WITH THE SECRETARY OF THE SENATE AND FILE TWO COPIES WITH THE CLERK OF THE HOUSE OF REPRESENTATIVES:

This page (page 1) is designed to supply identifying data; and page 2 (on the back of this page) deals with financial data.

PLACE AN "X" BELOW THE APPROPRIATE LETTER OR FIGURE IN THE BOX AT THE RIGHT OF THE "REPORT" HEADING BELOW:

"PRELIMINARY" REPORT ("Registration"): To "register," place an "X" below the letter "P" and fill out page 1 only.

"QUARTERLY" REPORT: To indicate which one of the four calendar quarters is covered by this Report, place an "X" below the appropriate figure. Fill out both page 1 and page 2 and as many additional pages as may be required. The first additional page should be numbered as page "3," and the rest of such pages should be "4," "5," "6," etc. Preparation and filing in accordance with instructions will accomplish compliance with all quarterly reporting requirements of the Act.

Year: 19_____

REPORT

PURSUANT TO FEDERAL REGULATION OF LOBBYING ACT

P	QUARTER			
	1st	2d	3d	4th
(Mark one square only)				

NOTE ON ITEM "A".—(a) IN GENERAL. This "Report" form may be used by either an organization or an individual, as follows:
(i) "Employee".—To file as an "employee", state (in Item "B") the name, address, and nature of business of the "employer". (If the "employee" is a firm [such as a law firm or public relations firm], partners and salaried staff members of such firm may join in filing a Report as an "employee".)
(ii) "Employer".—To file as an "employer", write "None" in answer to Item "B".
(b) SEPARATE REPORTS. An agent or employee should not attempt to combine his Report with the employer's Report:
(i) Employers subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their agents or employees.
(ii) Employees subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their employers.

A. ORGANIZATION OR INDIVIDUAL FILING:
1. State name, address, and nature of business.

2. If this Report is for an Employer, list names of agents or employees who will file Reports for this Quarter.

NOTE ON ITEM "B".—*Reports by Agents or Employees.* An employee is to file, each quarter, as many Reports as he has employers, except that: (a) If a particular undertaking is jointly financed by a group of employers, the group is to be considered as one employer, but all members of the group are to be named, and the contribution of each member is to be specified; (b) if the work is done in the interest of one person but payment therefor is made by another, a single Report—naming both persons as "employers"—is to be filed each quarter.

B. EMPLOYER.—State name, address, and nature of business. If there is no employer, write "None."

NOTE ON ITEM "C".—(a) The expression "in connection with legislative interests," as used in this Report, means "in connection with attempting, directly or indirectly, to influence the passage or defeat of legislation." "The term 'legislation' means bills, resolutions, amendments, nominations, and other matters pending or proposed in either House of Congress, and includes any other matter which may be the subject of action by either House"—§ 302(e).
(b) Before undertaking any activities in connection with legislative interests, organizations and individuals subject to the Lobbying Act are required to file a "Preliminary" Report (Registration).
(c) After beginning such activities, they must file a "Quarterly" Report at the end of each calendar quarter in which they have either received or expended anything of value in connection with legislative interests.

C. LEGISLATIVE INTERESTS, AND PUBLICATIONS in connection therewith:

1. State approximately how long legislative interests are to continue. If receipts and expenditures in connection with legislative interests have terminated, ☐ place an "X" in the box at the left, so that this Office will no longer expect to receive Reports.

2. State the general legislative interests of the person filing and set forth the *specific* legislative interests by reciting: (a) Short titles of statutes and bills; (b) House and Senate numbers of bills, where known; (c) citations of statutes, where known; (d) whether for or against such statutes and bills.

3. In the case of those publications which the person filing has caused to be issued or distributed in connection with legislative interests, set forth: (a) Description, (b) quantity distributed; (c) date of distribution, (d) name of printer or publisher (if publications were paid for by person filing) or name of donor (if publications were received as a gift).

(Answer items 1, 2, and 3 in the space below. Attach additional pages if more space is needed)

4. If this is a "Preliminary" Report (Registration) rather than a "Quarterly" Report, state below what the nature and amount of anticipated expenses will be; and if for an agent or employee, state also what the daily, monthly, or annual rate of compensation is to be. If this is a "Quarterly" Report, disregard this item "C4" and fill out item "D" and "E" on the back of this page. Do not attempt to combine a "Preliminary" Report (Registration) with a "Quarterly" Report.

QUARTERLY REPORTS*

*All alphanumeric characters and monetary amounts refer to receipts and expenditures on page 2, paragraphs D and E of the Quarterly Report Form.

The following quarterly reports were submitted for the first calendar quarter 1970:

(NOTE.—The form used for report is reproduced below. In the interest of economy in the RECORD, questions are not repeated, only the essential answers are printed, and are indicated by their respective letter and number.)

FILE ONE COPY WITH THE SECRETARY OF THE SENATE AND FILE TWO COPIES WITH THE CLERK OF THE HOUSE OF REPRESENTATIVES:

This page (page 1) is designed to supply identifying data; and page 2 (on the back of this page) deals with financial data.

PLACE AN "X" BELOW THE APPROPRIATE LETTER OR FIGURE IN THE BOX AT THE RIGHT OF THE "REPORT" HEADING BELOW:

"PRELIMINARY" REPORT ("Registration"): To "register," place an "X" below the letter "P" and fill out page 1 only.

"QUARTERLY" REPORT: To indicate which one of the four calendar quarters is covered by this Report, place an "X" below the appropriate figure. Fill out both page 1 and page 2 and as many additional pages as may be required. The first additional page should be numbered as page "3," and the rest of such pages should be "4," "5," "6," etc. Preparation and filing in accordance with instructions will accomplish compliance with all quarterly reporting requirements of the Act.

Year: 19_____ ◀

REPORT

PURSUANT TO FEDERAL REGULATION OF LOBBYING ACT

	QUARTER			
P	1st	2d	3d	4th
(Mark one square only)				

NOTE ON ITEM "A".—(a) IN GENERAL. This "Report" form may be used by either an organization or an individual, as follows:
(i) "Employee".—To file as an "employee", state (in Item "B") the name, address, and nature of business of the "employer". (If the "employee" is a firm [such as a law firm or public relations firm], partners and salaried staff members of such firm may join in filing a Report as an "employee".)
(ii) "Employer".—To file as an "employer", write "None" in answer to Item "B".
(b) SEPARATE REPORTS. An agent or employee should not attempt to combine his Report with the employer's Report:
(i) Employers subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their agents or employees.
(ii) Employees subject to the Act must file separate Reports and are not relieved of this requirement merely because Reports are filed by their employers.

A. ORGANIZATION OR INDIVIDUAL FILING:
1. State name, address, and nature of business.

2. If this Report is for an Employer, list names of agents or employees who will file Reports for this Quarter.

NOTE ON ITEM "B".—*Reports by Agents or Employees.* An employee is to file, each quarter, as many Reports as he has employers, except that: (a) If a particular undertaking is jointly financed by a group of employers, the group is to be considered as one employer, but all members of the group are to be named, and the contribution of each member is to be specified; (b) if the work is done in the interest of one person but payment therefor is made by another, a single Report—naming both persons as "employers"—is to be filed each quarter.

B. EMPLOYER.—State name, address, and nature of business. If there is no employer, write "None."

NOTE ON ITEM "C".—(a) The expression "in connection with legislative interests," as used in this Report, means "in connection with attempting, directly or indirectly, to influence the passage or defeat of legislation." "The term 'legislation' means bills, resolutions, amendments, nominations, and other matters pending or proposed in either House of Congress, and includes any other matter which may be the subject of action by either House"—§ 302(e).
(b) Before undertaking any activities in connection with legislative interests, organizations and individuals subject to the Lobbying Act are required to file a "Preliminary" Report (Registration).
(c) After beginning such activities, they must file a "Quarterly" Report at the end of each calendar quarter in which they have either received or expended anything of value in connection with legislative interests.

C. LEGISLATIVE INTERESTS, AND PUBLICATIONS in connection therewith:

1. State approximately how long legislative interests are to continue. If receipts and expenditures in connection with legislative interests have terminated, place an "X" in the box at the left, so that this Office will no longer expect to receive Reports. ☐

2. State the general legislative interests of the person filing and set forth the *specific* legislative interests by reciting: (a) Short titles of statutes and bills; (b) House and Senate numbers of bills, where known; (c) citations of statutes, where known; (d) whether for or against such statutes and bills.

3. In the case of those publications which the person filing has caused to be issued or distributed in connection with legislative interests, set forth: (a) Description, (b) quantity distributed; (c) date of distribution, (d) name of printer or publisher (if publications were paid for by person filing) or name of donor (if publications were received as a gift).

(Answer items 1, 2, and 3 in the space below. Attach additional pages if more space is needed)

4. If this is a "Preliminary" Report (Registration) rather than a "Quarterly" Report, state below what the nature and amount of anticipated expenses will be; and if for an agent or employee, state also what the daily, monthly, or annual rate of compensation is to be. If this is a "Quarterly" Report, disregard this item "C4" and fill out item "D" and "E" on the back of this page. Do not attempt to combine a "Preliminary" Report (Registration) with a "Quarterly" Report.◀

AFFIDAVIT

[Omitted in printing]

PAGE 1◀

NOTE ON ITEM "D."—(a) *In General.* The term "contribution" includes *anything of value.* When an organization or individual uses printed or duplicated matter in a campaign attempting to influence legislation, money received by such organization or individual—for such printed or duplicated matter—is a "contribution." "The term 'contribution' includes a gift, subscription, loan, advance, or deposit of money, or anything of value, and includes a contract, promise, or agreement, whether or not legally enforceable, to make a contribution"—Section 302(a) of the Lobbying Act.

(b) IF THIS REPORT IS FOR AN EMPLOYER.—(i) *In General.* Item "D" is designed for the reporting of all receipts from which expenditures are made, or will be made, in accordance with legislative interests.

(ii) *Receipts of Business Firms and Individuals.*—A business firm (or individual) which is subject to the Lobbying Act by reason of expenditures which it makes in attempting to influence legislation—but which has no funds to expend except those which are available in the ordinary course of operating a business not connected in any way with the influencing of legislation—will have no receipts to report, even though it does have expenditures to report.

(iii) *Receipts of Multipurpose Organizations.*—Some organizations do not receive any funds which are to be expended solely for the purpose of attempting to influence legislation. Such organizations make such expenditures out of a general fund raised by dues, assessments, or other contributions. The percentage of the general fund which is used for such expenditures indicates the percentage of dues, assessments, or other contributions which may be considered to have been paid for that purpose. Therefore, in reporting receipts, such organizations may specify what that percentage is, and report their dues, assessments, and other contributions on that basis. However, each contributor of $500 or more is to be listed, regardless of whether the contribution was made solely for legislative purposes.

(c) IF THIS REPORT IS FOR AN AGENT OR EMPLOYEE.—(i) *In General.* In the case of many employees, all receipts will come under Items "D 5" (received for services) and "D 12" (expense money and reimbursements). In the absence of a clear statement to the contrary, it will be presumed that your employer is to reimburse you for all expenditures which you make in connection with legislative interests.

(ii) *Employer as Contributor of $500 or More.*—When your contribution from your employer (in the form of salary, fee, etc.) amounts to $500 or more, it is not necessary to report such contribution under "D 13" and "D 14," since the amount has already been reported under "D 5," and the name of the "employer" has been given under Item "B" on page 1 of this report.

D. RECEIPTS (INCLUDING CONTRIBUTIONS AND LOANS):

Fill in every blank. If the answer to any numbered item is "None," write "None" in the space following the number.

Receipts (other than loans)

1. $_____Dues and assessments
2. $_____Gifts of money or anything of value
3. $_____Printed or duplicated matter received as a gift
4. $_____Receipts from sale of printed or duplicated matter
5. $_____Received for services (e.g., salary, fee, etc.)
6. $_____TOTAL for this Quarter (Add items "1" through "5")
7. $_____Received during previous Quarters of calendar year
8. $_____TOTAL from Jan. 1 through this Quarter (Add "6" and "7")

Loans Received

"The term 'contribution' includes a . . . *loan* . . ."—Sec. 302(a).

9. $_____TOTAL now owed to others on account of loans
10. $_____Borrowed from others during this Quarter
11. $_____Repaid to others during this Quarter
12. $_____"Expense money" and Reimbursements received this Quarter

Contributors of $500 or more
(from Jan. 1 through this Quarter)

13. Have there been such contributors?
Please answer "yes" or "no": _____

14. In the case of each contributor whose contributions (including loans) during the "period" from January 1 through the last days of this Quarter total $500 or more:

Attach hereto plain sheets of paper, approximately the size of this page, tabulate data under the headings "Amount" and "Name and Address of Contributor"; and indicate whether the last day of the period is March 31, June 30, September 30, or December 31. Prepare such tabulation in accordance with the following example:

Amount	*Name and Address of Contributor*
	("*Period*" from Jan. 1 through _____, 19____)
$1,500.00	John Doe, 1621 Blank Bldg., New York, N.Y.
$1,785.00	The Roe Corporation, 2511 Doe Bldg., Chicago, Ill.
$3,285.00	TOTAL

NOTE ON ITEM "E".—(a) *In General.* "The term 'expenditure' includes a payment, distribution, loan, advance, deposit, or gift of money or anything of value, and includes a contract, promise, or agreement, whether or not legally enforceable, to make an expenditure"—Section 302(b) of the Lobbying Act.

(b) IF THIS REPORT IS FOR AN AGENT OR EMPLOYEE. In the case of many employees, all expenditures will come under telephone and telegraph (Item "E 6") and travel, food, lodging, and entertainment (Item "E 7").

E. EXPENDITURES (INCLUDING LOANS) in connection with legislative interests:

Fill in every blank. If the answer to any numbered item is "None," write "None" in the spaces following the number.

Expenditures (other than loans)

1. $_____Public relations and advertising services
2. $_____Wages, salaries, fees, commissions (other than item "1")
3. $_____Gifts or contributions made during Quarter
4. $_____Printed or duplicated matter, including distribution cost
5. $_____Office overhead (rent, supplies, utilities, etc.)
6. $_____Telephone and telegraph
7. $_____Travel, food, lodging, and entertainment
8. $_____All other expenditures
9. $_____TOTAL for this Quarter (Add "1" through "8")
10. $_____Expended during previous Quarters of calendar year
11. $_____TOTAL from January 1 through this Quarter (Add "9" and "10")

Loans Made to Others

"The term 'expenditure' includes a . . . *loan* . . ."—Sec. 302(b).

12. $_____TOTAL now owed to person filing
13. $_____Lent to others during this Quarter
14. $_____Repayment received during this Quarter

15. Recipients of Expenditures of $10 or More

In the case of expenditures made during this Quarter by, or on behalf of the person filing: Attach plain sheets of paper approximately the size of this page and tabulate data as to expenditures under the following heading: "Amount," "Date or Dates," "Name and Address of Recipient," "Purpose." Prepare such tabulation in accordance with the following example:

Amount	*Date or Dates*	*Name and Address of Recipient—Purpose*
$1,750.00	7-11:	Roe Printing Co., 3214 Blank Ave., St. Louis, Mo.—Printing and mailing circulars on the "Marshbanks Bill."
$2,400.00	7-15, 8-15, 9-15:	Britten & Blaten, 3127 Gremlin Bldg., Washington, D.C.—Public relations service at $800.00 per month.
$4,150.00	TOTAL	

A. Ad Hoc Committee of the Construction Industry Advancement Funds, 1016 20th Street NW.

A. Clarence G. Aramy, 1725 Eye Street NW., Washington, D.C.
B. National Association of Food Chains, 1725 Eye Street NW., Washington, D.C.
D. (6) $500.

A. S. Allan Adelman, 1660 L Street NW., Washington, D.C.
B. American Gas Association, Inc., 605 Third Avenue, New York, N.Y.
D. (6) $975.00. E. (9) $300.60.

A. Aerospace Industries Association of America, Inc., 1725 DeSales Street NW., Washington, D.C.
D. (6) $6,761.05. E. (9) $6,761.05.

A. Air Traffic Control Association, Inc., 525 School Street SW., Washington, D.C.

A. Air Transport Association of America, 1000 Connecticut Avenue NW., Washington, D.C.

SENATE—*Tuesday, July 28, 1970*

The Senate met at 10 a.m. and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Reverend John H. Satterwhite, D.D., professor, Wesley Theological Seminary, Washington, D.C., offered the following prayer:

O God, our Father, You have revealed Your will to persons in the past: Grant to the President and the Members of the Senate the revelation of Your wisdom through which in our own day they may make Your will known in our country. Reveal Yourself to them, that through their work our country may come to know justice, equality, and love for all people.

Help them to make human life more human for all and to work for a united witness in our Nation for the liberation of the poor out of fear for our lives. Our lives belong to You and help us realize that hatred, violence and the destruction of human life are not part of our liberation.

Help us to obey Your commands which we have heard but not yet obeyed and use the wealth and power of our Nation to serve the communities of poverty and oppression; and may we be renewed by Your spirit through Jesus Christ, Your Son and our Lord. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore of the Senate (Mr. RUSSELL).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., July 28, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Monday, July 27, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR SYMINGTON LATER IN THE DAY

Mr. MANSFIELD. Mr. President, because of the early hour of convening, I ask unanimous consent that, although the distinguished senior Senator from Missouri (Mr. SYMINGTON) has already been granted an order to proceed for not to exceed 30 minutes, he may proceed under that order today at a time appropriate to him.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent to limit statements to 3 minutes in relation to the transaction of routine morning business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. SCOTT. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

SIX YEARS IN A BAMBOO CAGE

Mr. SCOTT. Mr. President, 6 years is a long time. For some of our prisoners of war held in North Vietnamese or Vietcong horror camps, it will soon be 7 years. Some of our men have spent what may be one-tenth of their allotted span of life in the most despicable conditions, in a bamboo cage hidden in some steaming jungle, their feet rotting away from parasitical infection, their bodies and minds tortured by inhuman practices fertile in the oriental mind.

Mr. President, it is worse even than this. Normally we spend approximately 20 of our years in preparation for our adult lives. Afterward, if we are fortunate, we may enjoy somewhere between 10 and 20 years of well-earned retirement. This leaves on the average approximately 40 years of adult productive living. I think it is only fair to recognize that to these prisoners, the citizens of this country who were our emissaries in a distant war, 7 years could be one-sixth of their allotted productive span of life. It has not been spent in particularly pleasant conditions.

To an enlightened people, who believe in the rights of the individual, the situation of our prisoners is intolerable. Tolerate it we must, since for the moment there seems nothing else to do; but repay it to the men concerned, and their families, we shall, so far as we can. And we hope, on that glad day when the battered remnants of these heroic men are at last repatriated to their own country and their own families, that the world will well note and long remember how they were treated, and by contrast how we have treated those of the other side who fell into our hands.

OVERSEAS ASSIGNMENT OF MILITARY VOLUNTEERS

Mr. SCOTT. Mr. President, last week I suggested that at this time we might give serious consideration to phasing out the draft for those who serve in Vietnam, substituting therefor those who volunteer to serve, those who are willing to put in their time in this overseas assignment. I think it might do a great deal to relieve tensions to make it clear that the element of compulsion to combat has been lifted in this instance.

I do not believe in selective objection to wars. I think all wars have some immorality associated with them, so I do not believe in the so-called immoral war concept. I do not believe we should choose the wars in which we serve; but I do believe if there are enough volunteers, and I believe there are, who would be willing to serve in Vietnam during

the terminal years of this conflict, during the period when the war is being wound down, and especially after the removal of virtually all the combat troops next spring and next summer, and gradual removal of supply and support forces, that perhaps this proposal would go a considerable way toward bringing about some better feeling and better understanding between the generations in this country.

I do not make the proposal as a "truce" because I was the first witness before the Scranton Commission, and for about a week or 10 days the only witness who made the point that student unrest was not necessarily geared to the war, for if it were, why would it arise when the war was being deescalated, rather than under previous administrations when it was being escalated; and moreover, since student unrest is a widespread phenomenon everywhere in the world, and not only in the springtime, there certainly are many causes for it.

But I do believe that youths feel that the generations above them which run the country are not being fair to them. This is not an unusual feeling. Young people always feel that older people are not being fair to them, and they have something on their side when they say that.

So to the degree to which we can preserve the elements of fairness in relation to the obligations and the duty of a citizen, we should try to do it. That is why I would like to keep alive the discussion of the importance of volunteer forces in this area. I hope that we can devise some means to do it. I hope if we do this will improve negotiations between the colleges and the rest of the country, and may perhaps lead to a lowering of the temperature, even in the ivy leagues, because our "elites" in this country are students, and our affluent who should be happy are actually the most discontented of all our citizens.

I think we might remove one of the root causes of that alleged discontent and then see what continues to bug them, and perhaps we can get to the treatment of whatever is the underlying cause of the ferment if we remove some of what are clearly the external and visible irritations.

I hope we give careful consideration to this suggestion. It does not bear an ideological mark; it was suggested as recently as yesterday by Mr. Buckley, a conservative columnist, and it has been suggested by liberals and moderates. I think chiefly it is being suggested by people who are wondering what has gone wrong with today's youth, and in their search for means by which we might ease the exasperations. This is one of the proposals which has surfaced and which I think deserves careful consideration.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, communicated to the Senate the intelligence of the death of Hon. Michael J. Kirwan, late a Representative from the State of Ohio, and transmitted the resolutions of the House thereon.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (S. 2601) to reorganize the courts of the District of Columbia, to revise the procedures for handling juveniles in the District of Columbia, to codify title 23 of the District of Columbia Code, and for other purposes, and it was signed by the Acting President pro tempore (Mr. ALLEN).

DEATH OF MICHAEL J. KIRWAN, REPRESENTATIVE FROM OHIO

Mr. SCOTT. Mr. President, I know the Senate joins in sorrow for the death of the distinguished dean of the Ohio delegation, Representative Kirwan, of Ohio, and with whom I served in the House of Representatives.

DEATH OF JOHN KUNKEL, FORMER REPRESENTATIVE FROM PENNSYLVANIA

Mr. SCOTT. Mr. President, I yesterday brought news of the death of another former colleague, the Honorable John G. Kunkel, of Pennsylvania, grandson and great-grandson of many Members of Congress, one of whom ran on the ticket for vice president with Henry Clay, and another was a Member of the First Congress.

John Kunkel was a very distinguished man, indeed, who was very much beloved by all his colleagues. We join in extending our condolences to his widow, Kitty, and the family, in saying the last sad goodbye to a friend.

RECESS

Mr. SCOTT. Mr. President, I ask unanimous consent that the Senate stand in recess, subject to the call of the Chair.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Thereupon, at 10:29 a.m., the Senate took a recess subject to the call of the Chair.

At 10.41 a.m., the Senate reassembled when called to order by the Acting President pro tempore (Mr. ALLEN).

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the distinguished Senator from Nebraska (Mr. HRUSKA) and I be permitted to proceed for an indeterminate period of time during morning hour.

The ACTING PRESIDENT pro tempore. Is there objection? Without objection, it is so ordered.

INSPECTION OF IMPORTED LIVESTOCK PRODUCTS

Mr. MANSFIELD. Mr. President, the well-known columnists, Roscoe and Geoffrey Drummond, in one of their columns of recent date, headlined "Is Hruska Beef Bill for Health or Protectionism?" referred to "special-interest Congressmen" who "are going to fantastic lengths to take advantage of the high protectionist madness now gripping both the House and the Senate." That is a direct quotation from the Drummonds' article.

They also say that:

Politicians are lining up to hand out the goodies, and they see votes at home when they do.

Again quoting the Drummonds:

Just when you think that the worst is over, it isn't. Something more comes out of the legislative factory now running at high speed for no good purpose and oiled for the coming elections.

* * * * *

And who is fashioning the latest bit of high-protectionism gone berserk? None other than two of the normally most thoughtful and careful men in the Senate—the prestigious liberal majority leader, Mike Mansfield of Montana, and the distinguished Republican conservative, Roman Hruska of Nebraska.

They are proposing a restrictive trade measure which shows what can happen when two usually reasonable and responsible men get caught up in the home-industry, protectionist mania on the eve of a congressional election.

Mr. President, I assume that what the Drummonds are referring to is a bill (S. 3942), which was introduced by me some weeks ago, to provide for thorough health and sanitation inspection of all livestock products imported into the United States, and for other purposes.

That bill has nothing to do with imports per se, but it does have a great deal to do with endeavoring to make imported meat as sanitary, as healthful, and as safe as that produced by our domestic producers.

I appeared before the Committee on the Judiciary under date of July 16. I ask unanimous consent that my testimony at that time be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR MIKE MANSFIELD: S. 3942—INSPECTION OF IMPORTED MEATS, JULY 16, 1970

Thank you, Mr. Chairman and members of the Committee, for this opportunity to appear before you in behalf of my bill, S. 3942, on inspection of imported meat.

There is nothing more important to consumers and to those who produce meat in this country—and we have both in Montana—than the maintenance of absolute confidence in the purity, wholesomeness and sanitary quality of the meat and animal products offered consumers.

Per capita consumption of beef has grown from 85 pounds in 1960 to 110 pounds last year, and of all meats from 161 pounds to 183 pounds per person. The Department of Agriculture is forecasting continued growth, and this is all because American consumers have confidence in our system of inspection and, therefore, in the quality of the meat allowed to be offered to the public at stores.

In recent years, when proof was offered that some slipshod practices existed in handling of meat, Congress has promptly provided for poultry inspection and for improved meat inspection. We have voted the most rigid requirements considered desirable on our own meat packing and processing establishments, and we have voted to require that meat imported into the United States be produced under equally sanitary conditions so it will meet standards of wholesomeness equal to ours.

My confidence in the quality and thoroughness of inspection of imported meat was shaken when Dr. John Melcher, a Montana veterinarian who was elected to Congress just a year ago at a special election,

described to me what he had learned as a result of a personal investigation into the nature of our inspection of foreign meat plants and of meat as it comes into the United States.

We have only 14 or 15 men who travel the globe to make sure that more than 1,100 foreign packing plants are designed and operated to meet our sanitation requirements, and that the day-to-day inspection of meat as it moves down the packing house lines is equal to the inspection standards and requirements we maintain. The annual report of the inspection branch at USDA shows that one of these men frequently inspects three plants a day, which certainly isn't much of an inspection of the plant, the premortem and post-mortem procedures, the boning, cooking or freezing, packing and handling of meat destined for the United States. In his hour or two visit, he cannot, of course, assure himself that there is premortem examination of all animals butchered around the year, or that there is thorough post-mortem inspection of every carcass on the packing line 365 days a year—that has to be taken on faith that the governments in Central and South America, Oceania, Europe and the East all provide rigid day-to-day inspection equal to ours.

We run a check on the results of the inspection on foreign plants when meat arrives in the United States. The equivalent of about 75 man years is devoted to sampling the 1.6 billion pounds of meat shipped to us to make sure that the defects in it do not exceed certain tolerances: one minor defect per 30 pounds, one major defect per 400 pounds, and one critical defect per 4,000 pounds. Congressman Melcher will discuss those defects and their classification.

It is my understanding—and if it is not correct we should make it so—that as meat moves down processing lines in an American packing plant, if any defect is discovered which affects the absolute wholesomeness of a piece of meat, that piece of meat is pulled off the line and the defect eliminated or the meat "tanked" and removed completely from any possibility of human use.

The bill which I introduced in the Senate, a companion to Congressman Melcher's H.R. 17444, provides for thorough inspection of all animal products imported into the United States, and that means piece by piece inspection, after thawing, of the fresh and frozen meat which arrives at our ports of entry.

We cannot provide hundreds or even thousands of United States inspectors in foreign plants to maintain daily vigilance over meat produced in each of them which may be shipped to us. We can inspect these products thoroughly which are offered for our markets, and that is what the bill proposes be done.

I am concerned about the volume of meat and animal products being imported into the United States. Unregulated, it can have extremely serious consequences for our domestic producers, upon whom we must rely for the great bulk of our meat, dairy products and other animal foods. We deal with the problem of volume in separate import quota legislation. I authored the Meat Import Law of 1965.

This question of thorough inspection is a separate question, just as important as any import quota, for failure to guarantee American consumers that imported meat—which is mixed with our own in ground and processed products and is unidentifiable as imported meat except in rare instances where it comes in in consumer packages—is absolutely wholesome and sanitary can destroy confidence in the meat and animal products on the shelves and in the coolers of our stores.

Congressman Melcher will testify today. As a veterinarian he can discuss with you in some detail the existing inspection procedures, and such problems as the failure of Australia to eliminate certain defects in shipments to us. This aspect of the problem is very technical and I defer to my colleague, Dr. Melcher, who is a very thorough person. At least, we have found him to be as a veterinarian in Forsyth, Montana; as a Congressional candidate from the Second District, and as a Congressman.

Mr. MANSFIELD. I also ask unanimous consent that a statement of Representative JOHN MELCHER of the Second District of Montana before the committee on the same date be printed in the RECORD at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY CONGRESSMAN JOHN MELCHER: IMPORTED MEAT INSPECTION

Thank you, Mr. Chairman and members of the Committee, for this opportunity to discuss the pending bills for improvement of the inspection of imported meat and animal products.

I have introduced in the House of Representatives, H.R. 17444. The Mansfield and Burdick bills, S. 3942 and S. 3987 are the same. The bill was an outgrowth of my concern, as a veterinarian as well as a citizen, about both the safety from a health standpoint and the wholesomeness and sanitation of meat coming into the United States. I made considerable inquiry into the situation. On April 15, I addressed the House on the subject and on May 5, introduced H.R. 17444. I have subsequently put into the House Record an article from a Melbourne, Australia paper, reporting a discussion of the inadequacy of meat inspection and procedures in that country during a meeting of their Parliment. Also, an article from the Western Livestock Reporter, published at Billings, Montana, indicating that there is considerable American capital behind expansion of the livestock industry in that country; American interests are acquiring land there in large tracts and there are indications that the Australian native citizens are not entirely happy about it.

With your permission, Mr. Chairman, I will file copies of these past statements for your hearing record.

I would like to make clear at the outset that, while I am concerned about the volume of meat, dairy and honey imports into the United States, the problem of adequate inspection of what does come is separate from any quota problem. If there is a relationship between volume of imports and inspection, as distinct from economic consideration involved in imports, then it is that quantity should be geared or regulated to the volume we are equipped to certify for sanitary production and to thoroughly inspect before use in this country.

Certainly this is no time to expand and enlarge quotas; we need first to make sure of the safety, wholesomeness and sanitation of what we are getting, for it is presently questionable.

The bill I introduced calls for "thorough examination and inspection" of animal products, including "all fresh or frozen or chilled meats after thawing" and before use in this country. The language is intended to cause the Secretary of Agriculture and others concerned—including those of us in Congress—to look not only at the adequacy of our inspection of fresh and frozen meat but also dairy products, cooked and canned meats—the whole list of animal product imports and be certain that they meet proper standards.

The phrase "thorough examination and inspection" has been used because some latitude is necessary as to inspection of various products: cheese, butter, dairy mixes, eggs and canned meat products, but it is the intention of the author of the bill that, in the case of meats, "thorough examination and inspection" means piece-by-piece inspection of all chilled and uncooked meat, piece by piece inspection of cooked meat which arrives here in paper or plastic wrappers, piece by piece inspection of meat in bulk cans after they are opened and before use, and at least a thorough sampling of the contents of consumer packages, including canned meats.

If legislative history to that effect isn't enough to make it binding, then the bill should be amended to make that explicit.

Our surveillance of foreign packing and processing plants licensed to export to the United States is not adequate to give us very positive assurance that the processing has always been under standards for wholesomeness and sanitation truly equal to ours.

The requirement that consumer packages indicate the country or origin provides some warning to consumers, but I think we owe them more than a warning: we owe them reassurance that the product in the package is wholesome and sanitary. Inspection of a substantial sample is little enough reassurance of that.

I am advised that there are two developments in the meat importing business that must be taken into consideration: more and more meat is coming into the country "containerized," or in large containers which can be hoisted directly from the hold of ships to vehicles for transport to inland destinations, and given import entry inspection at the destination in the interior of the United States. There is also an increasing volume of cooked meat for processing uses which goes to the processed meat and canned soup factories in large bulk cans.

We have meat and food inspectors all over the United States, and there is no reason why blocks of chilled meat cannot be thawed and examined piece by piece before use at processing plants, or why the contents of the bulk cans cannot be inspected after the cans are opened and before the contents are used in consumer food items.

Cooking meat insures killing disease organisms, but it is not an assurance of wholesomeness. Cooked meat needs to be examined for thoroughness of cooking (there have been cases of imported cooked meat which was semi-raw in the middle) and for all of the defects involving wholesomeness and sanitation for which raw meat is inspected: dirt, insects, rodents, blood clots, cysts, ingesta, fecal matter, etc. Cooking should not permit automatic entry: we still need to know it is well-cooked, particularly in the case of Argentina where hoof and mouth disease is prevalent. In addition, in all cases we need to be certain that all the meat, cooked or otherwise, is clean.

I do not want to take an excessive amount of the Committee's time, Mr. Charman, dealing with the inspection staffs available to maintain surveillance over 1100 foreign plants, the wholly inadequate sampling method of inspection after meat arrives in the United States, the standards, the number of defects allowed to go through, and other details. The House remarks which I have inserted deal with them, and include a table of defects and defects allowed in accepted lots.

I have spent a good many hours trying to familiarize myself with details, including a visit to the docks to see what happens to a cargo of meat when it arrives, and I could easily impose on your time. I will try not to do so, but I would like to point up a few major facts.

In my House remarks, I said that we have 15 "foreign review officers" who travel the globe to make sure that regulations, plants, procedures, sanitary conditions and other phases of meat production and inspection are *equal* to ours, as required by law. I am now told it is 14 inspectors, a reduction of

only one, but significant because that one is a 6⅔% reduction in the size of the total force! In addition the foreign review officers live here in the Washington area and are not permitted by a State Department ruling to live abroad in the countries whose plants they have been delegated to inspect. They consequently are in travel status back and forth much of the time.

I was advised that the equivalent of 75 man-years of time is devoted to inspecting meat as it arrives at our docks, and have had no change in that figure.

I was supplied figures indicating that we have about 7,050 full-time and part-time inspectors serving 1,052 meat and poultry processing plants in the United States. Subsequently, I have been given revised data.

It indicates the following:

It indicates that we have 734 plants in the United States where red meat is slaughtered and a 3,224 which slaughter and/or process red meats, served by 4,637 inspectors. Then there are 1,004 poultry slaughter and/or processing plants served by 2,750 inspectors. The meat inspection staff totally includes 7,387 field personnel and 804 who are administrators here in Washington or laboratory people, bringing the grand total personnel involved in the work to 8,191.

I cannot believe that 14 men, operating separately, who are not allowed to live abroad but must commute from the United States and have to drop in on three and even four foreign plants a day in order to visit all of them at least once a year, can possibly provide us with any real assurance that slaughter and inspection procedures, and the sanitation of the 1,100 plants abroad which ship to us, is equal to United States standards.

I don't think the Department of Agriculture believes it either. I have here the ledger sheets, which are the only record which has been kept on imported meat rejections, indicating rejections for one year, the shipping plant number, size of lot, cause of rejection and the port of rejection. I understand the Department is now computerizing this record so it can determine if there are plants from which rejections regularly run high, or other coincidences or data in these records which would indicate trouble spots abroad which our review officers have missed in their hurried visits to the foreign establishments.

It is my understanding, incidentally, that this compilation of rejections was started after the advent of meat import quotas, in order to get a total on pounds rejected so imports to replace the rejected lots could be entered into the United States.

The need to analyze the rejection data to find trouble spots is indicative of the Department's own behalf that violations get by their tiny force of "review officers," who inspect abroad.

We get 1.6 billion pounds of chilled, cooked and canned meat from the 1100 plants inspected by the 14 review officers. After it arrives here, we put about 75-man years into inspection, by a very thin sampling procedure based on mathematical probabilities—a sort of poker or roulette system—involving less than 1% of all the meat.

Because low cost of free refrigerator space is not available at most of our docks, even the inspection of the tiny samples is done under time pressure. They want to get the cargo moving before it begins to thaw out.

As the meat cargo is lifted from the hold of a ship, it is assembled into lots on the dock. When a lot has been assembled, an inspector makes a random selection of a prescribed number of samples of the 50 to 60 pound boxes of frozen meat in the lot. These are marked and transported to an inspection room, or station, by the importer. The balance of the lot is marked "inspected and passed by the U.S. Department of Agriculture," and hurried to refrigerated railroad cars, trucks or storage space to be held until the samples have been inspected and the whole lot can be released—or it is rejected and ordered shipped back out of the United States.

The marked sample boxes are transported by the importer to the inspection station, located on the dock or nearby. There, some of the 50–60 pound blocks of meat are sliced with a band saw to take out two 2-inch cross cuts, or a 4-inch cut. These are then placed in plastic bags, immersed in warm water, thawed and inspected. The fate of the whole lot is decided on the basis of what is found in the slices which constitute about ½% of all the meat involved.

If the inspector finds less than a prescribed number of minor, major or critical defects in a lot, it goes through. If he finds more, up to a certain limit, a second batch of samples is run through.

The number of samples taken from lots of various sizes and the exact number of defects permitted to pass is indicated in the table attached to my House remarks, and will undoubtedly be supplied by the Department.

I am told that, statistically, the procedure allows one minor defect like dirt, a blood clot, or certain benign cysts, to pass per 30 pounds, one major defect like hair, blood clots, cysts and ingesta per 400 pound, and one critical defect, like a substantial dab of manure per 4000 pounds.

I have heard the statement made, Mr. Chairman, that these standards are "equal" to American inspection—that the allowable defects in imported meat coincide with the number that "get by" during our domestic inspection.

It is my understanding that U.S. meat inspectors do *not* stand at a slaughter line counting the number of defects passing them—they aren't just calling balls and strikes—but that made wholesome and sanitary or it is "tanked"—taken out of any line that goes into human food products. The objective of meat inspection is to get all defects out. If our inspectors are over-worked, or haven't time to "catch" all the defects in domestic meat, then we had better be considering how to augment the force. We should not make their shortcomings the basis of tolerating less than thorough inspection of imported meat.

There is evidence that our inspection force needs strengthening—that veterinarians in the force is declining by attrition, at least—and that the force is inadequate to provide full service without excessive overtime. I ask your permission to put in the record a brief statement on this subject that I put in the House record.

At this point, I want to make an additional observation about the need for piece-by-peace inspection.

Monday morning I watched a 32,000 lb. of meat unloaded and "inspected" at the wharf in Philadelphia. I saw the pallets of meat hoisted off the boat, the lot assembled, the boxes stamped "U.S. Inspected and Passed," and sample boxes taken to the meat inspection corner of a huge shed where samples were sawed and about 180 lbs. from the 15 boxes thawed out for examination. I stood with one grade 7 and one Grade 9 employee—neither was a veterinarian—as they each examined trays of the meat.

There were samples from other large lots piling up around them—two boats were unloading—and hunreds of tons of frozen meat in a great, unrefrigerated warehouse, awaiting the completion of their work.

If they had been on a domestic meat inspection line, they would have pulled off the slaughter or processing line several pieces of meat which had hair, blood clots and minor defects to be cleaned up or tanked. But their decision there was not whether an occasional single piece of meat was to be cleaned up/or rejected; (there were no facilities for that) their decision was, in this instance, whether $15,000 worth of meat—16 tons—were to be rejected and ordered out of the country for a few too many minor defects.

They weren't making 64 cent decisions—they were making the $64,000 kind under terrifically greater pressure to be reasonable than on a domestic slaughter line.

It is just common sense to know that an inspector will be less reluctant to send back a single shoulder of beef or mutton than to reject tons and tons of meat because he found a defect or two too many. Even in instances where domestic inspectors check lots of 20–100,000 lbs, their decision to turn a lot back is only for re-working—it is not a flat rejection of every pound in a multi-ton lot.

Piece by piece inspection is inevitably better than inspection of units with values running into five and six figures.

Three faults in the system appear to be self evident—

1. Foreign review officers are spread too thin. We need more of them and need them living in the countries they are assigned to inspect.

2. On the dock inspection is not acceptable because of the pressure of time, the confusion, and the inherent disorder of dock procedures.

3. Random selection which inspects only a minute percentage of the meat neither assures wholesomeness and sanitation nor does it assure confidence to consumers that the meat they are going to buy meets the standards we say it should have.

The fact that we have inspected a small portion of the foreign meat, and on that tiny inspected portion have found only so much dirt or hair or blood clots, cysts, ingesta, or fecal material is not satisfactory. By doing so we jeopardize the belief that the finished product cleared for anywhere in the United States—any store, any restaurant or hot dog stand or any dinner table including our own is the clean, wholesome quality meat that we want and use to be confident we had.

In my mind, there is absolutely nothing more important to the livestock industry than complete confidence and absolute assurance on the part of the American housewife and that the meat she buys at the retail store is healthful, sanitary and wholesome.

If the housewife loses confidence in what is in the freezer, or on the butcher's block, our market will decline precipitously. Our American product must be kept up to the highest standards.

And I am concerned about imports because the imported meat is mixed with American in hamburger, it goes into soups, cold meat and processed meats—hot dogs, sausage, cold cuts—and becomes indistinguishable from American.

It is intolerable that slipshod inspection of imports might be allowed to undermine confidence in all meat offered at our stores.

I must say very candidly that I have been shocked by developments in relation to meat inspection since I made my first statement on the subject.

Shortly, afterward, imports of mutton from Australia from ewes butchered after May 15 were embargoes, and I was advised that there had been some debate in the inspection division for two or three years about the need to take such action.

The revelations in the Queensland paper I have submitted make me believe that the "equal" requirement in our law has not been enforced in this instance. The Minister of Primary Industry for Australia is quoted as saying their packing methods have not—and cannot in some plants—meet our standards because the carcass and viscera are not kept associated. He talked about reaching a "compromise" with us. A compromise between our standards and what they want ac-

cepted simply can't meet the requirements of our law. The law says their plants, procedures and inspection must be "equal" to ours: not some compromise between "dirty" and equal.

There has been temporizing with processing and inspection abroad. And a recent General Accounting Office report indicates temporizing in some plants here at home which shocks me, particularly in view of difficulty which was given to butchers and small locker plants in rural areas.

I am advised that the General Accounting Office is starting to look at the adequacy of our surveillance and inspection of foreign plants, and meat imports.

I requested the General Accounting Office to undertake such a study about a fortnight ago and on Tuesday consulted with a team from that agency which has already gone to work.

I am especially pleased with this since the charge cannot be made—as it has been made in regard to a Congressman from the cow country—that this is an effort to create a furor which will limit the volume of imports.

Regardless of volume, meat which is imported into the United States must be kept healthful, wholesome and completely sanitary and those objectives are all that is involved in the bill before you today. I am talking now about quality, not volume.

Mr. MANSFIELD. Mr. President, Representative MELCHER is the original author of this proposed legislation. He is one of the best known veterinarians in the northwestern part of our Nation. He is a good, sound Congressman, and he knows the livestock industry as very few other Members of Congress do. What we are endeavoring to do, I repeat, is to apply the same standards for healthful meat to imports that we apply to our domestic production.

My testimony before the committee applied to only this particular matter, and it pointed out that we have only 14 or 15 men who travel the globe to make sure that more than 1,100 foreign packingplants are designed and operated to meet our sanitation requirements, and that the day-to-day inspection of meat as it moves down the packinghouse lines is equal to the inspection standards and requirements we maintain. The annual report of the inspection branch at USDA shows that one of these men frequently inspects three plants a day, which certainly is not much of an inspection of the plant, the premortem or postmortem procedures, the boning, cooking or freezing, packing, and handling of meat destined for the United States. In his hour or two visit, he cannot, of course, assure himself that there is premortem examination of all animals butchered around the year, or that there is thorough postmortem inspection of every carcass on the packing line 365 days a year—that has to be taken on faith that the governments in Central and South America, Oceania, Europe and the East all provide rigid day-to-day inspection equal to ours.

Mr. President, one of the results of that meeting was that I received a call from the CBS in San Francisco—and I understand that what I am about to say also appeared in certain portions of the Nation's press, though I must report that I have not seen it in that respect.

Anyway, a George Mair of CBS News called and asked for my reactions to two statements which came over the wire this afternoon on the AP and the UPI. One is by Raymond Ioanes of the Department of Agriculture. Mr. Ioanes stated that the Mansfield-Burdick bill would result in the blocking of further American meat exports. How I do not know. And how asking that foreign, imported meats be up to American standards would have that effect, I do not know.

Then he continued:

Remarks by Peter Nixon, Australian Minister of the Interior, from Melbourne—"Senator Mansfield's remarks on behalf of the meat lobby will result in having the cost of meat inspection forced on the Australian Embassy—

I do not know what the Australian Embassy has to with it—

If this is to work as I suspect it is, Senator Mansfield should be hung, drawn and quartered without benefit of inspection and roasted on the high altar of American protectionism.

That is quite a strong statement, but I had no comment. I think the record should speak for itself.

I do think, Mr. President, that when we try to bring forth a bill of the type which I have mentioned, we ought to at least be given credit for good faith, and we ought to be recognized as not endeavoring to do anything in this measure which would interfere in any way with meat imports. We do have a law covering the importation of frozen meat and veal, and that law is the result of the efforts of the distinguished Senator from Nebraska (Mr. HRUSKA) and the Senator from Montana, now speaking.

That law was passed 6 years ago. We have had to watch it very carefully, but it has brought about a degree of importation with which we can live. We would only hope it would be observed in all its details.

But so far as the bill in question is concerned, I repeat: It has to do only with the proposition that meats imported into this country should be just as sanitary, just as healthful, just as safe, and the same requirements applicable to our own meats should apply to these foreign imports.

It is interesting to note that in this column by the Drummonds, the heading is "Hruska Beef Bill for Health or Protectionism?" To the best of my knowledge, while I know the distinguished Senator from Nebraska (Mr. HRUSKA) is very sympathetic to this proposed legislation, his name was not on the measure when it was considered before the committee. I must admit I do not know what HRUSKA beef bill is referred to, unless it is one which the distinguished Senator from Nebraska introduced some time ago, which has passed both bodies, which has been signed by the President, and which is now the law of the land. But I defer at this time to the distinguished Senator from Nebraska, who can explain his position far better than I can.

Mr. HRUSKA. If the Senator will yield, the Senator from Nebraska would say that he also carefully inspected the bill that was introduced by the Senator from Montana, and his name does not appear as a cosponsor of that bill.

Mr. President, I want to minimize the offenses here against accuracy, and otherwise, of the authors of the article in question. I ask unanimous consent at this time, with the permission of the Senator from Montana, to join him as a cosponsor of his bill, so that we will correct that part of the column, even though it is on a nunc pro tunc basis.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MANSFIELD. I am delighted to have the distinguished Senator from Nebraska as a cosponsor, because, in my opinion, he is the leader of the Senators in this Chamber, both Democratic and Republican, in trying to bring home a better understanding of what the beef industry stands for in this country, and also in pointing out the difference between beef in the marketplace and beef on the hoof.

Mr. HRUSKA. Mr. President, I should like to ask the Senator from Montana this question: He well knows that Public Law 90–201, which is the Meat Inspection Act of 1967, contains provisions, under section 20 thereof, requiring that foreign meat products imported for human consumption be prohibited entry unless the exporting country complied with all inspection and building standards and other regulations applicable to such articles produced and inspected within the United States.

My question is this: Is it not a fact that the bill introduced by the Senator from Montana, and now cosponsored by the Senator from Nebraska, in addition to several other Senators, simply seeks to sharpen the provision which has been law for 3 years now, and to make it more accurate and to make it more effective, to see that only wholesome meats are imported into this country?

Mr. MANSFIELD. The Senator is correct. I might add that the purpose is to equalize the situation between imported meats and domestically produced meats.

Mr. HRUSKA. I am confident that the authors of the article would not take any other position but that any meats which are imported should comply with the law of this land, because the objective of the law of this land is to protect the consumer; and that is exactly the purpose of the Mansfield bill.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. HRUSKA. I am happy to yield.

Mr. MANSFIELD. May I say that that is not the view of the Department of Agriculture, which is against this proposal for reasons which I cannot understand, even though I have in my hand the letter signed by J. Phil Campbell, Under Secretary, addressed to the Honorable ALLEN J. ELLENDER, under date of July 16, 1970. With it is a USDA statement on statutes and activities for preventing introduction of animal diseases.

It is most interesting that our own Department of Agriculture is in opposition to this bill, which seeks only to achieve for imported meats what we now demand of domestically produced meats. This is such a simple, straightforward bill, having nothing to do with imports, that it was a shock to me to find out that

the U.S. Department of Agriculture was in opposition to giving this kind of a fair deal, a square deal, to the American beef producers.

Mr. HRUSKA. Mr. President, normally we think of Roscoe and Geoffrey Drummond as among the most careful and reasonable of today's newspaper columnists in their utterances.

Mr. MANSFIELD. And they usually are.

Mr. HRUSKA. It is surprising and disappointing, therefore, to find them engaging in careless and reckless misstatements when one of their personal causes or pet articles of faith comes under attack.

I refer to a column which appeared in some of the Nation's newspapers yesterday relating to proposals to tighten up on the sanitary inspection of foreign meat imported into this country for American consumption. To Mr. Drummond and his son, evidently the cause of foreign trade is so sacred that no consideration—not even the need to protect the health of the American public—must be permitted to stand in its way. Sanitary inspection procedures accepted as normal by American producers are treated as deliberate harassments and "protectionist" obstacles when applied to food products brought here from foreign countries.

Regrettably, the column by the Drummonds contains a number of specific misstatements of fact which need correction. It imputes motives to the Senator from Montana (Mr. MANSFIELD) and to the Senator from Nebraska (Mr. HRUSKA) which are unworthy. It says that legislation presented as a "health" bill is really a "keep out imported meat" bill. By innuendo and journalistic artifice, it suggests all sorts of devious actions on the part of these two Senators. These various implications and suggestions are untrue. The record shows it, and shows it over a series of years, and the record in connection with the article ought to be set straight.

In the Drummond column it is stated that "Senators MANSFIELD and HRUSKA know that health-endangering meat is not being imported into the United States."

The fact is, Mr. President, that health-endangering meat has been imported into the United States and we know that to be a fact because the Department of Agriculture has told us so. To give an example, several months ago, the Department of Agriculture found it necessary to impose a total embargo on imports of all Australian mutton because the Australian inspection system on mutton is not adequate. It is not equal to the standards we impose on our own in-industry. Until the deficiencies in the Australian system are corrected, we must insist that no more Australian mutton come into this country. That ban was imposed more than 2 months ago, and the Austrlians have not yet raised their requirements to meet our standards.

I ask unanimous consent to have printed at this point in the RECORD a press release put out by the Department of Agriculture.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

USDA ANNOUNCES TEMPORARY BAN ON IMPORTS OF AUSTRALIAN MUTTON

The U.S. Department of Agriculture announced today that Australian mutton slaughtered after May 15 may not be imported into the United States. The action was taken by USDA's Consumer and Marketing Service which administers the Federal Meat Inspection Act.

C&MS said that the Australian inspection system for mutton is deficient in that carcass identification is not adequate for proper inspection, disposition of questionable carcasses is not in accordance with requirements, and dressing and handling procedures are inadequate.

C&MS said that these deficiencies in the Australian inspection system applied only to sheep slaughtering plants.

C&MS said that imports of Australian mutton into this country may be resumed when the deficiencies are corrected.

Federal law requires that, before a country may export meat to the United States, it must have and enforce inspection laws and regulations equal to those which apply to meat produced in the United States.

Mr. HRUSKA. The press release is dated May 11, and it was received in my office a week later. The opening sentences read as follows:

The U.S. Department of Agriculture announced today that Australian mutton slaughtered after May 15 may not be imported into the United States. The action was taken by USDA's Consumer and Marketing Service which administers the Federal Meat Inspection Act.

C&MS said that the Australian inspection system for mutton is deficient in that carcass identification is not adequate for proper inspection, disposition of questionable carcasses is not in accordance with requirements, and dressing and handling procedures are inadequate.

It seems to me that anyone who would seek to quarrel with the Department of Agriculture on the basis of statements that they use for official action of this kind involving another government has a big task at hand. If he wants to quarrel, whether he be a columnist or not, with the conclusions of the Department of Agriculture, I will bet on the Department of Agriculture, because they are trying to protect the consumers of this country.

Next, the Drummond column states that these two Senators—MANSFIELD and HRUSKA—know that the "proposed additional inspection is a trick, a gimmick to close off such meat imports."

The facts prove the contrary. It is true that there is a law on the books designed to put a limit on the amount of meat that can be imported into this country. That act was passed in 1964. It was known as the Hruska amendment, adopted for that purpose. However, it is a perfectly straightforward law—there is nothing gimmicky about it. The quota on imports permitted is a very substantial quota, under the law and the procedures we have followed. It allows for an increase in the quota each year to be adjusted according to the increase of consumption of meat in the domestic market.

By recent action of the President, the quantity of fresh, chilled, and frozen beef, veal, mutton, and goat permitted to enter in 1971 will be 1,140 million pounds. The quantity of meat is greater than the quantity admitted in any previous year since foreign meat producers are permitted to share in the growth of the U.S. market with the domestic industry under the law.

As to the allegation that sanitary restrictions are simply a gimmick to close off imports, it is worth noting that the same question was raised with respect to an amendment proposed by the Senator from Nebraska during consideration of the legislation which became the Wholesome Meat Act of 1967.

It was at that point that the amendment to section 20, already referred to, of Public Law 90–201, was adopted which forbids and prohibits entry into the United States of foreign meat products imported for human consumption, unless the exporting country complied with all inspection and building standards and all regulations applicable to such articles and produce and inspections within the United States.

It had been proposed that the Secretary of Agriculture give Congress a report each year of the effectiveness of our effort to inspect the meat from foreign sources. During a colloquy which occurred on November 28, 1967, the gentleman from New York (Mr. JAVITS) asked for assurance that the requirements with respect to sanitary inspection not be used as a device to limit imports, in the guise of a sanitary requirement. He was satisfied with the assurances given at that time, and as noted above, the volume of meat brought in has actually increased since that time, proving that the sanitary requirement has not been perverted into a "gimmick" to throttle the channels of trade, as charged by the Drummonds.

Next, the Drummond article states that "The health issue is a phony." This conclusion is based on the testimony of a departmental official about the present inspection system. Nowhere does the departmental official say that the health issue is a phony and neither does he say that the present system is perfect. He defends the present program to some degree, since he is part of the administration of it. There has doubtless been an effort to bring the level of inspection in other counrties up to our own standards, but the fact remains that we have only 14 or 15 inspectors traveling around the world covering all of the meat production and processing plants in 40 countries that supply us with meat. During the Senate subcommittee hearings on the agriculture appropriations bill which were recently held, it was brought out that there are some 1,100 plants abroad that are certified to ship meat to this country, and we try to have our inspectors visit them as often as possible. Yet, last year it was possible to make only 1,700 visits to those 1,100 plants. In other words, most of them were visited only once during the entire year; a few were visited twice or more. Those were only visits, not inspections—certainly not inspections carcass by carcass as is done in this country.

During the course of the Agriculture appropriations hearings a year ago on the 1970 appropriations bill, it was necessary to write into our committee report some strong language calling upon our Department and upon the foreign governments to tighten up their inspection

procedures. An extract from that language will be included in the RECORD at the end of this statement.

Mr. President, finally, the Drummond column dredges up once again the ancient concept that agriculture has surpluses to sell abroad and, therefore, that we should not ask for restrictions on imports. Apparently the argument is that the cattle industry which is the largest single industry in the United States, should be sacrificed for the benefit of our exports of wheat, soybeans, and rice. This argument overlooks entirely that fact, that most other countries are much more restrictive against imported farm products than we are. As noted above, we are permitting foreign meat producers, not only to continue shipping meat here as before, but to share in the growth of our own market.

In the Drummond column, a spokesman for the American Meat Institute was quoted as opposing further sanitary restrictions on imports of foreign meat, on the basis of our export markets in foreign countries. According to the column, this spokesman said—

> The meat industry now finds a market in foreign countries of half a billion dollars yearly for its meat and livestock products. While the advocates of protection for U.S. livestock producers are endeavoring to build a fence around this country to keep foreign products out, they will discover that fences stop trade in both directions.

If those quotations do indeed, in full context, represent the views of the American Meat Institute, they seem to me most ill advised. According to a tabulation recently published by the Department of Agriculture, imports of foreign livestock, meat and meat products in 1968 amounted to $1,103.9 million, compared with similar exports to foreign markets of only $427 million. Imports exceed exports in a ratio of nearly 3 to 1 in 1968, and no doubt the experience of 1969 was similar.

Now then, as to whether that 1964 amendment was protectionist, we had that out a number of years ago. It was discussed thoroughly during the negotiations that Secretary Orville Freeman of the Department of Agriculture had with the Common Market when the Kennedy round of negotiations was going on. The Hruska amendment of 1964 was actually used by Secretary Freeman as an example of how total embargoes could really be improved by reducing the matter to a quota system.

Mr. President, I quote now from one of his 1968 statements endorsing what he called the orderly trading in the international arena, and he was referring to the amendment of 1964 when he said the following words:

> Orderly trading calls for reasonable protection of our agriculture—not protectionism. There's a big difference. Reasonable protection allows trade to flow. It permits comparative advantage to function with relative freedom for the good of all. Protectionism, by completely shielding inefficient producers from competition, stifles trade.

Secretary Freeman then went on to say:

> The U.S. beef quota law illustrates what I mean by reasonable protection.

Mr. President, I think that is conclusive to those who want to designate this as being a protectionist measure and a protectionist step.

Mr. President, I ask unanimous consent to have printed in the RECORD at the conclusion of my remarks the Drummond column as it appeared in the Omaha World-Herald on July 27, 1970; a press release issued by the Department of Agriculture on May 11, 1970, describing the decision to embargo further imports of Australian mutton until the deficiencies in the Australian inspection system are corrected—which deficiencies have not yet been corrected as of this date—a press release issued by the Department of Agriculture on June 30, 1970, announcing the volume of fresh, chilled, and frozen beef, veal, and mutton which may be imported in 1970; an extract from Senate Report 91-277, the report on the 1970 agriculture appropriation bill, which describes the additional measures needed to be taken to tighten up the inspection procedures in foreign countries on meat to be sold in the American market; and a page from Foreign Agriculture Circular FLM 10-69, issued September of 1969, published by the Foreign Agricultural Service of the U.S. Department of Agriculture, which summarizes U.S. imports and exports of livestock, meat, and meat products in 1968.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Omaha (Nebr.) World-Herald, July 27, 1970]

IS HRUSKA BEEF BILL FOR HEALTH OR PROTECTIONISM?

(By Roscoe and Geoffrey Drummond)

WASHINGTON.—Special-interest congressmen are going to fantastic lengths to take advantage of the high-protectionist madness now gripping both the House and the Senate.

> Industries are lining up in clusters to grab a share of the protectionist favors —a domestic market walling out competition from imports. This lets prices go where they will, which is up.

Politicians are lining up to hand out the goodies, and they see votes at home when they do.

Just when you think that the worst is over, it isn't. Something more comes out of the legislative factory now running at high speed for no good purpose and oiled for the coming elections.

And who is fashioning the latest bit of high-protectionism gone beserk? None other than two of the normally most thoughtful and careful men in the Senate—the prestigious liberal majority leader, Mike Mansfield of Montana, and the distinguished Republican conservative, Roman Hruska of Nebraska.

> They are proposing a restrictive trade measure which shows what can happen when two usually reasonable and responsible men get caught up in the home-industry, protectionist mania on the eve of a congressional election.

It's a revealing case study because if theirs is a good bill, then the liberal two-way trading policy which has brought so much prosperity to the United States is bad.

The bill is presented as a "health" bill—which it isn't—not as a keep-out-imported-meat bill, which it is.

Its purpose is described as providing for "thorough health and sanitation inspection of all livestock products imported into the United States." And it is specifically added that every can, every pound of fresh, frozen or chilled meat must be thawed and inspected piece-by-piece at its entry.

Sens. Mansfield and Hruska know that health-endangering meat is not being imported into the United States. They know that Americans are not dying or being made sick by poisoned-meat imports.

> They know their proposed additional inspection is a trick, a gimmick designed to close off such meat imports.

They know that their bill would mainly hurt the poor, because the imports they are trying to keep out are mainly ingredients for hamburger and sausage.

Maybe some few livestock men somewhere—in Montana or Nebraska or elsewhere—will find themselves benefitted, but certainly not the consumer, certainly not agriculture as a whole and certainly not the nation's total economy.

This is special-interest protectionism at its worst.

The health issue is phony. Says Dr. H. M. Steinmetz of the Consumer and Marketing Service of the Agriculture Department: "Meat prepared in foreign countries for importation into the United States is equivalent to that produced under federal inspection in our country."

Is American agriculture a limping industry which can't compete in the world market? Not at all. American farmers exported a near record of $6.6 billion in farm commodities in the last 12 months and this is a billion dollars more in commercial sales than the year before.

We sell abroad far more farm commodities than we buy abroad—over a third of our wheat crop, 40 per cent of our soybeans, 60 per cent of our rice. And if we apply unneeded, discriminatory "sanitary" restrictions against countries selling meat to the United States there would inevitably be retaliation.

This is one of the reasons why Aled P. Davies, vice president of the American Meat Institute, opposes the Mansfield-Hruska atrocity.

"The meat industry," he says, "now finds a market in foreign countries of half a billion dollars yearly for its meat and livestock products. While the advocates of protection for U.S. livestock producers are endeavoring to build a fence around this country to keep foreign products out, they will discover that fences stop trade in both directions."

No wonder President Nixon threatens a veto if such madness as this gets through Congress.

[From the U.S. Department of Agriculture]

USDA ANNOUNCES TEMPORARY BAN ON IMPORTS OF AUSTRALIAN MUTTON

The U.S. Department of Agriculture announced today that Australian mutton slaughtered after May 15 may not be imported into the United States. The action was taken by USDA's Consumer and Marketing Service which administers the Federal Meat Inspection Act.

C&MS said that the Australian inspection system for mutton is deficient that carcass identification is not adequate for proper inspection, disposition of questionable carcasses is not in accordance with requirements, and dressing and handling procedures are inadequate.

C&MS said that these deficiencies in the Australian inspection system applied only to sheep slaughtering plants.

C&MS said that imports of Australian mutton into this country may be resumed when the deficiencies are corrected.

Federal law requires that, before a country may export meat to the United States, it must have and enforce inspection laws and regulations equal to those which apply to meat produced in the United States.

[From the U.S. Department of Agriculture]

NEW MEAT IMPORT PROGRAM ANNOUNCED

The Secretary of State and the Secretary of Agriculture have been instructed by the President to set new voluntary restraint levels on meat imports under Section 204 of the Agricultural Act of 1956.

Accordingly, Secretary of Agriculture Clifford M. Hardin announced today that 1970 imports of meat subject to the Meat Import Act are now estimated at 1,140 million pounds. The new estimate is based upon revised restraint levels for principal foreign suppliers for calendar 1970.

The President has issued a proclamation pursuant to Section 2(c)(1) of Public Law 88-482 limiting imports on certain meats—primarily beef and mutton—subject to the Act. At the same time he suspended that limitation.

The President suspended the limitation after determining that this action is required by overriding economic interest of the United States, giving special weight to the importance to the nation of the economic well-being of the domestic livestock industry.

The President also indicated that imports would not be permitted to enter without limitation during the balance of this year. The Secretary of State is readjusting the voluntary restraint program which has been negotiated with the Governments of the principal supplying countries to assure that imports of these meats will not exceed 1,140 million pounds during calendar 1970.

Secretary Hardin indicated that this action applies only to the balance of the current year and does not establish a precedent for action which may be taken in 1971.

Secretary Hardin also stated that he is today taking steps which would stop further transshipments through a third country of meat originating in Australia, New Zealand and Ireland. The transshipments of meat from Oceania have been an important factor contributing to the need for increasing the third quarterly estimate.

The Secretary also stated that authority to issue regulations limiting imports of certain meats under Section 204 of the Agricultural Act of 1956 have been delegated by the President to the Secretary of Agriculture under an Executive Order issued simultaneously with the Proclamation and suspension of quotas.

Public Law 88-482, enacted in August 1964, provides that if yearly imports of certain meats—primarily beef and mutton—are estimated to equal or exceed 110 percent of an adjusted base quota, the President is required to invoke a quota on imports of these meats. The adjusted base quota for 1970 is 998.8 million pounds. The amount of estimated imports which would trigger its imposition is 110 percent of the adjusted base quota of 1,098.7 million pounds.

Imports of meat by months from January 1967 through May 1970 were as follows:

MPORTS OF MEAT SUBJECT TO PUBLIC LAW 88-482 BY MONTHS

[In million pounds]

Month	1967	1968	1969[1]	1970[1]
January	77.4	80.7	41.9	124.5
February	58.5	72.6	50.4	100.7
March	61.9	64.1	136.1	112.0
April	58.8	78.3	90.0	88.7
May	51.5	56.1	80.5	62.0
June	69.6	105.1	85.7	.....
July	88.7	86.4	107.1	.....
August	92.2	108.6	141.8	.....
September	89.7	115.5	121.4	.....
October	91.8	102.1	108.3	.....
November	82.3	95.8	51.4	.....
December	72.4	35.6	69.4	.....
Total	894.9	1,001.0	1,084.1	.....

[1] Rejections which occur after entry is made are included in the published census figures and amounted to 13,500,000 pounds during 1969.

[Extract from Senate Report No. 91277]

FOREIGN MEAT INSPECTION PROGRAM

Public Law 90-201, the Meat Inspection Act of 1967, contained provisions under section 20 thereof, requiring that foreign meat products imported for human consumption be prohibited entry unless the exporting country complied with all inspection and building standards, and other regulations applicable to such articles produced and inspected within the United States.

The Secretary of Agriculture must certify that approved foreign meat processing plants, who slaughter or process meat products for export to the United States, "have complied with requirements at least equal to" all provisions of the act and regulations. In summary, these legal requirements impose standards and procedures for foreign meat plants equivalent to those imposed by the Department of Agriculture upon the U.S. meat slaughter and processing plants who ship in interstate commerce.

Based upon committee findings and the hearings on this bill, it is evident that the departmental regulations and requirements dealing with foreign meat processing plants do not specifically require those governments to establish and maintain an independent regulatory review of "inplant" inspection and supervision equivalent to the U.S. inspection program—under which highly trained veterinarian specialists make periodic and unscheduled visits to U.S. federally supervised meatpacking and processing establishments.

The purpose of visits and inspections by specialized veterinarians in U.S. federally inspected plants is to review the standards of performance maintained in plant facilities, and by the regular inspection personnel assigned to these plants in carrying out the requirements and regulations issued by the Department for facilities subject to the Meat Inspection Act, as amended.

The Secretary of Agriculture is directed to institute prompt changes in current regulations dealing with the foreign meat inspection provisions of Public Law 90-205, which will require foreign governments interested in exporting meat products to the United States to promptly establish and maintain an equivalent system of periodic supervisory inspection of the plants that such countries certify as meeting standards equivalent to U.S. meat inspection and operating requirements. It is expected that such revised regulations will require that there be a minimum of at least one supervisory review inspection each month in addition to the regular inplant inspection, and it is further expected that the reports of findings will be made available to U.S. veterinary personnel upon request, when they visit exporting countries to conduct inspections of such plants.

Senator HRUSKA. I also request that the new regulations, printed in the Federal Register on February 27, be printed in the RECORD.

TITLE 9—ANIMALS AND ANIMAL PRODUCTS

CHAPTER III—CONSUMER AND MARKETING SERVICE (MEAT INSPECTION), DEPARTMENT OF AGRICULTURE

Subchapter A—Meat inspection regulations

Part 327—Imported Products

Monthly supervisory visits by foreign officials to approved foreign export meat plants

On October 14, 1969, there was published in the Federal Register (34 F.R. 15800) a notice of proposed amendment to § 327.2(a)(1) of the Federal Meat Inspection Regulations (9 CFR 327.2(a)(1)). The amendment was proposed to require supervisory visits by foreign officials to foreign meat plants if the plants are to be eligible to have their products imported into the United States and to provide for reports by such officials.

Statement of considerations.—The Federal Meat Inspection Act requires that the Secretary of Agriculture shall each year report to the appropriate committees of the Congress with respect to administration of the section of the Act dealing with importation of livestock carcasses, meats and meat products. The Act specifies that this report shall include a certification that foreign plants exporting such carcasses or meat or meat products for importation into the United States have complied with requirements at least equal to all provisions of the Act and regulations issued thereunder. Such certification can only be made if the supervisory inspection exercised by the national government of the countries in which such foreign plants are located is adequate to maintain standards and operating procedures equivalent to those established by the United States meat inspection program.

As a result of the publication in the Federal Register of the notice of proposed amendment to § 327.2(a)(1) of the regulations, the Department received twelve letters of comment—seven from foreign countries and five from American farm and producer organizations.

The Department has carefully considered all of the information presented to it in these comments, and all other available information and has made the following decisions on the proposal to amend the regulations under the Federal Meat Inspection Act:

Frequency of visit [Decision: Monthly supervisory visits to each approved plant will be required.] This decision is necessary to assure uniform application of U.S. requirements to each certified establishment and to give the certifying foreign official current information on which to base continuing certification of establishments.

Report of findings [Decision: Foreign supervisors will be required to prepare written reports of findings and make such reports available to Department representatives.]

This decision will insure that monthly visits are made and serve to inform the Department of the condition of the establishment at the time of the supervisory visits.

Scope of reports [Decision: Reports will cover requirements referred to in (a) through (f) of subdivision (ii) of subparagraph (1), paragraph (a) of § 327.2.]

This decision will insure that the monthly examination covers the criteria prescribed for approved establishments by § 327.2 and permits exclusion from the report of matters not pertinent to U.S. meat importation.

These are the considerations on which the decisions were made. The specific amendment to the regulations is as follows:

§ 327.2(a)(1) is amended by adding a new sub-division (iv) to read as follows:

§ 327.2 Eligibility of foreign countries for importation of product into the United States.

(a) * * *

(1) * * *

(iv) The foreign inspection system must maintain a program of periodic supervisory visits to each certified establishment to assure that requirements referred to in (a) through (f) of subdivision (ii) of this subparagraph, at least equal to those of the Federal system of meat inspection of the United States, are being met. A representative of the foreign inspection system shall make at least one such supervisory visit each month to each such establishment and prepare a written report of his findings in respect to the requirements referred to in (a) through (f) of subdivision (ii) of this subparagraph, copies of which shall be available to the representative of the Department at the time of his review upon request by said representative to a responsible foreign meat inspection official: *Provided*, That such visits and reports are not required with respect to any establishment during a period when the establishment is not operating or is not engaged in producing meat food products. (Sec. 21, 34 Stat. 1260, as amended, 21 U.S.C. 621; 29 F.R. 16210, as amended; 33 F.R. 10750).

The foregoing amendment differs in some respects from the proposal set forth in the notice of rulemaking. The differences are due to changes made pursuant to comments received in the rulemaking proceeding. It does not appear that further rulemaking procedure on the amendment would make additional information available to the Department. Therefore, under the administrative procedure provisions in 5 U.S.C. 533, it is found upon good cause that such further proceedings are unnecessary.

The foregoing amendment shall become effective 30 days following publication of this notice in the Federal Register.

Done at Washington, D.C. on: February 24, 1970.

ROY W. LENNARTSON,
Administrator.

[From U.S. Department of Agriculture Foreign Agriculture Circular, September 1969]

U.S. TRADE IN LIVESTOCK, MEAT, AND MEAT PRODUCTS IN 1968

SUMMARY

The value of U.S. exports of livestock, meat, and meat products in 1968 totaled $427.0 million, down from $450.2 million in 1967 but 5.0 percent above the 1961–65 average. Most of the decline in 1968 exports was due to declines in the two major export categories—tallow and greases, and hides and skins. Nevertheless, tallow and greases, valued at $134.3 million, continued to be the leading category of exports; but their share of total exports declined to 31.5 percent from an average of 36.3 percent during 1961–65. Hide and skin exports, valued at $121.7 million, were down 4.5 percent in 1968 but were 36.9 percent above the 1961–65 average. Hides and skins are the second largest category of exports; their share of total exports was 28.5 percent in 1968, up from 21.9 percent during 1961–65. Total red meat exports showed impressive gains in 1968, increasing from $47.7 million in 1967 to $62.0 million and representing 14.5 percent of total exports. Virtually all of this increase was accounted for by pork, exports of which increased from $17.8 million to $31.6 million. Variety meat exports of $54.9 million were down 3.7 percent in 1968 but were 45.6 percent above the 1961–65 average and accounted for 12.9 percent of total 1968 exports. Lard exports, valued at $14.3 million, continued their downward trend from the 1964 high of $69.8 million.

U.S. imports of livestock, meat, and meat products reached a new high of $1,103.9 million in 1968, an increase of 18 percent over the previous year and were 32.8 percent above the 1961–65 average. Gains were recorded for all major categories of imports in 1968, with total red meats showing the greatest gain. Total red meats have increased from 51.9 percent of total imports during 1961–65 to 66.5 percent in 1968. Beef and veal was by far the principal meat import, valued at $485.5 million in 1968 and accounting for 44.0 percent of total import value. Imports of wool accounted for 13.2 percent of the value of 1968 imports; cattle, 8.8 percent; and hides and skins, 6.4 percent.

Mr. MANSFIELD. Mr. President, all too often and all too easily the beef producers of this Nation are being charged with the high cost of beef in the marketplace and on the shelves in the supermarkets.

For the record, could the distinguished Senator explain the difference between the price received on the hoof and the price the consumers have to pay in the marketplace?

Mr. HRUSKA. I shall be delighted to explain it. That is one of my favorite themes and I never tire of reciting it.

The fact is that the farmer and the rancher do not sell beef. They do not sell round steak, porterhouse steak, or hamburger. They sell cattle. I repeat, they sell cattle.

The price of fat cattle on the market today in Chicago, Omaha, Minneapolis, or Kansas City is less in terms of 1970 dollars than it was 20 years ago in terms of 1950 dollars.

If there is a difference in the price of hamburger, the eyes of criticism and castigation should not be directed to the farmer and the rancher. There must be something somewhere between the time the sale is made by them and the time the hamburger is ground and placed on the retail counters. The farmer and the rancher cannot be held responsible for that.

Mr. MANSFIELD. Mr. President, does the Senator recall offhand, or would he have to check with his wife, what the price of hamburger is today?

Mr. HRUSKA. Mr. President, I have not inquired of her lately. Frankly, I do not know what it is. I do know that it costs anywhere from 35 cents to 85 cents for a hamburger sandwich in the restaurants. And I am confident that the hamburger meat is not worth that much and that it does not cost that much.

Mr. MANSFIELD. Mr. President, I understand that it is 70 to 75 cents a pound today, and hamburger is made of the cheapest cuts.

Mr. HRUSKA. The Senator is correct. It is made of what they call the processing or manufacturing beef.

Mr. MANSFIELD. It is low-grade beef which goes into hamburger. How they can blame the stockmen for the wide disparity in price that exists which the consumer has to pay when he goes to the supermarket or marketplace is beyond me.

I am delighted that once again the distinguished Senator from Nebraska has laid it out for those who want to hear, those who are willing to look to see, that insofar as the beef industry is concerned, the high prices do not result where the beef is produced, but where it is bought, and is, therefore, entirely out of the hands of the cattlemen.

Mr. HRUSKA. That is correct. And I might state that the cost of producing a fat steer today is twice what it was 20 years ago. Yet, the number of dollars received by the farmers and ranchers is less than it was when that critter was sold.

Mr. MANSFIELD. Mr. President, I hope that this homily by the distinguished Senator from Nebraska will be taken to heart by the consumers of the country so that they will know where the blame lies for the high price of beef and meat and will be aware of this propaganda which seems to place the blame on the stock growing segment of our economy, a blame which properly does not belong there.

Mr. President, I ask unanimous consent that I may have printed in the RECORD the text of S. 3942 and a column by the distinguished team of Roscoe and Jeoffrey Drummond.

There being no objection, the bill and article were ordered to be printed in RECORD, as follows:

S. 3942

A bill to provide for thorough health and sanitation inspection of all livestock products imported into the United States, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Agriculture is directed to establish a system of thorough examination and inspection of all livestock products imported into the United States, including all fresh and frozen or chilled meats after thawing, providing for such examination at the time of entry or before any processing or offering for sale to consumers, to prevent the entry of any disease or distribution of any unwholesome products. The Commissioner of Customs shall levy on such animal products entering the United States, in addition to any tariffs, a charge or charges set by the Secretary of Agriculture, sufficient to defray the cost of such examination and inspections and of United States surveillance of all establishments abroad slaughtering animals or processing animal products for export to the United States.

IS HRUSKA BEEF BILL FOR HEALTH OR PROTECTIONISM?

(By Roscoe and Geoffrey Drummond)

WASHINGTON.—Special-interest congressmen are going to fantastic lengths to take advantage of the high-protectionist madness now gripping both the House and the Senate.

Industries are lining up in clusters to grab a share of the protectionist favors—a domestic market walling out competition from imports. This lets prices go where they will, which is up.

Politicians are lining up to hand out the goodies, and they see votes at home when they do.

Just when you think that the worst is over, it isn't. Something more comes out of the legislative factory now running at high speed for no good purpose and oiled for the coming elections.

And who is fashioning the latest bit of high-protectionism gone berserk? None other than two of the normally most thoughtful and careful men in the Senate—the prestigious liberal majority leader, Mike Mansfield of Montana, and the distinguished Republican conservative, Roman Hruska of Nebraska.

They are proposing a restrictive trade measure which shows what can happen when two usually reasonable and responsible men get caught up in the home-industry, protectionist mania on the eve of a congressional election.

It's a revealing case study because if theirs is a good bill, then the liberal two-way trading policy which has brought so much prosperity to the United States is bad.

The bill is presented as a "health" bill—which it isn't—not as a keep-out-imported-meat bill, which it is.

Its purpose is described as providing for "thorough health and sanitation inspection of all livestock products imported into the United States." And it is specifically added that every can, every pound of fresh, frozen or chilled meat must be thawed and inspected piece-by-piece at its entry.

Sens. Mansfield and Hruska know that health-endangering meat is not being imported into the United States. They know that Americans are not dying or being made sick by poisoned-meat imports.

They know their proposed additional inspection is a trick, a gimmick designed to close off such meat imports.

They know that their bill would mainly hurt the poor, because the imports they are trying to keep out are mainly ingredients for hamburger and sausage.

Maybe some few livestock men somewhere in Montana or Nebraska or else-

where—will find themselves benefited, but certainly not the consumer, certainly not agriculture as a whole and certainly not the nation's total economy.

This is special-interest protectionism at its worst.

The health issue is phony. Says Dr. H. M. Steinmetz, of the Consumer and Marketing Service of the Agriculture Department: "Meat prepared in foreign countries for importation into the United States is equivalent to that produced under federal inspection in our country."

Is American agriculture a limping industry which can't compete in the world market? Not at all. American farmers exported a near record of $6.6 billion in farm commodities in the last 12 months and this is a billion dollars more in commercial sales than the year before.

We sell abroad far more farm commodities than we buy abroad—over a third of our wheat crop, 40 percent of our soybeans, 60 per cent of our rice. And if we apply unneeded, discriminatory "sanitary" restrictions against countries selling meat to the United States there would inevitably be retaliation.

This is one of the reasons why Aled P. Davies, vice president of the American Meat Institute, opposes the Mansfield-Hruska atrocity.

"The meat industry," he says, "now finds a market in foreign countries of half a billion dollars yearly for its meat and livestock products. While the advocates of protection for U.S. livestock producers are endeavoring to build a fence around this country to keep foreign products out, they will discover that fences stop trade in both directions."

No wonder President Nixon threatens a veto if such madness as this gets through Congress.

Mr. HRUSKA. Mr. President, I am grateful that the Senator from Montana brought this subject up. I was most happy to join him in this colloquy. It will no doubt set the record straight with men of good faith, and in the exchange of views and the information here perhaps their views will change a bit.

Mr. MANSFIELD. If they do, I think it will be because of the clarity with which the distinguished Senator from Nebraska expressed himself and explained the situation which confronts us on the basis of the column which was published throughout the Nation.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, July 28, 1970, he presented to the President of the United States the enrolled bill (S. 2601) to reorganize the courts of the District of Columbia, to revise the procedures for handling juveniles in the District of Columbia, to codify title 23 of the District of Columbia Code, and for other purposes.

RECESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate stand in recess subject to the call of the Chair.

The PRESIDING OFFICER (Mr. HOLLINGS). Without objection, it is so ordered.

Thereupon, at 11:13 a.m., the Senate took a recess subject to the call of the Chair.

The Senate reassembled at 11:55 a.m., when called to order by the Presiding Officer (Mr. HOLLINGS).

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following letters, which were referred as indicated:

CHUGACH ELECTRIC ASSOCIATION, INC., ANCHORAGE, ALASKA

A letter from the Administrator, Rural Electrification Administration, U.S. Department of Agriculture, transmitting, in accordance with Senate Report No. 497, information relating to the $10,860,000 loan to the Chugach Electric Association, Inc., of Anchorage, Alaska, for the financing of certain generation and transmission facilities (with an accompanying paper); to the Committee on Appropriations.

REPORT OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the opportunity for savings by reducing paper work involved in Department of Defense bus travel, dated July 27, 1970 (with an accompanying report); to the Committee on Government Operations.

PROPOSED CONCESSION CONTRACT, WHITE SANDS NATIONAL MONUMENT, N. MEX.

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a proposed concession contract under which T. L. and Thelma Womack will be authorized to provide facilities and services for the public at White Sands National Monument, N. Mex. for a 5-year term (with accompanying papers); to the Committee on Interior and Insular Affairs.

REPORT ON ACTIVITIES IN CERTAIN COUNTRIES RELATING TO APPLICATIONS FOR CONDITIONAL ENTRY

A letter from the Commissioner, U.S. Department of Justice, Immigration and Naturalization Service, reporting, pursuant to law, on activities in certain countries relating to applications for conditional entry, for the 6-month period ended June 30, 1970; to the Committee on the Judiciary.

ADMISSION INTO THE UNITED STATES OF CERTAIN DEFECTOR ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, copies of orders entered granting admission into the United States of certain defector aliens (with accompanying papers); to the Committee on the Judiciary.

REPORT OF THE AUDIT OF THE NATIONAL SAFETY COUNCIL

A letter from the National Safety Council, transmitting, pursuant to law, a report of the audit of the National Safety Council for the year ended December 31, 1969 (with an accompanying report); to the Committee on the Judiciary.

PETITIONS

Petitions were laid before the Senate and referred as indicated:

By the ACTING PRESIDENT pro tempore (Mr. ALLEN):

A joint resolution of the Legislature of the State of California; to the Committee on Aeronautical and Space Sciences:

"SENATE JOINT RESOLUTION NO. 16—RELATIVE TO EDWARDS AIR FORCE BASE

"Whereas, The hub of NASA's future space plans is the earth-orbited manned space station, from which interorbital ferries and planetary expeditions will depart, and hopefully, it will prove to be the precursor for the module that will eventually carry men to Mars and back; and

"Whereas, In order to support the station and its subsequent additions, an earth-to-orbit shuttle is required; and

"Whereas, Together, the space station and shuttle are the keystones to the next major accomplishments of the nation's space program; and

"Whereas, The year-round climate conditions are ideal at Edwards Air Force Base, in Kern County, California, for the earthside operations of the so-called "shuttle ship" to the future United States space station; and

"Whereas, The many dry lakebeds in the vicinity provide the best possible physical conditions for receiving such a craft in any event of an emergency reentry landing; and

"Whereas, There already exists the necessary open space, uncluttered by suburban congestion, for all phases of the project to launch and receive the vehicle; and

"Whereas, The basic facilities for the project are already installed there; and

"Whereas, Existing West Coast aerospace manufacturing firms can supply project components at the lowest possible transportation cost; and

"Whereas, Sufficient technical personnel required for the project already reside on or near the West Coast, thus providing the necessary project manpower with the least degree of dislocation of workers' families and the attendant least private and governmental expense to locate them there; now, therefore, be it

"Resolved by the Senate and Assembly of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States, and requests the National Aeronautics and Space Administration, to permanently locate the launch and reentry facilities for the space station shuttle ship project at Edwards Air Force Base in Kern County, California; and be it further

"Resolved, That the Secretary of the Senate transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to each Senator and Representative from California in the Congress of the United States, and to the National Aeronautics and Space Administration."

A joint resolution of the Legislature of the State of California; to the Committee on Appropriations:

"SENATE JOINT RESOLUTION NO. 32—RELATIVE TO THE 1971 WHITE HOUSE CONFERENCE ON AGING

"Resolved by the Senate and Assembly of the State of California, jointly, That the Legislature of the State of California memorializes the Congress of the United States to appropriate sufficient funds for the scheduled 1971 White House Conference on Aging, including funds for use by local committees which will attend the White House Conference in order that such local committees may hold local conferences in preparation for the national conference; and be it further

"Resolved, That the Secretary of the Senate transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Armed Services:

"SENATE JOINT RESOLUTION NO. 28—RELATING TO THE BATTLESHIP U.S.S. MISSOURI

"Whereas, 1970 marks the 25th anniversary of the end of World War II; and

"Whereas, The citizens of Martinez, California, have undertaken the creation of a peace shrine and a living memorial to the

veterans of World War II with the organization of a committee to bring the U.S.S. Missouri to that city; and

"Whereas, This famed ship upon whose decks the documents ending hostilities with Japan were signed on September 2, 1945, bringing peace to a war-weary world, now languishes in the Bremerton, Washington, Navy Yard; and

"Whereas, Battleships of this class are fitted with every type of facility that serves a community such as a bakery, carpentry shop, plumbing and pipefitting shop, paint shop, machine shop, theater and even a hospital, all resources that well might be utilized for federal and state job-training programs; and

"Whereas, Such a ship has great potential in disaster relief as it is able to produce vast amounts of fresh water and electric power; and

"Whereas, The harbor of the City of Martinez is an appropriate site for the location of this ship because Camp Stoneman (later Parks Air Force Base) and Camp Shoemaker in Contra Costa County were the principal points of embarkation for the Pacific Theater both in World War II and the Korean conflict, because Port Chicago has served for 28 years as the major Pacific Coast naval ammunition depot, and because nearby are other military installations that also played vital roles in the World War II victory effort; and

"Whereas, The committee organizing the citizen effort behind this project envisions the creation of a nonprofit foundation to raise the necessary funds to move the vessel from its present moorings to San Francisco Bay, prepare a site offered by the City of Martinez, and fit the vessel for public inspection, the revenue from tours and sale of souvenirs making the ship self-supporting with profits going to the U.S. Navy Relief Fund; and

"Whereas, This project has been endorsed by the Martinez Chamber of Commerce, the Martinez City Council, the Contra Costa County Board of Supervisors, the City-State Waterfront Committee and the Contra Costa Council of the Navy League; now, therefore, be it

"Resolved by the Senate and Assembly of the State of California, jointly, That the citizens of Martinez are to be commended for their initiative and leadership in endeavoring to bring this renowned 'fighting ship' to San Francisco Bay, and their project is hereby endorsed by the California Legislature; and be it further

"Resolved, That the appropriate local, state and federal agencies whose sanction is required to move this vessel to the City of Martinez are urged to give speedy approval to this proposal so that the anniversary of the conclusion of World War II may be appropriately commemorated by the anchoring of this flagship of the United States Navy in Carquinez Straits; and be it further

"Resolved, That the Secreretary of the Senate is directed to transmit a copy of this resolution to the President and Vice President of the United States, the Secretary of Defense, Secretary of the Navy, Chief of Naval Operations, the commandants of the 12th and 13th Naval Districts, the Members of the United States Senate and House of Representatives from California, and to the Battleship 'Missouri' Committee of the Martinez Chamber of Commerce."

A joint resolution of the Legislature of the State of California; to the Committee on Banking and Currency:

"ASSEMBLY JOINT RESOLUTION NO. 9—RELATIVE TO HOUSING

"Whereas, Interest rates, land costs and spiraling costs of construction have made it impossible for California families with an income of less than $12,000 per year to be eligible for homes insured by the Federal Housing Administration; and

"Whereas, As forecasts indicate a severe economic recession in the housing industry during the coming fiscal year, it is desirable that all possible efforts be made to prevent such a recession; and

"Whereas, Unemployment rates in that industry are currently at 12 percent in California and threaten to reach 25 percent by early spring; now, therefore, be it

"Resolved by the Assembly and Senate of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the President and Congress of the United States that the ½ percent insurance fee required by the Federal Housing Administration on housing loans be eliminated if consistent with continued maintenance of Federal Housing Administration resources and the ability of the Federal Housing Administration to cover anticipated losses, that credit and income requirements for applicants be relaxed, that the mortgage period be extended from 30 to 35 years on loans insured by the Federal Housing Administration and Veterans' Administration, that maximum funding of the 235 Federal Housing Administration interest subsidy housing program for California be provided, that government-backed mortgage securities be introduced, and that every effort to reduce the high cost of interest rates in the residential mortgage industry be made; and be it further

"Resolved, That the Chief Clerk of the Assembly transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, to each Senator and Representative from California in the Congress of the United States, and to the Secretary of Housing and Urban Development."

A joint resolution of the Legislature of the State of California; to the Committee on Commerce:

"SENATE JOINT RESOLUTION NO. 9—RELATIVE TO THE LOS ANGELES-SAN DIEGO TRANSPORTATION CORRIDOR

"Whereas, The high-speed rail demonstration project in the Northeast Corridor between Boston and Washington, D.C., is evidence that high-speed rail transportation is competitive in cost, convenience, and time with airplanes and automobiles in traveling between these two metropolitan areas; and

"Whereas, There is mounting interest in California to apply the newly gained knowledge from the high-speed rail demonstration project in the Northeast Corridor to a similar high-speed rail link in the Los Angeles-San Diego Transportation Corridor to connect the metropolitan areas of Los Angeles, Orange, and San Diego Counties, and as a step toward extension of service between the Los Angeles and Palmdale areas, and between Los Angeles, San Francisco, and Sacramento; and

"Whereas, The ability of trains to travel into the core area of a city results in many passengers being brought closer to their destination than if they had traveled by airplane, and without the necessity of expending the great amount of time and effort that is so often necessary to reach the core area from an outlying airport; and

"Whereas, The increasing use of high-speed trains to travel between the metropolitan areas can eliminate the necessity of expanding the present networks of freeways that exist in such areas, and thus save the core areas of the cities for living purposes; and

"Whereas, It is imperative that alternative modes of transportation be developed in creating a balanced system of transportation to serve all strata of our society by making educational, recreational, cultural, and occupational opportunities readily accessible to all; now, therefore, be it

"Resolved by the Senate and Assembly of the State of California, jointly, That the Legislature respectfully requests the Secretary of Transportation to initiate studies as promptly as possible on the feasibility of a high-speed rail link in the Los Angeles-San Diego Transportation Corridor to connect the metropolitan areas of Los Angeles, Orange, and San Diego Counties; and be it further

"Resolved, That the Secretary of the Senate transmit copies of this resolution to the President and Vice President of the United States, to the Secretary of Transportation, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on Finance:

"SENATE JOINT RESOLUTION NO. 22—RELATIVE TO VETERANS' UNEMPLOYMENT COMPENSATION BENEFITS

"Whereas, Returning veterans who receive, upon separation from the armed forces, pay for unused accrued leave are being denied unemployment compensation benefits for a period of time equal to the number of days of accrued leave as per Section 8524 of Title V of the U.S. Code; and

"Whereas, A returning serviceman who has bravely defended his country, returns home, and finds it difficult to find a job has enough difficulties without being penalized for being prudent in his use of leave time while in the service; now, therefore, be it

"Resolved by the Senate and Assembly of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to amend the present law so that our returning servicemen will not be denied unemployment compensation benefits under the circumstances described above; and be it further

"Resolved, That the Secretary of the Senate transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A joint resolution of the Legislature of the State of California; to the Committee on the Judiciary:

"SENATE JOINT RESOLUTION NO. 20—RELATIVE TO PLEDGE OF ALLEGIANCE TO THE FLAG

"Whereas, The right of school children to voluntarily salute the Flag of the United States in the public schools is being threatened; and

"Whereas, The children of this country, now more than ever, need the right to voluntarily reaffirm their love and respect for the flag of this country; and

"Whereas, In our proper concern for the rights of minorities we must not ignore the fact that patriotism is a privilege which may not be taken away from the majority; and

"Whereas, It is in the public interest to amend the Constitution of the United States to specifically insure that the children of this country shall have the right to salute the Flag of the United States in public schools; now, therefore, be it

"Resolved by the Senate and Assembly of the State of California, jointly, That the Legislature of the State of California respectfully memorializes the President and the Congress of the United States to utilize all their powers to bring about the passage of an amendment of the Constitution of the United States which shall assure to every child the right to voluntarily pledge allegiance to the Flag of the United States in any public school; and be it further

"Resolved, That the Secretary of the Senate transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

A resolution adopted by the Kamimotobu

Village Assembly, Okinawa, praying for the removal of gas weapons from Okinawa; to the Committee on Armed Services.

A resolution adopted by the Ie Village Assembly, Okinawa, praying for the removal of all poison gas weapons from Okinawa; to the Committee on Armed Services.

A resolution adopted by the Ozato Village Assembly, Okinawa, praying for the removal of poison gas weapons from Okinawa; to the Committee on Armed Services.

A resolution adopted by the Women's Bureau, Department of Labor, 50th anniversary conference, Washington, D.C., praying for the enactment of legislation relating to the equal rights amendment of the Constitution; to the Committee on the Judiciary.

REPORTS OF A COMMITTEE

The following reports of a committee were submitted:

By Mr. TYDINGS, from the Committee on the District of Columbia, with an amendment:

S. 3647. A bill to authorize the Commissioner of the District of Columbia to lease airspace above and below freeway rights-of-way within the District of Columbia, and for other purposes (Rept. No. 91–1037).

By Mr. TYDINGS, from the Committee on the District of Columbia, with amendments:

S. 3648. A bill to provide improvements in the administration of health services in the District of Columbia, and for other purposes (Rept. No. 91–1038).

EXECUTIVE REPORTS OF A COMMITTEE

Mr. MAGNUSON. Mr. President, as in executive session, from the Committee on Commerce, I report favorably sundry nominations in the Coast Guard which have previously appeared in the CONGRESSIONAL RECORD and ask unanimous consent, to save the expense of printing them on the Executive Calendar, that they lie on the Secretary's desk for the information of any Senator:

The PRESIDING OFFICER (Mr. HOLLINGS). Without objection, it is so ordered.

The nominations, ordered to lie on the desk, are as follows:

Timothy J. Cenna, and sundry other officers, for promotion in the Coast Guard; and

Frederick K. Farner, and sundry other officers, for promotion in the Coast Guard.

EXTENSION OF THE HIGH-SPEED GROUND TRANSPORTATION ACT—REPORT OF A COMMITTEE—INDIVIDUAL VIEWS (S. REPT. NO. 91–1036)

Mr. HARTKE. Mr. President, from the Committee on Commerce, I report favorably, without amendment, the bill (S. 3730) to extend for 1 year the act of September 30, 1965, as amended by the act of July 24, 1968, relating to high-speed ground transportation, and for other purposes, and I submit a report thereon. I ask unanimous consent that the report be printed, together with the individual views of the Senator from Pennsylvania (Mr. SCOTT).

The PRESIDING OFFICER (Mr. CASE). The report will be received and the bill will be placed on the calendar; and, without objection, the report will be printed, as requested by the Senator from Indiana.

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. ELLENDER:

S. 4128. A bill for the relief of Luka Cibilic;

S. 4129. A bill for the relief of Zdravko Franicevic;

S. 4130. A bill for the relief of Frano Gudelj;

S. 4131. A bill for the relief of Mate Gudelj;

S. 4132. A bill for the relief of Maro Hihar; and

S. 4133. A bill for the relief of Ante Lepetic; to the Committee on the Judiciary.

By Mr. BAYH:

S. 4134. A bill for the relief of Clarence C. and Lucy W. Russell; to the Committee on Finance.

By Mr. HART:

S. 4135. A bill for the relief of Dalpat Kasan Daya;

S. 4136. A bill for the relief of Kantilal Kasan Daya; and

S. 4137. A bill for the relief of Juliana M. Geronimo; to the Committee on the Judiciary.

ADDITIONAL COSPONSORS OF BILLS

S. 3788

Mr. ALLOTT. Mr. President, I ask unanimous consent that, at the next printing, my name be added as a cosponsor of S. 3788, amending the Coal Mine Health and Safety Act of 1969.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

S. 3942

Mr. HRUSKA. Mr. President, I ask unanimous consent that, at the next printing, my name be added as a cosponsor of S. 3942, to provide for thorough health and sanitation inspection of all livestock products imported into the United States, and for other purposes.

The PRESIDING OFFICER (Mr. HOLLINGS). Without objection, it is so ordered.

S. 4104

Mr. JAVITS. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Indiana (Mr. BAYH) be added as a cosponsor of S. 4104, the School Breakfast Act of 1970.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

SENATE RESOLUTION 433—SUBMISSION OF A RESOLUTION TO DISAPPROVE REORGANIZATION PLAN NO. 4 OF 1970

Mr. NELSON. Mr. President, I submit, and ask for its reference to the appropriate committee, a resolution to reject Reorganization Plan No. 4, a measure proposed by the President to establish in the U.S. Department of Commerce a National Oceanic and Atmospheric Administration, and I ask unanimous consent that the resolution be printed at the end of this statement.

This morning, I testified in opposition to this plan at a hearing by the Subcommittee on Executive Reorganization of the Senate Government Operations Committee. The testimony thoroughly explains my position regarding this oceans agency proposal, including my reasons for introducing the resolution which would reject it, and I ask unanimous consent that a copy of my testimony be printed in the RECORD at the end of these remarks.

Additionally, I ask that a copy of a statement I made in February proposing a national policy to protect the oceans environment and detailing the grave threats to this fragile environment also be printed in the RECORD.

Finally, I ask unanimous consent that a chart outlining Federal responsibilities in the marine environment be printed in the RECORD. This chart dramatically reveals the lack of coordination and focus at the Federal level on marine environmental policies.

The PRESIDING OFFICER (Mr. GRAVEL). The resolution will be received and appropriately referred; and, without objection, the resolution and other material will be printed in the RECORD, as requested by the Senator from Wisconsin.

The resolution (S. Res. 433) was referred to the Committee on Government Operations, as follows:

S. RES. 433

Resolved, That the Senate does not favor the Reorganization Plan No. 4 transmitted to the Congress by the President on July 9, 1970.

The material, presented by Mr. NELSON, is as follows:

STATEMENT BY SENATOR GAYLORD NELSON (D-WIS.) TO SUBCOMMITTEE ON EXECUTIVE REORGANIZATION, SENATE GOVERNMENT OPERATIONS COMMITTEE, REGARDING OCEANS REORGANIZATION PLAN

Mr. Chairman and members of the Subcommittee, thank you for the opportunity to testify here today. You are to be commended for undertaking this careful review of these two reorganization plans which have major implications for Federal policies regarding the environment and the oceans.

My remarks on Reorganization Plan Number 3, which creates an Environmental Protection Agency, will be brief. I support EPA and commend the President for taking this step. It should mean a much tougher, better coordinated, more effective Federal policy in dealing with polluters. Furthermore, EPA, which is similar to proposals that have been made in Congress, is a logical foundation for further steps which must be taken for environmental control. An adequate budget and staff will be critical to EPA's success.

My concern today is with Reorganization Plan Number 4, which proposes a National Oceanic and Atmospheric Administration in the Department of Commerce.

In my view, Plan Number 4 leaves unanswered major, pressing questions about our oceans policies, and I intend to introduce a resolution today which would reject the plan.

My action regarding this proposal is not intended to be critical of the President. With his State of the Union Message and the messages and proposals to Congress that have followed and with the other actions the Administration has taken, the President has shown his deep interest and commitment to improving environmental quality, and his

efforts merit the support of Congress and the nation.

Further, the President may well be right in proposing Plan Number 4, and later, after careful consideration of all the possibilities, I might support it. But in my view, before an oceans agency in the Department of Commerce is established, Congress should thoroughly consider all of the ramifications not only of this proposal but of the numerous alternatives that have been proposed in high level reports and in legislation now pending.

The purpose of Reorganization Plan Number 4 at this time is not at all clear to me. Is it supposed to assist in developing the resources of the sea? Or is it supposed to protect them? Or is it to be another hybrid agency such as the Atomic Energy Commission which has had a great deal of trouble reconciling the development of nuclear power with the regulation of its consequences? In carefully reading the reorganization plan and the documents supporting it, I could not find a clear answer to any of these questions.

What is at stake in establishing this policy and deciding these matters is the last great undeveloped and probably least understood resource on earth—the sea. If we don't put environment first in the oceans sequence, it will be the same old sad story: In our haste to reap the benefits of these resources we will destroy their worth forever and further diminish the quality of life on earth.

At the July 9 press conference announcing the reorganization plans, Mr. Russell Train, Chairman of the Council on Environmental Quality and an environmentalist for whom I have great respect, was asked why the new NOAA was not put in EPA.

Mr. Train responded: "Because the new EPA is intended to focus on the control of pollution . . . Ocean programs, obviously, go far beyond that, development efforts of all sorts."

Asked essentially the same question, Mr. Rocco Siciliano, Under Secretary of Commerce, responded: "As far as NOAA is concerned, let's make a comparison. One is a standard setting, enforcement type agency which needs independence and that is your EPA. The other is a research, development, protection and conservation function which we are doing already in the Commerce Department. . ."

Frankly, these answers are confusing to me. If, as is now proposed, floating airports are put in the ocean off some of our cities, who will be responsible for protecting the sea from the environmental consequences? Who will be responsible for environmental regulations on the 47 million tons of wastes—from industrial acids to junked autos—that are dumped in ocean waters off our coasts each year? Or for the hundreds of square miles of coastal wetlands that are being drained and filled for subdivisions and industry?

The fact is, marine environment responsibilities are scattered all over the Federal government, or in instances are actually unassigned, and Plan Number 4 does little to remedy this.

Under the Plan, offshore oil leasing remains in the Bureau of Land Management in the Department of the Interior and oil well regulation remains in the Department's Geological Survey. On the other hand, control of the environmental effects of offshore oil spills goes to EPA with the Federal Water Quality Administration. The U.S. Coast Guard, which has important marine pollution control enforcement responsibilities, stays in the Department of Transportation. The Department of the Interior's marine fishery program, which has important marine environmental concerns among its other tasks, goes to the Department of Commerce.

Furthermore, Plan Number 4 does little to resolve other major questions on the marine environment. The Corps of Engineers lets all kinds of waste dumping go on beyond the three-mile limit off our coasts, because it is unsure of its authority in this area, and for inshore waters, the Corps recently did not even know how many permits it had issued. Plan Number 4 does not deal with this serious inadequacy in Federal policy.

Responsibilities for protection of our estuaries and the inshore region of our coasts in other activities—such as wetlands development—are equally unclear, and Plan Number 4 would not appear to resolve this matter.

Responsibilities for regulating the environmental consequences of such developments as offshore airports and seaports are also unfixed—yet soon, we will be faced with the job of dealing with these matters.

Finally, the tremendously important responsibility for controlling pollution of the sea beyond the three-mile zone is also unsettled, and Plan Number 4 does not provide the answer.

We might argue that a NOAA in the Department of Commerce is only temporary, with the hope that better things are in the offing—an independent NOAA, for instance—but as we all know, "temporary" agencies in Washington have a way of becoming permanent and gathering additional power, through no one's fault or ill-intention, but merely through bureaucratic inertia and by default.

There is no quarrel with those who say we need to develop the resources of the sea. We do. The minerals, the food, the space, the recreation offered by the marine environment can be of great benefit to all nations.

But distinguished ecologists are already warning that in 50 years or less there will be little productivity left in the sea for anyone if we continue on our present course of polluting it.

Just in the past two years, report after report has urged a coordinated national effort to wisely manage and protect the marine environment.

While citing the great opportunities in the sea, the January, 1969, report of the Commission on Marine Science, Engineering and Resources (the Stratton Commission) warned of the major threats lying "in the potential destruction of large parts of the coastal shellfisheries, and fisheries on the high seas." To deal with both the opportunities and the dangers, the report recommended a new, independent Federal agency, the National Oceanic and Atmospheric Agency, and among other things, suggested a Federal-state coastal zone management program in NOAA.

The National Estuarine Pollution Study report to Congress last November said, "The impact of man on his environment has taxed the resources of many estuarine zones to the limit of endurance and reached into the depths of the ocean itself."

Last year's reports by the President's Panel on Oil Spills said that at present rates of offshore drilling for oil, we could expect a marine disaster on the Santa Barbara scale once a year by 1980. The panel concluded that we do not now have the technology to contain major marine oil spills and pointed out that we are drilling 3,000–5,000 new undersea oil wells a year. And the President's Panel urged that certain marine resources be held in trust until we better understand how to exploit them without harming the ocean environment.

Then, according to newspaper reports, the Ash Council, appointed by the President to study and recommend government reorganization, early recognized the need for much greater emphasis on ocean problems in the Federal government and recommended a new marine environment agency under the Secretary of the Interior.

But Plan Number 4 proceeds in a quite different direction from these various recommendations and would deal with very few of the problems cited in these important reports and studies.

In my view, instead of this reorganization into a development-oriented department at this early stage in the shaping of national oceans policy, we would do far better to more carefully consider the recommendations of the above reports and to carefully consider legislation before Congress proposing to deal with the challenge of the sea.

Measures to establish coastal zone management programs have been introduced and heard before Senate and House committees. One is sponsored by the Administration—introduced last year, it would put the coastal zone management program in the Department of the Interior.

The Administration has also proposed legislation to end the dumping of polluted dredge spoils in the Great Lakes—an urgently needed step, and the President has directed the Council on Environmental Quality to study the ocean waste dumping problem and report to him with recommendations by September 1.

Further, measures to establish marine sanctuaries off California and to terminate oil leases in the Santa Barbara Channel have been introduced and are being actively considered.

Legislation to create the independent NOAA has been introduced by Senator Hollings, who has chaired hearings and has intensively studied our marine problems and who has been very perceptive in his understanding of these great concerns.

And the bill by Senator Muskie first proposing an environmental protection agency would have transferred the Environmental Science Services Administration from the Department of Commerce to EPA.

This year, I have introduced two bills regarding the oceans. One, the Marine Environment and Pollution Control Act, proposes a comprehensive system for marine management based on intensive environmental studies. The other bill would place in a national trust untapped marine minerals until we develop the technology and plans to protect the vital ocean environment as we tap its resources.

The Secretary of the Interior would be responsible for the programs created under both of these measures. At this point, I would like to comment that the record of the present Secretary of the Interior leaves no question that he is a courageous man determined to carry out his responsibilities for this nation's environment to the very best of his ability. The Department of the Interior is one of the two or three logical places in the Federal government to put the responsbilities for our marine environment, and under Secretary Hickel, one could have great confidence that he would institute a comprehensive program which would be an excellent base on which we could build this important policy.

The implementation of any of these proposals would represent a better first step towards establishing a national environmental policy on the oceans than Reorganization Plan Number 4. And in my view, such a policy could be better achieved by reorganizing and strengthening the Department of the Interior, or by building on the foundation of the Environmental Protection Administration, than by starting in the Department of Commerce.

What is necessary is that from the very beginning, we emphasize the importance of understanding the marine environment and acting to harmonize our activities with it. This will require extensive studies, planning, standard-setting, and enforcement.

And frankly, if I were an industrialist, I would insist that environmental policy regarding the oceans be established before I made any investment. Sooner or later, en-

vironmental controls will be set and enforced. And as the Santa Barbara and Gulf of Mexico disasters so well demonstrate, the costs of putting "development" before "environment" are immense.

It is appropriate to recall that we thought pesticides were a panacea and we rushed them into use—now we are paying the price. The same was true of the automobile, nuclear power generating plants, the one-way container. Now the sea—it will give us everything just find the golden key.

As the last frontier on earth, the oceans do present a great opportunity. And they are a great concern. The President recognized this in his major proposal in May for international cooperation to manage the resources of the sea beyond the 200 meter depth.

As yet, the oceans are almost uncharted, relatively undeveloped—as were the public lands of this nation a century and more ago. We have a choice: We can do it right this time, or we can make the same mess of the sea as we have of the land. Our better alternative is to establish a comprehensive national policy now that will harmonize our activities with the fragile sea, thus assuring the wise use of its resources.

And the sea presents this nation a unique opportunity to set an example for the entire world, as the President said. But can we lead, and expect other nations to act wisely, if our first concrete step regarding our own ocean waters is to give a matter as important as the marine environment such inadequate attention?

The matter of assuring environmental protection for the oceans as the world's single greatest resource is a responsibility great enough that we ought to hold up on authorizing the actions proposed in Reorganization Plan Number 4 until we have had the opportunity to evaluate all of the marine proposals that have been made and that are pending in legislation before Congress. Again, my introduction of the resolution to reject Plan Number 4 is not in any way meant as criticism of the President and his environmental program.

S. 3484—INTRODUCTION OF THE MARINE ENVIRONMENT AND POLLUTION CONTROL ACT OF 1970

Mr. NELSON. Mr. President, I am introducing legislation today which, in its broadest terms, is a human survival act. Its concern is with the pollution of the Great Lakes, and now, of the sea, a situation that poses dangers to the future of the human race that rank with those posed by the threat of nuclear war.

The legislation is entitled the Marine Environment and Pollution Control Act of 1970. One portion of the bill would establish a tough new national policy to halt the reckless exploitation and the destruction of our vital marine environment, and would substitute an environmental management plan beyond State waters that would be aimed at achieving a harmonious relationship between man and the source of all life, the sea.

Another part of the legislation would deal specifically with the disposal of tens of millions of tons of wastes into the sea from New York and other major cities on the ocean coastlines, in the Gulf of Mexico, and in the Great Lakes. I will explain in detail the provisions of this legislation later in the statement.

For the past year, the tragic story about the destruction of the sea has been unfolding at an accelerating pace. For people the world over, it is a shocking, surprising story, which they may first receive in disbelief. Throughout history, we have believed the sea was a limitless resource, as indestructible as the earth itself. And, as with all our other resources, we have acted accordingly, abusing it in the name of "Progress," somehow never realizing until very, very late that, like all other systems of the planet, the sea is a fragile environment, sensitive and vulnerable to the debris of civilization.

Our persistent refusal to accept these facts about all environments on earth is, in the view of many scientists, hurling us headlong to unprecedented worldwide disaster.

The sea is a fragile environment because, among other things, its only really productive areas are extremely limited. They are the Continental Shelves, the narrow bands of relatively shallow, highly fertile areas that extend from our coastlines, the same areas on which our myriad and dramatically increasing ocean activities are focused. Our shipping, mineral extraction, fishing, recreation, and waste disposal all are concentrated in these relatively small, fragile areas.

Destroy life on the Continental Shelves—which is what we are doing now—and, for practical purposes, the oceans are rendered a desert. Fertile coastal waters are 20 times as productive as the open ocean.

Destroy the richness of the sea, and you eliminate one of the greatest potential resources for feeding an exploding world population. Even today, there are nations, such as Japan, that depend almost entirely on the sea for their food and for many other critical resources.

Upset the intricate ecological systems of the oceans, and you run the grave risk of throwing all natural systems so seriously out of balance that the planet will no longer sustain any life.

The evidence is pouring in that we are already well on the way to causing drastic and lasting damage to the ocean environment.

Citing the steady buildup of toxic, persistent pesticides in the oceans, many scientists now believe that another 25 to 50 years of pesticide use will wipe out the oceanic fisheries.

Scientists investigating a massive dieoff of seabirds last year off Britain found in the dead birds unusually high concentrations of another dealy pollutant, toxic industrial chemicals used in making paints and plastics, and in other industrial processes. Concentrations of toxic mercury and lead have also been reported in instances at alarming ocean levels.

Scientists now see new dangers to marine life and human beings as well from the potential buildup through the food chain of long-term poisons from the crude oil that is now being spilled, dumped, or leaked into the oceans by man's activities at a rate of 1 million tons a year.

The oil is showing up far from its original sources. Scientists towing a net recently in the Sargasso Sea hauled in oil tar lumps as much as 2 inches thick. The Sargasso Sea is 500 miles south of Bermuda in the Atlantic Ocean.

In addition to oil, author-explorer Thor Heyderdahl sighted plastic bottles, squeeze tubes and other debris in the mid-Atlantic during his papyrus raft trip last year. At one point, the ocean water was so filthy the raft crew could not use it to wash the dirty dishes.

In the Pacific Ocean, some still undetermined ecological change has caused a population explosion among a species of starfish. It might be just another fascinating incident if it were not for the fact that the starfish, which feeds on living coral, can, in great enough quantities, cause serious erosion on islands protected by coral reefs and lead to the destruction of food-fish populations that inhabit the reefs.

Closer to home, the oil well blowout in the Santa Barbara Channel last year stunned our Nation. Anyone who still believes the sea is invulnerable to the same devastation we now see in rivers across the land should talk to the citizens of Santa Barbara.

Or they should ask the residents of Cleveland, Detroit, Toledo, Chicago, Milwaukee, Green Bay, or Duluth-Superior. For the past several decades, we have been methodically destroying the Great Lakes, among the largest bodies of fresh water on earth. Lake Erie is degraded almost to the point of a cesspool. Lake Michigan is seriously polluted, and is about to be ringed with nuclear powerplants discharging massive heat wastes. Lake Superior, the largest, cleanest Great Lake, is now threatened. On the Minnesota north shore, a mining company is dumping 60,000 tons of iron ore process wastes into the lake each day.

One need only to have glanced over the newspapers for the past few days to get a sense of the pattern that is developing off our coastlines. Off the gulf coast, an intense fire has been burning out of control for several days on an oil well platform. If the situation is not brought under proper control, raw oil from the well could seep over vast areas of the gulf, spreading to wildlife and bird preserves, stretches of coastal marshland, and recreation beaches. Off Nova Scotia, oil spreading from a wrecked tanker has contaminated nearby shores and is killing sea birds, and the same thing is happening off Florida as oil spreads from another wrecked tanker.

The situation in a few years will be much worse. If present trends continue, according to a recent report by the President's Panel on Oil Spills, we can expect a Santa Barbara-scale disaster every year by 1980.

The report also confirmed that we do not have the technology to contain the oil from massive blowouts and spills. In fact, scientists are pointing out that current control techniques, such as massive use of detergents to break up oil slicks, can be even more damaging than the spills themselves.

Yet, in blunt testimony to our sorry history of exploiting our resources at any risk to the environment, 3,000 to 5,000 new oil wells will be drilled annually by 1980 in the marine environment. The pressure is on even in polluted Lake Erie, where only widespread public resistance has prevented drilling there to date.

By ironic coincidence, Federal plans for new oil lease sales in U.S. offshore areas were announced only a few days before the Presidential panel's 1969 oil spill report.

Because of the dramatic and sudden nature of its occurrences and damages, oil pollution has been the most visible of the marine environment problems. A second, less visible, but just as significant threat is from the wastes that are over-running the industrialized, crowded metropolitan areas along our coastlines.

Progress—American style—is adding up each year to 200 million tons of smoke and fumes, 7 million junked cars, 20 million tons of paper, 76 billion "disposable" containers, and tens of millions of tons of sewage and industrial wastes.

It is estimated that every man, woman, and child in this country is now generating 5 pounds of refuse a day from household, commercial, and industrial wastes. To quote Balladeer Pete Seeger, Americans now find themselves "standing knee deep in garbage, throwing rockets at the moon."

The rational way out of this dilemma would be using the country's technology and massive resources to develop systems to recycle our wastes, making them valuable "resources out of place," or treating wastes to the highest degree that technology will permit.

Instead, in the classic American style, we have been taking the easy way out. Rather than planning ahead to handle the byproducts of our affluent society, we have invariably taken the cheapest most convenient route to their disposal, regardless of the environmental consequences. Until fairly recently, the easy way has been to dump our debris outside the city limits, or into the nearest river or lake.

But now, the end of one city means the beginning of another, especially in our sprawling metropolitan areas. And either the

river or lake is already grossly polluted with other wastes, or water quality standards are demanding that the polluters install decent treatment facilities.

With this tightening situation, one might think that we would finally begin a national effort to establish effective and environmentally safe waste management plans.

Instead, we have found another way to avoid the costs of environmental controls: Dump the debris into that supposedly bottomless receptacle, the sea. The attractions are many. The fact is that environmental regulations in our costal waters are so loose it is like frontier days on the high seas, a field day for laissez faire polluters. One recent private report points out the gross inadequacies in offshore environmental regulations:

Few applications for offshore waste dumping permits are ever denied, even when environmental agencies strongly oppose the dumping. In fact, the report could find no instance where the U.S. Army Corps of Engineers—in most cases, the lead agency for regulating the dumping—had ever rescinded a disposal permit, even when the polluter had clearly violated it. The reason, according to the report, is that authorities and responsibilities in the marine environment are so uncertain that public agencies may be reluctant to take action that might lead to court tests;

Furthermore, most dumping is carried out so far offshore that no present regulations of any Federal, State or local agency explicitly apply;

Although many public agencies are concerned in various ways with ocean dumping, rarely do any of them have a comprehensive picture of the total offshore waste disposal activities in the area;

Regular monitoring of ocean dumping is almost nonexistent, leaving the way wide open for abuse of already inadequate permit terms;

Finally, guidelines to determine how dumping will affect fragile ocean ecology and the marine food chain do not exist. Thus, decisions on the dumping permits are made with a tragic lack of vital information as to the consequences.

In this situation, it is often cheaper for a city to send its municipal wastes out to the ocean depths via a barge; or for an industry to relocate to the coastline from an inland area with tough water quality standards, so it can discharge its wastes directly into coastal waters without having to install costly pollution control equipment.

Because the effects of the ocean dumping are slow to appear, it is a problem that only now is breaking into public view. But when all the facts are in, I am convinced that continued unrestrained dumping clearly will spell a tragedy that will make Santa Barbara pale by comparison.

In the United States, cities, industries, and other polluters are now disposing 37 million tons of wastes into the marine environment every year, and this does not include Great Lakes figures.

Predictably, our mass consumption, mass disposal society is responsible for one-third to one-half the world's pollution input to the sea.

The cities and metropolitan areas involved include San Francisco, Los Angeles, San Diego, Boston, New York, Philadelphia, Baltimore, Charleston, St. Petersburg, Miami, Port Arthur, Galveston, Texas City, and Houston.

The wastes—dumped at sea from barges and ships—run the gamut of byproducts from the "affluent" society. They include garbage and trash; waste oil; dredging spoils; industrial acids, caustics, cleaners, sludges and waste liquor; airplane parts; junked automobiles and spoiled food. Radioactive wastes, poison gas, and obsolete ordnance have also been dumped in the sea by atomic energy and defense agencies.

Along our Pacific coast, 8.8 million tons of these wastes were dumped in 1968 alone.

Along the heavily populated east coast, 23.7 million tons were dumped that year.

And along the gulf coast in 1968, 14.6 million tons of wastes were dumped.

A leader for the whole country in the dumping of wastes into the sea is metropolitan New York. In a recent year dumping for this area off the New Jersey and Long Island coasts came to 6.6 million tons of dredge spoils, 4 million tons of sewage sludge, 2.6 million tons of dilute industrial waste acids, and 573,000 tons of cellar dirt.

The sewage sludge dumped 11 miles offshore, has spread over a 10- to 20-square-mile area of the ocean bed, killing bottom life, cutting oxygen levels, poisoning the sea waters. A wide area outside the dumping grounds is also contaminated, possibly by the sewage sludge. Dumping of other wastes is being carried out in five other undersea areas off New York.

The results of several decades of ocean waste disposal off this vast metropolis are grim portents for the future of much of the U.S. marine environment if the practice is allowed to continue.

Off New York, outbreaks of a strange fish disease, where fins and tails rot away, have been reported since 1967.

Recreation-destroying red tides have recently closed local beaches, particularly during the summer of 1968.

Massive growths of nuisance organisms, such as seaweeds and jellyfish, are now prevalent.

Once huge oysterbeds in New York Harbor have been all but eliminated.

Nearly all local clamming areas have been closed because of contamination.

Many swimming beaches are now closed every summer for the same reason, and there are indications that the sewage sludge dumped far offshore may now be creeping back in on the currents.

Now, in the face of this marine disaster, suggestions are being made that the New York dumping grounds be moved anywhere up to 100 miles offshore. Whether this is feasible on even an interim basis, it is highly doubtful it offers any permanent solution. New Yorkers 40 years ago thought they had escaped much of their waste problem when the present offshore dumping grounds were selected. Past history gives little cause for confidence that dumping even 100 miles into the sea will prevent grave consequences 40 years from now.

In fact, the evidence from the present New York situation, and from the effects of other United States and worldwide marine activities, indicates firmly that if we are to avoid setting off further disaster in our vital offshore areas, the dumping should be phased out entirely along our coastline and the Great Lakes. The legislation I am proposing would require such a phase-out in 5 years, a deadline which respected authorities have indicated would be reasonable, if a concerted effort is started now to find alternative, safe means of waste disposal or recycling.

The only exception would be when the Secretary of the Interior determined that an alternative was not yet technically available. Then, a temporary permit could be issued until an alternative was developed.

The legislation will also deal with the wastes pouring directly into the ocean and the Great Lakes from numerous outfalls of municipal and industrial waste disposal systems. As I pointed out earlier, the alternative of piping our wastes directly into the sea is becoming increasingly attractive from an economic point of view, as water quality standards are tightened inland. Yet from an environmental point of view, moving to the edge of the sea for cheap waste disposal and cheap water supplies will only accelerate the pollution of the sensitive offshore areas. It is a trend that must be halted now, and the legislation I am introducing will allow only liquid, nontoxic wastes, treated at levels equal to the natural quality of the receiving waters, to be disposed of at sea, with the exception noted above, where an alternative was not technically available.

Now, on one 30-mile stretch of the New Jersey coast alone, there are 14 sewer outfalls discharging directly into the ocean, with more planned. In New York harbor, 20 New Jersey companies are either in court or under orders to halt pollution. According to Federal figures several years ago, the estuarine waters of the United States received 8.3 billion gallons of municipal waste discharges per day.

Clearly, wholesale waste disposal and dumping into the ocean environment is a practice that is rapidly becoming a national scandal. It reflects another near total failure of our institutions to come to grips with a grave new challenge of this modern, complex age. And it is one more tragic instance of polluters and Government, with the consent of a lethargic public, avoiding rational environmental planning now, and letting future generations pay the price.

To date, we has been spending only a pittance in this country on new, more effective ways of handling our wastes, while we spend tens of billions of dollars to put a man on the moon, or to fight the Vietnam war. Legislation now pending before the Senate, the Resource Recovery Act, would be an important step forward in the urgently needed effort to manage this country's mounting solid wastes.

Ironically, while we continue to accelerate the gruesome process of polluting the sea, industry, our crowded cities, commercial ventures of all kinds, and even public agencies are making big new plans to carve up this rich, little regulated frontier for profit or for the tax dollar.

Already, the Defense Department holds one of the biggest chunks of marine environment—a total of approximately 300,000 square miles used for missile testing grounds and military operations.

But jurisdictions are so confused in the increasingly busy offshore waters that one mining opeartor had to turn back his sea bed phosphate lease when he found it was in an old Defense Department ordnance dump.

Crowded metropolitan areas are looking to the sea as the answer not only to their waste disposal problems, but for their space shortages as well. In the next few years, it is possible that construction of floating airports will begin for New York City, Los Angeles, and Cleveland. Floating seaports and floating cities may not be far behind.

And population and use pressures on our coastal areas will continue to escalate. Already, more than 75 percent of the Nation's population, more than 150 million people, now lives in coastal States, and more than 45 percent of our urban population lives in coastal counties.

Now, the coasts provide recreation for tens of millions of citizens. And the demand for outdoor recreation is increasing twice as fast as our burgeoning population. Yet in the face of these growing needs and expectations, the coasts are in danger of being crowded and polluted out of the market as recreation resources. In effect, Americans are slamming the door on their last escape route to a livable world. Our choice now is to either clean up our environment, or survive in surroundings we never thought we would have to accept.

Again, we look to the sea for distant answers. Within 33 years, we can expect permanent inhabited undersea installations and perhaps even colonies, according to the commission on the year 2000, a group established by the American Academy of Arts and Sciences.

In another activity, oil tankers, a more frequent source of pollution than oil wells, are being built to huge scales, cutting transpor-

tation costs but increasing environmental danger. The *Torrey Canyon* tanker was carrying 118,000 tons of crude oil when it broke up off England in 1967, a disaster that soaked miles of beaches with oil and killed more than 25,000 birds. Today, there are tankers being designed with a 500,000 ton capacity.

In addition to bringing new pollution dangers, the tankers will probably help create a new industrial seascape off our coasts. Since our ports are not big enough to handle these super ships, offshore docking facilities will have to be built.

In the Gulf of Alaska, heavy tankers could soon be operating to ship oil from the southern end of the proposed Trans-Alaska pipeline. Meanwhile, other oil and gas interests are proposing leases for drilling in the gulf. Leasing could put the tankers and oil rigs on a collision course, with massive oil spills as a result.

In another area of resource use, a company will soon begin an experimental mining operation off the southeast Atlantic coast in which a vacuum device will draw materials off the sea bed, and half way up, separate out fine wastes and spew them into the undersea in a broad fan. An almost certain result will be the smothering of bottom life over a wide area.

On Georges Bank, a rich international fishery off the New England coast, studies have identified areas with tremendous oil and gas potential, posing possible conflicts.

The evidence is clear. If tough environmental management steps are not taken now, the outcome of this bustle of new activity is certain. We will ultimately make as much a wreckage of the oceans as we have of the land. There will be constant conflicts between users, more reckless exploitation, perhaps the total destruction of marine life, and through the whole process, public agencies will be relegated to their all too frequent ineffective role of referees between competing resource users.

The legislation I am proposing today as the Marine Environment and Pollution Control Act of 1970 prescribes far-reaching steps to establish rational protection of the ocean environment.

The first section makes it unlawful for U.S. citizens, which includes corporate and municipal officers, to dispose of refuse materials into the Great Lakes, the territorial sea, Outer Continental Shelf waters, or the high seas without a permit from the Secretary of the Interior issued with the concurrence of the Council on Environmental Quality in the White House. Before the Secretary can grant such a permit, he will be required to undertake a broad-ranging investigation into the effects the disposal would have on the marine environment. In addition, public hearings will be held if requested, to give concerned citizens the opportunity to speak on the matter. In general, this legislation provides for public involvement in the decision-making process at every available opportunity, an involvement that has far too frequently been lacking in the making of Federal environmental policies.

Under this bill, the Secretary will only grant a waste disposal permit if there is convincing evidence that the disposal will not have any adverse effects on plant and animal life and the marine environment generally. As I have pointed out earlier, consideration of the impact of dumping on the fragile marine ecology of dumping has been entirely inadequate.

The bill would phase out all marine dumping by June 30, 1975, which is a reasonable and essential step for environmental protection, except for the exceptions noted earlier in the statement. It also provides a fine of not more than $1,000 per ton of material disposed of in violation of the act.

In the important second section of the bill, a system for marine environment management is established, which will apply to the submerged offshore lands under the jurisdiction of the Secretary of the Interior. As a first step, the bill provides for an Advisory Committee on the Marine Environment, to be appointed by the Secretary with the concurrence of the Council on Environmental Quality. The private citizen committee will include scientists trained in disciplines dealing with marine environment concerns. It will be responsible for the general scientific overview of the whole new program.

Also called for is a series of comprehensive programs and studies designed to increase our knowledge of the marine environment and its complex ecological systems, and the effects of our activities on this vital environment. Under the bill, the Secretary would develop models of physical and ecological systems of the marine environment which would be used to predict in advance the effects of proposed activities, an unprecedented step in marine environment protection.

I have also included a provision in the bill requiring truly long range forecasts of our needs and requirements, not only for minerals, but for recreation, fisheries, shipping, and natural ecological balance, over the next 50 years, another unprecedented step fundamental to making sound decisions about our ocean activities. This information will be made available to the public as it is developed by the Secretary, with the advice and recommendations of the scientific commission.

The next section of the bill provides for the application of the information and knowledge gained by the Secretary and the commission to the development of comprehensive resource management plans for the marine environment. Such plans will be developed whenever the Secretary is notified that present or proposed uses of the marine environment involve a risk of serious environmental damage or serious conflict with present or future users, or when any submerged lands under the jurisdiction of the Secretary are proposed to be leased. As a part of the plan, the Secretary would conduct an intensive study of the specific area involved, and of all the plant and animal life in it, and would attempt to develop means for avoiding adverse effects or conflicts among uses. The Secretary will also seek the views of the Governors of the coastal States in the vicinity of the area of proposed activity.

These efforts will culminate in a management plan which will be submitted to the Advisory Committee on the Marine Environment and also to the Council on Environmental Quality and there will also be opportunity for a public hearing. After concurrence of the council in the plan, the Secretary will implement it in public regulations which will constitute a comprehensive and mandatory guide for the use of the seabed and waters governed by the plan.

I believe these management plans would be a major step in avoiding Santa Barbara-type disasters brought on by lack of foresight and information, and this approach might well merit consideration by the States for the Great Lakes and their offshore territorial waters. Public participation would be an important part of the development of these plans.

It should be made clear that even the adoption of this legislation will only be a beginning in protecting our oceans. Inland, our water standard and cleanup programs must be strictly enforced and well financed, not only for the sake of our rivers and lakes, but for the future of the sea itself, which ultimately receives these wastes. And it is clear too that although the activities of this Nation are a major factor in the threat to the sea, all nations are having an impact, and have responsibilities which they too must exercise if this common world resource is to be protected. It is clear this will require new international cooperation and agreements.

Mr. President, I introduce this legislation for reference to the appropriate committee, and ask that it be printed in the CONGRESSIONAL RECORD at this point.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

TABLE I.1.—FEDERAL MARINE SCIENCE ACTIVITIES

Agency	Mission
Department of Defense	All phases of oceanography relating to national security.
Navy; Advanced Research Projects Agency; Army Corps of Engineers.	Naval technology.
	Statutory civilian responsibilities: Great Lakes, river, harbor, coastal, and ocean charting and forecasting; Great Lakes, river, harbor, and coastal development, restoration, and preservation.
Department of the Interior	Management, conservation, and development of marine natural resources
Geological Survey; Federal Water Pollution Control Administration; Bureau of Commercial Fisheries; Bureau of Sport Fisheries and Wildlife; Bureau of Mines; Bureau of Land Management; National Park Service; Bureau of Outdoor Recreation; Office of Saline Water.	Measurement and enforcement of water quality standards.
	Acquisition, preservation, and development of coastal areas.
	Identification and development of technology for evaluation of mineral resources.
	Identification of sources and interrelationships for supply of fresh water.
National Science Foundation	Basic and academic oceanography.
	Facilities support.
	Sea grant colleges and programs.
Department of Commerce	Environmental prediction and description; tsunami and hurricane warning.
Environmental Science Services Administration; Maritime Administration.	Charting and mapping of coastal and deep-ocean waters.
	Central responsibility for air/sea interaction program.
	Research on ship design, shipbuilding, and ship operations.
	Marine transportation and port systems.
Department of Transportation	Safety and protection of life and property in port and at sea.
Coast Guard.	Delineation and prediction of ice masses.
Office of the Secretary.	Navigation aids; oceanographic and meteorological observations.
	Transport systems analysis and planning.
Atomic Energy Commission	Radioactivity in the marine environment.
	Development of Marine nuclear technology.
Department of Health, Education, and Welfare	Human health, healthfulness of food, biomedical research, and support of education.
Public Health Service; Office of Education; Food and Drug Administration.	
Department of State	United States participation in international organizations.
	Support of international fisheries commissions.
	International marine policies.
Agency for International Development	Foreign assistance and food resources for developing nations.
Smithsonian Institution	Identification, acquisition, classification, and ecology of marine organisms; investigations of the geophysical factors of oceanic environment.
National Aeronautics and Space Administration	Feasibility, design, and engineering of spacecraft and sensors for ocean observations.
National Council on Marine Resources and Engineering Development	Policy planning and coordination; assistance to the President.

SENATE RESOLUTION 434—SUBMISSION OF A RESOLUTION RELATIVE TO THE DEATH OF REPRESENTATIVE MICHAEL J. KIRWAN OF OHIO

Mr. YOUNG of Ohio submitted a resolution (S. Res. 434) relative to the death of Representative Michael J. Kirwan of Ohio, which was considered and agreed to.

(The remarks of Mr. YOUNG of Ohio when he submitted the resolution appear later in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSOR OF A CONCURRENT RESOLUTION

SENATE CONCURRENT RESOLUTION 74

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Maine (Mr. MUSKIE), I ask unanimous consent that at the next printing, the name of the Senator from Indiana (Mr. BAYH) be added as a cosponsor of Senate Concurrent Resolution 74, affecting the treatment of prisoners in South Vietnam.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT—AMENDMENT

AMENDMENT NO. 795

AMENDMENT TO GUARANTEE EQUAL TREATMENT FOR U.S. CITIZENS

Mr. TYDINGS. Mr. President, as the result of anti-inflationary cuts in the Federal budget, the number of civilian positions in the Department of Defense is being reduced. Over the past 6 months, increasing numbers of Marylanders and other U.S. citizens employed by the Pentagon have been forced to confront the anxieties and hardships of unemployment and the ordeal of finding new jobs.

At the same time, the Department of Defense is providing jobs for 232,347 foreign nationals—primarily at U.S. military facilities and bases abroad—at a cost to the American taxpayer of approximately three-quarters of a billion dollars a year. More than one out of every six civilians currently employed by the Department of Defense is a foreign national. And what is worse, the percentage of DOD civilian employees who are foreign nationals has increased over the past 5 years.

This policy simply makes no sense at a time when Marylanders and other U.S. citizens working as civilian employees of the Pentagon are losing their jobs.

Reductions in the size of our military establishment are unavoidable and will continue. Cuts in Federal spending to combat inflation, the reordering of national priorities, and the movement toward foreign and military policies which rely on our allies to provide the manpower for their own defense necessarily entail reduced military manpower requirements.

But I believe we owe it to those U.S. citizens now employed as civilians by the Pentagon to insure that they are not forced to bear an unfair share of the burden of these manpower cuts. Whenever possible, they should be given preference over foreign nationals employed by DOD when civilian defense jobs are eliminated; and at all times they must be guaranteed at least equal consideration.

Therefore, I am submittting today an amendment to the defense procure authorization bill (H.R. 17123) to guarantee equal treatment for U.S. citizens in all future DOD civilian job reductions. This amendment obligates the Pentagon to match every job eliminated for a U.S. citizen with the elimination of at least one job currently held by a foreign national.

I ask unanimous consent that the text of this amendment to guarantee equal treatment for U.S. citizens be printed at the close of my remarks.

Mr. President, this amendment is not only dictated by basic considerations of equity, it also is consistent with the fundamental reorientation of U.S. foreign and military policies enunciated in the Nixon doctrine. As you know, the President has stated that our allies in Europe and Asia can no longer look to the United States to supply the manpower for their own defense. Consequently, we will be reducing the size of our overseas military forces considerably in the coming years. Bringing U.S. troops back home and closing American bases abroad will mean a much diminished demand for civilian DOD employees abroad. And 87 percent of all civilians currently employed by the Pentagon overseas are foreign nationals.

In short, this amendment provides a corollary to the Nixon doctrine: As our allies supply the manpower for their own defense, the United States will no longer be compelled to hire foreign nationals to fill overseas civilian defense positions.

Finally, if instances do arise where reductions in jobs held by U.S. citizens lead to the elimination of essential positions held by foreign nationals, the host nations should fill those positions at their own expense.

Nearly half of the foreign nationals paid by the Pentagon actually are employed by the nations in which the U.S. bases and facilities where they work are located. We simply reimburse these nations for the wages they pay these people. Since these nations presumably have invited us to station troops and build bases on their soil for their own security, there is no reason why they cannot be expected at least to pay the salaries of their own citizens needed to help in this effort. A survey of the 108,516 foreign nationals subsidized under this indirect-hire arrangement as of December 31, 1969, reveals that 98,604 or 91 percent are employed by West Germany and Japan—two nations that certainly can afford to pay these individuals out of their own treasuries.

Mr. President, both economic conditions here at home and military developments abroad demand a reduction in the number of foreign nationals employed by the U.S. Department of Defense. My amendment to guarantee equal treatment for U.S. citizens serves the interests of those U.S. citizens currently working as civilian employees of the Pentagon and of all of us who now are forced to send our scarce tax dollars overseas to pay the salaries of these foreign nationals.

The PRESIDING OFFICER (Mr. CRANSTON). The amendment will be received and printed, and will lie on the table; and, without objection, the amendment will be printed in the RECORD.

The amendment (No. 795) is as follows:

At the end of the bill add a new section as follows:

SEC. 507. Whenever any citizen or national of the United States has his employment with the Department of Defense terminated as a result of a reduction in force, the Secretary of Defense shall, within 30 days after the date on which such employment is terminated, cause to be terminated, through a reduction in force, the employment with the Department of Defense of at least one foreign citizen or national, and the position occupied by such foreign citizen or national with the Department of Defense shall not be subsequently filled.

FAMILY ASSISTANCE ACT OF 1970—AMENDMENT

AMENDMENT NO. 796

Mr. METCALF. Mr. President, last year with the cosponsorship of several others, I offered a bill, S. 2265, to amend the Social Security Act to extend to all Indians of all tribes under all of the existing public assistance programs the special additional Federal matching payment of 80 percent, now provided only for the Navajo and Hopi for old-age assistance, aid to dependent children, and aid to the needy blind.

Today, with Senators MANSFIELD, GOLDWATER, GRAVEL, MCCARTHY, MONDALE, MOSS, STEVENS, and YARBOROUGH, I am submitting a revised version of the bill, drafted as an amendment to the Family Assistance Act, H.R. 16311, now being considered by the Finance Committee.

Mr. President, in his recommendations on American Indians, Mr. Nixon said:

Because of the high rate of unemployment and underemployment among Indians, there is probably no other group in the country that would be helped as directly and as substantially by programs such as the new Family Assistance Plan. . . . It is estimated . . . that more than half of all Indian families would be eligible for Family Assistance benefits and the enactment of this legislation is therefore of critical importance to the American Indian.

The Department of Health, Education, and Welfare and the Treasury Department in their reports urged enactment of family assistance, rather than my bill, S. 2265, and others.

In his message to the Congress, Mr. Nixon articulated the tradition of Federal responsibility for American Indians. He said:

The special relationship between Indians and the Federal government is the result . . . of solemn obligations . . . entered into by the United States Government.

Yet the family assistance proposal makes no special provision for welfare

for Indian people and, indeed, wipes out those in existing law that have made it possible for some States to extend assistance to Indians under categorical programs. The administration offers nothing in place of them by which the affected States may make good the promises in the President's message. The administration acknowledges a special responsibility, promises much and withholds everything. It says Indians would be eligible directly and substantially, but makes no provision for special Federal help.

In 1949, in recognition of the special Federal responsibility for Indian people, the Congress provided in Public Law 474 an 80-percent reimbursement to the States for funds expended in behalf of those Navajo and Hopi Indians who were receiving federally approved old-age assistance, aid to dependent children, and aid to the needy blind. We seek through this amendment to extend to all States 100 percent Federal money and further to reimburse the States for expenditures made in behalf of Indian people in programs enacted since 1949, aid to the permanently and totally disabled and medical assistance. Our amendment would provide a 100-percent Federal payment for categorical aid and 100 percent for supplementary aid to families, according to the formula in the new bill.

H.R. 16311 leaves States without additional funds to extend welfare to Indian people while other provisions of the act, the so-called outreach and case finding stipulations, actually will increase State obligations. The director of public welfare in my State informs me that the lower local share contemplated for Montana for welfare purposes is exaggerated because of the projection rests on the 1968 caseload level. These are facts of arithmetic that are in themselves ample justification for correction. If we go beyond them we find our traditions and a whole body of law holding that the Federal Government, is and should be responsible for Indian affairs. And we have been reminded of this by Mr. Nixon.

It was estimated in 1966 that three-quarters of the Indian families living on reservations earn less than $3,000 annually, and while the off-reservation Indian may earn higher wages because he does not receive the free medical care and other benefits that are available to the reservation Indian, his real income is reduced accordingly. In States in whose boundaries there are large tracts of land set aside as reservations for Indian people, there is an overriding Federal responsibility because the States derive no revenue from these lands.

Deprived of that source of revenue, and realizing precious little in income taxes from a people who earn too little to pay them, the State of Montana and others with large Indian populations are simply not able to handle the burden of welfare assistance.

Since the inception of Office of Economic Opportunity programs and since Federal impact aid for education more Indian children are going to school than before. Economic development programs that are operating and those that are planned on reservations promise much. Yet these are fragile structures that could be brought down if they are not properly supported while they grow.

Without help now for the blind, the disabled, the elderly and for families and without medicaid, the grinding poverty will render helpless yet another generation of Indians who, with help, might well break out of the cycle into the "historic step forward" envisioned by the President in his new Indian policy.

Mr. President, I ask unanimous consent that my amendment be printed in the RECORD following these remarks.

The PRESIDING OFFICER (Mr. BELLMON). The amendment will be received and printed, and will be appropriately referred; and, without objection, the amendment will be printed in the RECORD.

The amendment (No. 796) was referred to the Committee on Finance, as follows:

AMENDMENT NO. 796

At the end of the bill, add the following:

"TITLE IV—MISCELLANEOUS AMENDMENTS

"ADDITIONAL FEDERAL PAYMENTS UNDER PUBLIC ASSISTANCE PROGRAMS ON ACCOUNT OF EXPENDITURES FOR AID TO INDIANS, ALEUTS, ESKIMOS, OR OTHER ABORIGINAL PERSONS

"SEC. 401. Title XI of the Social Security Act is amended by adding at the end thereof the following new section:

"'ADDITIONAL FEDERAL PAYMENTS UNDER PUBLIC ASSISTANCE PROGRAMS ON ACCOUNT OF EXPENDITURES FOR AID TO INDIANS, ALEUTS, ESKIMOS, OR OTHER ABORIGINAL PERSONS

"SEC. 1122. (a) In the case of expenditures by a State during any quarter (commencing with the quarter which begins July 1, 1971)—

"'(A) under the plan of the State approved under (i) part A of title IV, (ii) title XVI, or (iii) title XIX, or

"'(B) under an agreement entered into by the State under part E of title IV,

for aid (as defined in subsection (b)) to Indians, Aleuts, Eskimos, or other aboriginal persons, such State shall, in addition to the Federal shares to which it is entitled for such quarter under—

"'(C) in case of a State plan approved under part A of title IV, section 403(a)(1),

"'(D) in case of a State plan approved under title XVI, section 1604 or (if applicable) section 1121(c),

"'(E) in case of a State plan approved under title XIX, section 1903(a)(1), or

"'(F) in case of an agreement entered into by the State under part E of title IV, section 453(a)(1),

be entitled for such quarter to payments (to be made in the same manner and from the same appropriations as are other payments which are made under such sections) equal to 100 per centum of the non-Federal shares (as determined without regard to this section) of such expenditures, but counting only so much of such expenditures as are counted for the purpose of determining the Federal shares under such sections.

"'(b) For purposes of this section, the term "aid" means—

"'(A) foster care (as defined in section 406, when used in referenec to a State plan approved under part A of title IV,

"'(B) aid to the aged, blind, and disabled (when used in reference to a State plan approved under title XVI), and includes (in the case of any such plan which has been modified in accordance with section 1121) benefits in the form of institutional services in intermediate care facilities,

"'(C) medical assistance, when used in reference to a State plan approved under title XIX, and

"'(D) supplementary payments, when used in reference to an agreement entered into by a State under part E of title IV.'"

ANNOUNCEMENT OF HEARING: SENATE COMMITTEE ON AGING

Mr. WILLIAMS of New Jersey. Mr. President, the U.S. Senate Special Committee on Aging—in conjunction with the 93d annual meeting of the American Bar Association—will conduct a hearing in St. Louis, Mo., on "Legal Problems Affecting Older Americans." Members of the ABA Section Committee on Legal Problems of the Aging will participate. Directors of projects under the legal research and services for the elderly, a project sponsored by the National Council of Senior Citizens under an Office of Economic Opportunity grant, have prepared a working paper which will be issued at the ABA meeting. Several LRSE representatives will also participate in the hearing.

Testimony will begin at 2:30 p.m. at the Stouffers Riverfront Inn.

ADDITIONAL STATEMENTS OF SENATORS

RETIRED CIVIL SERVANTS DESERVE CONSIDERATION

Mr. HARTKE. Mr. President, in past months a great deal of attention has been focused on America's senior citizens, who have been among those hardest hit by inflation because they are forced to subsist on fixed incomes. As a member of the Committee on Finance and the Special Committee on Aging, I have been particularly interested in the economic plight of the older Americans and have sponsored legislation to financially aid these people through increased social security and medicare benefits. However, I also serve as chairman of the Committee on Post Office and Civil Service's Subcommittee on Retirement, and I would be negligent if I did not bring to the attention of Senators the financial crisis now faced by those retired Federal employees who are not covered by social security and medicare. With so much emphasis being put on the necessity for increased social security benefits there is a tendency to forget the similar needs of civil service retirees and their survivors.

There is no question that liberalizations in the social security system must be forthcoming, but let us not overlook the need for comparable liberalizations in the civil service retirement system. Of an approximate 997,000 retired Federal employees and survivors, some 276,000 receive annuities of less than $100 per month, and about 515,000 receive less than $200 per month. Using a poverty level income of $3,000 per annum, at present 619,000, or more than 60 percent of these former employees and survivors, are living in poverty.

I intend to hold hearings on legislation to correct this injustice by granting these

civil service annuitants and survivors an overall annuity increase with the largest increase going to those with the smallest annuities. These increases would be as follows: $26 per month if now less than $200 per month; 13 percent if now at least $200 but less than $300; 9 percent if now at least $300 but less than $400; 7 percent if now at least $400 but less than $500; and 5 percent if now more than $500 per month.

I should also like to invite attention to another glaring inequity in the civil service retirement law, which is presenting a special hardship for a number of Federal retirees. The present retirement law provides that a retiree at the time of retirement may elect to take a reduced annuity to provide a survivor annuity for his spouse. Some annuitants who retired many years ago were forced, under law, to take as much as a 25-percent reduction in their annuities to provide for a survivor's annuity. Over the years liberalizing amendments have been adopted and those retiring today take a reduction of 2½ percent on the first $3,600 of annuity and 10 percent on the remainder. The law also states that only one election can be made, and that at the time of retirement.

When a retiree is predeceased by the named spouse he must continue to pay for a survivor's annuity through his reduced annuity as long as he lives, although there will never be anyone who can receive the survivor annuity. Also, if the retiree remarries he cannot name the second spouse as beneficiary.

I believe the present law is inequitable and unjust. The retiree has reduced his own annuity to provide for his spouse, and if this spouse predeceases him and he remarries, though he must still take a reduced annuity each month, he cannot provide any security for the second spouse. One can change a beneficiary on an insurance policy—why not on a survivor annuity, which is in itself a form of insurance an employee elects by taking a reduction in his monthly annuity? I also intend to hold hearings on this legislation to provide for the restoration of full annuity or permit the retiree to name a new spouse as survivor when the originally named survivor predeceases the retiree.

None of us need be reminded that the ever increasing cost of living has steadily reduced the buying power of those on fixed incomes. Though today's retirement computation formula for present employees can provide adequate retirement incomes for the career Federal employee, we must not forget that many thousands of these annuitants retired years ago, when salaries were low and the computation formula not as liberal as today's, and the small annuities their years of service produced are now inadequate to maintain an acceptable standard of living.

It would seem to me that we have a responsibility to these retirees, who dedicated their working years to the Federal Service, to correct some of these injustices, so that they may spend their retirement years free from financial concerns which prevent them from living lives of dignity.

COAL AND MINERAL RESEARCH PROGRAMS

Mr. SCOTT. I wish to congratulate Secretary Hickel for his unequivocal rejection of persistent reports that the Department of the Interior was planning to eliminate or reduce its essential coal and mineral research programs. The Washington rumor mill began to churn after the press obtained copies of a memorandum from the Under Secretary to the Bureau of the Budget calling for the elimination of the Office of Coal Research and a reduction of $23 million in the budget of the Bureau of Mines coal research program by the end of fiscal year 1972. This action would have all but completely emasculated coal research activities at a time when our national energy needs are especially grave.

Coal research activities at the Pittsburgh, Pa., and Morgantown, W. Va., facilities have already begun to pay commercial dividends. New ways to improve the combustion efficiency of low-grade bituminous coal are now being developed. These advances promise further developments that will allow us to utilize our large bituminous coal resources while, at the same time, safeguarding the environment. It is incomprehensible that these programs should be disbanded at a time when science is on the threshold of a major breakthrough.

By 1990, our projected energy needs will be twice what they are today. Even if we succeed in making dramatic advances in the production of energy through harnessed nuclear reaction, more than two and one-half times as much coal will be needed in 1990 to meet our energy demands. Our energy needs and the economy of Pennsylvania require the continuation of the Department of the Interior's coal research activities. I know I join with many other Senators and Representatives from coal-mining States in thanking Secretary Hickel for this prompt and courageous response to our needs.

I ask unanimous consent that Secretary Hickel's letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF THE INTERIOR,
Washington, D.C., July 27, 1970.

Hon. HUGH SCOTT,
U.S. Senate,
Washington, D.C.

DEAR SENATOR SCOTT: I am aware of your strong concern over the future of coal and mineral research programs.

Let me make it quite clear that this Department is not seeking a reduction or decrease in emphasis in coal research programs. I will personally determine the policy formulation for these important research efforts in the Bureau of Mines.

While the budget for Fiscal Year 1972 is, of course, still in the formative stage, I believe that the continuation and encouragement of coal research is vital toward maintaining and improving both a quality environment and a strong energy position for the Country. I have no intention of decreasing our emphasis or commitment toward programs for coal research.

Sincerely yours,

WALTER J. HICKEL,
Secretary of the Interior.

BLUE LAKE, N. MEX.

Mr. ANDERSON. Mr. President, I have attempted for many years to resolve the Blue Lake issue in New Mexico. As many Senators know, this issue has to do with the protection of the Blue Lake as a religious shrine of the Taos Pueblo Indians in northern New Mexico.

Since 1957, I have been introducing legislation which would guarantee the protection of the shrine. The Taos Indians have a legitimate concern that their place of worship be protected and kept secure from desecration. At the same time, in accomplishing this wholly legitimate aim, we must be exceedingly cautious not to set an undesirable precedent involving public lands and sound conservation practices throughout the United States. My bill, S. 750, would accomplish the goal of protecting Blue Lake without removing an entire 48,000-acre watershed from the national forest.

Recently I received a letter from the Reverend Herman Schripsema, who questions the validity of turning over the entire watershed to the tribe. I ask unanimous consent that his letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ALBUQUERQUE, N. MEX.

Hon. CLINTON P. ANDERSON,
Senate Office Building,
Washington, D.C.

DEAR HONORABLE SIR: I have watched with interest the reports of your stand in committee on the matter of giving to the Taos Indian Tribe the large tract of land they ask.

I am an ordained minister in the Christian Reformed Church, and have spent the last 25 years of my ministry as missionary to the Indians. During that time conclusions have been formed in my mind that wholly substantiate your position on giving away the 48,000 acres in the Blue Lake area.

That it would set a dangerous precedent is sure, and that is reason enough to deny the request. And, the use to which the Indian Tribe wants to put it will be amply satisfied by the smaller tract that you have been advocating.

I love the Indian people, and my best friends are Navajos, and you will represent us best if you stand steadfast against setting the bad precedent that giving the 48,000 acres would entail.

Thank you.

Sincerely,

HERMAN J. SCHRIPSEMA.

AMERICAN RED CROSS AID FOR EARTHQUAKE VICTIMS

Mr. GRIFFIN. Mr. President, recently, I placed in the RECORD a summary of the assistance made available by the United States to victims of the earthquake which struck Peru on May 31, 1970.

Recently, I was impressed by a report on the actions taken in connection with that disaster by the American Red Cross. I commend the Red Cross for its response to the appeal of the Peruvian Red Cross and ask unanimous consent that the report be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

AMERICAN RED CROSS ACTIONS TO ASSIST THE PERUVIAN RED CROSS

The first report of the earthquake which hit in the northern section of Peru was re-

ceived at 10:30 p.m., May 31 by Mr. Enso V. Bighinatti, Deputy Director of Disaster Services of the American National Red Cross via a telephone call by radio patch directly from Lima, Peru. The report of the earthquake which had occurred only a few hours earlier also included a request for assistance from the Peruvian Red Cross.

Immediate actions were taken to comply with the request for aid. A ten-man Red Cross team of disaster specialists were dispatched to work with the Peruvian Red Cross. In addition a Red Cross representative went with the U.S. Government Survey Team dispatched from Panama. The Red Cross disaster team was headed by Ralph Mitchell and included: Michael A. Lanigan, Ralph E. Davis, Gabino Carrillo, Rene Carrillo, Edward Hukle, Edward Valenzuela, William Braye, David Claude, Marco Beteta, and Howard Spiegleman. Mr. Mitchell has since returned, however, the rest of the Red Cross team remains on the job in Peru.

Direct assistance rendered thus far includes $35,000 cash contribution from ARC to the Peruvian Red Cross to be used for local purchase of relief supplies. Over 827,000 pounds of relief supplies, valued at close to $500,000, have been shipped or are enroute. These supplies include food, clothing, medicaments, blankets, tents, roofing material, etc. A detailed shipping report is attached.

Immediately following the disaster the avalanche of relief supplies shipped into Peru from many countries throughout the world created serious logistical problems. Our Red Cross team was able to give considerable assistance to the Peruvian Red Cross and other agencies in eliminating these logistical problems by locating and establishing warehouses, and effecting a pipeline for immediate distribution from the ports of entry to the affected areas. In these early stages ARC staff were directly involved in carrying out many of these operational plans. At the present time a very effective organization has been established made up of local paid and volunteer personnel. The American Red Cross team members are therefore now acting in an advisory and training capacity and as soon as the Peruvian Red Cross staff and volunteers are trained and able to carry on their responsibilities our staff will gradually phase out the operation. American Red Cross personnel will stay on the scene in Peru, however, as long as needed. The supplies of food and medicaments are reported to be sufficient to take care of present needs. The operation is now moving into the recovery stage and the ARC is now focusing our assistance toward furnishing rebuilding materials to help with reestabishing homes for the victims. Many of the manufacturers of the roofing materials, etc. have been most cooperative and have made sizable donations of this badly needed material. The American Red Cross will continue rendering support to the Peruvian Red Cross as long as necessary for this earthquake operation.

CRITICAL TEXTILE IMPORT PROGRAM

Mr. TALMADGE. Mr. President, it is becoming increasingly apparent that strong congressional action would be required to remedy the critical textile import problem. Efforts to negotiate agreements have been stymied, and in my judgment no alternative is left but the establishment of reasonable import quotas to protect the American industry.

The Washington Post of Sunday, July 26, contains an excellent editorial column written by Stanley Ruttenberg, a former Assistant Secretary of Labor, that supports the case for textile quota legislation in more compelling terms, especially in terms of how the American textile and apparel industry is virtually having to fight for its economic life and in terms of lost jobs at a time when unemployment has already become perilously high. Mr. Ruttenberg also disposes of the notion that cheap, low-wage imports from countries like Japan benefit the consumer by holding prices down. As he points out, the Consumer Price Index shows that this has not been the case.

I bring this editorial to the attention of the Senate and ask unanimous consent that it be printed in the RECORD.

There being no objection the article, was ordered to be printed in the RECORD, as follows:

MANY LIBERALS BACK TRADE BILL

(By Stanley Ruttenberg)

(NOTE.—The author of this article, former assistant secretary of Labor, is now a manpower consultant in Washington. One of his clients is the Amalgamated Clothing Workers of America, which supports textile quota legislation.)

It is perhaps a sign of the times that many organizations and individuals normally aligned with advocates of liberal trade policies now find themselves charged with protectionism. They are the target of criticism by erstwhile allies because of their support for H.R. 16920, the bill introduced by Chairman Wilbur Mills of the Ways and Means Committee and 255 other congressmen designed to provide for orderly trade in textile, apparel and leather footwear.

Among analysts and observers who have, for any length of time, been close to the trade scene, none of this should have come as a surprise—not the Mills bill; not the support that it has evoked among those who are truly committed to expanding world trade and certainly not the attacks that have been leveled at both by those who regard themselves as the only true defenders of the faith.

This latter group may reject the idea, but the plain and simple fact is that many of those who have been supporting H.R. 16920 believe as I do that such a posture is not at all inconsistent with advocacy of a liberal trade policy.

The bill that was introduced by Chairman Mills—himself a long-time free trade advocate—is considered by its supporters to be the best way to assure continued expansion of trade between nations. Strangely enough—and to the dismay of the critics who have from the outset viewed the bill as the potential opening salvo of an all-out trade war—liberal trade advocates have lent support to H.R. 16920 in order to forestall the wave of protectionism and the resulting trade war that they feel would be certain to materialize if the ideological rigidity of the critics is permitted to prevail.

In short, supporters of the Mills bill who believe in liberalized trade perceive some very real and urgent problems that require attention.

Opponents of the Mills bill simply refuse to recognize that the period of reconstruction following World War II has long since passed, that this is now 1970, and that the economies of our major trading partners have been rebuilt and are flourishing; and that, despite such changed circumstances, these nations retain a variety of barriers to trade which the critics of the Mills bill tend to brush aside as if they were inconsequential.

For example, the value added tax prevalent in countries of the European Economic Community has the effect of raising prices on imports and reducing prices on exports; Japan not only restricts the free flow of capital; but also maintains import quotas on scores of key commodities; the United Kingdom restricts coal imports; the variable levy and price-support arrangement employed by the EEC for agriculture is its adaptation of the American Selling Price principle; the EEC and the United Kingdom have agreements with textile-producing Asian countries effectively controlling the flow of textiles. And this does not even begin to exhaust the list of "exceptions" to the principles upon which free trade and reciprocity are based.

It is not enough to offer as the rationale for policy, as do the critics of the Mills bill, that the United States should do what is right regardless of the behavior of others. The possible adverse consequences of such a policy—on jobs and income, and in the almost-certain trade war that can ensue—are too great.

The upsurge in textile and apparel imports over the past decade has been tremendous, particularly with respect to products of man-made fiber and especially during the latter part of the decade. By the end of the decade of the 1960s, U.S. imports of textile and apparel products were in excess of $2.1 billion per year—more than double their level in the early part of the decade. So far as products of man-made fiber are concerned, import volume—measured in square yards—rose by more than 200 per cent between 1965 and 1969 alone, while the apparel portion of that import volume grew by 500 per cent.

If the critics of the Mills bill are accurate, this uncontrolled flood of textile and apparel imports should have rebounded to the benefit of American consumers by holding down prices. The available evidence points in the apparel direction.

Price increases of apparel items were responsible for more of the total increase in the Consumer Price Index during the latter part of the decade—when the volume of imports was ballooning—than during the first part of the decade.

It stands to reason that the domestic apparel industry, in which average hourly earnings in 1969 were $2.31, cannot be expected to compete successully with imports produced by labor which is paid as little as the U.S. equivalent of 26 cents per hour (as in Hong Kong) or 39 cents per hour (as in Japan). American producers in this labor-intensive industry simply do not have a countervailing advantage in technology with which to overcome the advantage in labor costs that these kind of wage rates give to foreign competitors.

Critics of the Mills bill have been inclined to reject any suggestion of job losses due to the growth of textile and apparel imports, but they ignore the hundreds of thousands of jobs—more than 200,000 in apparel alone during the 1960s—which would have been created in the absence of the imports.

Without adequate safeguards, imports will continue to grow at an excessively rapid rate, undercutting both jobs and labor standards without necessarily benefitting the consumers. To delay recognition of this reality—and the development of a thoughtful remedy—will not eliminate the problem. Rather, it will assure that the eventual response and reaction—and there will be one—will be that more explosive.

A NEW ACADEMIC YEAR ON AMERICAN CAMPUSES

Mr. FANNIN. Mr. President, it soon will be time for the start of a new academic year on our campuses. This is an appropriate time to review the responsibilities of our citizens and of our stu-

dents to our institutions of higher learning.

It indeed is a sad day when for any reason our institutions of learning are not open for those who are seeking knowledge there.

Where else are we to light the lamp of understanding and seek intellectual guidance for the solution of our problems?

It grieves me that there are students, and even faculty members, who would countenance such closing. When we darken the doors of our colleges and universities we extinguish the eternal flame.

Again, I believe it is timely to review our campus situations in this Nation today because there is a growing support to permit 18-year-olds to vote, a proposition I feel should be considered only through a constitutional amendment.

Certainly today, the first step in exercising responsibilities of citizenship is for our students to make sure that their student representatives really are in fact representative of the student body.

The Arizona Republic of July 19, 1970, has published a discerning editorial on the necessity for responsible students to safeguard their campus organizations.

The editorial notes that the militant president of the student body of a large university was elected by a vote of 1,000 to 300—yet, there were 23,000 students eligible to vote.

The editorial is timely. It reminds the students that the militants take time to vote.

We must be ever vigilant to safeguard our freedoms and our individual rights. We must be ever vigilant that those who speak for us, do so at our choice, and not by our default. This is the first lesson of good citizenship.

And certainly our college youths must remember that the first measure of their citizenship will be by their campus actions. If the militant and outspoken youth leaders on their campus do not represent their views, the students will have only themselves to blame.

Mr. President, I ask unanimous consent that the editorial and the excellent statement of May 18, 1970, by Arizona's great Gov. Jack Williams concerning the policy for State tax-supported educational facilities be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

WILL YOUNG AMERICA DESTROY ITS HERITAGE?

Although less than 10 percent of American youth has been participating in the violent, senseless protests about their own colleges and universities, there is a growing danger that the noisy, militant leaders of America's young revolutionaries will lure more and more students to their cause.

The vast majority of students are serious-minded young people striving to get an education. They have, so far, refused to enter into the "gory glee" of hell-raising on the campuses. But no leadership among the silent majority of students has arisen to challenge the revolutionaries.

The President of the student body at a large university was elected by a vote of 1,000 to 300. Only 1,300 out of 23,000 students voted in that election. They simply weren't interested in the militant program of the radical leaders. However, the student who was elected president claims that he represents the entire student body, and demands a voice in the Board of Regents' meetings, in spite of the fact that 90 per cent of the students wanted no part of his program.

Unless the students who believe they go to college to get an education rather than to start a revolution begin very shortly to organize and challenge the revolutionaries on the campus, they may find they have sat silent while their precious heritage of freedom and opportunity goes down the drain in a blazing, destructive, senseless revolution led by leaders who don't know what they want or what they would do with it if all their demands were granted. They want a noisy voice in everything, but beyond that they know not what they are shouting about.

A sober observation about America's youth recently came from England, where the editor of the London Daily Telegraph declared that no generation of young people ever had so great a heritage of freedom and opportunity as today's American youth.

Under the caption "Revolt of the Pampered," the editor of the London Daily Telegraph wrote:

"America is the victim of its national myth. It entered history proclaiming the rights of man; its Constitution is aimed at fostering freedom at all costs. Its young have been brought up largely on an educational theory which attaches supreme importance to self-expression. Is it odd that it should lead the world in rebellion or that its volunteer forces should sometimes lack the virtue of unrelenting discipline? Yet one marvel does defy explanation. Why should America's pampered and idolized student youth, living in a country that enjoys freedom and prosperity in unprecedented degrees, turn all its righteous anger, not against the depotisms that rule most of the rest of the world, but against America itself?"

OFFICE OF THE GOVERNOR,
STATE HOUSE,
Phoenix, Ariz., May 18, 1970.

A STATEMENT BY GOVERNOR JACK WILLIAMS

The people of Arizona have clearly demonstrated their intention to support the state's universities as institutions of learning.

The Board of Regents carries the responsibility of answering the expressed concern of our citizens. I suggest we must take appropriate action to:

1. Identify the non-students who advocate violent disruption of accepted university routines, and effectively bar them from the state's campuses.

2. Advise those bonafide students, and those faculty members who have encouraged and supported violent disruptions of the university routines that such disturbances will no longer be tolerated, and

3. Declare our intention to maintain on the college campuses in Arizona a climate which whl be conducive to the welfare of those students who are in earnest in their desire to secure an adequate education.

Peaceful dissent is our heritage, but it must not encroach on the rights and privileges of non-dissenting students to pursue their legitimate purposes at the universities.

The incidents which have disfigured some Arizona campuses in recent weeks were created by a very small minority of the students enrolled at these institutions.

We can be grateful that such disruptions as have occurred have not produced the tragic situations so common in other universities throughout the nation. But we must recognize that unless we take the proper action now the situation may escalate and bring about an intolerable condition.

My office has received petitions bearing the signatures of thousands of Arizona citizens demanding action.

The 29th Legislature has enacted and I have signed into law Senate Bill 174. The purpose of this legislation is clearly stated in Section 1 of the Act:

"It is the purpose of this Act to guarantee to students, faculty and other staff and the public, that tax supported educational facilities will remain accessible and useful at all times for educational and other authorized public purposes in accordance with appropriate rules and regulations established by their governing boards."

We must not equivocate; we must not procrastinate. Our duty is clear. The ambitions of that very small minority to disrupt and destroy and humiliate our institutions at the expense of the vast majority of serious, peaceful students must not be permitted.

FORTIETH ANNIVERSARY OF THE VETERANS' ADMINISTRATION

Mr. CRANSTON. Mr. President, a week ago today, on July 24, the Veterans' Administration celebrated its 40th anniversary. As chairman of the Veterans' Affairs Subcommittee, I wish to congratulate the Administrator of Veterans' Affairs Donald E. Johnson and the 170,000 VA employees working for the welfare of veterans in installations across the country. Over the years, the VA has compiled a record of dedicated and effective service to our Nation's veterans.

On July 24, 1931, President Hoover signed the Executive order creating the VA and thus creating some form and some system to the way our Nation was caring for its veterans. The order combined smaller agencies—and the activities that had been fragmented throughout these agencies—into one organization capable of doing the job that needed to be done for men who had suffered from war and for their dependents.

With the great mood of returning veterans at the end of World War II, the VA's importance grew in a way that had not been foreseen at the time it was formed. But, because it had developed a strong staff and because of the leadership of Gen. Omar N. Bradley, the VA was able to meet the challenge of not only providing for a much larger veteran population but also administering a large array of new veterans' programs.

The number of veterans and the number of programs have continued to grow since that time. But the agency has in the main continued to be blessed with capable administration, loyal, skilled employees—and the unwavering support of the American people.

When President Hoover signed the order creating the Veterans' Administration, there were 4,664,000 living veterans, of whom 4,336,000 were veterans of the First World War. There were still nearly 50,000 Civil War veterans and there were 274,000 Spanish-American War veterans.

It is not a happy thought that events within the last 40 years have added to the number of veterans until there are now nearly 28 million men and women who have served this country in time of peril. But it is comforting to know that their needs are being cared for in an efficient way by one of the largest agencies of the Federal Government. It is good to know that, while in 1930, programs for veterans helped meet only the most basic and minimal needs, today, veterans are

entitled to the benefit of programs to help them meet the greater needs of today's society.

Perhaps one of the greatest developments that has taken place during the VA's 40 years has been the change in philosophy that now directs and compels the agency to go and meet the veteran, to invite him in and to say, "How can we be of help?" This new way of operating means even going to the battlefield to meet the man before he becomes a veteran, trying to help him foresee his needs and plan his civilian future.

This type of service is a development of very recent years. It was an important part of the new veterans' education and training law, Public Law 91-219, that we enacted this past March.

Mr. President, at a time when we are gaining about 1 million new veterans a year, it is well to pause on the VA's birthday to recognize our enormous obligation to those who wage our wars and to rededicate ourselves to insuring that the VA receives all the funds, personnel and general public support it needs to continue its record of good service to our veterans in its many diverse programs. This is the finest and most appropriate birthday present we could give the VA and our 28 million veterans.

EPA: THE PRESIDENT'S PROPOSAL TO COORDINATE ENVIRONMENTAL PROGRAMS

Mr. BOGGS. Mr. President, President Nixon earlier this month sent to Congress his reorganization plan No. 3. This is an important proposal that will consolidate several existing agencies into a new Environmental Protective Agency. President Nixon explained the need for this change in his message to the Congress:

> The Government's environmentally related activities have grown up piecemeal over the years. The time has come to organize them rationally and systematically.

The President is to be commended for his leadership in offering this imaginative proposal. The Ash Council, under the leadership of industrialist Roy Ash, and its environmental group, headed by Amory Bradford, are also to be commended for their efforts in developing the information for the President.

Specifically, reorganization plan No. 3 will bring together into one agency reporting directly to the President nearly a dozen programs now scattered among various departments. The Federal Water Quality Administration and the National Air Pollution Control Administration will be the largest component units of EPA. The reorganization, however, will also combine the pesticide study authorization under the Department of the Interior with the pesticide registration activities now performed by the Agriculture Department and pesticide studies conducted by the Food and Drug Administration. The reorganization plan will take over the Atomic Energy Commission's work on radiation criteria and standard setting, as well as programs on radiological health, solid waste management, and water hygiene from the Department of Health, Education, and Welfare.

The creation should go far toward encouraging a coordinated approach to meet these challenges. As President Nixon stated:

> The environment must be perceived as a single, interrelated system. The new structure of EPA, the President went on to say in his message to Congress, would have the capacity to do research on important pollutants irrespective of the media in which they appear, and on the impact of these pollutants on the total environment.

The form in which a particular form of waste enters the environment and causes an environmental threat is often pure chance. Or it may be product of how vigorously water pollution or air pollution is attacked.

When dust is removed from a factory's smokestack, air pollution is prevented. But accumulated dust either becomes solid waste, or it may be discarded into a nearby river creating water pollution.

By coordinating these programs under a single executive agency, we should be able to insure that the pollutant brings the least possible damage to the total environment.

Although some persons have argued that specific components of the proposed EPA should remain in their existing department, it is my belief that the general concept is sound and should be supported.

In recent months, I have had the honor to cosponsor legislation to create such an agency that was offered by Members on both sides of the aisle. The record that will be made in hearings on EPA today and tomorrow by the Senate Subcommittee on Executive Reorganization will be of great benefit to our understanding of the EPA concept.

A recent editorial in the New York Times discussed another aspect of this proposal. The editorial, in strong support of the President, stated:

> No agency entrusted with promoting the development of an area's natural resources—minerals, seafood, water power—should be entrusted at the same time with protecting the environment against the consequences of that development.

I ask unanimous consent that this editorial be made a part of the RECORD at the conclusion of my remarks.

It is also significant, I believe, that many State governments have perceived this need to coordinate more fully their environmental agencies.

Three days before President Nixon announced his reorganization plan, Gov. Russell W. Peterson, of Delaware, led a discussion on the State's efforts to enhance the environment. This program, in which many Delaware officials participated, was for the benefit of the Southern Regional Environmental Conservation Council, connected with the southern Governors conference.

Governor Peterson made it clear that Delaware, the First State of our Nation, intends to set the example on what can and will be done at the State level to abate pollution and enhance the environment.

Our Nation and our States, Governor Peterson told the officials, must "recognize we have to manage this whole ecological system as one unit." To allow my colleagues an opportunity to understand the significance of the Delaware program, I ask unanimous consent that a copy of Governor Petersons' remarks be printed at the conclusion of my remarks, as well as a copy of a newspaper article concerning these sessions.

The EPA proposal is an important step forward. I applaud the President for the courage and wisdom in presenting it to the Nation.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY GOV. RUSSELL W. PETERSON

I appreciate the opportunity for us Delawareans to appear today before your panel to give you our report of what we're trying to do in this very important field, hopefully to stimulate some ideas on your part and we're looking forward to the opportunity to take advantage of the ideas you have caught from other parts of the seventeen southern states you are studying.

I want to welcome you here in Delaware. We are quite proud of our little State. We believe we have many treasures here to safeguard and our history tells us we've had some great treasures which we lost as a result of our failure to take care of our environment. We are out to recruit them as you have heard here today.

Some people refer to Delaware as the "Diamond State." We think it is a jewel among the states and we are going to do our darndest to make it ever better. We have set as a goal to make our State a model for the nation. We pride ourself in our heritage that we were the first state to sign our Constitution and, therefore, we plan that we're the state that started the nation and we can thus become the state that leads the nation. One of the places we're out to lead this nation is in the area we're discussing today of the quality of our environment and the conservation of our natural resources.

Now you no doubt have concluded by now that we have been blowing our horn here today; I hope that you didn't think a single horn. We deliberately have tried to blow a whole variety of horns and string instruments and drums because we want to illustrate the fact that if we're going to solve this problem, we have to be carrying out a whole symphony; a symphony which gives some harmonious actions about the whole community. In fact, one of the problems in the past as we've approached the difficulties with our environment in a piecemeal way—one individual, one organization to cope with a little part of it—not recognizing its effect on other parts.

But now we are in many places in America, and certainly we are here in Delaware, recognizing that we have to manage this whole ecological system as one unit. And we are doing it, but as we go about doing it and as we talk here today, I think it's important for us to keep remembering it's only one part of the environment that we have to keep working on. I'm sure that some young boy in a home in the slums with the many problems in that environment could care less about whether we clean up the beach down in Rehoboth or whether we have pure air and pure water and many other aspects of that immediate environment much more pertinent to his future. And so it goes that children raised in the home of the parents who have no respect or love for the kids, they are stunted in their ability to learn and to develop. So, that kind of environment is extremely important for us to pay attention

to and when somebody's driving down the highway and gets run into by a drunken driver and loses his life or has his family crippled by the accident, he is greatly concerned about that aspect of our environment, too.

So, there are many many things you should keep in mind when you talk about the quality of our environment besides those which we are talking about here today. But, the natural resources, the quality of our air, the quality of our water certainly has not been given adequate attention in the past and is very encouraging and heartening to all of us, I'm sure, to realize the great interest now throughout America and especially through our younger generation.

As you have been told here before today, we this year reorganized the government and the first unit of this new reorganization was our Department of Natural Resources and Environmental Control—the Department where we pulled together all those responsibilities of State government concerned with our natural resources and with the control of the quality of our air and of our water and the disposal of our solid wastes. We've been trying to learn from what's going on around the world what we can do to make our environment truly outstanding and we may come up with some ideas of our own that we are trying to prove. We've heard about the work we've been doing right out in front. The record shows we've been trying to set standards for the quality of our air, to install the most modern and complete monitoring system in the country for air quality, that is, and now right out there on schedule in developing our tentative plans, before long it will be our firm plans, for implementing our air quality standards, at least for two of the contaminants of the air.

We are taking leadership in providing State resources to help in controlling the quality of our water. Fortunately, the State of Delaware is supplying more funds to help local communities with sewage treatment programs than the Federal Government is to the states. We believe that by 1977, we will have our streams of Delaware cleaned up and one of the key bottlenecks here is to get the Delaware River cleaned up and that is dependent primarily upon the City of Philadelphia abiding by the time schedule established by the Delaware River Basin. We are looking for the day when that Delaware Bay will again be thriving with all kinds of recreational spots, tourist spots, as it was some decades ago. We want to make it as attractive along the area to human beings as it now is to the Canada goose in certain parts of our area. You know it's a disadvantage being downstream and it's certainly true when people put food in some rivers. We're about as far downstream in the Delaware River as you can get and so our waters here are dependent upon cooperation of our neighbors to the north and we believe through the Delaware River Basin Commission that we are getting that cooperation, at least we have the mechanisms to insist that we get that cooperation. I am sure that you from the more southern states are concerned about being further downstream when it comes to the Canada goose; because as you can see, we've now made Delaware a very attractive stopping place for the Canada goose and he no longer goes, at least many of them no longer go, as far as North Carolina and some other places, and we tend to make Delaware as attractive as possible for such water fowl.

I am as excited as we saw Bob Berndt was and many others are here in Delaware about our attempt to convert our solid waste into an acid as a raw material for a manufacturing purpose so we can sell products from it and then profit thereby and at the same time get this litter off of our fields and our highways and our beaches.

I was asked when I came here today by the television crew whether I really thought it was desirable for Delaware to get involved with the Seventeen State Group on the study of the quality of our environment, and I said "yes" I thought it was important to join and study the problems and consider what we might do together, but the prime thing we should do is to do the job at home. There is no better way to get the job done than to do it oneself, in his own home, first, in his own back yard, second, his neighborhood, in his economy, in his State, and in his region, and in his nation.

We're out to set an example here in Delaware how we're going to clean up our own back yard. Hopefully, we can learn from you how we can do that job better and we would like to think that maybe we can submit some suggestions to you to help you do the job in your own area. But, by the example of our actions, we do the best job of teaching. We are going to make our little State an example for ourselves first of all.

Now, we recognize when it comes to such things, as I said a few minutes ago, the quality of air and the quality of water, that we have to work in partnership with our neighbors and I've already mentioned the Delaware River Basin Commission as the extremely important organization in the quality of the water in our area. Austin Heller and John Bryson mentioned the Air Quality Control Region, centered around Philadelphia, which I've stated, as a part obviously necessary for us to be concerned about the air in the region involving our neighboring States and certainly we talk about the Delaware Bay and need be concerned about New Jersey and need to work in partnership with New Jersey as we are doing. I know that there are important things that the seventeen states that belong to the Southern Regional States have been working on together just as there are things that all fifty states have been working on together. So, we want to listen to what your proposals will be when you get through with the study to see to what extent to participate with you in that program.

One of the things which is so vital to all of us is to pick out the goals that we want to reach. We managed here in Delaware in about 14 months, from start to finish, to change from a commission form of government of about 144 different agencies and commissions to essentially ten departments. We'll finalize that when we hold our first cabinet meeting on August 5. Now many people told us we couldn't do this; it was ridiculous to think that we could do it; and certainly ridiculous to think that we could do it in that short a length of time But we set the goals and decided that one thing that we knew for sure, we'd never reach that goal unless we set it. And, as the months went by, people were very, very critical of this and said "My Gosh, I think they're going to make it"; and the thing got contagious and they worked harder and harder and did make it.

Now, I cite that as just one of the many examples of the same thing. You can do big things if you set big goals. If we set little goals, we would have a hard time meeting those little goals. So I say to you as we go about studying this and I say to Delawareans, let's set big goals when we start because we can meet them and if we don't set big goals, we never will meet them.

[From the Wilmington (Del.) Evening Journal, July 7, 1970]

ENVIRONMENT GROUP TOLD STATE'S ECOLOGICAL PLAN

(By Wally Judd)

A comprehensive plan for Delaware's environment control was presented to representatives of the Southern Regional Environment Conservation Council yesterday by Gov. Russell Peterson and his top ecology aides.

The council representatives, seeking to find out what 24 states are doing to better the environment, heard Delaware's story in a 2½-hour hearing at Buena Vista.

No special new projects were announced. The state summarized what it is doing and what it has on the drawing board.

The council, which is connected with the Southern Governors Conference is collecting information on the feasibility of "umbrella" agreements between the states and the federal government that would allow separate states to enter separate agreements on interstate environmental problems without federal approval of each case.

Delaware belongs to the Southern Governors Conference and is interested in the council's affairs. Seventeen states are in the association.

"We're interested in what other states are doing and we're going to listen to what this group comes up with. But I'm not terribly excited about the program because we have to deal more with Pennsylvania, New Jersey and New York," Peterson said.

The thrust of the state's message was that "it intends to clean up its own backyard in becoming a model for the nation."

Points covered were:

AIR POLLUTION

The quality of Delaware's air is watched by a computerized monitoring system capable of making more than 500,000 individual determinations per month through four primary and 10 secondary stations.

Delaware is in an air quality region with certain counties of Pennsylvania and New Jersey. Standards governing this region are set by the state and approved by the Secretary of Health, Education and Welfare.

Delaware's own air quality codes include regulations concerning sources having interstate air pollution potential, refuse and salvage operations, smoke emissions from the fuel-burning equipment, ambient air, particulate emissions from fuel-burning equipment, and sulfur dioxide.

"These facts coupled with our philosophy that if each state properly abates its own pollution problems, the need for superagencies operating across many boundaries is often unnecessary," said John Bryson, acting director of the Division of Environmental Control.

WATER POLLUTION

Delaware has developed a method of collecting water samples between tides with a fast boat to give uniform readings when the river is at a state of equilibrium. This technique enables the state to identify polluters after a few samples, according to Bryson.

Tides cause a problem because they bring pollution back after it has flowed away.

Bryson said this technique enabled the state to draw conclusions about the state's rivers in six years while it took the British 50 years to draw similar conclusions about the Thames.

The state has also developed an effective trap for collecting oil from spills. The device uses chicken wire and a lot of straw.

To meet federal standards, the state has not found it necessary to build a primary sewage treatment plant since 1963 but has built 28 industrial and 32 municipal-commercial systems since then to augment the total system.

Peterson said the state spends more on local water treatment plants than the amount for which the federal government compensates the state.

Plans for treatment of more than 90 per cent of the state's sewage are on the drawing board, according to Bryson.

WILDLIFE AND FISH RESOURCES

As a result of a plan to remove physical obstacles to fish passage, shad are passing lower mill dams on the Brandywine Creek, according to Norman G. Wilder, acting director of Division of Fish and Wildlife. Eleven more fish passages are scheduled to be built which should open the Brandywine for saltwater fish spawning in fresh water. The department also protects wetlands from such things as pesticides and regulates fish harvests.

Through the use of protected areas and live decoys, the Canada goose has returned as the state's major waterfowl.

Wilder says he has seen evidence of the bald eagle reproducing since DDT has not been getting into its food supply. And, plans are under way to reintroduce the ruffed grouse to the area after 100 years of absence.

PARKS AND RECREATION

The state recently passed legislation to charge $1 entrance fee per car on state parks and recreation areas. Seasonal permits will cost $5.

The state has allocated $12.1 million for a six-year program to buy parklands, which will double the state's park acreage from 6,000 to 12,000 acres.

SOLID WASTES

Delaware recently authorized $1 million to be spent on the design of a project to reclaim materials from solid wastes and sell them to private industry.

Projections are that the plant will be able to handle 500 tons of solid wastes daily.

This plan was the best received of all the programs mentioned by the State.

"I don't know of any state that has gone this far," said Ralph Pickard, director of the Board of Environmental Health in Kentucky and a member of the task force.

MARINE AND COASTAL AFFAIRS

Dr. James Wakelin Jr. has been hired as a special assistant to Gov. Peterson.

He said the group he heads hopes to evaluate the state's present resources, evaluate the present controls, and make recommendations by the spring of next year.

After the formal presentations which were coordinated by Austin Heller, secretary of the Department of Natural Resources and Environmental Control, Peterson told how he believed the state's programs could be a "model for the nation" and that Delaware's role in the national pollution problem was to clean up its own backyard to serve as an example for others. He cautioned that environmental control means more than pollution.

"We're blowing our horns today," said Peterson. "But to solve the environmental problem, you've got to play the string instruments and the drums—the whole symphony. One boy in the ghetto could care less whether we clean up the air."

[From the New York Times, July 12, 1970]

PLAN FOR THE ENVIRONMENT

President Nixon's proposed reorganization of environmental agencies is a statesmanlike move which could prove to be almost as historic in its own way as the great alphabetical upheavals of the early Roosevelt Administration.

Basically the President's plan rests on two concepts. One, long nurtured by conservationists of all shades, is that no agency entrusted with promoting the development of an area's natural resources—minerals, seafood, water power—should be entrusted at the same time with protecting the environment against the consequences of that development. The two objectives often conflict, and it is almost invariably the organized exploiters who win, the unorganized public that loses.

The second concept of the plan is that problems posing current environmental dangers, calling for quick solution or mitigation—air pollution from automobiles, the pumping of raw waste into streams—are the province of one type of agency; while those long-range problems, calling for study and research—the impact of modern society on the plankton of the seas, the cumulative effect of chemical dischargs on the earth's climate—require different treatment.

The President's approach would take into account the first of these broad principles by assigning to a new Environmental Protection Agency those functions that old-line Cabinet departments and independent commissions have largely failed to perform because of their concentration on stimulating production or aiding particular groups in the population.

Agriculture and the Food and Drug Administration would yield to the new agency their often reluctant and ineffective control over pesticides. The Atomic Energy Commission, bent on producing energy, would lose its authority to set radiation standards. Aspects of water-pollution control would be brought together from Interior and the Department of Health, Welfare and Education, which would likewise lose its function in the field of air pollution.

The second of the two principles would be satisfied by creation of a National Oceanic and Atmospheric Administration. This agency, with an eye on the distant future, would draw its components from old-line agencies where they now exist, for the most part as disconnected bits and pieces of government. But it will be incorporated, unfortunately, in the unimaginative Department of Commerce.

Inevitably the plan will draw criticism—subdued and unofficial in the departments whose empires will be reduced; loud and on the record in Congress, where so great a reorganization is bound to affect those committee chairmen whose power derives from the hold they have on particular departments and agencies. Conservationists in good standing will have questions of their own: why should the Army Corps of Engineers retain any say in the matter of industrial discharges into navigable waters, for example? And why should aircraft noise levels be left to the Department of Transportation, which is sold on the SST?

Everyone can play the game—but it can hardly be helpful. The President's plan offers a major advance in drawing together a great many of the scattered concerns of some 84 Government departments, bureaus, administrations, councils and the like. If nothing else, it would break up the bureaucratic pattern of all too many entrenched, encrusted agencies—some clashing, some overlapping, some moribund.

Congress has sixty days in which to veto the reorganization or let it take place. Along with millions of others, we will watch hopefully for the triumph of imagination over the politics of special interest.

SENATOR NELSON CALLS FOR NEW PRIORITIES IN TRANSPORTATION

Mr. TYDINGS. Mr. President, the Senator from Wisconsin (Mr. NELSON) recently appeared before the Senate Public Works Subcommittee on Roads at the hearings on "all aspects of the national highway program and related activities." His statement was a ringing call for new and more rational priorities in American transportation.

He pointed to the incredibly disproportionate amounts of money this Nation has spent, from Federal taxpayer funds, on highways as compared to other means of transportation. He asked us to imagine how different the country might be today—different and better—if we had spent these immense sums of money in a more balanced and rational way.

Since we cannot now undo the errors of the past, it is at least incumbent upon us to do better in the future, Senator NELSON said. Specifically, he called for an early end to the highway trust fund or, alternatively, for a commitment to use moneys from the highway trust fund for "alternatives to the highway and the automobile" after the 42,500-mile Interstate System is finished. That is the proposal of his bill, S. 3996. The Senator also endorsed my bill, S. 3960, which would permit States to use portions of their Interstate System apportionments from the trust fund for urban mass transit, if they so elect and the Department of Transportation approves the plans.

The irrationality of our present transportation priorities is pointed up by two of the many statistical facts that Senator NELSON included in his speech. He revealed that approximately 84 percent of the 1½ trillion passenger-miles that are traveled every year in this country in automobiles are miles covered on short trips, not on overnight or long-distance travel. Essentially, the Senator said, this means that well over 1 trillion passenger-miles of automobile travel each year is travel "around town." Yet it is in the cities that the automobile poses its greatest threat to the environment and is least satisfactory as transportation.

Senator NELSON called for declaration of a positive national goal of shifting up to one-half billion passenger-miles of travel now accomplished in automobiles into other forms of conveyance. Enactment of both his bill and mine would be important steps toward realization of that goal.

Mr. President, I ask unanimous consent that the text of Senator NELSON'S July 13 statement to the roads subcommittee, omitting the appended tables and exhibits, be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR GAYLORD NELSON

Mr. Chairman, you and your committee are facing decisions of literally awesome importance. Before the year is out, the Congress, guided by this subcommittee, might well take actions that will affect not only the quality of transportation but the quality of life in this country for the rest of the century and beyond. Certainly the country can only be encouraged by your first decision in this process: your decision to hold wide-ranging hearings *before* the introduction of a new, omnibus highways bill.

While it is a privilege to have been invited to participate in your deliberations on highway policy as related to total transportation needs and environmental concerns, it is also humbling if only because of the massive dimensions of the challenge. The vast experience of the subcommittee's members is well known. Further, in preparation for this occasion, I have read quite a bit of the testimony presented at the first round of these hearings, and in the hearings before your House counterpart. Some of those statements are "hard acts to follow." In that category could be placed, among others,

Chairman Randolph's June 3 statement on the Senate Floor, announcing these hearings; Senator Proxmire's statement of June 9; and the June 10 testimony of Mr. Slayton of the AIA (American Institute of Architects), in which the American Institute of Planners (AIP) concurred.

Mr. Chairman, this is a rather lengthy prepared statement, including some tabular material that is not very readable—aloud. With your permission, I shall offer it in its entirety for the record and then reverse the usual order of things by stating my conclusions and recommendations at the outset.

CONCLUSION: AMERICA'S TRANSPORTATION PRIORITIES NEED RADICAL CHANGE

It seems quite clear to me, despite the forcefully expressed contrary impressions of many good citizens and good friends in the highway-related industries, that our automobile-highway transportation system has gotten completely out of hand.

It has become too large, too costly, too wasteful and, ironically, falls far short of meeting our transportation needs.

The country has become enmeshed in a vicious cycle: we build more roads because more people are buying cars; then more cars are built and sold because the roads are there and other ways of getting around on the ground are not there.

The resultant problems of mounting accidental deaths, resource consumption, junk disposal, air pollution, noise, traffic jams, human dislocations and disruptions, destruction of city neighborhoods, uglification of both the urban and rural scene, and the decline and fall of mass transit are reaching —and in some places have reached—disaster proportions.

The 1970 Highway Needs Report, like its predecessors, defines "need", unfortunately, in terms of the amount of new pavement required to accommodate projected increases in the population of motor vehicles. Those projected increases are accepted as if carved in stone and beyond human intervention.

Today we have 105 million motor vehicles in the United States. The Department of Transportation tells us that there WILL be 134 million motor vehicles by 1980 and 158 million by 1990, and establishes the requirements for additional highways on those numbers. The required roads, according to the American Association of State Highway Officials (AASHO), will cost $320 billion over the next 15 years. We have no estimate on all the parking lots and garages and other hundreds of thousands of acres of land that must be paved-over and surrendered forever to the automobile and the truck.

There is no reason those increases must be accepted as inevitable.

Instead of asking, "How can we accommodate 'X' millions of additional cars by 'Y' year?", we should be asking ourselves and the experts, "How can this Nation most rationally, efficiently and economically, by a set year, be accommodating a national demand for the trillions of miles of travel, in cities and between cities, by persons and goods?"

Our focus should be, constantly and without flinching, on the *social* need for the best possible transportation for the maximum number of people. We should be distracted if at all only temporarily and always secondarily by considerations of the *economic* needs of particular vested-interest industries.

Another conclusion which it is hoped this subcommittee may share with me is this: the highway related industries are in my judgment mistaken in their insistence that the American motor vehicle owner will rise up in outrage against the State or Federal legislator who dares spend gasoline and other vehicle taxes on something other than roads. There are persuasive indications that the exact reverse is true. The vast majority of vehicle owners will enthusiastically welcome alternative modes of transportation which will lessen congestion on the roads and offer alternatives to driving, thereby presenting the option of reduced physical strain, frustration and vehicular expense.

In fact, unless we develop some alternative, such as efficient inter and intracity ground transportation systems, the dependence on the automobile will continue in its explosive growth until the roads will become so congested that the automobile will be virtually useless.

It is abundantly clear from all the evidence that an urgent social need now exists to make immense improvements and changes in the American transportation system. To make these improvements will require radical changes in America's transportation priorities. Any change in priorities will first require majorities in both houses of Congress who believe that people are ready, willing and anxious to have the improvements and changes made. Unfortunately, it will not be easy to convince the Congress that people will accept efficient methods of ground transportation over the passenger car, even though there is substantial growing evidence that they will.

RECOMMENDATION: THE HIGHWAY TRUST FUND SHOULD BE PERMITTED TO EXPIRE

If the foregoing conclusions about needs and capabilities are accurate, it seems to follow that we must, as soon as practicable without breaking legal or clear moral commitments, terminate the segregation of high way tax moneys in the Federal Treasury.

The highway trust fund is a fairly recent fiscal invention. In all the years before 1956, Congress appropriated moneys for Federal aid to the States for highway building on an annual basis from the general fund. Receipts from highway taxes went into the general fund.

To this day, great social needs, including most of those involving Federal aid to the States, are still financed in that way. Housing does not have a trust fund. Education does not have a trust fund. Rivers and harbors do not have a trust fund. Even national defense is financed without a trust fund, with the Congress thereby retaining complete control of the vast moneys involved.

It is the same with tax receipts. Cigarette taxes, liquor taxes, oil royalties, and—biggest of all—income taxes all go into the general fund of the Treasury, with the most minor, partial exceptions. Only in the case of highway-user excise taxes does segregation occur.

The highway trust fund imposes a tax on a tax. In those years when Congress does not appropriate or the Executive does not expend all the segregated moneys in the fund, interest must be paid to the fund from the general Treasury. In fiscal year 1969, the interest earned by the highway trust fund was $53 million. In the first three quarters of fiscal 1970, the same amount of interest was earned—$53 million. I have not seen the year-end figure, but the Treasury estimated it would reach $102 million for the full 1970 fiscal year. The Treasury's estimated net interest income of the trust fund for future years is $145 million in 1971 and $190 million in 1972.

The time has come to break out of this system. Sound fiscal policy would dictate that Federal-aid highway funds be appropriated in consideration of a total view of national priorities. That total view of priorities will change from time to time.

My recommendation is that the highway trust fund be permitted to expire on the date presently set by statute, October 1, 1972, or within two years thereafter.

It is argued that all user tax funds are needed because the actual, growing highway needs are always much greater than the amounts produced by the highway user excises. That was probably true as a general proposition during the 25-year period of the mid-1930's to the late 1950's, when expansion of the auto and truck population was explosive.

But we went too far. The result of the pressures then was overemphasis on highway transportation. That, in turn:

1) destroyed mass transportation or inhibited its development;

2) degraded the quality of highway transportation by overcrowding the roads as fast as they were built.

It is now time to restore balance, and abolition of the trust-fund concept would be the best way to do it. But I recognize that may be temporarily impossible, in terms of practical politics, vested contractual commitments, or the sincere contrary convictions of this committee and majorities in Congress.

If so, we should take the next-best step. We should earmark some moneys in the highway trust fund for other forms of transportation, including both highway and off-highway urban mass transit systems. That is the purpose of a bill I have introduced (S. 3996). That bill would set a national policy of completing the Interstate Highway System as presently authorized. Then the moneys from the trust fund now going for the Interstates would be earmarked for financing alternatives to the highway and the automobile.

I have offered this bill for your consideration, and asked that it be referred here before its normal referral to the Finance Committee. That was done, not because I think the highway trust fund should be continued, but because it probably will be, whatever my preference. If it is, then the approach of that bill seems to me to be preferable to the creation of a new, general transportation trust fund to supersede the existing highway trust fund. A transportation trust fund would all too soon and too likely become as difficult a fixture to bend to changed social needs, or improved perceptions of old social needs, as the highway trust fund has become. Still, a general transportation trust fund is clearly an improvement over a highway trust fund.

Whether by continuation of trust-fund financing or otherwise, it is also my recommendation that the rural portions of the presently authorized, 42,500-mile Interstate System be pressed to the speediest possible completion. As for the urban portions—especially those that are so hotly disputed in 11 cities—I support Chairman Randolph's statement when he announced the present hearings that, "I have requested that Secretary Volpe contact the governors and mayors concerned to ascertain their views as to the desirability of removing these high-cost, troublesome routes from the designated Interstate System."

With the Chairman, I shall be awaiting the Secretary's report, and hoping that the Congress, in its turn, will let the cities concerned have the last word on whether the costs of the controversial highways too far exceed the benefits to be acceptable.

If we are going to let the cities decide that they don't want such-and-such mileage of urban Interstate Highway, then it seems only reasonable and fair to let them, if they wish, have the same Federal money that would have gone into that urban mileage to build other transportation more to their needs and liking. That, of course, is the policy which would become law if Senator Tydings' bill, S. 3960, were enacted. This seems to me so sensible, and indeed urgently necessary, that I have asked to become a cosponsor of the proposal, and I join the Senator from Maryland in his expressed hope that this committee will include the main ideas of that bill in the omnibus legislation it will soon draft and report.

Even where an urban Interstate segment is desired by the city government concerned, it would seem appropriate for Congress to constantly review and re-review all unstarted portions in the light of increasing costs and possible alternative transit modes. The

Chicago crosstown expressway, now estimated to cost $50 million a mile for 20 miles, is a graphic example.

The remainder of this statement is an elaboration of the previous conclusions and recommendations.

THE AUTOMOBILE-HIGHWAY TRANSPORTATION SYSTEM HAS GROWN TOO LARGE

One trillion miles of driving—"around town."

Sometime in the late '50's, the number of passenger-miles covered by Americans in domestic travel crossed the mark of 1 trillion in a year. This year, Americans in transit (along with visitors to America) will accomplish close to 2 trillion passenger-miles of domestic travel.

The term "passenger-mile" means one person riding one mile, by whatever means of conveyance. It should not be confused with "vehicle-mile," another measurement of travel that is often used. Obviously, a "vehicle-mile" covered by one bus, train, or commercial airplane involves many more "passenger-miles" than a "vehicle-mile" covered by one automobile, or one motorcycle. In this statement, the reference is always to "passenger-miles," the least-common-denominator of the methods of transportation.

Table 1A shows the number of passenger-miles traveled in the four main transportation modes in several recent years. The source of the information is the National Safety Council's annual publication, Accident Facts, for the years shown.

Table 1B shows the number of passenger-miles traveled by Americans on overnight trips out of town, or of 200 miles or more in a day. That information is from a 1967 survey by the Census Bureau.

Table 1C shows the relationship between the 1967 data from the National Safety Council and the 1967 data from the Census Bureau. In other words, it gives a rough idea of the percentage of total travel by car, bus, train and airline that represents local (or "non-trip") travel.

(Note: Tables referred to not included in the RECORD.)

What we see is this: 84 percent of all the passenger-miles traveled in 1967 in automobiles was essentially short-haul, local travel, not travel on trips out-of-town overnight or for long distances. In other words, more than a trillion passenger-miles in automobiles in 1967 were traveled by persons driving back and forth to work, to the store, from farm to town, around town on errands or visits. Our own senses confirm this impression as we look out our car windows at the now-typical rush-hour traffic jams which afflict even our smaller cities—traffic jams generally characterized by one person in one car.

If we can make money available that begins to approach the generosity of Federal spending to encourage highway building, we can create alternative modes of local, short-haul transportation for at least the high and medium-density population areas. If these alternatives are attractive enough to shift even half of the trillion-plus passenger-miles of annual, local automobile travel into other forms of conveyance, the "pill" to check the automobile population explosion that Secretary Hickel recently called for will have been found.

THE DESTRUCTIVE POPULARITY OF THE AUTOMOBILE

As Tables 1A and 1B so clearly show, the automobile is far and away America's favorite mode of travel. The highway lobby argues that, since we elect to accomplish well over 90 percent of our total passenger travel by auto, taxi and bus, to say nothing of the importance of trucking, there is nothing unreasonable about spending 75 percent of Federal transportation outlays for roads. (Federal spending for different modes of transport for the period 1947–1970 is shown in Table 2 not printed in RECORD.)

That argument is no longer valid, if it ever was. Among the more thoughtful of our citizens, at least, mere popularity is no longer an adequate defense for the immense social costs of the automobile.

Those costs to the Nation and to the cities in particular are now familiar to this subcommittee. Most of the costs were listed at the outset of this statement and need not be repeated.

The question that now seems important is, how much of the automobile's popularity is due to overspending for roads and inadequate spending for alternatives instead of—as the vehicle and road builders would have us believe—the other way around?

Suppose that our response to the obvious inadequacy of the Nation's roads for the Nation's mushrooming vehicle population in the mid-fifties had been, not just to build more roads, but to spend for highways *half* the amount of money we then decided to spend, and a like amount for other systems of transportation. How would our country be different today?

No one can ever know now, for certain—but the juxtaposition of a few interesting and significant numbers supports a strong theory that what "might have been" would be significantly better than what was, and is.

The first two numbers to compare are the amount of Federal funds we have spent on the Interstates since 1956 and the amount we have spent in support of both urban and inter-urban rapid rail transportation systems, the latter not beginning until 1965 in anything above a trickle: the Interstates: $32 billion. Rail transit: well under $1 billion.

Here is another interesting comparison. The American Transit Association says the country needs to spend $28.2 billion for mass transit in the next 10 years. By inference, that could be $42.3 billion for 15 years. The American Association of State Highway Officials sees a need for $320 billion for highways over the next 15 years. The highway lobby's ambitions are over seven times bigger than the transit lobby's.

As was pointed out when S. 3996 was introduced, the Metroliner has demonstrated that even small outlays and fairly modest improvements in service can attract large numbers of new riders to inter-urban rail transportation. Since 1965, the Congress has authorized a niggardly $127.4 million for the High Speed Ground Transportation Act and has appropriated an even more niggardly $76 million. Compare that five-year total with the $4 billion of Federal money being spent this year on the Interstates! Out of that $76 million, about $2 million of Federal money with some $60 million of Penn Central corporate money has given the Northeast Corridor traveler the Metroliner. And the Metroliner in its first year, increased the number of rail travelers between Washington and New York by 46 percent. No one who has experienced the New Jersey Turnpike, or Washington National or LaGuardia Airports in a typical late-afternoon crush can doubt that any diversion of traffic from those travel facilities would be of great benefit to those trying to use them. And yet the Metroliner is only a small improvement over the service previously offered, and far, far from what is possible, with existing technology and a little money.

While we are on that $76 million for the High Speed Ground Transportation Act, we could also note that appropriations under the Urban Mass Transportation Act of 1964 have totaled $795 million. We could compare both of those numbers with the $1.3 billion past and projected appropriations of Federal money to get two prototype supersonic transport aircraft into the air, maybe, someday. That last, of course, may not be directly relevant to this subcommitee's present deliberations; but it is interesting as further evidence of the country's truly astonishing transportation priorities and values.

In Tables 2 through 13, appended to this statement,* there are some further statistical data by which governmental aid to the various modes of transportation can be compared in more detail. The tables also include data on highway tax receipts.

The conclusion seems to be inescapable: our spending for highway transportation has so far outweighed our spending for other forms of urban and inter-urban ground transportation that we have not given the other modes a fair chance to prove what drawing power they might have, if developed with even half the monetary generosity that has characterized our development of roads. Since we have not done and cannot do it sooner, we must do it now.

THE POLICY FOCUS: HIGHWAYS VERSUS TRANSPORTATION VERSUS LAND USE

The argument of the highway lobby is that there will be a projected growth in the vehicle population by a set year; therefore there must be a corresponding increase in the highway mileage constructed. This is usually followed by some mention of the economic importance and the political clout of the various industries associated with highway transportation—indisputable both. There is, finally, the assertion that, highway-user taxes having been increased expressly to pay for highways, it would be ethically wrong and politically foolish to spend highway taxes for anything but roads.

Congress has accepted this argument too long. The country is now mature enough politically, and in bad enough shape socially and ecologically, to permit and require that highway planning now give way to total transportation planning, as Chairman Randolph eloquently stated in his announcement of these hearings. The time has come for transportation planning to be viewed as an integral part of over-all land-use planning—as the American Institute of Architects suggested in its statement. The modes and the placement of transportation facilities shape and place limitations on the use of the land. There must be concerted planning and integration of the whole into harmonious, rational balance for environmental protection and for the quality of living.

There is a need to shift at least 500 billion passenger-miles of urban travel a year away from privately-owned, passenger-operated cars. These one-passenger, five-empty-seats, one-and-a-half-ton vehicles must give way to more modern and less wasteful and destructive conveyances. That is a development which the automobile and highway-building industries can and should cooperate in achieving. These are developments the public and, increasingly, the State governors will support.

Item. Strong editorials and articles in the Wall Street Journal, the New York Times, the Washington Post, the Minneapolis Tribune, and the Des Moines Register, among others, have attacked the highway trust fund in recent weeks and have called for shifted transportation priorities. I put the Minneapolis Tribune articles in the Congressional Record on June 3, 1970, page 18062. The others mentioned are appended to this statement.**

Item. On January 11, 1970, National Educational Television's popular Sunday night program, The Advocates, debated the question, "Should half of the Highway Trust Fund be devoted to mass transit?" Chairman Randolph was a guest on that program. As usual, viewers were invited to mail in their "votes" after listening to the arguments pro and con. The response, as of February 3:

*Not included in the CONGRESSIONAL RECORD. See hearing record.

**Omitted from the CONGRESSIONAL RECORD. See hearing record.

out of 1,509 signed "votes" received, from 45 States and the District of Columbia, 92.7 percent favored the proposal, 5 percent were opposed, and 2.3 percent expressed other views.

Item. Two eloquent, angry books have been published recently attacking the disproportionate highway spending of this country, and the high social costs of the automobile-highway transportation system: Road to Ruin by A. Q. Mowbray, and Superhighway—Superhoax by Helen Leavitt. I am aware of no comparable books reflecting an opposite view.

Item. A recent survey by the Federal-State Relations Office of the National Governors' Conference revealed greater willingness by the States to spend highway revenues on nonhighway demands, including mass transit, pollution control, airports, and marine activities.

Item. Secretary Volpe has repeatedly stated his belief that the highway trust fund should give way to a transportation trust fund.

This country has shown remarkable ability to do what it wants to do. In 1941, America's last full pre-war year before World War II, our automobile industry produced close to 3.8 million passenger cars, over 1 million trucks and buses, for a total of 4.8 million motor vehicles. During the war years, 1942–45 inclusive, passenger-car production totaled only 293,143 units, dropping to an annual low of 139 units in 1943. Truck production in the same grim four-year period was 2,911,558 units, total. In 1946, the war over, passenger-car production soared to 2,148,699 units, to over 3.5 million in 1947, and has been climbing every year, with rare exceptions, since.

It is my belief that an industry which can shift so thoroughly and quickly from peacetime to wartime needs, and back to peacetime again, is equally capable of responding to changed national priorities and demands in the numbers and types of vehicles in which we ride, without prolonged or substantial disruptions of either jobs or profits. The magnificently versatile, giant companies that comprise the automobile and truck manufacturing industry can, in short, do what the Nation requires of them. It is my hope that, before too long, our requirements of them will be for a far more rational and less wasteful quality and quantity of vehicular production than at present.

It is also my belief that many companies not now producing ground transportation vehicles and systems have the capability to enter that market. They could introduce not only improvements on the old familiar forms of conveyance—the bus, jitney bus, train, trolley car, subway-elevated cars, highway-median rail cars, and monorails—but many dazzling new forms: single- and dual-mode automated guideway systems, air systems, and assorted other mind-boggling AUTS (advanced urban transportation systems) calculated to make life tomorrow better than today. Some of these are as yet undreamed of, others just dreams but ready to come to reality. May I interject here: how much more useful and sensible it would be for the country and its stockholders if the Boeing Company would only pin its future to some such transportation activities as these, instead of the SST.

TRANSPORTATION FINANCING

The bill I have introduced, S. 3996, assumes that the highway trust fund will continue for some time to come, but with dramatically shifted expenditures following completion of the Interstate System. That bill, let me now explain, was introduced for discussion purposes and referred to this committee at my request because I wanted it to be here for your consideration as a possible compromise solution to the conflicting courses being forcefully urged upon you at these hearings.

At one extreme the American Association of State Highway Officials and the other members of the highway lobby are urging a permanent highway trust fund, untouchable for anything but highways and projects having a direct relationship to highways. At the other are those who believe it is time to terminate the trust fund.

One popular proposed way to compromise these opposite positions would be to change the highway trust fund into a transportation trust fund. As it is usually described, the new transportation trust fund would have provisions for earmarked outlays for each of the modes of transportation, and some further provision for shifts of funds from one mode to another. While I would consider this proposal some considerable improvement over the highway trust fund as it presently stands, I do not advocate it. My position is that we would do better to keep the highway trust fund, with provisions for broader usages of the money therein, as proposed by S. 3996. The reason is that this latter approach to needed reform, in my judgment, would not be as likely to take root and become permanent as would a transportation trust fund. The approach of my bill would contain more hope of getting the country back to general-fund, annual-appropriation financing at an earlier date.

I end where I began: if annual appropriations from the general fund and full, flexible control by the Congress are good enough for national defense, for housing, for education, for rivers and harbors, why are they not good enough for highways and for transportation generally? I say they are—but, if this committee disagrees, then in my judgment, S. 3996 offers a better approach than a new, broadened fund.

CONCLUSION

The national policy for highways should be fully integrated with national policy for transportation generally, which, in turn, should be viewed as a part of total land-use policy.

There should be promulgated and pursued a positive national goal of developing modes of urban transit which will induce a shift of at least 500 billion passenger-miles annually of local, short-haul travel out of private, passenger-operated automobiles and into more efficient, non- or less-polluting, public vehicles, at the earliest possible date.

Transporation systems should be shaped to the travel needs of society, not to, and by, the economic needs of established corporate and bureaucratic interests. Where economic dislocations are involved in the processes of necessary change and improvement, the role of Government should be to help affected industries and companies convert to more socially useful and needed endeavors. Government should not join the industries and businesses in obstructing the socially needed changes and improvements simply because they are economically inconvenient.

MEN PHYSICALLY UNFIT FOR MILITARY DUTY

Mr. SCHWEIKER. Mr. President, in 1968 a Comptroller General investigation made at my request found that for fiscal years 1966 and 1967 the Pentagon enlisted or drafted some 40,000 men physically unfit for military duty at a cost of over $19.6 million for 1967 alone.

I was appalled by this report, and because I am continually receiving letters from servicemen regarding physical defects prior to entering the service I asked for another study on April 10, 1970, to "update" the 1968 report.

I have received the new report and am concerne dby the statistics. A total of 39,400 men during fiscal years 1968 and 1969 have been discharged because of physical defects which existed prior to entering the service. It cost the Pentagon an alarming $17.6 million in fiscal year 1969, a cost, by the way, which does not include training, so the over-all cost to the taxpayer is much higher. I should also point out that for both report periods the ratio of such discharges to total accessions was the same—2.3 percent.

This report shows that we drastically need increased Defense Department attention paid to the quality of inductee physical examinations. The psychological and personal hardships to the men and their families caused by inadequate examinations cannot be tolerated.

The GAO report noted a number of improvements pertaining to examining stations, including specialized training for military medical officers assigned to examining stations, and general upgrading of examining stations facilities.

Development is already underway of "a prototype of an automated medical examination system for use at the station in Philadelphia, Pa." On the other hand, the examining station in Pittsburgh with a capacity of 200 men daily, had a workload in April 1970, ranging from 65 to 350 daily, which alone lends itself to serious concern.

Although I am pleased that improvements in the examining process have been made since I received the 1968 report, the fact that the over-all rate of such discharges has not changed indicates to me that these examinations must be drastically improved.

Mr. President, as a member of the Committee on Armed Services and a longtime advocate of the all-volunteer army, I know that if we are to maintain our high military standards, with the hope of eventually creating an all-volunteer force, we must start at the foundation—the physical examinations. For instance, after complaints of back pains, a man was discharged from the Air Force when an examination revealed the absence of muscles on the left side of his body, including his shoulder, hand, forearm, upper arm, back of left side, and buttock area. The fact that this condition existed at the time of his enlistment is not only shocking, it is inexcusable, and must be corrected immediately.

I ask unanimous consent that the summary of the updated report prepared by the GAO for fiscal years 1968 and 1969 and my own letter requesting the report be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

COMPTROLLER GENERAL'S REPORT TO HON. RICHARD S. SCHWEIKER, U.S. SENATE

WHY THE REVIEW WAS MADE

By letter of April 10, 1970, Senator Richard S. Schweiker requested the General Accounting Office (GAO) to update its report of March 21, 1968, on discharge of enlisted personnel because of physical defects that existed prior to entrance into military service. (See app. I.)

GAO was requested to examine into the same areas as those covered in the 1968 re-

port and to report on the present status of the activities of the Armed Forces Examining and Entrance Stations and of the Office of the Surgeon, U.S. Army Recruiting Command, which is responsible for the physical examinations given at the examining stations, and to present a current picture of the experience and improvements since the 1968 report period.

Because of limited time (the report was requested in about 60 days), GAO concentrated on obtaining data from responsible officials and from available reports and did not visit the examining stations. GAO has not obtained written comments from the Department of Defense on the matters discussed in this report; however, GAO has notified the Department of the subject matter of the report and the date of its release.

FINDINGS AND CONCLUSIONS

For fiscal years 1968 and 1969, the number of enlisted personnel discharged because of physical defects that existed prior to service exceeded 39,400 compared with about 40,200 for fiscal years 1966 and 1967, the period covered by GAO's 1968 report. For both report periods, the ratio of such discharges to total accessions was the same—2.3 percent. Statistics for the Army and Air Force for the first part of fiscal year 1970 indicate possible increases in their discharge rates. (See pp. 8 to 10 and exhibit A.)

GAO estimates that about $17.9 million was expended during fiscal year 1969 by the military services for pay and allowances, uniforms, and travel of personnel discharged because of preservice physical defects after serving in the military for a year or less. Reviews made by the Surgeon, U.S. Army Recruiting Command, of about 5,000 discharges involving preservice physical defects show that only 13.2 percent should have been detected at the examining stations before entry into service. Information on the length of service of such personnel was not readily available for fiscal year 1969 from which to compute the cost to the Government. Most of those cases would have been discovered shortly after entry into the service; therefore the costs would be relatively low. (See pp. 14 to 16.)

Files of the military services include cases where physical defects should have been detected during the physical examination at the examining station. GAO noted cases involving members who had only one kidney, congenital underdevelopment, poor vision, or one leg shorter than the other. (See pp. 30 to 33.)

Inquiries made of personnel at the Office of the Surgeon, U.S. Army Recruiting Command, and the Office of the Surgeon General, U.S. Army, indicate that—

Although some improvements have been made, not all files for persons discharged for physical defects existing prior to service are being received by the Surgeon, U.S. Army Recruiting Command, for review.

About 35 percent of the files received—the same percentage as in the 1968 report—cannot be graded because they lack the data essential for determining whether or not the physical defect should have been detected during the physical examination at the examining station.

The Tri-Service Regulation, proposed in 1967 to correct irregularities in forwarding discharge files to the Surgeon, U.S. Army Recruiting Command, has not been issued because the regulations of the individual services were deemed by the military departments to be adequate.

In GAO's opinion, controls should be established and implemented to ensure that the Surgeon receives all the records he requires to discharge his responsibilities for reviewing files of persons discharged for physical defects that existed prior to service. (See pp. 17 to 20.)

For many years, scheduling an even daily workload through the examining stations has been a problem. GAO has found indications that the problem still exists. For example, the station at Houston, Texas, has the capacity to examine 150 persons a day. The planned workload for May 1970 showed that the capacity would be exceeded on 17 of the 21 examination days and that the daily workload ranged between 63 and 278. Examining station staffs are augmented with civilian physicians when the workloads exceed station capacities; thus, in the opinion of Department of Defense officials, the overloads should not affect the standard of performing physical examinations. (See pp. 20 to 22.)

GAO has noted the following improvements pertaining to examining stations:

Specialized training for military medical officers assigned to examining stations has been instituted in an effort to reduce discharge rates. (See p. 18.)

A project is under way to develop a prototype of an automated medical examination system for use at the station in Philadelphia, Pennsylvania. (See pp. 23 and 24.)

Progress has been made in upgrading the facilities of some stations, but lack of sufficient funds has held this progress to a slow pace. (See pp. 24 and 25.)

The Surgeon, U.S. Army Recruiting Command, believes that local Selective Service Boards are providing the examining stations with all available medical data. GAO's inquiries indicate that only a few members have been discharged because of physical defects existing prior to service which entitle them to disability retired or disability severance pay, or to benefits administered by the Veterans Administration. (See pp. 26 to 29.)

EXHIBIT A

EPTS CASES AND RATES FOR FISCAL YEARS 1968 AND 1969 BY MILITARY SERVICE

	Fiscal year 1968			Fiscal year 1969			Total for fiscal years 1968 and 1969		
	Accessions	EPTS discharges	EPTS rate	Accessions	EPTS discharges	EPTS rate	Accessions	EPTS discharges	EPTS rate
Army	533,082	10,403	2.0	455,202	6,463	1.4	988,284	16,866	1.7
Navy	143,485	3,484	2.4	165,587	4,542	2.7	309,072	8,026	2.6
Marine Gorps	97,787	3,530	3.6	94,324	4,889	5.2	192,111	8,419	4.4
Air Force	90,248	2,637	2.9	117,325	3,464	3.0	207,573	6,101	2.9
Total	864,602	20,054	2.3	852,438	19,358	2.3	1,697,040	39,412	3.2

Note.—We obtained the above data from reports of military services in generally the same manner as we did for our 1968 report. To develop the estimated EPTS discharge rates, we divided the number of personnel discharged because of EPTS physical defects by the number of accessions. In general, we included as accessions all first enlistments, inductees, and other enlisted personnel taken into the armed services who did not have prior active service. Although the individual services use differing reporting formats, we believe that we have included the bulk of enlisted personnel who received EPTS discharges and also those who entered military service for the first time.

U.S. SENATE,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., April 10, 1970.

Hon. ELMER B. STAATS,
Comptroller General of the United States, General Accounting Office, Washington, D.C.

DEAR MR. STAATS: During March, 1968, you issued report number B-146986, relating to Enlisted Personnel Discharged because of Physical Defects that Enlisted Prior to Entrance into Military Service. This report was the result of my request to you based on complaints from a significant number of my constituents who had experienced problems in this area. An earlier report on the same subject, had been issued on April 2, 1965.

At this time, I believe it would be most useful to determine the present status of the activities of the AFEEs and the office of the Surgeon, USAREC, and a current picture of the experience and improvements in this area during the time subsequent to the period covered by the statistics in that 1968 report.

Because of the groundwork laid by that report, I would hope that an updated version, including an investigation into the same area, and with particular attention to the current status of the individual services' and the AFEESs' own efforts to make improvements in their procedures (as highlighted in the previous report), could be provided within a period of perhaps 60 days.

My legislative assistant, Mr. Blakeslee, will be available to discuss this matter further with the appropriate individuals in your office. I will greatly appreciate your assistance in initiating action on this matter as soon as possible.

With best regards.

Sincerely,

RICHARD S. SCHWEIKER,
U.S. Senate.

PLIGHT OF THE COTTON FARMERS OF GEORGIA

Mr. TALMADGE. Mr. President, probably no other Government endeavor is so widely misunderstood or the subject of blatant distortion as the farm program. Surely no segment of our society is more maligned than the farmers who receive Government subsidies. The typical newspaper cartoon pictures fat, overstuffed farmers lounging on mountains of taxpayers' money while the needy people of the Nation go hungry. The editorialist usually characterizes farm subsidies as fat profits for rich farmers.

Nothing could be further from the truth. Large farmers, as well as small farmers, are caught in an inexorable cost-price squeeze. At present price levels, the cotton farmers of the Nation have an extremely difficult time in staying solvent—not to speak of making a profit. Moreover, if the cotton farmer is not large enough, he cannot economically produce cotton. Only a large unit can justify the tremendous outlay of funds required to buy the expensive equipment for growing and harvesting cotton.

In my own State, this economic fact of life has resulted in the small farmers leasing their cotton allotments to the few large farmers who are still willing to grow it. A writer for the Atlanta Journal and Constitution Magazine, Andrew

Sparks, has done an excellent job in describing the plight of the cotton farmers of Georgia. Mr. Sparks interviewed the three Georgia farmers who last year received more than $100,000 apiece from the Federal Government. As the writer pointed out, one of these farmers was planting the cotton allotments of 72 different farms, so the $100,000 payment was actually split 72 ways. In addition, the subsidy is used to pay the salaries of five or six farmworkers.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TROUBLE IN THE COTTON FIELD

(By Andrew Sparks)

Three Georgia farmers last year received more than $100,000 apiece from the federal government.

Many a taxpayer, remembering his personal involvement in government programs back at income-tax time, might envy the farmers and dream of having a little place of his own where he "could do nothing and get rich."

But farming is not like that, according to the men who received more than $100,000 in price support payments from Uncle Sam, one in north Georgia, one in middle Georgia, one in south Georgia.

They are cotton farmers, and raising cotton, they say, is the most expensive kind of farming you can do. It is so expensive, they claim nobody in this country could grow cotton without government support.

These top money men—the biggest cotton farmers in the state—were Asbury Wright of Dooly County, who received $123,156 in government payments: Hubert Cheek Jr. of Hart County, $114,065; and Guy H. Shivers of Warren County, $105,031. For them, cotton was no bonanza. One of the men says he lost money on his 1969 cotton crop, even with more than $100,000 in aid from the government. Another, who at times borrowed as much as $200,000 to finance his crop, figures he had a total net profit on his entire farming operation of only $14,000. The son of the third says, "We didn't make the laws, and everybody farms the way he does trying to come out with the most money."

Hubert Cheek, who lives in a tiny north Georgia town called Bowersville, seven miles from the county seat at Hartwell, grows cotton on 72 different farms. All but one of them are somebody else's. The only farm he owned he has now sold to a south Florida cattleman who will take it over in 1972. Mr. Cheek's operation is so far flung he has to mark the sites on county maps and carry a list in his pocket to keep up with where he is planting, plowing, spraying and picking. Without him, and maybe a dozen smaller farmers who operate the same way, the bulk of the cotton in Hart County would not be planted.

Mr. Cheek rents land and rents cotton allotments and grows his crop in scattered patches over an area 10 miles square. He says if limitations are set on future crops and the amount of federal payments one farmer could collect in one year is restricted to $20,000 he could simply let each of the 71 farm owners collect the government payment and hire him to produce the crop. Twenty-four of the farms he plants are owned by widows ("It's kind of a sob story," Mr. Cheek says) and few of them could grow cotton themselves.

Many of the owners—widowed, retired or gone to work at industrial or city jobs—would get no income at all from their farms without Mr. Cheek's help. His rent money often pays the owner's taxes, which have risen considerably under Hart County's tax reevaluation, and part of the owner's living expenses as well. Mr. Cheek's crop also keeps the cotton allotment on the farm. If unused, the allotment would revert to someone else, and if not used in Georgia would go to another state.

Bud Cheek's base of operations is a range of brick buildings facing the railroad tracks in Bowersville. His father, and his grandfather before that, operated a farm supply business in the big brick stores, back when Bowersville was a prosperous town and every little Hart County farm supported at least one family. The big buildings are now used as shops for repairing farm machinery. There's so much of it, inside and out, the place looks like an equipment dealer's display yard for second-hand tractors, pickers and sprayers. All the equipment is Mr. Cheek's—thousands and thousands of dollars' worth.

"Farming has got to where a man can't own both land and machinery," he said. "All over the United States the bulk of farming is now done by people who lease other people's land. All of the farms I work used to support one or two families. Now they won't support any.

"I didn't intend to do all this cotton farming, but my neighbors came and begged me to work their land. I turned down 1,000 acres of cotton this year. I couldn't get to it, and the owners couldn't get anybody else to do it.

"Mine is just a one-man operation. No partners. No corporation. Just me. I usually have five or six workers. We use all modern equipment, like sprayers to put out weed and insect control. I have 15 tractors, including late model highboys. Here's the first tractor I ever bought—in 1949," he said, walking around the corner of his shop to point out an old machine that had been retired to the shade of an ancient oak. "This tractor cast $2,500 back when we were getting 45 cents a pound for cotton. Today, when the market for cotton is down to 20 cents, that same tractor costs $8,000. Fertilizer and labor are up—we pay all the wage increases across the board. A cotton picker costs between $20,000 and $25,000, and I have three. It's not economical to use them in a lot of little scattered fields, but I do."

Most men are sensitive about the public exposure of their private finances, and Mr. Cheek was understandably riled when newspapers started publicizing how much he received each year from the government. Rep. Paul Findley, a Republican from Illinois, supplies Congress with an annual list of every farmer who receives more than $5,000 as part of the Findley campaign to limit farm subsidies to $20,000 per individual. Mr. Cheek's payments have increased from $60,000 to $80,000 to $114,000 over the last three years as he has upped his cotton acreage. The figures have been reported in state and local papers.

"Folks have tried to sell me everything but the Brooklyn Bridge since the stories started coming out," Mr. Cheek said. "It used to make me mad as hell. I could have stopped it. I could have let the money come to the people who own the land and let them pay me for growing the cotton. It never would have been noticed. But I believe this way is better. I have to pay income taxes on it anyway. But the publicity got rough before I began to sway with it.

"In the last four years, 50 people have been here to see me. They've come from as far away as Washington and California. I'm just not that large. I've got a friend in California the government pays $2 million to. My operation is just like a handful of marbles.

"Basically, the government is paying farmers what it used to pay the textile mills. For years and years we had a two-price system on cotton. Cotton brought about 22 cents a pound on the world market, but it sold for around 32 cents a pound here. The government paid the mills the difference between the world market price and what they had to pay to buy cotton in this country. It was a rebate to the mills. If a mill bought a million dollars' worth of cotton they'd be rebated between $300,000 and $400,000 in a direct payment from the government. That was never mentioned. Then the mills got scared of possible publicity, and the government gave the money to the farmers. Farmers have been getting the money for four years."

Georgia Sen. Herman Talmadge sponsored the 1965 Agriculture Bill which brought about the change.

Most of the big money payments in Georgia are for cotton. Mr. Cheek says cotton is responsible for 99 per cent of his. Three crops have a price support—cotton, wheat and feed grains, which are corn, barley and grain sorghum.

Wheat and feed grains are "diversion" programs, in which a farmer can divert some acreage to something else, or leave some acres idle, and receive a payment. But in cotton—unless he has less than a 10-acre allotment—he's got to grow it to get it. He is paid on the basis of his projected yield, determined by the past history of the farm. And he can draw a payment—currently 16.8 cents a pound—for only a certain part of his allotment, set each year by the secretary of agriculture. This year it is 65 per cent.

"What this money is doing, like any money the government puts out, is getting people to cooperate in something," says Paul Holmes, state executive director of the Agricultural Stabilization and Conservation Service, which handles the payments and allotments. "The government is asking farmers to participate in orderly production, asking them to leave land idle—as in the grain program—and to limit the cotton production to what we think we need.

"Our program is available to everyone. When it was designed, it was never intended that anyone would get $100,000. What these big farmers have done is buy up land, rent farms, lease allotments—agriculture is no different from radio or any other business; you're always going to have the J. B. Fuquas and the Coxes. When you hear about a farmer who has received $100,000, you know he's gone out and exposed himself. What I feel for him is not envy or jealously but compassion."

Mr. Cheek agrees. "It's no bed of roses," he said. "With what I borrowed, I could have made more money in any other kind of business. Not many individuals would be crazy enough to go out on a limb for that kind of money.

"If the government reduces supports, I'll reduce my crops, reduce the land I work, the allotments I lease, the workers I hire. If I go plum out, I've got to think about a diversion to something else. I could get a job, but there are not many things I could do on account of my disability. I can't get on a tractor."

Mr. Cheek came home from World War II with some souvenirs. He has two bullets, one in his heart tissue and one in a bronchial tube, and a silver plate in his head. After the Battle of the Bulge, he spent two and a half years in hospitals. He went back to Clemson and graduated, with a degree in animal husbandry. Now the oldest of his three children is a son at the University of Georgia, majoring in business administration, which is what Mr. Cheek figures a farmer most needs to know today.

"I'll probably continue growing cotton as long as it's feasible and I can make a living for the boys who work for me and make some money for the landowners, but when it gets to the point I can't, I'm going to get out.

"The way I look at it, 72 people drew the $114,000 that was paid me. Down in Dooly County, 28 people drew $1.1 million. Dooly County is the seat of the big producers."

Asbury Wright, "Bury" to his friends, is the biggest cotton farmer in the state. The 40-year-old south Georgian lives near Pinehurst, Ga., eight miles north of the Dooly County seat at Vienna. He and his wife and four children, ages 8 to 18, live in a modern red-brick ranch house built in 1950. There's a new blue swimming pool in the yard, and nearby rows and rows of cotton wagons and tractors are neatly parked under long red-stained open sheds.

Mr. Wright's office, set on blocks in a thick stand of coastal bermuda, is a blue and green, three-room house trailer, air-conditioned, carpeted wall to wall, and equipped with two telephones and two secretaries, all busy. One of the secretaries is Mr. Wright's. The other works for the Pinehurst Dusting Service, which does aerial dusting for farmers in Georgia and Florida. Mr. Wright is one of five men who own the business.

"If I had to depend on this farm to feed me, I'd be out of luck," Mr. Wright said when he arrived at his trailer office. He wore pointy-toed boots, an alligator belt, pants cut Western style with horizontal pocket openings on the front, and a wide-brimmed Panama. He has the kind of sunburn typical of farmers who wear hats—brown cheeks beneath a pale white forehead. "I was in a tax meeting all morning, trying to find out what to do about the property tax on these airplanes."

The Pinehurst Dusting Service operates in Georgia in summer and Florida in winter, and both states want to tax the company's five airplanes. Mr. Wright and his secretary, who had gone to the tax meeting in Vienna with him, had evidently missed lunch, and, when they had a break, kept nibbling on Tom's Peanut Butter Logs from a glass apothecary jar on the desk. "Allen Fullford, the county agent, is coming out," Mr. Wright said in a momentary lull between phone calls about trucks and airplanes and herbicides that hadn't killed what they were supposed to.

Dooly is Georgia's No. 1 county in cotton production, and has been for the past seven years, the county agent said when he got there.

"The practices our farmers carry out are responsible," he explained. "We don't have the highest cotton allotment in the state, but by leasing allotments from other counties we are up close to the top. The biggest reason our folks are No. 1 in production is because of improved practices—getting a good stand, planting on beds, preparing land, proper fertilizing and liming. Where they succeed more than anywhere else is in insect control.

"Dooly County has the highest projected yield in the state—it's been more than 600 pounds per acre for three years.

"I'd say 85 or 90 percent of the farmers growing cotton here plant it on their own land and on rented acres. We have farmers renting a tremendous amount of land. Economic pressure brought this about. Farmers must have large units to be able to afford the equipment necessary to grow cotton and to be efficient enough to stay in business. A man with 15 or 20 acres can't grow cotton. He couldn't buy the necessary equipment. He's got to rent his land out."

Mr. Fullford estimated that most farmers in Dooly County pay between $40 and $50 an acre to rent land with a cotton allotment. This is twice as much as Mr. Cheek pays for his scattered fields in north Georgia.

"I pay $50 an acre," said Mr. Wright, who grows cotton in nine different locations. He has a 1,000-acre farm of his own and rents five others. Last year, but not this, he also grew some cotton in Sumter County, for which he received around $5,000 in price support payments, a sum that was not included in the published figure of $123,156. This year he has 1,456 acres of cotton.

"During a break in the tax meeting this morning, I tried to figure what it costs me to grow an acre of cotton—I never had broken it down before," he said. "It's almost $220. I'd have shot myself if I'd known it cost that much. I never figured it before."

He pulled his penciled tabulation out of his pocket. Taxes, $2.20. Preparing land (mowing old stalks and harrowing twice), $10. Seed, $6.80. Planting, $2. Herbicides, $7.10. Insecticides, $72. ("That's outrageous—last year I sprayed till November. My bill for insecticide was $66,000.") Application of sprays, $19.80. Cultivating, $6. Harvesting, $42.60. Fertilizer, $23.20. Lime, $8.20. Interest on borrowed money, $14 per acre.

Mr. Fullford says his office figures it costs the average farmer 27 cents to raise a pound of cotton—six or seven cents more than the world price.

"This comes to almost $170 per acre," he said. "A farmer gets about $100 per acre for his cotton, plus $95 from the government, and he should have a profit of $25 or $30. If Bury's $220 figure is right—it probably is; I checked him once for the Bale-and-a-Half Cotton Club and his expenses did go over $200—he may have lost $25 per acre. If so, he went $38,000 in the hole.

"Before farmers received direct payments, they were able to put cotton in the loan, to borrow money on it. They never redeemed these loans. The public was subsidizing farmers by loaning them money, plus storage costs, plus giving a direct subsidy to the mills. The present set-up costs the taxpayers a lot less and opens up free channels of trade for all the cotton produced."

Would Mr. Wright quit if the support program was ended?

"Right!" he exclaimed.

Is cotton on the way out in the Southeast?

"It depends on what Congress does," Mr. Fullford responded. "There have been repeated attempts by many smart men to write a farm program. I don't think anybody's written one yet that suits everybody.

"This we know: practically all elements of our economy are subsidized one way or another. Certainly the farmer needs subsidies of some kind. I'm not smart enough to say what it should be. I don't know the answers."

Mr. Wright started farming when he was 13, renting land and growing cotton on it. At 14 he quit school and got out on his own. He's been farming ever since. He grows more corn now than anything else and makes more on both peanuts and soybeans than cotton, last year anyway.

"We mopped up on soybeans—50 bushels to the acre," he said. "If you make soybeans you don't make cotton. We had a good cotton crop last year on August 1. Then it started to rain and all our bottom cotton rotted. All we could do then was raise a top crop—and keep spraying. That's why I sprayed till November.

"Farming's not all I do. I'm in the trucking business—that's where the money comes from. There's money in trucking. One of my daughters says when she grows up she's going to be a truck driver. These children know where the money is. We move anything you can put in a truck, and we run in every state.

"If Congress limited payments, I'd cut down drastically on cotton. I'd hate to be in the congressmen's places and have to decide which way to travel."

The third Georgia farmer to top the $100,000 mark in farm payments in Guy H. Shrivers, Jr. of Barnett in Warren County. He was in partnership with his father, Guy H. Shrivers, Sr., until Mr. Shrivers' accidental death last November when an old shotgun he carried in his truck went off in the backyard and killed him instantly. The $105,031 farm payment was the total they both received. Dividing the payment by two puts the Shivers men into a much bigger category. Thirty other Georgia farmers last year received more than $50,000 each. Since his father's death, Guy, Jr., who is 44, has taken over the operation of the whole farm—4,000 acres which he and his mother own together. Guy graduated from the University of Georgia with a major in dairying in 1949, after a 26-month interruption for military service.

"What I intended to do was have a dairy, but beef prices were high and we were already in beef cattle," he said. "We sold cattle higher then than we ever have since. Then I got off into this cotton business."

Mr. Shrivers was helping workmen load some reluctant cattle into a truck for the weekly auction sale in Washington, Ga. A friend watching him work, as he pushed and shoved with a cattle stick in his hand, said, "You won't get him to stay still long enough to make a picture."

He wore rumpled khakis, with a hole in his pants, and bigtoed high shoes. A mat of gray hair protruded at the open neck of his shirt, and the dark hair on his head was cropped in a crew cut. He and his wife, who have two children, a boy at Middle Georgia last year and a girl who will be a freshman at Brenau this fall, live in a handsome white frame ranch house on Highway 287; it sits in a shady landscaped island surrounded by cotton fields.

The base of the farm operations is at his mother's house, a one-story structure enveloped on three sides by a screen porch, that traditional Georgia way to combat the summer heat which cotton thrives on. Farm equipment and shops cover a couple of acres behind the house. Between the shops and the house is the office, a little one-room trailer.

"We plant about 1,400 acres of cotton," Mr. Shrivers said above the hum of the air-conditioner in the dark, cool retreat from the heat outside, "and we have to lease allotments to plant that much. Only 400 acres of it is on the home farm.. I also have a farm and plant 100 acres there. The rest is planted on land we rent, including 250 acres on Cox Woodlands land. We make a payment to Cox Woodlands of about $9,000, part rent payment, part cotton payment.

"Two or three farmers draw the government payment themselves and pay us for growing the cotton. We feel $25 an acre is the minimum we can get by with. We also get the cotton, but the cotton doesn't bring much. Farmers can't grow cotton at the world price. We aren't paying the world price for anything else. Insects are the big problem—we spray every five days beginning the last of June. If we could get rid of insects we might be able to produce cotton at the world price.

"Without price supports, we couldn't even plant cotton. The farmer is not the only one to benefit from the payment. When you take row crops out of an area, you pretty well take a lot of business out of the area—fertilizer, chemicals and equipment aren't used as much and that hurts business. Our payments for cotton last year were around $80,000 and ouor chemical and fertilizer bill was $70,000. There's not as much business when the fields go to pasture. Yet, I don't see how taxpayers can subsidize farmers to keep small communities alive. (The Barnetts, the Bowersvilles, the Pinehursts.) Maybe they'll have to let them die.

"In the farm program, everytime they find a solution to one problem, they create another one. It gets more complicated, and more misunderstood.

"We farm and try to do the best we can. We didn't make the laws or the rules. Everybody farms the way he does trying to come out with the most money. Sometimes you try to maximize your payments. Sometimes you don't.

"You can cut down on your corn, and plant just half, and get the same payment as if you planted it all. That's what I call maximizing. If you have a 100-acre cotton allotment, you get a payment for only 65. So you only plant 65. That's maximizing.

"In Congress, they say they're going to put limits on payments. Some congressmen want to wipe out the farm program. It is bad that you have to depend on a government subsidy to operate. I'd rather not have it that way, but farming's not the only one.

"If they put a maximum on payments, we'd have to cut out the farms we're renting. We'd get into a position where we wouldn't suffer a cut in payments by going over a specified amount. We don't know what that is—they're talking about $25,000. We'd probably just plant 300 acres of cotton on our own farm—not 1,400.

"It takes a lot of money to grow cotton. And cotton has a way of being disappointing. At harvest time you don't have as much cotton as you think you have. It doesn't grade as good. The price drops. It's not as sure as some crops."

Is it on the way out?

"I wish I knew."

Meanwhile, back in the patch, weevils are working. And farmers are working to get the weevils, to kill the weeds, to pick the lint. Taxpayers are working to earn enough to pay the government enough to support the farmers, the sprayers and pickers, so the farmers can get cotton to the mills cheap enough to compete with cheap cotton and cheap labor of other countries. Mills complain that they need tariff protection which, in effect, is what the farmers already have.

Cotton is the most expensive crop you can grow and the most troublesome, and the expensive crop is in trouble.

Any way you look at it, cotton is trouble.

PROPOSED LONGSHORE SAFETY RULES

Mr. FONG. Mr. President, the Department of Labor published its proposal for new safety rules covering longshoremen in the Federal Register on June 26. The new safeguards deal with crane and container operations, and also have provisions on eye and head protection.

With the rapid development of new techniques on docks, especially in the field of containerization, the need for revised and tightened safety rules is plain. The proposals put forth by the longshore safety branch of the Bureau of Labor Standards meet this need.

Overloading of containers, the cause of several recent accidents, should be reduced drastically by the requirement for a load-indicating device on cranes, as well as certification of container gross weights by BLS-approved weighing stations.

Other sections calling for protective glasses and hard hats on certain jobs will also cut the wasteful and tragic toll of job injuries.

Mr. President, I believe the Department of Labor has proposed a sound and necessary reform in safety rules, and I hope that the new standards will shortly be adopted as final and put into operation.

I ask unanimous consent that a description of the proposed longshore safety rules from the July 1 edition of the Dispatcher, published by the International Longshoremen's and Warehousemen's Union, be printed in the RECORD.

There being no objection, the proposal was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C.—Proposed new longshore safety rules, approved by outgoing Secretary of Labor George Shultz, were published in the Federal Register on June 26. The proposals cover crane and container operations, with additional language on eye and head protection.

According to Edward P. March, chief of the longshore safety branch of the Bureau of Labor Standards, the new rules "will insure that we know what we are picking up and will avoid container and crane failures due to overloaded containers."

Several recent accidents, including a fatal one in New York, were suspected to be due to container overloading by shipping firms seeking unfair competitive advantages.

A summary of the proposals follows:

Every crane used to load or discharge cargo shall be fitted with a working load indicating device, excepting certain bulk, liquid or magnetic crane operations. This would allow crane operators to know instantly if a load is too heavy for the crane.

All cargo containers shall be permanently marked with the weight of the empty container, a maximum intended cargo weight, and the sum of these two weights.

No container shall be loaded or discharged by means of hoisting unless its actual gross weight has been certified by a BLS-approved weighing station.

No container shall be hoisted if the certified weight exceeds the maximum intended weight, or if it exceeds the capacity of the crane or other hoisting device.

All outbound containers shall be inspected for visible defects; inbound containers to be inspected where practicable. Visible structural defects will prevent loading until corrected on outbound containers; inbounds to be emptied or discharged by means insuring safety.

Employees facing eye hazards from flying particles or heavy dust must be provided with eye protection meeting specific standards.

Employees handling loose scrap metal, bulk ores or other chunky commodities, and those loading or discharging lift-on lift-off containerships, must wear approved protective hats.

RESTRICTION OF TEXTILE AND SHOE IMPORTS — THE LIST GROWS EVERY DAY

Mr. McINTYRE. Mr. President, almost every day, now, we read in our newspapers about the continued debate over the bill introduced by Representative MILLS in the House and by me in the Senate to restrict textile and shoe imports. In almost all instances the issues are cast in political and economic terms. We hear about a possible trade war, about balance of payments, about wage differentials, and so on. This is highly informative, but there is one side of this controversy which is too often lost in the rush of complex economic arguments: It is the human side—the men and women who have spent years in the shoe mills, only now to be thrown out of work with no place to go for reemployment.

Yesterday, I received a touching reminder of how severe the problem really is. Agnes Strob, of Derry, N.H., wrote me the following letter:

DEAR SENATOR MCINTYRE:

This is a list of the people who are working at Stage Door, Inc., when they were forced to close their doors, due to the import of shoes. Do sincerely hope this will in some small way help.

Isbel Pare, Carol Patrick, Cincy Riel, Jacqueline Griffin, Elaine Glover, Ada Witham, Beatrice Bodwell, June Hurteau, Ruby Neil, Nellie Healey.

Doris Robinson, Beatrice Metevier, Caroline Modis, Mary St. John, Edna Berry, Elizabeth Desilets, Irene Pettiner, Marianna Witham, Mildred Henry, Gladys Barnard.

Myrna Dudley, Doris McGowen, Alberta Hanson, Ruby Witham, Doris Bunker, Mildred Robinson, John Dudley, Charlotte Fife, Helen Dudley, Lois Markwith.

Della Bishop, Bertha Twombly, Alma Demyanovich, Hazel Little, Elsie Porter, Mary Favour, Lorna Chase, Elizabeth Thibeault, Edith Emery, Rose Tisus.

Mary Mandile, Una Heywood, Ruby Underhill, Jeanne Dmers, Marianna Goodwin, Julia Hill, Annette Quintal, Virginia Emery, Marie Brown, Audry Pitkin.

Grace Rollins, Freida Burritt, Martha Waterman, Gertrude Eaton, Alice Waldron, Jane Karpinski, Eva Ryan, Eva Clark, Lois Spear, Theresa Taylor, Caroline Severance.

Muriel Proulx, Hazel Strandell, Donna Margaritis, Jeanette Baker, Esther Freitos, Irma Hanson, Gertrude Gagnon, Evelyn Lodge, Deborah Wilbur, David King.

Jane Szybiak, Joanne Wallace, Bessie Plant, Florence McLaughlin, Marie Guyette, Lillian Cooley, Shirley McPherson, Kenneth Witham, Mary O'Neil, Elmer Leach.

Martha Woodhead, Betty Platts, Virginia Leach, Mary Elgin, Alice Meader, Lorraine Smart, Irene Wilson, Alice Bouley, Theresa Stevens, Phyllis Kurkier.

Catherine Healey, Grace Barnes, Blanche Tong, Janet Fields, Ruth Huchins, Norma Raymond, Annie Stevens, Amy Guyette, Aura Beers, Lora Witham.

Harry LaCouture, Ola Plante, John Wallace, George Edwards, Everett Babb, Emile Quintal, John Cassier, Charles Dudley, Mary Baker, Joseph Quintal.

Norma Kenniston, Norman Ouilette, Richard Hartford, Frank Pelky, Frank Cleveland, E. P. Camier, Gerald Foster, Paul Smart, Paul Cunningham, Hebert Denoncoeur, Theodore Barnard.

Burton Strout, Lewis Nowe, Harold Barnes, Walter Ricker, Lemma Rollins, Martha Tibbetts, Kenneth Neptune, Marjorie Neptune, George Robinson, George Wilson.

Robert Riel, Cornelius Smart, Wilder Bemis, Ernest Quintal, Clifton Latimer, William Reynolds, Loretta Neilson, Lucy Downing, Francis St. John, Alberta Shepard.

Roger Woodhead, Ruth Hanson, Richard Hammerstrom, Joseph Veve, Beulah Adams, Robert Johnson, Dennis Currier, John Miller, Elsie Linehan, Sylvia Bemis.

Patricia McCusker, Alfred Eaton, Alan Fenstermaker, John Smalley, Everett Wilbur, Harlan Hutchinson, Jr., Virginia Smith, Kenneth Frost, John DeGuire, John Broman.

Roger Carron, John Markiewicz, Lucien Glidden, James Currier, Leota Glidden, Robert Fields, Mark Wallace, Lawrence Chase, Jr., Paul Clement, John Eastman.

Fred Wallace, Austin Campbell, John Witham, Gregory McIntosh, Joan Nowe, Helen Nowe, Jerry Riel, Frederick Plant, Robert Rothwell, Mike Daley, John Tilton.

Tasker Cheney, Beverley Witham, Roland Lagasse, Maurine Paquette, Howard Rollins, Andy Senechel, Marguerite Quintal, Grover Eaton, Roland Croteau, David Ricci.

David Nowe, Harlan Pitkin, Bernard Wallace, Audry Shepard, Harriett French, Joseph Kominsky, Jack Haley, Clarence Pettengill, Julian Vive, Nettie Valley.

Linda Gilson, Norah Levesque, Irene Lafond, Polly Quintal, Colleen Quintal, Iris Richards, Francine Demyanovich, Angelina Desjardin, Katherine Merrill, Edith Merchant.

Helen Gauthier, Yvonne McGovern, Rita Clark, Rene Broman, Betty Jean DeLorn,

Emily Yeaton, Bonnie Eaton, Harriet Margaritis, Joyce Hyre, Marilyn Perkins.

Lenore Cole, Marion Chasse, Melverda Smith, Vera Crooker, Elizabeth Davies, Florence Currier, Rollande Bartholomi, Elizabeth Strout, Alice Adams, Margaret Vehey.

Rosanna Porter, Janice Smalley, Everett Wilbur, Florence Campbell, Darlene Wladron, Nancy Rollins, Diane St. John, Betty Cheney, Lucille O'Brien.

Gloria Maynard, Jeanne Stilkey, Helen McIntosh, Patrick McCusker, Anastasia Guyette, Kathy Richards, Dorothy Smith, Pauline Miller, Rury Henderson, Nancy Margaritis.

Constance Richardson, Winifred Hartford, Charles Proul, Louise Abbott, Claire Dube, Beverley Quintal, Irene Markiewicz, Jean Sweeney, Ruby Mullin, Agnes Strob.

Mildred Souter, Doris Comstock, Pearl Rollins, Ella Mae Donovan, Etta Margaritis, Myrtle Sinclair, Marjorie Richards, Rachel Richardson, Linda Croteau, Edith Wallace.

Polly Ann Mataragas, Ellen Watts, Althea Davis, Georgia Bolduc, Virginia Collins, Lila Marcotte, Bonnie Griffin, Paris Stilkey, Elva Ferry, Mary Cheney, Pasty Brown, Jean Downing, Elaine Marcotte.

The above is a list of Shoe Workers which formally were employed at the Stage Door, Inc., Raymond, N.H.

UNITED SHOE WORKERS OF AMERICA, AFL–CIO, CLC, LOCAL 106, RAYMOND, N.H.

JOHN TILTON, *Secretary-Treasurer.*

It is my hope that Senators will glance at this list and try to think what a layoff like this can mean to a small town. This mill was at the heart of the economic life of the town; now it is gone. This is going to occur again and again across our Nation unless action is taken soon by the House and Senate to slow down the influx of cheaply made foreign shoes.

MARTIN MARIETTA'S COST UNDERRUN ON PERSHING MISSILE

Mr. GOLDWATER. Mr. President, needless to say, we hear a great deal of complaint in the Senate these days about cost overruns, especially in the Department of Defense. For example, my friend the Senator from Wisconsin (Mr. PROXMIRE) just a few days ago gave the latest figures on cost rises for weapons systems during the past 9 months.

It is very seldom, however, that anyone gives credit to any part of the so-called military-industrial complex for a cost underrun. I suggest, Mr. President, that costs underruns are important too. In this connection, I wish to place in the RECORD an information sheet concerning Martin Marietta's financial performance on the Pershing missile system over a 13-year period. It will be noted that this system which has proved highly successful as the U.S. Army's longest range and most powerful weapon has accumulated a cost underrun of $30 million.

I ask unanimous consent that the Martin Marietta information be printed in the RECORD.

There being no objection, the information was ordered to be printed in the RECORD, as follows:

PERSHING MISSILE PROGRAM NETS $30 MILLION UNDERRUN

The Pershing missile system, which has proven to be singularly successful as the U.S. Army's longest-range and most powerful weapon, has another distinction.

Instead of an overrun, the Pershing project, managed by the U.S. Army Missile Command, Redstone Arsenal, Ala., has accumulated an *underrun* of just under $30 million over its 13-year existence.

The result is the saving of that much taxpayer money by the Army and Martin Marietta Corporation, prime contractor for the Pershing system.

The overrun amounts to 2.49 percent of the $1.2 billion spent to date on development, production, deployment and improvements for the 400-mile-range, surface-to-surface ballistic system.

Included is a series of 59 major contracts between the Missile Command and Martin Marietta dating back to March, 1958, when the nuclear-tipped Pershing was conceived as a replacement for the Redstone missile.

One $225-million contract for initial production of Pershing equipment, awarded in 1961, resulted in a $9 million underrun—or 4 percent under target. The remainder of the underrun resulted from other of the 58 major contracts.

There have been overruns, however. The largest was a 2.1 percent overrun on a $67.2 million research and development contract awarded in 1966. This overrun amounted to $1.4 million above original estimates. But in the overall program, the limited overruns were overshadowed by the underruns which make up the $30 million figure.

One factor credited with contributing to the price hold down on the Pershing program is the orderly progression in the types of contracts used by the Army Missile Command which changed in parallel with development of the system.

Starting with the original R&D effort, the contract was a Cost Plus Fixed Fee agreement.

The next contracts were Cost Plus Incentive Fee, followed by Firm Fixed Price agreements through most of the production phase, placing the risks more upon the contractor than the government.

With the Pershing 1–A improvement work, a Cost Plus Incentive Fee contract was again employed, giving multiple incentive on cost, schedule and technology. In the subsequent production phase, Fixed Price Incentives were used, with the incentive based on cost only. In such contracts, the contractor stands to share in the cost savings or is penalized for poor performance.

More recently, the missile command awarded a Cost Plus Award Fee contract for engineering services to be performed by Martin Marietta. Under this agreement, the contractor is assured of only 3 percent but, depending upon the efficiency with which the work is performed, can be awarded up to 7 percent more on the judgment of the contracting agency.

Another factor contributing to lower costs at the Orlando Division of Martin Marietta—where the Pershing work is done—is an extensive cost reduction program emphasized by Martin Marietta management.

Under this program, which embraces other projects in addition to Pershing, the Orlando Division last year set a goal of $13.6 million as a cost reduction target. At year's end, net savings and cost avoidance amounted to over $16 million, or 18 percent above the projected goal.

Of that amount, the Pershing program contributed $2.8 million.

NATIONAL DEFENSE REQUIRES GREAT FALLS-BROWNING TRANSMISSION LINE

Mr. METCALF. Mr. President, last week a delegation of military officers briefed me regarding the Safeguard ABM system programed for Montana in the area between Great Falls and Browning. Thirteen thousand persons will be moving to the sparsely settled area centered at Conrad.

The Safeguard impact will be substantial on various community facilities—schools, sewers, water systems, hospitals, communications, and power. I shall report to the Senate on these matters in due course. I deal today only with the electric power aspects, inasmuch as certain actions must be taken very soon by Congress in order to provide reliable electric service in an area vitally important to the national defense.

In 1968, prior to the decision to put Safeguard in the area, engineers of the Bureau of Reclamation and the Montana Power Co. agreed that new transmission facilities, beyond the 115-kilovolt line recently constructed by the company, would be needed by 1972.

The Defense Department will provide, as in previous situations, onsite generation for mission requirements. This onsite generation is independent of commercial power. This does not mean that the Defense mission is impervious to the operation of commercial power systems. When a hunter's bullet caused a blackout lasting several hours and covering several thousand square miles in Montana last year, the efficiency of the Minuteman system was impaired, because of a shutdown of onsite power at one of the sites during the period when the blackout occurred. Similarly, serious voltage fluctuations in the line serving Opheim Air Force Station in Montana damaged equipment and impaired defense capability. Reliable commercial power will back up on-site generating capacity.

Safeguard will also create substantial increments in power use in the area immediately adjacent to the ABM sites. Thousands of persons, those connected with the mission or with service industries, and their families, will be dependent on commercial power in an area which, as I pointed out previously, transmission deficiencies were forecast even before Safeguard was planned for the area.

The existing Montana Power 115-kilovolt transmission line is inadequate to meet the needs of the early seventies. The line does not provide reliable loop service. It leaves a substantial area dependent on one-line radial service. A single outage, not even at peak load, could result in voltage reductions that would damage the electrical equipment of thousands of Montanans throughout the area.

Indeed, the Bureau of Reclamation advised the Senate Interior Committee last month that the existing transmission system will not meet minimum reliability criteria established by the Western Systems Coordinating Council, even in the years immediately ahead.

Mr. President, last Friday the Department of the Interior instructed its agent in Montana to sign a wheeling contract with the Montana Power Co. regarding transmission service from the Montana Power 115-kilovolt line. The Department of the Interior did not allow Senator MANSFIELD and me an opportunity to review the contract prior to its signing, as we had requested. The De-

partment did not permit the rural electric cooperatives most directly concerned to review the contract.

The Department of the Interior did not consult with the Rural Electric Administration nor with the REA cooperatives immediately involved. Bonneville Power Administration, whose jurisdiction covers all of Montana, was not consulted.

Nor did it share the contract with the Senate Interior Committee, which conducted a hearing on this matter in April.

In his summary of those hearings, Chairman JACKSON on behalf of the Committee on Interior and Insular Affairs concluded that the proposed wheeling agreement, into which the Department of Interior entered Friday, "will result in a system of questionable short-term reliability." On the other hand, Chairman JACKSON concluded that Federal construction of a 161-kilovolt line, which would provide loop service, would provide long-term reliability, and would possibly be cheaper in the long run than the small radial line constructed by Montana Power.

The needed 161-kilovolt Federal transmission line to which Chairman JACKSON referred was included in both the Johnson and Nixon budgets. Last year both the Senate and House Appropriations Committees voted funds to initiate its construction. However, the appropriations committees stated that the money should not be spent if a wheeling contract, providing substantially the same benefits as a Federal line, could be negotiated.

We now have a wheeling contract. It does not meet the standards of reliability and adequacy set forth by the appropriations Committees. Chairman JACKSON has found for long-term reliability through the 161-kilovolt Federal loop line, and against the questionable short-term reliability available through the 115-kilovolt radial line constructed by the private company, the approaching impact of Safeguard and the inadequacies of the wheeling contract underscore the need for construction of the Federal line as soon as possible. The line is needed to improve reliability and provide adequate power for Safeguard and its complement, as well as the indigenous population.

The money to begin construction has been appropriated. Needed now is release of the funds by direction of the appropriations committee to the Department of the Interior. The Department must be told to proceed with construction of the 161-kilovolt line.

I urge members of the appropriations committee to include such direction in their report on the Public Works Appropriation bill.

ONLY THROUGH STRENGTH

Mr. HANSEN of Idaho. Mr. President, John L. Frisbee, the senior editor for plans and policy of the magazine Air Force and Space Digest makes a point that is as old as man, but is too often forgotten by some men—that in this world only strength can insure both peace and freedom.

Today we are in an era reminiscent of the 1930's, when some believe that good intentions and sincerity of purpose will suffice. Many a nation that thought that no longer exists. Others exist only because the United States was available to rescue them or protect them.

Mr. President, nobody is around to rescue or protect the United States. It is imperative that we do that ourselves; that we be not misled by the well-intentioned blind.

Mr. President, I ask unanimous consent that Mr. Frisbee's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"SHOW AND TELL"

(By John L. Frisbee)

Twenty-five years ago this month, mushroom-shaped clouds rose over Hiroshima and Nagasaki. They marked the end of World War II and the beginning of a new era in international affairs.

It is quite conceivable that nuclear weapons will never again be used directly in war. But whether they are or not, the turn of events and the fate of nations are—and for a very long time will continue to be—affected by their shadowy presence.

Twice in the last sixteen years, events of major importance have been resolved in favor of the side of that possessed nuclear superiority. In 1956, the Hungarian Revolution, which could have triggered the destruction of the Soviet empire, was squelched by the USSR's localized superiority in nuclear weapons. At that time, the US had no nuclear-armed missiles that were operational, and our strategic bombers weren't truly global in range. Our allies, threatened by a few Soviet missiles of limited range and by nuclear-capable Soviet bombers, declined to provide either military assistance for the Hungarians or bases for US deterrent forces. Our nuclear bargaining power was neutralized and Soviet tanks rolled into Hungary. A crack in the iron wall of Soviet hegemony was sealed.

In October 1962, the tables were turned. A small force of US ICBMs and our much larger, by-now global, bomber fleet were decisive in forcing the Soviets to withdraw offensive missiles from Cuba.

Neither in 1956 nor in 1962 was a shot—nuclear or conventional—exchanged between the two super-powers, but in each case the outcome was decided by nuclear weapons at the ready.

The US was prepared in 1962 because we took seriously the erroneous forecast of a missile gap, made in 1959 and 1960. The forecasts, based on the best intelligence information then available, turned out to be exaggerated. But if we had not heeded them, it is doubtful that the US would have launched a crash program to put missiles in the ground and to enlarge and improve our bomber force. Without the fairly wide margin of nuclear superiority we had in the fall of 1962, the Cuban crisis might well have culminated in a shooting war.

Now, Soviet expansionism is again on the move. A crisis, at least comparable in gravity to the Soviet missile presence in Cuba, is developing in the Middle East and the Mediterranean basin. Elsewhere in this issue of AIR FORCE Magazine, that increasingly perilous situation is discussed (see page 16 and page 40). The USSR has moved ominously toward a centuries-old Russian objective, shared by Czars and commissars alike, of dominating an area that is of great strategic importance, both in itself and as a way-station to further expansion.

Underlying the Soviet drive into the Middle East is a major shift in the nuclear balance. Between 1968 and the summer of 1970, the US nuclear superiority of about 4 to 1 over the Soviets has evaporated. Rapid deployment by the Soviets of a variety of ballistic and orbital weapons, including the giant SS-9 missile, their construction of an ABM system, and the USSR's emergence as a major maritime nation have combined to virtually neutralize US strategic power except as a deterrent to a direct Soviet attack on the United States.

It was ironic that we met the earlier Soviet challenge, in 1962, because we heeded inaccurate warnings of a Soviet drive for nuclear superiority. It is doubly ironic that *unequivocal* evidence of the USSR's race for nuclear superiority now is either ignored or discounted as self-serving propaganda. The result: Today the Middle East and the Mediterranean hang in precarious balance. Tomorrow—what?

In a recent address to Associated Press editors Secretary of Defense Melvin Laird revealed considerable hitherto classified information on the Soviet strategic buildup. He told his audience: ". . . the information I am presenting to you is based on our own observations of what the Soviets are doing," not on Soviet discussions of their strategic forces. The Secretary had to be referring to satellite reconnaissance photogaphs, highly refined electronic intelligence, and other sources of information that didn't even exist in 1960.

Today's public skepticism about the realities of Soviet nuclear power, and its intended uses, is somewhat reminiscent of the skepticism that existed in the fall of 1962, concerning allegations of Soviet missilesite construction in Cuba. That earlier skepticism disappeared when photos of the Cuban missile sites, taken from high-flying U–2 aircraft, were made public. The American people, almost without exception, rallied behind the President.

We are reliably informed that one of this country's highest-ranking officials recently asked: "What does it take to awaken the American people to the seriousness of the Soviet threat?"

We don't claim to have a comprehensive answer. But one way might be to release some of the satellite photography on which US analysis of the threat is based. That was pretty effective in the case of Cuba.

The old grammar school game of "Show and Tell" isn't just for kids. It works for grownups, too.

JIM LUCAS

Mr. BELLMON. Mr. President, the death of Pulitzer Prizewinning correspondent Jim Lucas last week saddens me as it does others who knew and admired this fearless and faithful reporter. Jim Lucas was a native Oklahoman and came to be one of the most illustrious sons of the Sooner State.

I first knew Jim Lucas as a war correspondent on Iwo Jima. Throughout that operation he worked with the 4th Marine Division and in some of the most intense combat in the history of the war. He was always on the scene to give an accurate, factual account of the events, and more particularly, personal insights into the men who were making history.

Jim Lucas began his career as a reporter in Oklahoma as a writer for the Muskogee Daily Phoenix and the Tulsa Tribune. Throughout his life he maintained his roots in our States and frequently returned for personal visits or for assignments. In 1965, during the time I served as Governor, Jim came to Okla-

homa to investigate and report on an alleged scandal in the Air National Guard. After digging into the story for many weeks, Jim found that the allegations were not well founded; and to his everlasting credit he had the grace and honesty to say as much. In my judgment, this was in the highest tradition of the fourth estate.

The death of Jim Lucas leaves a great void in the ranks of combat correspondents. However, the record he made and the tradition of integrity, incisiveness, and fairness he contributed to the journalism profession will serve to guide many who follow in his footsteps.

I extend my deepest sympathy to the members of his family.

WHERE FEDERAL MONEY GOES

Mr. GOLDWATER. Mr. President, in the past few days, the President has been extremely critical of Congress for authorizing expenditures of a mandatory nature which make it impossible to place a ceiling upon Federal spending. He pointed out that he recently signed a bill fixing a ceiling on Federal spending for the current year—fiscal year 1971. He said he intended to live by that ceiling, but that Congress has made a travesty of it.

Quite naturally, the Chief Executive's remarks were immediately challenged by the majority leader and by the Senator from Wisconsin (Mr. PROXMIRE). In view of this, I think the Senate would be interested to read an exceptionally fine article written by Mr. David Lawrence which tells exactly where the money goes and why the President is correct in his assertions.

I ask unanimous consent that Mr. Lawrence's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHERE DOES FEDERAL MONEY GO?

(By David Lawrence)

The federal government spends more than $200 billion a year nowadays, and Congress must authorize the appropriation of every penny of it. But how many of the approximately 120 million eligible voters are really familiar with the merits of the legislative measures involving large sums?

The purposes of some of the current allocations of funds can be summed up briefly:

1. The House has approved a $4.4 billion measure for the Office of Education. This is $453.3 million above the President's request.

2. The House has approved a bill, which now is before the Senate, to extend unemployment compensation to an additional 4.4 million workers, increase the tax on employers, and provide that, beginning in 1972, jobless benefits could be extended an extra 13 weeks in periods of high unemployment. The House voted down a move to put an estimated 275,000 farm workers under the coverage.

3. The House Agriculture Committee has approved a three-year price-support program with a limit of $55,000 a year on payments to individual farmers growing cotton, wheat and feed grains. The Senate has voted to make it a $20,000 ceiling.

4. The House Agriculture Committee has endorsed a measure providing that able-bodied individuals must sign up for work before they can be eligible to receive food stamps. The restriction would modify a bill already passed by the Senate, which plans to furnish $2.5 billion annually in food stamps by 1972.

5. The House has passed and sent to the Senate bills to authorize $775 million over three years for new air purity standards and $511 million to find new ways of disposing of or re-using solid waste materials.

6. The House has passed and sent to the Senate a plan supported by the President for a minimum annual income for poor families. A minimum of $1,600 a year would be given a family of four, and its income could go as high as $3,920 before the $1,600 subsidy would be eliminated.

7. The House adopted a $20 billion measure for military procurement. This includes authorization for an expansion of what is known as the Safeguard antimissile system and the purchase of equipment for another nuclear aircraft carrier and a new manned bomber. A Senate committee has approved the plan.

8. The Senate has approved a $3.1 billion financing program for mass transit projects. A similar program, which would permit localities to make contracts totaling $5 billion over the next year for urban transit projects, has been approved by the House Banking Committee.

9. The President vetoed a measure authorizing a three-year continuation of the hospital construction program because it was $350 million over his request. But both houses overrode the veto and authorized $2.79 billion to be spent.

10. President Nixon has proposed that the national government return to the states a portion of the federal tax revenue "with no strings attached" so it could be used by the states and local governments on their own projects. The measure has not been acted upon by either house.

But where does the biggest part of the $200 billion in the budget go? Much of it is spent for the Vietnam war, and only $2.2 billion is expended for economic and military aid to the smaller countries of the world.

Many of the authorizations for the use of government funds concern matters wholly unfamiliar to the vast majority of the citizens, so the American people have to rely on their representatives in Congress to act wisely in their behalf. Whether Congress overspends or not is not easy for outsiders to judge. Undoubtedly the members of both houses are influenced by political factors. The pressure for government appropriations is constant. The committees are in reality the groups that make the important judgements. If both parties therein concur, the chances of support in the two houses are good, but if it's a partisanly sponsored measure, a controversy usually ensues.

The public as a whole, however, gets to know very little about all the aspects of the spending problem. Even though many billions of dollars are involved, most newspapers would consider it dry news to print the technical details of all the appropriations bills. So the taxpayers have no choice but to depend on their representatives in Congress and the President for an efficient handling of the public money.

UNITED NATIONS LINEUP FOR HUMAN RIGHTS

Mr. PROXMIRE. Mr. President, I thought it would be appropriate for us to take a look today at some of the reasons given by other nations for supporting international treaties for the preservation of human rights for all of mankind. The following is a sample lineup provided by the World Federalist, May/June 1970:

Norway: "A deliberate transfer of executive, judicial and even legislative power to international bodies becomes more and more a common feature in State practice. Norway regards such a transfer of power in no way as a violation but merely as an expression of national sovereignty."

Sweden: "The Swedish Government has strongly given voice to the view that human rights questions transcend the boundaries of nations and that therefore, in this field, States should not . . . cling to the principle of sovereignty in order to block an effective examination."

Netherlands: "The duty of the [Human Rights] Commission was to defend the rights and freedoms of individuals; however, at the present the Commission did not have the power to protect individuals, and this was most regrettable . . ."

Yugoslavia: ". . . one could see two opposing opinions; each had some right on its side. However, the developing countries had shown little interest in the matter; and the proposal could only be settled when the developing countries could see that they could benefit from it."

These nations are only a sample of the more than 75 members of the United Nations that have taken the initiative for human rights for all of mankind. Our absence, Mr. President, is both conspicuous and embarrassing.

The time is now. The Genocide Convention is under active consideration in the Senate for the first time in 20 years. I hope the Senate will not let this opportunity pass by.

BUILDING OUR AMERICAN COMMUNITIES

Mr. BELLMON. Mr. President, as a farmer and one who is vitally interested in the rural areas of our country, I have long been impressed by the Future Farmers of America. My admiration for this organization continues to grow as I observe the many contributions it makes in the development of young Americans and the communities in which they live.

The most recent undertaking of this group of young leaders is one of which I am especially proud. Last week, the national FFA president, Harry Birdwell, of Fletcher, Okla., was in Washington to announce the initiation of a new program which is designed to get young people involved constructively in helping to make their communities more attractive places in which to live and work. The theme of this program is "Building Our American Communities."

It was my pleasure to visit with the State president of the Future Farmers of America, Teddy Shaw, of Ninnekah, Okla., last week concerning this program, and I was impressed again by the imagination and enthusiasm that was evident in the goals that were set forth. The FFA is to be commended, along with the Farmers Home Administration, which assisted in the development of this positive and forward-looking program.

Smaller communities and rural areas all over the country, the real backbone of American life, will benefit greatly from the efforts of these dedicated young Americans as they seek to build toward a better future for their country.

Mr. President, in order that Senators may be fully informed about this program, I ask unanimous consent that Harry Birdwell's announcement of the program be printed in the RECORD.

There being no objection, the announcement was ordered to be printed in the RECORD, as follows:

BETTER DAYS THROUGH BETTER WAYS

(Announcement of FFA "Building Our American Communities" by Harry Birdwell, national FFA president)

In the opening paragraph of the FFA Creed members of our organization are reminded that better days are the result of better ways. As we reflect upon the critical problems of 1970, it is quickly obvious that our challenge has become one of solving America's problems while maintaining America's strengths. That seems to indicate that not only the Future Farmers of America, but all of America, is seeking *better days through better ways.*

From every sector of America young people are saying, "Let's play an active role in America's future". For the most part young people have correctly analyzed the obstacles which our nation must overcome, and as we view the energy and ambition of constructive, well-meaning youths—what things can provide them with opportunities for meaningful participation? Unfortunately the opportunities for millions of this nation's youth to become involved with adults and to participate in worthwhile community efforts are limited. For this reason it is and will continue to be the aim of the Future Farmers of America to provide our members with the knowledge of community problems and to undertake noteworthy community service and community improvement projects.

In keeping with that objective I am proud to formally announce an innovative community action program, . . . *Building Our American Communities.*

The new national effort was conceived eighteen months ago by staff members of the Farmers' Home Administration, an agency of the United States Department of Agriculture. As the USDA and FFA view America's future, it becomes more evident that rural America must, of necessity, offer a solution to many problems of congested urban centers. This over crowding of our population can be reduced provided that sufficent jobs, adequate housing and municipal facilities can be secured in rural and semi-rural areas. As FFA has worked jointly with the Farmers' Home Administration, we have decided that a program involving both study and action will be the most effective means of involving our membership. Instructional units will be made available to 12,000 teachers of Vocational Agriculture, and beginning with the 1970–1971 high school year this information will be taught in Vocational Agriculture classrooms in 9,000 American communities. Vocational Agriculture students will devote a portion of their class time to discussion of the problems of their local communities. In addition to the instructional phase, FFA members will be involved in actual community improvement projects dealing with *seven* rural problem areas:

1. Making efficient use of community resources.
2. Conducting job surveys and rural job development.
3. Becoming involved in environmental clean-up and control of water, air and solid waste.
4. Leading community beautification drives.
5. Developing recreational programs and facilities.
6. Surveying and developing community housing.
7. Encouraging community safety and aiding in the development of rural health facilities.

We realize this seems to be quite an undertaking, however, we anticipate that many other organizations will become actively involved in community projects as a result of the FFA effort to help coordinate rural development efforts. We challenge other youth and adult organizations, civic clubs and city governments to join hands with a half million FFA members as we set out to build rural America.

To this point the response to this effort has been excellent. Young and old alike are excited about the prospects for improved communities through this "youth pioneer" approach to community problem solving. President Nixon has sanctioned our program and has indicated that it satisfies the desire of his administration both to get youth involved in solution finding and to strengthen rural America.

If constructive youth involvement and further development of rural American communities seem to be important priorities for the decade ahead, then I solicit your enthusiastic support for *Building Our American Communities.* To those of you assembled here today, and to every American who shall see the results of this effort, I say this . . . FFA members have not fallen subject to a spirit of pessimism and impending doom. On the contrary we believe that *better days* are ahead for America if we will search for *better ways* to solve our problems and employ our creativity. Though troubles beset America, though controversy divides America, 450,000 Future Farmers of America join with me in saying to you that as we further build our American communities we have much to build with and God knows everything to build for.

HABITS OF AMERICAN YOUTH

Mr. GOLDWATER. Mr. President, all of us, I am sure, are concerned today with the performance and habits of American youth. I, for one, believe that American youth is far from lost. In fact, I would say that the vast majority of our young people today are exceptional, responsible, and intelligent. Of course, we do have the 5 percent or less that participates in violence and senseless protests and draws a greatly overrated measure of attention from the Nation's communication media.

Regardless, I believe the warning contained in an editorial published in the Arizona Republic is pertinent at this time. I wish to thank publisher Eugene C. Pulliam for writing it. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WILL YOUNG AMERICA DESTROY ITS HERITAGE?

Although less than 10 per cent of American youth has been participating in the violent, senseless protests about their own colleges and universities, there is a growing danger that the noisy, militant leaders of America's young revolutionaries will lure more and more students to their cause.

The vast majority of students are serious-minded young people striving to get an education. They have, so far, refused to enter into the "gory glee" of hell-raising on the campuses. But no leadership among the silent majority of students has arisen to challenge the revolutionaries.

The president of the student body at a large university was elected by a vote of 1,000 to 300. Only 1,300 out of 23,000 students voted in that election. They simply weren't interested in the militant program of the radical leaders. However, the student who was elected president claims that he represents the entire student body, and demands a voice in the Board of Regents' meetings, in spite of the fact that 90 per cent of the students wanted no part of his program.

Unless the students who believe they go to college to get an education rather than to start a revolution begin very shortly to organize and challenge the revolutionaries on the campus, they may find they have sat silent while their precious heritage of freedom and opportunity goes down the drain in a blazing, destructive, senseless revolution led by leaders who don't know what they want or what they would do with it if all their demands were granted. They want a noisy voice in everything, but beyond that they know not what they are shouting about.

A sober observation about America's youth recently came from England, where the editor of the London Daily Telegraph declared that no generation of young people ever had so great a heritage of freedom and opportunity as today's American youth.

Under the caption "Revolt of the Pampered," the editor of the London Daily Telegraph wrote:

"America is the victim of its national myth. It entered history proclaiming the rights of man; its Constitution is aimed at fostering freedom at all costs. Its young have been brought up largely on an educational theory which attaches supreme importance to self-expression. Is it odd that it should lead the world in rebellion or that its volunteer forces should sometimes lack the virtue of unrelenting discipline? Yet one marvel does defy explanation. Why should America's pampered and idolized student youth, living in a country that enjoys freedom and prosperity in unprecedented degrees, turn all its righteous anger, not against the despotisms that rule most of the rest of the world, but against America itself?"

SEWER PROBLEMS IN ROGUE RIVER, OREG.

Mr. HATFIELD. Mr. President, when we were debating the 1971 Agriculture Appropriations Act, I gave my full support to the amendment to increase funding for the FHA rural water and sewer grants and loans. My statement in support of the amendment appears on page 23294 of the July 8, 1970, CONGRESSIONAL RECORD.

In those remarks, I mentioned the situation in Rogue River, Oreg., and the problems that small towns in Oregon face in providing adequate sewer systems.

Mr. President, I ask unanimous consent that the portion of my remarks on July 8, 1970, describing the situation in Rogue River be printed in the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Mr. President, I would like to comment on the experience of one small town in Oregon and its problems in this area. I quote from a letter to me from Mr. Wayne Richards, community development specialist of the Jackson County Community Action Council. That letter states in part:

"Representative Don Stathos advised writing to you in regard to pollution of the Rogue River. The City of Rogue River is in the embarrassing position of being partly responsible for polluting its famous namesake. After taking a routine water sample for its swimming classes in August of 1969, the Jackson County Parks and Recreation Department decided to bus the participants into Medford, 21 miles away. Evans Creek, which empties into the Rogue River at the townsite, has been officially posted as being polluted. The entire population of Rogue River (700) now uses septic tanks. Because they are in such close proximity to each

other, several of the businesses share the same tank. Engineering surveys indicate clay subsoil which is very poor for proper drainage of septic tanks.

I call attention to the following paragraph; for it goes to the heart of the problem:

"The City of Rogue River has repeatedly attempted to bond itself and pay for its sewer system. These bond issues have been unsuccessful because of the excessive financial burden placed on the tax payers. Two thirds of the inhabitants of Rogue River are over age 65 and living on fixed incomes. 538 social security checks were mailed to zip code 97537 of which Rogue River is the major part; these checks averaged $71.46. The last bond issue presented before the voters in November of 1966 was for $360,000.00—$30,000.000 of which was a Farmers Home Administration Grant. That is 8% federal assistance."

I ask my colleagues to pay particular attention to this section of Mr. Richard's letter:

"Inability to pay is clearly as much of a problem here as is the pollution of the river. The City of Rogue River is once again preparing an application to federal funding sources for grants to help pay for a sewer system. Is the national concern about pollution genuine? What kind of support need we solicit to obtain 50% to 80% federal grant participation?"

In closing, Mr. President, I would note that the problems of Rogue River, Oreg., are not unique. Similar statements could be expressed by many mayors and county commissioners in small Oregon communities. It is for this reason, Mr. President, that I urge passage of the Goodell amendment.

Mr. HATFIELD. Mr. President, recently I have been sent a copy of the Federal application for financial assistance for a sewage system, which was submitted by the town of Rogue River. The application has been sent to the Economic Development Administration, the Farmers Home Administration, and the Federal Water Pollution Control Authority.

When I read this application, it dramatized to me the need for increased Federal assistance to our rural areas. The problems they face are different from those in our urban centers, and we must not lose sight of the special needs of small towns and rural regions across the United States.

We in the Senate have spent much time discussing the growing urbanization of our country and its effects on all facets of our society. Much debate has centered on the results of urbanization, but not as much has been focused on the causes. In my opinion, this application could serve as a case study of reasons that many of our small towns are stagnating today.

Our young people should be able to choose a city life or a rural life, and not be pushed into city or suburban living because no jobs are available in rural areas and small towns. We must help give our rural areas a new economic lift.

Mr. President, because I believe this situation in Rogue River, Oreg., sets out so well the problems facing many small towns, I ask unanimous consent that the application be printed at the end of these remarks.

I ask Senators to read these comments, for they could be those of any small town suffering from a severe financial squeeze. These people across America deserve our assistance. We need to move now to help them, or the decline of our small towns and the attendant urbanization will only multiply the all too familiar problems brought on by urbanization.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

APPLICATION FOR FEDERAL ASSISTANCE FOR CITY OF ROGUE RIVER SEWER SYSTEM

Cities, towns, or areas: Rogue River.

County: Jackson.

Population: 1960, 520; Current (Est.) 700; to be served by project, 2,000.—Design for expansion to 2,000.

Description: To construct a modern sewage treatment plant, interceptor sewer, main lines and house laterals for the entire city of Rogue River.

Public interest and necessity: Narrative and supporting data attached hereto.

METHOD OF FINANCING

[In thousands of dollars]

Source of funds	Waste components		Total
	Treatment	Collection	
Federal grant requested	56,250	143,750	200,000
Federal loan requested			
Other Federal contribution			
State contribution	33,750	86,250	120,000
Applicant contribution	22,500	57,500	80,000
Estimated total project cost	112,500	287,500	400,000

OTHER FEDERAL ASSISTANCE—PREVIOUS OR PENDING

Name of agency	Type of assistance	Indebtedness outstanding, if any
Housing and Home Finance Agency	Sewer planning grant	$1,500

Preliminary cost estimate for proposed Rogue River sewer bond issue

Interceptor:	
3,000 linear feet at $6	$18,000
800 linear feet at $10	8,000
8-inch street mains (20,000 linear feet at $6)	120,000
4-inch house laterals (5,000 linear feet at $3)	15,000
Manholes (60 units at $250)	15,000
Creek crossing	5,000
Repaving:	
40,000 square feet at $0.10	4,000
40,000 square feet at $0.30	12,000
Pump station	25,000
Right-of-way acquisition	5,000
Subtotal	227,000
Contingencies, engineering, legal and financing charges (all at 25 percent)	57,000
Total; interceptors and distribution system	284,000
Treatment plant (2,000 population equivalent)	90,000
Contingencies, engineering, legal and financing charges (all at 25 percent)	23,000
Total treatment plant	113,000
Repay planning grant	1,500
Grand total	398,500
Recommended bond issue	400,000

PUBLIC INTEREST AND NECESSITY

Statistics over a period of time indicate that not only is there poverty in the Rogue River area, but that it is increasing. This particular project is one of the few that promises to change not only the poverty situation but also the increasing poverty level. A sewer system for Rogue River would provide basic human sanitation and give a basis for rational economic growth. This grant application represents ten years of preplanning activity in attempts to get a sewer system built for the Rogue River area.

I. Contribute to health and living standards: The health report committee of the 1968 Jackson County Long-Range Planning Conference stated ". . . the most serious unmet health needs in the County . . . (are) adequate sewage disposal system . . ." The same paragraph from which this statement was taken also indicates another serious unmet health need as ". . . better housing for the elderly," which, of course, cannot be built in the City of Rogue River until the sewage problem is taken care of.

No adequate housing can be provided for any age group until adequate sewerage is provided. Neither the county wide leased housing program nor the rehabilitation housing program can operate in Rogue River because the available existing houses do not meet minimum Federal standards. Older houses are not being replaced because builders hesitate to accept septic systems as economically feasible when building new houses.

II. Prevent or abate pollution: The City of Rogue River has the dubious distinction of being a polluter of the River of its own namesake. Individual septic tank and drainfield systems presently serve the area within the Rogue River city limits. Black clay underlay prevents proper drainage of effluent from the septic tanks. The clay soil condition coupled with increased population density in the downtown area, have long ago rendered inadequate the current disposal system.

In August, 1969, the Jackson County Parks and Recreation Department took a routine water sample from the Rogue River at the Rogue River townsite, and from the negative results decided to bus its annual swimming classes into Medford, twenty-one miles away.

Evans Creek, which empties into the Rogue River at the townsite, was officially posted as polluted by the Jackson County Court during the summer of 1969. In July, 1970 a concerned citizen of Rogue River telephoned the Rogue River Neighborhood Center, telling them of the negative results obtained from two water samples taken from Evans Creek near her home. She felt that parents of children swimming in Evans Creek should be notified of its high pollution content. She called the County Sanitation Officer, who went on the radio that evening to inform the public of the situation.

A sewage system would clearly abate present pollution and prevent its occurrence in the future from the Rogue River population. Sufficient reserve capacity will be provided (the design presented before the voters will be for a maximum of two thousand people) to serve the ultimate development of the city and surrounding area.

III. Assist in the creation of long term employment: Lack of a sewage collection system and treatment facility has seriously hindered the growth and development of Rogue River and the surrounding area. (See attached letters.)

Prospective businesses have approached the local real estate brokers and our local banker, as testified in their accompanying letters of support. It is easy to see why restaurant or motel interests would find it inadvisable to locate in a city which has no sewage facilities. The most pressing need of the Rogue River area is adequate housing and new jobs, neither of which is possible without a sewer system. The City of Rogue River's excellent location on the legendary river itself makes it potentially ideal for further development of tourism and recrea-

tional facilities. One of the largest public camping facilities in Southern Oregon is located less than one mile from the city limits of Rogue River. Valley of the Rogue State Park provides one hundred and fifty overnight camping sites. In 1967 there were 605,248 visitors to this park.

IV. Primarily benefit long time unemployed and members of low-income families: Construction of the needed sewage facilities without Federal assistance would involve an extraordinary and excessive financial burden on the city in relation to its financial resources. The City of Rogue River has been trying to get a sewer for ten years. A preliminary engineering survey was completed in 1960. Bond issues have been defeated because the taxpayers could not bear the full cost of such a system.

A survey taken four years ago and forwarded to Congressman John Dellenback indicated that two-thirds of the inhabitants of Rogue River (population 700) are over age sixty-five and living on fixed incomes. As of January, 1968 monthly Social Security checks mailed to Zip code 97537, of which Rogue River is the only incorporated area, numbered 538. These checks average $71.46.

Rogue River School District #35 (enrollment: 1,000 students) has its main school buildings within the city limits, which presents additional financial burdens to the city. Less than 100 students enrolled in Rogue River schools live within the city limits of Rogue River. For example: already unpaved, ill-graded, improperly surfaced, sub-standard streets are periodically rutted out due to frequent and heavy school bus traffic. The schools' sewage disposal is also handled completely by septic tank. Also indicative of the economic need of this area is the fact that the Rogue River schools are eligible for and do participate in the Federal free school lunch program. Rogue River School District is identified by the Oregon Board of Education as being one with a "high concentration of students from low-income families." The District is able to document that over 20% of its enrollment is under OEO poverty threshold guidelines.

The last bond issue presented before the voters for a sewage system in 1966 would have cost approximately $600 per typical household (100 x 100 foot lot) for the sewer hookup. These sewer rates are unreasonable, especially to the elderly, whose priority expenses are such things as food, eyeglasses, taxes, hearing aids, etc. Using the $71.46 average monthly Social Security check mentioned previously, this $600 cost per homeowner would be in many cases almost three-fourths (12×$71.46 equals $857.52) of the entire yearly income of pensioners.

The City of Rogue River has been identified by the Economic Development Administration of the Department of Commerce as being located in one of their designated areas. The principal requirements for this designation are high unemployment and low family income. Rogue River has been declared eligible for participation in Economic Development Administration programs. Jackson County is an economically distressed area described by the U.S. Department of Labor as having "chronic and persistent unemployment." Without a sewer system the City of Rogue River lacks the foundation required for economic growth. The historical lack of growth Rogue River has experienced (1950 census: 590 persons; 1960 census: 520 persons) has local citizens concerned stemming the flow of youth migration from this rural area to urban areas. Teenagers are moving out as fast as they graduate from high school because there are no job opportunities. The people of Rogue River are aware that their greatest investment is the youth of this area.

1969 average unemployment percentage rate for the City of Grants Pass, (population 13,000) nearest "large" city to Rogue River, was 10.6%. 12.7% was the percentage for the first week of May, 1970, 15.5% for March, and 17% for February. Unemployment for the area is above the state average.

The following is a breakdown of results obtained from a questionnaire administered through the mail to all 250 households situated within the City of Rogue River. There were 55 replies answering anonymously "How many people live in your household?" And "How much is your monthly household income?"

Household income per month	Number of households	Total number of people living in households
Less than $150	17	26
$150 to $250	6	13
$251 to $350	15	34
$351 to $450	9	21
Above $600	8	22

MAY 18, 1970.

TO WHOM IT MAY CONCERN: There are no job opportunities in Rogue River so when I graduate Wednesday, May 20, I will leave here to seek other means of better employment opportunities. Also, our river and creeks are so polluted swimming is almost impossible.

Respectfully submitted,

RENA L. BAKER.

ROGUE RIVER, ORE.,

DEAR SIR: I am 76 years old and a home owner in Rogue River. I think we need a sewer, but living on a limited income I could not afford to pay for it. It is necessary in our town, but the people like myself can't do it without a gov. grant. I am also a widow and living alone.

LOIS I. HART.

MAY 19, 1970.

DEAR SIR: Do to the financial circumstances of the city and the people living in Rogue River. It seems impossible to finance a sewer system here. We are very much in need of one. My husband 58 years old does odd jobs, myself 56 takes care of elderly people for our low income, less than $3,000 per year. We do need one badly and hope the government will help us get one.

Sincerely,

Mr. and Mrs. L. A. MAILANEN.

MAY 19, 1970.

DEAR SIR: I am a widow, 83 yr. old living in Rogue River. I feel that a sewer would be necessary for health & economic reasons, but living on a limited income, I cannot afford to pay for it in taxes. Rogue River is not financially able to pay for it—we need government help to put in our sewer.

Sincerely,

EDA B. FULTON.

APPLETON REALTY CO.,
Rogue River, Oreg., April 13, 1970.

Mr. WAYNE RICHARDS,
Community Action Center,
Rogue River, Oreg.

DEAR MR. RICHARDS: The current effort being enlisted by your group on behalf of this community and directed towards a satisfactory installation of a sewage disposal system for the City of Rogue River is greatly appreciated by myself as well as many others in the community.

As you may know, various beneficial developments have been thwarted in past years due to the fact that sewers were not readily available.

I would like to cite a few examples for you, the first of which is a syndicate of a group from Portland which was desirous of locating a motel within the city limits of Rogue River. This complex, as planned, called for the development of a motel unit, as well as a good quality restaurant and cocktail lounge facility, keyed not only to tourist traffic in this area but it was hoped it would help to round out the business community greatly. A complex such as this, it was estimated, would have employed as many as 15 people on a regular basis which, in itself, would have been a sizable contribution to the community.

One other phase of development which has been stymied by the lack of a sewer system is the development of an adequate mobile home park unit in and near this community. The cost of installing self-contained sewage disposal units apparently is prohibitive to the private developer attempting to develop a park of this nature. Estimates of the manpower needed to operate a facility of this type are difficult to make, however, I cannot help but feel that if a sizable park were developed, it would require the services of many people to continue adequate maintenance.

The multiple dwelling or apartment type development is very much a need in this area but again has been postponed due to this same critical situation. The construction and development of multiple dwelling units in this area as well as the continued maintenance of same naturally would contribute to the over-all economy as well as provide work for additional people.

I have cited some of the frustrations that have occurred due to the lack of sewage disposal in the City of Rogue River and do not mean to overlook the fact that, in my estimation, we are probably now in a critical stage relative to over-saturation of affluence in this area. This alone serves as a deterrent to any man in business who is thinking of locating in this area and this phase of the problem should not be overlooked.

Again I want to thank you personally for the effort you have extended, and I am sure you will continue in this direction, and I will offer my services in any way possible to aid you in your efforts.

Sincerely,

GRANT APPLETON,
Broker.

ROGUE RIVER, OREG.,
March 27, 1970.

Mr. WAYNE RICHARDS,
Community Action Center,
Rogue River, Oreg.

DEAR MR. RICHARDS: It is my understanding that you are requesting information from various individuals who had planned construction projects within the City of Rogue River but have been unable to because of the lack of a community sewer system.

As for myself—I had intended to construct a 4-unit apartment building or additional office complex to the rear of my present location, but cannot until such time as a sewer system is installed.

My father-in-law owns a lot adjacent to the bank and is presently considering a medical-dental ocmplex, but is holding off until such time as a sewer system is installed.

As a professional engineer, I have had to turn down numerous clients who were contemplating construction of apartments, motels, restaurants and commercial projects but again were thwarted because of the lack of sewers.

If you have any further questions, please call or write.

Sincerely,

BRYCE W. TOWNLEY.

ROGUE RIVER, OREG.,
April 2, 1970.

TO WHOM IT MAY CONCERN: The city of Rogue River has been in need of a sewer system for a very long time.

Because of the high percentage of elderly low income people within the city and the high property taxes to which they are already subjected, it is financially impossible for the residents of Rogue River to bond themselves for such a system.

Therefore Federal assistance is mandatory if this situation is to be corrected in the forseeable future.

Respectfully,

R. J. CAMDEN.

GOLD HILL, OREG.,
May 13, 1970.

The STUDY COMMITTEE FOR THE DEVELOPMENT OF A SEWER SYSTEM IN ROGUE RIVER,
Rogue River, Oreg.:

For ten years I have owned seventeen acres of undeveloped land located within the city limits of Rogue River. This property is ideally suited for and was originally purchased for housing and it has been and still is my desire to construct a one hundred unit condominium for the elderly there. This letter is to testify that this housing project has been held up for ten years due to the lack of a sewer system. My construction would begin when and if there is a sewer system built in Rogue River. I understand that because of the high percentage of elderly low-income people living within the city limits it is financially confiscatory and prohibitive for them to bond themselves for such a system. However in the event that a bond issue is passed it is easy to see the enormous amounts of additional taxes that would be available to help pay for the sewer from my investment alone. There is a very severe lack of adequate housing in this area which can be verified by the Jackson County Housing Authority.

In summary I would like to point out and emphasize that (1) Rogue River has needed a sewer for a very long time, (2) the lack of a sewer has adversely affected the availability of adequate housing, (3) the materials and labor for constructing the units would certainly boost the economy in this economically distressed area, (4) maintenance of the units would create jobs, (5) all of this is and has been for ten years contingent on a sewer system in Rogue River.

Sincerely yours,

E. F. BOLT.

HOME OWNER PURCHASING ENTERPRISES INC.,
Medford, Oreg., July 10, 1970.

Mr. WAYNE RICHARDS,
Medford, Oreg.

DEAR MR. RICHARDS: In regards to Home Owners Purchasing Enterprises, Inc. doing rehabilitation of homes in Rogue River. We find it not feasible to do because of no adequate sewer system.

Several families have asked our office to consider a certain house they wished to buy. F.H.A. is very stiff about issuing a 30 Year loan on a private sewer system and more so if same property is on private water system.

We earnestly hope your efforts will work out the problem for the citizens of Rogue River.

Sincerely,

MARY A. DUTTON,
Executive Director.

HOUSING AUTHORITY OF JACKSON COUNTY,
Medford, Oreg., May 26, 1970.

Mr. WAYNE RICHARDS,
Study Committee for the Development of a Sewer System in Rogue River, Medford, Oreg.

GENTLEMEN: With regards to the development of a sewer system in Rogue River it is the opinion of the undersigned that such a system is desperately needed in the Rogue River area.

We have all heard of the high pollution factor of the Rogue River that eminates from the immediate Rogue River area, but more importantly, the lack of an adequate sewage disposal system prevents any significant development in the area.

Our experience has indicated that it is extremely difficult, if not impossible, for the Housing Authority to obtain units in the Rogue River area. New development is stifled and existing units are not capable of economic rehabilitation or repair due to the fact that in the final analysis adequate sewage disposal is just not available in the majority of cases.

We wish to commend you on your efforts and it is our earnest hope that your committee will lead to the solution of the sewage disposal problem in Rogue River.

Very truly yours,

RALPH B. EATON,
Executive Director.

OREGON EMPLOYMENT DIVISION,
Medford, Oreg., July 9, 1970.

Mr. WAYNE RICHARDS,
Jackson County Community Action,
Medford, Oreg.

DEAR MR. RICHARDS: Pursuant to your request for some of the possible employment impact which the installation of sewerage system would have on the City of Rogue River, I submit the following possibilities:

1. Expansion of tourist oriented industries. Accepting the general consensus used in studying the impact of the recreation and vacation travel industry, there are 10 industries which contribute practically all of the seasonal swing between February and August. These 2 months have been established by study of travel data as the low and high months of tourist mileage. The 10 marked by seasonal industries were:

Industry:	*SIC code*
Eating and drinking places	581
Hotels, tourist courts, motels	701
Gasoline service stations	554
Sports, promotion, recreational services	794
Retail stores N.F.C	599
Motion picture theaters	783
Theatrical producers, etc	793
Rooming and boarding houses	702
Laundries	721
Trailer parks and camps	703

All of these industries appear to be below the expectation of such an excellent location on a river well adapted to recreational uses and its near proximity to a heavily used state park. It must be concluded that lack of development has been, at least partially, the lack of an adequate sewerage system.

It would seem reasonable that with the installation of an adequate system, that several motels, eating-drinking places, service centers, such as gas and laundries would add between 60 and 80 job opportunities.

2. Development of retirement condiminiums: The high liveability of the Rogue Valley is well accepted, yet there has been no announced permanent year-round jobs.

3. Health center could become a very worthwhile project for recuperative patients who need to remain in the area close to the special treatment facilities, such as the cobalt center, but who prefer to be in a smaller community.

Therefore, in summary, I would anticipate that a considerable number of jobs would result from the proposed sewerage system.

Respectfully submitted.

STEARNS CUSHING,
Labor Economist.

ROGUE RIVER LIONS CLUB,
Rogue River, Oreg., April 21, 1970.

To: The study committee for the development of a sewer system in Rogue River:

The Lions Club of Rogue River believe that a sewer system would greatly benefit the City of Rogue River and its people, while at the same time aiding in the elimination of the Rogue River waters pollution.

The downtown section of Rogue River City is comprised of many businesses which are sharing the few septic tanks available. These are operated to the maximum limit most of the time and thus restrict any new business use. The size required of a drain field prohibits any new septic tank installation because of the building density of the area. Therefore, the City's growth has stagnated. Resulting in no new revenue to offset the rising costs of operating the city with which the taxpayers are now being burdened.

With a sewer system there would also be a treatment plant which would process the waste and return it to the soil in a near pure state which would not contaminate the river and the city water system.

The Lion's Club considers the installation of a sewer system to be a great asset to the City of Rogue River.

Sincerely,

LELAND SOUTHERN,
Secretary.

ROGUE RIVER JAYCEES,
Rogue River, Oreg., April 16, 1970.

Hon. WARREN BROTHERTON,
Mayor, City of Rogue River,
Rogue River, Oreg.

DEAR MAYOR BROTHERTON AND MEMBERS OF THE CITY COUNCIL: The Rogue River Jaycees are very aware of the need for a sewer system in the City of Rogue River. We feel this is the time for a study of the problem and strongly urge the creation of a committee to study the development of a sewer system.

The entire county is aware of the pollution problem and the need to solve it. More federal funds are now available than ever before for projects such as this.

In order for the City of Rogue River to prosper and expand, a sewer system is needed so new homes, motels, small industries and other businesses can locate in the area. Once a sewer system is completed, it would be possible to extend the city limits.

In a short time there will be a sanitation problem with the use of septic tanks throughout the city, and the City of Rogue River should act now before the problem becomes acute and the State Board of Health demands a solution.

Very truly yours,

CLIFFORD E. BIGHAM,
President.

VALLEY OF THE ROGUE BANK,
Rogue River, Oreg., April 24, 1970.

STUDY COMMITTEE FOR DEVELOPMENT OF A SEWER SYSTEM FOR ROGUE RIVER,
Rogue River, Oreg.

GENTLEMEN: As your local banker, I was delighted to hear that you are making a determined effort in the direction of a sanitary sewage system for our City. You have my complete cooperation.

In the three years in which I have been involved in the community affairs, I can not think of a single item which would do more for the progress of the community than the subject at hand.

In the past we have had several inquiries concerning the possibility of a medium-sized motel, cafe combination. Interest dwindled rapidly when it was learned that there was no existing sewage disposal system.

The institution of an acceptable system, in my opinion, would bring into the community several small businesses which would create employment and enhance our local economy. The property which is now zoned commercial and is occupied by old "shanties" would be purchased very rapidly for immediate and future commercial building sites.

I know personally of several projects which are pending, and will be instituted when and if there is an established sewage system within the limits of our City.

Very truly yours,

CLYDE THOMPSON,
President.

ROGUE RIVER, OREG.,
May 7, 1970.

Mr. WAYNE RICHARDS,
Community Center,
Rogue River, Oreg.

DEAR MR. RICHARDS: I would like to take this opportunity to tell you that I am def-

initely in favor of the proposed sewer project in Rogue River. I believe that this would be a definite asset to every person living in the Rogue River area.

First, it would increase the resale value of city property. Second, it would be the foundation for future growth as far as business establishments and income enterprises. Third, it would be an attraction for new residences and city expansion which would benefit us all.

I hope that all of us in the Rogue River area will take pride in our community and vote in favor of the proposed sewer project. Let us remember what President John Kennedy once said, "It is not what our country can do for us but what we can do for our country."

Yours truly,

H. W. HAWKINS, D.O.

SEWER SYSTEM BOND ELECTION MAY BE HELD IN SEPTEMBER

ROGUE RIVER.—A bond election to see whether or not residents of Rogue River will approve financing for a city sewer system may be held early in September, according to Councilman Chester Willsey.

Willsey is Rogue River's commissioner of sanitation and he is chairman of the Sewer Study Committee that was appointed by the council in April.

Financing is something that must be approved before the community can apply for federal assistance, hopefully a grant to cover 50 per cent or more of the cost.

"The difficulty is," Willsey explains, "that we must hold the bond election for the full amount—and we are talking in terms of $350,000 to $400,000—before we can apply for the federal grant that will offset part of it. The committee hopes to include a stipulation in the election that will guarantee the people that nothing will be done, no money will be spent, unless we can receive at least a 50 per cent grant.

SOMETHING WE CAN HANDLE

"We want to call for a vote on the bond issue, but we want to make it plain that unless we can get the local cost down to around $175,000 to $200,000, something we can handle, we will not proceed."

As it is planned, the local share of the bond issue could be paid off through sewer construction fees, monthly service charges, and the levy assessed for the sewer lines as they run adjacent to each piece of property served. (This amount could be figured either on a property frontage foot basis or on a square foot basis.) Individual property owners would be responsible for the cost of the line joining their homes to the main system.

The county assessor has said there would be no increase in taxes because property in Rogue River is already assessed at a value allowing for septic tanks and the difference between reassessing it with a sewer system would be negligible, except in the case of vacant properties, Willsey said.

SYSTEM IS NEEDED

Most of Rogue River's citizens (population about 700) agree that a city sewer system is needed, Willsey said.

The community is now served by septic tanks, some of which don't perform adequately, and city wells. There have been complaints about the amount of chlorine necessary to keep the drinking water safe.

The problem is, how to keep the cost down on what is needed, and this is what the Sewer Study Committee is trying to work out. Meetings have been held weekly since April.

"We are trying to benefit as many as possible at the lowest cost," Willsey said.

Along with Willsey, members of the committee include Warren Brotherton, mayor; Bob Nelson, businessman; Bryce Townley, engineer; Mrs. Elizabeth Sheffield, businesswoman; Mrs. Anna Classik, librarian; Ed Bolt, landowner; and Wayne Richards, community development specialist with the Community Action Center. Dr. Henry Hunt represented the school district until he left to assume the superintendency in Winston-Dillard.

TENTATIVE MAPS

Two tentative maps have been drawn and the committee is compiling cost figures.

Ways of financing a bond issue to the best advantage, and the possibility of state assistance are things to be considered, "but we haven't quite reached that stage yet," he added.

A public meeting was held several weeks ago at the Live Oak Grange and there were many questions concerning the sewer system proposal. Willsey said the committee felt that 90 per cent of the approximately 50 persons present seemed to agree that if the plan outlined could be worked out, they would support it.

Saturday, June 13, Congressman John Dellenback met with the committee and interested persons and told them that Rogue River's chances for getting federal assistance were good, but that there are always many bids made for federal dollars. He said that as soon as the local move is made (approval of a bond issue) his office will assist. No time schedule was given, but each request must go through six or eight offices, he reminded.

NO MORE PERMITS

The Jackson County Health Department is issuing no more permits for dry wells (to supplement septic tank systems where needed) in Rogue River and will not issue septic tank permits until the soil has been thoroughly tested.

The community is growing—the high school is being enlarged—and there is more demand daily on diffusing soils, Willsey continued.

One property owner wants to develop a condominium for the elderly, but is being held up because there is no sewer system. There is a severe shortage of adequate housing in the community and the Housing Authority of Jackson County has permission to lease there, but there is difficulty in finding rentals that meet standards because of the sewage problem.

Willsey explained that if Rogue River can't arrive at a way to solve its problem through careful, intelligent planning, it may be forced to take action, and soon.

"We could be told that we must put in a sewer system—to work it out the best way we can," he said. "The committee feels this would not allow us the opportunity to take into consideration the most economical use of the dollar."

HEALTH SERVICES AND MOUNTING COSTS

Mr. HARRIS. Mr. President, on July 8, 1970, I held an important public hearing in Tulsa, Okla., on the subject of the delivery of health services and mounting medical costs. The testimony I received at that time was thoughtful and worthwhile, and I believe that Senators and relevant committees can benefit from a consideration of it. Accordingly, I ask unanimous consent that the second additional portion of that testimony be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

PUBLIC HEARING ON HEALTH DELIVERY AND COSTS, TULSA, OKLA., JULY 21, 1970—II

Senator HARRIS. Thank you, Jack. Like you, I believe that our system can and will work if we get together, and that's the basic idea of this hearing. I appreciate very much what you've had to say.

Arthur Berkey is Area Director of the United Steelworkers of America. Arthur, we're glad you're here, and we'd be pleased to hear from you at this time.

TESTIMONY OF MR. ARTHUR BERKEY, AREA DIRECTOR FOR THE UNITED STEELWORKERS OF AMERICA, AFL–CIO–CLC, TULSA, OKLA.

I'm real privileged to present some of our viewpoints on this most important field.

I am Arthur K. Berkey, Area Director for the United Steelworkers of America, AFL–CIO–CLC; our Oklahoma Staff Office is at 124 So. Denver, Tulsa, Oklahoma 74103.

At present, we have approximately 5,500 members employed in 25 companies, covered by 19 Local Unions. One group is covered by a national contract. The others, although in some instances a branch of a national company, are covered by separate contract agreements. All provide for some method of life, medical and hospital coverage. Some are jointly financed by employees and employer though the majority are 100% financed by the employer as a part of fringe benefits negotiated into our contracts.

Workers are located principally in N.E. Oklahoma. The general area is Tulsa, Oklahoma City, Enid-Ponca City area and until recently in the Henryetta, Okmulgee area, not now in existence due to the closing of the Eagle-Picher Company Zinc Smelter at that location.

Inasmuch as we have had considerable experience in a wide-range of the State and due to the detailed involvement of negotiations for medical and hospital benefits, our members are concerned about the increased cost of benefits, which continues to climb at an alarming rate.

We have a wide range of programs, some are basic providing for as low as $12 to $15 per day for hospital benefits and $200 surgical schedules, on up through the Armco Steel (basic National Steel Agreement) providing for 100% coverage for daily room benefits and surgical fees on a customary and regular fee basis.

The majority of underwriters is Blue Cross-Blue Shield. The remainder are nationally-known insurance carriers, such as Metropolitan, Equitable Life and so forth.

Within the past few years, the cost of continuation of existing plans has been so inflated as to make it impossible to absorb this cost within the amounts we feel the employer can justifiably pay. Normally one would think that a wage earner in the $2.50 to $4.50 bracket should not find difficulty in meeting normal health and surgical cost, but this is not so. We daily receive reports of charges above the allowed cost of a plan negotiated a year or two ago, that was at the time of negotiations providing nearly 100% coverage. Now the individual is billed for upwards of 50% more than a similar sickness or operation cost two years ago.

The carriers, especially Blue Cross-Blue Shield, have been helpful in reviewing single cases on our behalf due to the availability of records that are not normally available to either the employee or his union representative.

We recognize that medical costs have risen due to necessary improvements and normal wage adjustments but we feel that the degree of increases is not justifiable and even if it were justified, medical services and hospital benefits are priced beyond the ability of the wage earner to afford. From members of our members families, we have reports that parents and relations who have

been retired cannot afford even the meager base necessities of proper medical care. From the experience we have had with our own members retirement, where a continuation of medical and hospital benefits were not provided in the pension plan, many have been unable to provide for such care out of S.S. and pension income. Medicare and medicaid have assisted this group.

I have attached a copy of the rates charged per day within various communities in Oklahoma that was recently published in the Tulsa newspaper, showing the wide range of per day cost by hospitals. We feel that certainly there will be some difference between any similar operating facility but we seriously question the justification in such a wide range. Surely it is not basic wages paid for services since these now come under minimum wage provisions of the Fair Labor Standards Act. And we do not find this degree of variance in wage rates in comparative operating properties that we have under contracts within the State.

I would point out within this Article in response to the question, "Why the disparity?" The best one official could come up with, "I guess they figure Tulsa can afford it."

But Senator, even if Tulsa could afford it, which we raise question, there are thousands of Oklahomans and millions of Americans that cannot afford to become sick or undergo a badly needed operation. We have some suggestions to offer:

1. We believe the whole area of medical and hospital services should be investigated with Congressional and Senatorial Committees for the purpose of seeking ways and means of improving services to the general public. This naturally must be a long range and continued program.

2. Immediate legislation should be passed providing for a fair pricing of medical services and hospitalization benefits, based on an in-depth study of fees charged by doctors and hospitals.

3. Expansion of medicare or a program of national health care to provide a cushion for cases where the individual cannot himself provide for needed medical care.

4. Investigation of high cost medical and hospital services in areas such as Tulsa to determine if such costs are justifiable or as the newspaper article would indicate, "because Tulsa can afford it."

5. Committees such as this to request assistance by all national carriers of hospital and medical insurance programs to make available its records revealing the number of cases referred to hospitals by doctors and the range of fees charged by both doctors and hospitals for similar services.

6. Some immediate relief be granted through tax allowances for excessive medical and hospital cost.

7. Enactment of re-insurance or an overall national health insurance program to pay for excessive cost for long term and intensive care medical and hospital services.

The average wage earner is seriously concerned with this additional cost burden especially in fact of other inflated costs, increasing unemployment or underemployment. He found it difficult with a full pay check and a part of the medical cost provided through employer and employee pre-paid plans, but now it is all but impossible for him to continue to meet this cost.

We're saying here, Senator, that we've simply arrived at a point where it is not fair or justifiable to continue to pass this excessive cost on to the employer.

Thank you for this opportunity to appear on behalf of our members of the United Steelworkers of America but more important, on behalf of those thousands of wage earners in Oklahoma who do not have union representation but must look towards you and your Committee for assistance in this great need.

I brought with me a copy of a plan that we have in existence here in the Tulsa area to give you an example of these increases in cost. This plan went into effect—it is a standard Blue Cross-Blue Shield plan—in December 1967. At that time we made a detailed, in-depth study of the hospital charges and the cost of medical service in the Tulsa area. It cost the individual employee $8.30 a month; for an employee with a family it cost $9.10.

We have had two increases; we're now confronted with a third. With the addition of that third, those costs will now be—I remind you, Senator, that this is since December 1967—it would cost to pay for the single person, $15.20; for the family group, $34.40. You can see here how that's a doubling. This is going up now at an annual rate of 15.8%, or it will double in approximately 5¾ years. We talk about the concern about the population explosion—we're doubling hospital costs about ten times the rate we're doubling the population. So, we should have some concern there. I want to say this on behalf of this particular carrier which is Blue Cross-Blue Shield: of the total costs in this period, of $13,892.30, they paid back $11,629.27. But the employees, in addition to the costs of buying the insurance, paid out an additional $3,381.55. So we continue to see great resistance on the part of our membership to continuation of hospitalization programs and plans. Anytime we can be of further service to you, we'll be privileged to come and appear.

Senator HARRIS. Thank you Arthur for a very comprehensive and very useful statement.

I'd like to call, now, on the President-elect of the Tulsa County Medical Society, Dr. C. S. Lewis. Dr. Lewis, we appreciate very much your coming here, and we will be pleased to hear from you at this time.

TESTIMONY OF C. S. LEWIS, JR., M. D., PRESIDENT-ELECT OF THE TULSA COUNTY MEDICAL SOCIETY

Thank you, sir. Senator Harris and friends.

We, in Tulsa, appreciate your time and interest in the problems of medical care for the people of the United States. We too are interested in these problems and are seeking ways of solving them. We appreciate this opportunity to visit with you, our senior senator, in regard to methods of handling health care problems of our country.

I am C. S. Lewis, Jr., M.D., President-Elect of the Tulsa County Medical Society. I am a Board Certified Internist and am engaged in the private practice of Internal Medicine in Tulsa. By way of credentials, I also serve on the Medical Advisory Committee of the Tulsa Area Health and Hospital Planning Council, am a member of the Clinical Faculty of the University of Oklahoma Medical School, and President-Elect of the Oklahoma Society of Internal Medicine. I serve the American Heart Association on state, regional, and national committees at present, and am a past member of the Board of Directors of that organization. I also serve as Chairman of the Joint Committee on Health Affairs of the United Presbyterian Church in the U.S.A. Among other duties, this policy-making committee has the responsibility for 56 mission hospitals in 23 developing countries around the world.

After discussion with appropriate committees of the Tulsa County Medical Society, we feel that the following statement of Richard S. Wilbur, M.D., Assistant Executive Vice-President of the AMA, reflects the feeling of the majority of physicians in this area, and I would like to read this statement at this time:

"I am not here simply to defend our present health care system. But we have heard so often and so vehemently about its problems, that I come here to set the record straight by praising it for the many outstanding strengths which it has. Frankly, I have heard enough from labor leaders, politicians, college teachers, newspaper columnists, television commentators and a few physicians, particularly the non-practicing ones, who berate the medical profession for many things over which it has no control, while ignoring all of the good things which we do every day.

I am still waiting for a government leader, a union president, or an editor to make a nationally covered speech about the millions and millions of people who were cured of disease, relieved of pain, or put back together after serious accidents last year and the year before, and the year before that.

All of these critics are fond of statistics. Fine, let them turn their computers to some of the positive facts. How many million successful operations were performed last year; how many million men returned to their jobs after being cured of some disease; how many million children went back to school after treatment; how many broken bones were set and healed perfectly; how many early cancers detected and cured; how many people who would have died 20 years ago were cured by advances in medicine pioneered in this country?

These figures have had no notice. Instead, the people who are looking for headlines and the people who are writing them look for something else entirely. They pick out the statistics for the most unfortunate people in the country—those who never had an education; those who have no jobs because they lack training or have not been able to get into union apprenticeship programs; or because industry has been automated beyond the need for unskilled, uneducated laborers.

They find people who live in unspeakable slums owned by absentee landlords who are under no legally enforced obligation to provide heat, running water, sanitation, paint, or pest-control. And then, they blame the medical profession and the system, or as they call it "non-system", of medical and health care for the fact that these unhappy, unfortunate, neglected people are not healthy.

They quote the statistics of infant mortality in these areas and imply that it is the fault of the medical care system that the mortality rates are high. They do not quote any rates for infant mortality among those christian scientists who live in the relatively well-to-do middle class areas with good housing, with good plumbing, with good nutrition, and with a good education, but without medical care of any type.

The critics also abandon all logic in seeking reasons for criticism. They point to physicians who move to suburbs instead of staying in the slums as though they were criminals—ignoring the fact that millions of people who live in the suburbs also need medical attention—and then, as the crowning blow of all, when they find those hundreds of physicians who have remained behind in the slums to devote all or a major part of their practices to caring for the poor, they do not congratulate them. They point the finger of scorn and accuse them of profiteering by accepting payment for the care they had rendered under Medicaid.

Although the medical profession pointed out the multiple deficiencies of this program, the very people who urged it on Congress are doing the complaining and are accusing the slum area physicians of graft and corruption for accepting payments from programs which they never sought.

The medical profession is more intimately involved in the problems of giving good medical care than is anyone else. But friends and critics alike must realize as we do that the problems are not caused solely by today's medical care system. Ignorance, unemployment, poverty, and aging are not medical problems alone.

They are social and economic as well. Although we in the medical profession try to do all we can as good citizens to alleviate

them, they are not solely or even chiefly our responsibility and no tinkering with the health care system will remove them.

While there are these many problems which are not purely medical, there are others which just as clearly do lie within our province, and we are working upon them. In the field of health manpower, we have joined with the Student American Medical Association and the American Association of Medical Colleges in a statement to Congress advocating increased support to medical students. We are encouraging innovation in improving the medical school curriculum and in more rapidly training physicians to make them productive in a shorter time. We are trying to find ways to attract more young people from minority groups into medicine and the allied health fields.

We are seeking innovations and new efficencies in medical and health care delivery to take care of more patients. The use of computers, automated multiphasic health testing facilities and even efficiencies in the way each of us practices in his office. We are seeking better ways of financing care, both for those who can afford private insurance and for those who need government help.

The AMA was the first organization to present a plan for national health insurance to Congress. We are deeply concerned with planning and coordination of health care delivery while avoiding the pitfalls of a rigid system such as our ill-fated postal system. We are doing all this while attempting to preserve that which is good in our present methods of delivery, such as the individual care by which a patient has the same personal physician at home, in the office, and in the hospital—which is unlike the usual European arrangement We are working hard through our accreditation committees to continue the high level of quality of our physicians who continue to compare more than favorably with the average foreign medical graduate.

We cannot do the whole job of improving the nation alone. We cannot alone overcome ignorance. It will take the nation's entire educational system to do that. We cannot overcome unemployment; it will take the employers and the unions of the nation to do that. We cannot provide the decent housing, efficient plumbing regular garbage pickup, or transportation for whole communities and neighborhoods, which is so desperately needed. This will take city, state and federal government plus all the citizens who are involved.

What we can do is to continue all of the things we have mentioned above. We can continue to give a high level of care to the vast majority of the people of our nation. We can, continue the world's greatest scientific advancement, unsurpassed anywhere. We can, and we must continue giving the kind of high quality care we have always given to all of the people who can be reached or who come to us for help. We can continue and increase our efforts to develop more health manpower and to expand facilities so that more people can be reached more easily and more effectively. We can also be proud of what medicine has accomplished. If we are not willing to speak of our past successes, why shouldn't the press, the Congress and the people believe the extreme statements of our detractors—that everything must be changed—abruptly and drastically."

That ends the formal statement of Dr. Wilbur.

There are four main points that we would like to emphasize at this particular time: First, most people agree, I believe, that the medically indigent segment of our society should be cared for by tax dollars collected on a broad base. It is quite important, however, to point out that one of the major problems for our hospitals at present is the failure of government programs, county, state, and federal, to bear their full share of the cost. It seems only right and fair that those persons covered under government programs should have their hospital bill paid in full, rather than being paid only in part and transferring therefor the rest of the cost to the non-indigent sick middle Americans in the communities and to their insurance carriers.

Secondly, the area of health manpower is a critical area that needs very significant support at present. Medical schools need funds for expansion in order to train more medical and paramedical students. The medical and paramedical students need help in many instances, in the form of scholarships, grants-in-aid, and so on. No system of financing health care can possibly get the job done if we do not have the medical manpower, trained and available, to do the job.

Thirdly, greater emphasis, rather than retrenchment, in the field of support of medical research seems to us to be of high priority. It is certainly true that new methods of treatment and new cures are useful only when applied to the patient who needs help. It is equally true, however, that those patients with diseases such as certain forms of heart disease, cancer, stroke, and others, for which definitive cures are not available, will not be cured until significant advances are made and new knowledge obtained through medical research. Failure to pursue our potential in research will, in my opinion, fail to carry out our obligation to our children and grandchildren for many years to come.

Finally, I feel that multiple systems of health care will be needed to meet all the various challenges and problems in our country. Health care problems are somewhat similar to the farm problems in that they are different from one region to another, and a program that works well in rural Oklahoma very likely will not fit ghetto areas of New York. Some programs such as the OEO programs with adequate health education and motivation activities are essential in deprived areas, even though they are exceedingly costly programs. We have only begun to scratch the surface in experimentation with new means of delivery of health care, and further pilot studies are essential before we can hope to pick out the best system. Again, it seems unlikely that a single system would be able to satisfy the needs of all areas of our country.

Thank you very much for this opportunity to appear at this hearing.

Senator HARRIS. Thank you very much for a very useful statement. I appreciate your coming here to give it. You make an extremely good point when you say that one basic barrier to good health is lack of income. That's a point that I've also tried to make over and over and is the reason for my particular interest in income maintenance, jobs and training, education, minimum wages, and so forth. I appreciate that point being made, and I appreciate the other suggestions that you have made. Thank you very much.

Robert Bickel is District Director of OCAW International Union. Robert, we're grateful you're here and we'll be pleased to hear from you.

TESTIMONY OF MR. ROBERT BICKEL, DISTRICT DIRECTOR, OIL CHEMICAL AND ATOMIC WORKERS INTERNATIONAL UNION, TULSA, OKLA.

Thank you, Senator. I want to emphasize one point that the Doctor made regarding the lack of people training to become doctors in this country. At present we have some one physician for each 3,100 individuals—a family physician for each 3,100 individuals in the United States. This is grossly inadequate. No doctor can take care of that many people.

I am District Director for the Oil, Chemical and Atomic Workers International Union. The District of which I am Director is composed of the States of Oklahoma, Kansas, Missouri and Arkansas.

My office has been here in Tulsa for the past eight years and I am most familiar with the problems concerning health care here in Oklahoma. However, in assisting with negotiations of labor agreements throughout the District, I am aware of the problems faced by the members of our Union in the four-State area.

Only a few years ago—in 1965, I had both my wife and my daughter in one of our leading hospitals in Tulsa. At that time the charge for a semi-private room was $17.00 per day. Today that same room is $47.11, an increase of some 280%. In the other hospitals here the increases have been the same. In other cities in this District—St. Louis, Kansas City, Wichita and Oklahoma City, the story is the same but in some cases, the prices are substantially higher. In some cases when patients are in intensive care units, a cost of $100 per day is not unheard of.

Again going back to my own personal experiences, several months ago I had my annual checkup in my Doctor's office, it included a chest X-ray and a cardiogram. I was in his office about 45 minutes. The bill was a little over $100. I was pretty unhappy about it and checked to see what that same Doctor charged me before. My last physical was done in 1968 and the cost for the same examinations was $57.00.

Now, while I didn't like what happened to me, there are many, many people in this area who just simply are not getting proper medical care. To nearly a third of our population, good comprehensive medical care is not available—for some because of the price and for some because it just isn't available. I believe that no one will dispute that a large segment of those living on the North side of Tulsa are not adequately cared for.

In my work we negotiate health care programs—insurance—for members in our Union. In the oil industry we do have some good hospital-medical insurance plans but here in nearly all cases, the Company pays around $15,000 per month of the cost while the employee pays the balance—often between $20 and $30 per month. Most of our contracts expire every two years and we just haven't been able to keep up with the increases.

Many of the members of our Union live in small towns in the "Oil Patch." Many of these members cannot obtain satisfactory medical help because it simply isn't available. In many cases there isn't even a doctor in the town. I know some of you doctors sitting here have heard about the cry of oilmen trying to get a doctor out there. They have the facilities and clinic for him to work in but they haven't found a doctor, or they hadn't the last time I heard. And this is prevalent where many, many members of our union work. Again, regarding the Doctor's point about training people in the medical profession—I think we need government help in this. I know we're getting some already but not nearly enough.

It's our firm conviction, Senator, that the only answer to the overall problem is a national health insurance program financed through taxing of workers and the people who will receive the benefits, together with their employers. I will tell you that at the bargaining table we have met real resistance from the employers when we try to improve our medical plans. Many of these plans, as Mr. Berkey pointed out, cover only a small part—in some cases cover only a part—of the total medical expense incurred when one of our members is sick. We will try this Fall to offer to the oil industry a comprehensive plan that will cover all of the normal and usual costs of an illness.

I want to tell you that the cost of such a plan now is around $44 a month. That plan only a few years ago, where we had those comprehensive plans, cost around $20 a month. We'll be talking to the oil industry this Fall when we go into negotiations on

new contracts about something around twenty cents an hour for the hospitalization benefits, medical benefits, in addition to the amount of wage increase. And at the bargaining table you're talking about pennies; every single penny counts at the bargaining table. And here because of the substantial increase in these services we'll be bargaining for a pretty substantial increase in medical costs to the companies because of the substantial increase in those costs. I thank you for the opportunity to be here Senator. I have a list of the semi-private costs in all of the hospitals in the Tulsa area which I'll submit with my testimony.

Hospital:	ASP Charges [1]	MSP Charges [2]
Children's Medical Center	$40.00	$40.00
Doctors Hospital	41.30	44.95
Hillcrest Medical Center	40.00	44.75
Oklahoma Osteopathic Hospital	43.17	44.00
St. Francis Hospital	47.11	47.50
St. John's Hospital	43.88	46.00

[1] Average semi-private.
[2] Maximum semi-private.

Senator HARRIS. Robert, thank you very much. Your statement on behalf of the Oil, Chemical and Atomic Workers has been very helpful to us.

Henry Likes who is President of the State AFL–CIO is here. Henry, we appreciate your coming and we'll be very pleased to hear your statement.

TESTIMONY OF MR. HENRY LIKES, PRESIDENT, OKLAHOMA STATE AFL–CIO

Thank you, Senator. I appreciate the opportunity to appear here. Ladies and gentlemen. We're concerned in the seventies—we were concerned in the sixties—about health care. The problem is compounded now in the seventies and I think something should be done. We made a stab in the sixties and the question of health for our members and their families is something the labor movement has been concerned with for a long time.

We are not doctors and we don't pretend to be. We are perfectly willing to leave the treatment of illness to the members of the medical profession. That's their business—that's what they are trained to do. While medical treatment is the doctor's business, the health of Americans is the Nation's business—and more specifically, the health of workers is a major concern of the trade union movement. We are mainly interested in three things: *To prevent unnecessary illness; to have the best treatment for workers and their families* (and for all Americans for that matter)—when they are sick so that they will recover quickly and completely; *to keep the cost of medical care at a reasonable level* so that people are not denied needed care simply because they cannot afford it.

You will often hear it said that the United States has the best medical care in the world. Well, *we ought to have the best because we are paying the most for it.* We are now paying more than $60 billion a year for health care. This is, of course, a lot of money.

Let's see how our health record compares with other countries. There are certain figures that are usually cited to make this comparison and frankly, we don't look too good. In infant mortality the United States ranked sixth in the world in 1950; by 1960, we had fallen to 11th and according to the latest figures, we have dropped to 18th. From 1959 to 1965 we dropped from 13th to 22nd place in life expectancy for males. Women did a little better; their life expectancy compared with other countries dropped from 7th to 10th place.

So, compared with other countries, our record is getting worse instead of better. Yet we are devoting to health care more money and a larger proportion of our resources than any other country. This is something that bothers us in the AFL–CIO. We don't like the idea of paying a tremendous amount of money for less than adequate health care.

When union people have a problem, they try to deal with it through collective bargaining. For 20 years or more now, we have been trying to meet the health and care need of our members through negotiated health care and welfare plans. Some unions have done very well, but many have not.

In fact, many unions have found that they have been on a sort of treadmill. Most of you know only too well what has been happening. Just as fast as we could negotiate money to provide more and better health services for our members, the doctors raised their fees and the hospitals boosted their charges. This means that our members were still paying after we had negotiated for more health care funds, just as much or even more out of their own pockets as they had before. A survey of Local Unions in our own area indicates the following: An increase of $9.58 per month from December, 1967 to December, 1969; increase in one Local each year without any increase in coverage; one Local reports no increase in rates but coverage is reduced; another Local has been advised of an increase in rates, but no definite amount as yet; one Organization reported an increase of $27.40 per month and found it necessary to cancel their coverage; another, no increase in rates, but less coverage.

People covered by health programs have experienced drastic reductions in coverage or increase of cost of present coverage and some have suffered both.

Our members have been priced out of the medical care market by the sky-high ever-mounting charges of doctors, hospitals and other providers of medical care. Medical costs have been going up faster than any other item in the Consumers Price Index. You all know that the cost of a visit to a doctor has doubled and even tripled in many cases, in the past few years. Hospital care is the most expensive medical care. That's why it costs a lot less money to prevent illness or to treat it before it becomes serious than to have to cure the patient after he gets into a hospital. Hospital charges have been rising so fast it's hard to keep track of them. Daily hospital rates have been soaring at 15% or more a year. According to the American Hospital Association, which certainly ought to know, hospital charges will soon average $100 a day. They are already at that figure in some of the better hospitals in large metropolitan areas.

Hospital bills are now largely paid by so-called "third party"—private organizations such as insurance companies, government programs such as Medicare and Medicaid. These third party organizations generally pay the hospitals on the cost-plus basis that we remember from WW II. The hospitals figure out what their costs are and then they are paid something over that. You can see that under this cost-plus system, the hospitals haven't the slightest incentive to increase their efficiency or to hold down their costs.

Most doctors are paid on another basis which isn't good from the consumer's viewpoint. This is the fee-for-service system. Under this system, the doctor gets a certain amount for every office visit or other type of treatment. This is a piece-rate system in which the doctor determines the number of pieces of service as well as the price per piece.

Now, we have no objection to people making a decent income—doctors or anyone else. This is the very purpose of the labor movement to try to obtain decent incomes for as many people as possible. So, we think that doctors deserve to get an adequate income. But, we think there is something indecent about a small group of people making a lot of money out of the misery of other people. The escalation of medical costs is depriving millions of Americans of the health care they need.

There is an answer—National Health Insurance, a program that would provide health care for every American. This program would provide preventive services, all types of physicians' services, hospital and nursing home care, home health service, rehabilitation—in fact, complete health care. It would be financed like Social Security, on social insurance principles but with a government contribution, as we are now advocating for Social Security. Since we think that every American is entitled to decent health care, the poor should be exempt from any payment but should be eligible for the same services as anyone else. The AFL–CIO is convinced that with National Health Insurance, Americans would have the best health care in the world. The American people deserves no less.

National Health Care is not a new idea. It was once endorsed by the American Medical Association, although that was retracted in 1920. It is not an extension of such programs as medicare or medicaid, since they are designed for particular groups. Coverage under National Health Insurance would be universal bringing the same benefits to rich and poor, to unemployed and employed. It is not designed to abolish the private practice of medicine.

The AFL–CIO plan for National Health Insurance is intentionally flexible; What is suggested is that the present 'non-system' has got to be coordinated into a rational plan. We have reached the point that two of every three doctors today are specialists of some type due to the inability of doctors in solo practice to keep up with the constantly expanding medical knowledge which demands more specialization.

The profiteering by the providers of medical care has had its worst effects in Medicare and Medicaid. Labor fought hard for the establishment of these two programs—to provide needed medical care to people who cannot afford to pay for it themselves. Some doctors and other health practitioners have pounced on these programs as if they had been legislated as get-rich-quick schemes for the medical profession—and instead of controls being placed on fees and charges paid under these programs, the burden has fallen on the disadvantaged people the programs were supposed to help.

Senator, we appreciate the opportunity to appear here. We hope if we can be of any further assistance on this particular problem the AFL–CIO, both home and national, is ready and willing to work with any group. We realize this is a very serious problem throughout our nation.

Senator HARRIS. Thank you, Henry. You certainly have as an organization made a contribution here this morning.

Is Mr. Lowell Quillman here? I'd like to have the record show that you're here, Lowell, representing the United Auto Workers. I understand that Mr. George Dowler of the United Auto Workers had to leave, and I do appreciate your staying on and being here.

Senator HARRIS. State Representative Wiley Sparkman is Chairman of the Legislative Council Committee on Health and Welfare. Is there anything you want to say at this time?

State Representative SPARKMAN. I appreciate it very much. It's almost lunch time and I will be very brief. Let me address myself to H.R. 17550, Section 225, of which we have informed the Congressional delegation, both Senators and the entire delegation, and, of course, your committee.

Let me say this to the public because it hasn't had very much say. For your information Section 225 stops, after 90 days, a third of the pay in the nursing homes. For your information, in this state we have 17,000

people in the nursing homes at this time and 4,500 of them have been taken out of your mental health institutions. We're not criticizing the Congress for voting for it because I know when you get driven up in one of those cracks you have to vote for it. (Laughter). The paper took it lightly. They talk about the 5 percent social security raise. Now we're depending on the Senator here, and I know if he can do it he's going to take it out.

Let me tell you people something; when we put those people in the nursing home we get one dollar of state money and we get two of federal to keep them in there. The day that we take that 4,500 out of there you're coming straight down the line with your dollar to take care of them. And we don't have the institutions in the state of Oklahoma for your benefit. They're crowded now. We have one of the best all around programs and welfare programs to take care of the old people and the senile of any state in the Union. I've been looking at it a little myself. I'll tell you what we have in our sister states over here. Walk over there and walk in their mental institutions. You talk about filth and squalor and people who are living in bad conditions. Come to Oklahoma and look. You're doing a good job of it. Now I had about all I can take of that welfare in six or eight years that I want and I care for because the fiscal policy of this nation is based on the welfare program. We have twelve institutions in this state under the program. We're taking one dollar of the state and two of the federal and putting it all in. We've got back $164 million of federal money in the last fiscal year to support it. Take Hissom Home out here. I helped institute Hissom Home and I voted to bring it to Tulsa. It's one of the greatest things and I'm proud of it.

Stand up and be for something. The man who is whispering to do something about the welfare program—he doesn't know what the hell he is talking about. That's just exactly right. I've worked in it 18 years down there and Mr. Rader and I have worked together. Get down on your knees and thank that you have a man with his ability to handle the thing. And Senator I know you're going to take it out because there are 4,500 that I know who will be pitched right back out. The nursing homes can't take care of them. They won't have the money; they can't pay them; and they will be right back in your lap.

It's a pleasure to be with you. I know everybody else will lean on these other things—the hospitals, the doctors, and everything else. And I wanted to address myself to this. I represent the House on the Advisory Committee of the Welfare Department and we meet tomorrow. This is serious because it is serious money. We want to use our money the way we want to use it.

Senator HARRIS. Wiley Sparkman has spoken of a provision in the Social Security bill that would reduce the federal contribution in regard to nursing homes. They didn't get a chance in the House to vote on that section. They had to vote either for or against the whole bill, which includes several other things, needed things, such as a benefits increase. Fortunately, we, in committee and in the Senate, will have a chance to separate those issues. We're going to knock out that provision, I think. I hope we will. I'm going to try to do that myself in the Senate Finance Committee. I believe that we'll do it because, as Wiley made so very clear, either we're going to put a lot of old persons out of nursing homes with no other place to go, or else the terribly overburdened states are going to have to come up somehow with the extra money. And, then, we have another problem that Wiley mentioned and that I have discussed at some length with Dr. Hayden Donahue. That is the excellent job we have done with our mental institutions in this state. A lot of people were in mental institutions way back before we knew a lot of things we know about today, particularly with the improvement in new drugs and chemicals. They, primarily, need custodial care which is being given in nursing homes, and those people, if the provision is passed as it was in the House, will have to go back into the mental institutions. Somehow, the state will have to come up with that extra money, here and around the country. So, I am very hopeful that we will knock that provision out of that bill, passed by the House. I appreciate what Wiley said here, and I think it is a very important point to be made in these hearings.

Dr. A. B. Colyar, Commissioner of the Oklahoma Department of Health, is here. We'd be pleased to hear from you now. Dr. Colyar was very helpful when we overrode the President's veto of the extended Hill-Burton program which Reid Hutchens mentioned earlier here today.

TESTIMONY OF A. B. COLYAR, M.D., COMMISSIONER, OKLAHOMA DEPARTMENT OF HEALTH

The State Health Department is, to put this in context, part of the state health system comprised of the central department and some sixty of the local health departments, which provide nursing services, sanitation and environmental services, and so forth. Our particular concern with health care has to do with preventive services primarily; and with helping to assist local communities in providing a healthful environment, eliminating environmental hazards to health. But more specifically, as concerns health services or medical services, we're concerned because of two or three things. One, we are the agency in the state which administers the Hill-Burton program—construction of hospitals, health centers, rehabilitation centers, nursing homes, and we have been for the last twenty-some years. Also the Department administers by contract with the Social Security Administration the Medicare program for Oklahoma. We have to do with the standards, certification, and so forth of the providers—that is, hospitals, nursing homes, rehabilitation services, and extended care facilities. More recently we have arranged with the Department of Welfare at their request by contract to provide certain services that have to do with the certification of facilities and providers of services under Title 19. So we're involved, therefore, in Title 18 and Title 19 with regard to facilities primarily but also very significantly with the services provided through facilities as contrasted to services provided out of physicians' offices.

We're concerned as you all are about increasing costs. I think an interesting statistic is that in Oklahoma we receive federal funds equivalent to 44% of our Gross State Product—if you can compare the Gross State Product with the Gross National Product—we receive 44% of that in federal funds. That is a very significant thing. So whatever the federal government does about its allocation of federal funds is extremely important for Oklahoma and has a great impact in Oklahoma.

We are concerned about ways to finance medical care. Despite the good intentions of those who passed Medicare and Medicaid, we find that certain groups still cannot afford the medical care they need. The low-income family with the husband in the home—making perhaps $2,800 a year—cannot get help from Medicaid. The uneducated find it hard to understand these programs. The poor, the Black, and the Indian still find prejudice and discrimination. And finally, even the middle-income, white American is finding himself pinched by the pressures, the long waits, the inconveniences, and the high costs of getting medical care.

Medicare and Medicaid have contributed greatly to the inflation in medical costs of the past few years. These programs simply prove that putting extra money into a system will not necessarily buy services, but it certainly will buy inflation.

Federal money will not buy a hospital bed if there is no hospital in town. Federal money will not buy a visit to the doctor if there is no doctor available. Federal money will not buy a quick visit to the Emergency Room if the Emergency Room is so crowded that you cannot get in. Federal money will not solve our health problems if it is poured down the same pipeline that has fueled the inflationary fires of the past five years.

In short, money will not guarantee that the people will receive services. Federal financing—whatever method is adopted—should not be seen as an end in itself.

Federal financing should be used as a *lever* to effect desirable changes in the quality, quantity, and method of delivery of health care. Such financing could be used to reduce the rural-to-urban migration, to encourage regionalization of health care programs, to stimulate the development of group practice, and to develop cooperation with and participation in comprehensive health planning.

It has been aptly said that, in health, the Federal Government has all the money, the State has all the authority (through its licensing of doctors, health facilities, and insurance companies)—and the local people have all the problems! I would like to use the Hill-Burton Health Facility Construction Program as an example of how we have been able to help the local people solve some of their problems.

Hill-Burton, as one of the Federal Government's first major programs to improve health services, has done a thorough job in providing facilities within the reach of most people. After twenty-three years, very few Oklahomans are more than thirty minutes away from a hospital or health center. Yet the demand for more facilities and more modern facilities is greater than ever. In Oklahoma alone, assistance has been requested in projects whose total construction cost will exceed $100 million.

For the most part, construction assistance has been requested for projects which will be merely a continuation of existing methods for delivering health care. But now, with the passage of the 1970 Hill-Burton Amendments, priorities and finances have been reordered to provide incentives for innovative development of systematic delivery of health care.

To be effective, health care delivery systems must be responsive and relevant to the continuing health needs of the people, rather than to only their episodic medical needs. The maintenance of health and disease prevention should be the primary focus, rather than treatment and management of disease processes.

The system should be so structured as to provide access to quality health care for all persons, regardless of their economic status, geographic location, or other variables. This is not to imply that every city, town, or hamlet should have a hospital. It does imply, however, the recognition of the complete health needs of all persons within any given area and the provision of rational methods to serve those needs.

The new Hill-Burton Program contains provisions emphasizing the importance of comprehensive health care. Applicants will be required to provide or participate in a planned continuum of care. Out-patient services are emphasized, as are improved emergency care, convalescent services, and rehabilitation. The development of State plans for health facility construction will be based on services, rather than hospital beds. In short, the new law provides the authority for assistance in meeting the changing needs of our society. To carry out the challenge and the charge, the program must be financed adequately.

The new law encourages us to meet our health needs by developing an organized sys-

tem of *services*, rather than through building facilities. At present, in Oklahoma we have 154 licensed hospitals. Of these, only about thirty have more than 100 beds. More than sixty hospitals have less than fifty beds. Many of these small hospitals across the State will gradually falter and die because they will not be able to attract the doctors, nurses, and other medical staff that they need.

Our major hospitals need to develop cooperative agreements with these smaller hospitals. Several small hospitals could serve as primary field stations or satellites of a major hospital. These small hospitals would continue to serve as institutions that are sensitive to community needs, while increasing the services available to those who desire and need them. These would provide opportunities for exchange of staff, continuing education, and a strengthening of the small hospital with relief of the crowding at the large hospital.

The development of hospital facilities is only one of the problems we face in Oklahoma. Many of our problems are similar to those that Senator Ribicoff found nationally two years ago, in his hearings on "Health Care in America." I would like to outline briefly some of our major problems. Parenthetically, I will point out that not one of these problems would be solved by a program of National Health Insurance.

1. For many people, there is no M.D. available when they need one. Many of our more rural counties have only one doctor per 2,000 or 3,000 people. These family physicians are growing older. Many are retiring or moving away—and they are not being replaced.

2. There is a maldistribution of the medical people we have. For instance, Oklahoma and Tulsa Counties have more doctors in proportion to the population than ninety-five per cent of the counties in the United States. But many other counties in Oklahoma have shortages of medical people. In other words, doctors seem to prefer the large cities even though those cities already have plenty of doctors.

3. Our present hospitals are crowded, and they are having problems financing new construction and modernization.

4. Our Emergency Rooms are crowded. After regular office hours, many patients come to the Emergency Rooms who would more appropriately be seen in a doctor's office.

5. We are not training enough doctors, nurses, and other medical people to meet our needs. This is one situation which could be improved by providing Federal funds directly to Medical Centers, but those funds are being cut back instead of being increased.

6. Some population groups have very few medical services available to them. These include people living in urban ghettoes, the rural poor, and minority groups. For instance, Indians in Oklahoma City may have to travel to Lawton for hospitalization, since last year the Indian Health Service eliminated contract medical services in the Oklahoma City area.

7. There is evidence of excessive use of inpatient hospital facilities for certain procedures, when these could well be handled in an out-patient facility if such facility were available and third-party payment could be authorized for such out-patient services.

8. Current programs do not emphasize prevention. It is far cheaper to prevent a medical problem than to try to care for it after it occurs. Similarly, it is cheaper to care for an illness in the early stage than in the late stage. Walter McNerney, of the National Office of the Blue Cross Association, has recently declared:

"If our society's concern were truly with health (that is, postponement of death and preservation of maximum function), we could achieve gains much more effectively than by pouring more money into the health-care system. We would develop as national goals, for example, the following: elimination of cigarette smoking or development of a nonhazardous substitute; development and promotion of foods low in sucrose and saturated animal fats and regulation of diet to keep body fat low; regular, vigorous physican-supervised exercise for all age groups; production of motor vehicles capable of withstanding 35 g or better decelerative forces; and better control of air pollution. Institution of these measures would surely decrease disability and death among adults. That we do not choose to pursue these achievable goals but continue to focus on health services, as presently given, suggests that this commitment is not based on logic and scientific knowledge but on complex psychosocial and economic needs and demands."

A strong and viable State Department of Health is essential in the development of programs of prevention.

9. We are not doing an acceptable job of communicating medical advances to private physicians. In many areas, physicians do not have the opportunity to discuss their problems with medical specialists. The University of Oklahoma has made an outstanding approach to this problem, but is restricted by the lack of funds to finance such a project.

10. Faulty and inadequate nutrition is widespread throughout our people, especially in vulnerable groups such as school children and the poor. Our present food and nutrition programs are not adequate to meet the need. One exception is the outstanding School Lunch Program we have in Oklahoma, but even this program is restricted by finances from doing the job that it is capable of doing.

11. The general public is not knowledgeable about health. Our schools need strengthened programs of health education, drug education, nutrition education, and family life education. Health departments need support for and assistance in developing adult and community education programs in these and related areas.

12. There is an inadequate use of physician assistants and other new professionals. Nationally, we are seeing an explosion of interest in developing additional people to assist the physician, but this has hardly touched us in Oklahoma.

13. Mental health services in Oklahoma, despite the extensive program of Public Health Guidance Centers, are still not sufficient to serve the needs of the State. Mental health is an integral part of health services and family care. Mental health does not consist of the alleviation of mental illness, the salvation of juvenile delinquents, or the counseling of unwed mothers, although it should include these services. Rather, mental health means creating a family environment so that these problems are less likely to arise. Mental health is a positive concept, not simply the absence of disease. Mental health means the integration of mental health into other health activities, the prevention of mental illness, the promotion of positive mental well-being, and the education of the public as to what constitutes mental health

4. We need to develop new programs to deliver health care at low cost. An example would be chronic disease screening. The Oklahoma State Department of Health has demonstrated that a patient can be checked for chronic disease through our screening for far less cost than in his own doctor's office. Oklahoma physicians have endorsed and supported this program across the State. Again, its operation is limited by available funds and the redirection of Federal priorities into other areas.

15. We lack an adequate health information system, particularly concerning the health status of the general population. The Oklahoma State Department of Health cooperated with the State Health Planning Agency in developing a preliminary survey, but this is only a start. One possibility would be to utilize the data we have from our chronic disease survey. This, plus additional data that could be collected by volunteers, could be fed into a computer bank. This would allow us to generate estimate of the arameters of health and disease in the State as a whole. It would, essentially, give us the population data necessary to devise a program of health maintenance.

These are essentially some of the problems we face in Oklahoma. The solutions are not simple. Support is needed for health programs (as opposed to "sickness" programs), for medical education, for health facility construction and modernization, and for attention to acute and chronic problems of certain groups.

Any program financed by the Government should encourage new methods of delivery of health care. This is essential. Attention should be given to the encouragement of out-patient departments, free-standing emergency rooms not physically in the hospital, prevention and rehabilitation centers, maternal and child care units, and ambulatory care units outside the confines of a hospital. Some of these services may need to be provided on a regional basis

In addition, we need to regionalize other services. We cannot attract physician and other highly-educated people to areas that do not contain opportunities for education—for their children, as well as for themselves. Regionalization can provide a broader base, both tax and population, for the support of our educational, health, cultural, and social services. Only by improving the opportunities in the under-populated areas can we attract people away from the over-populated areas.

We need to maintain professional standards and practice across the State. A citizen who lives in a small town is entitled to the same standard of medical care as a citizen who lives in a metropolitan area. This simply echoes the need for expanded educational programs of medical education.

We need to develop alternate methods of treatment. At present, the physician does not actually give every injection, every drug, every medical treatment himself. This is delegated to nurses and, in some cases, even to nurses' aides. How can this delegation be expanded, while preserving quality of care? What other medical functions can the physician appropriately and legally delegate? Just how much supervision is necessary for a service to be considered under the "direct supervision" of a physician, as required by our State law? The Oklahoma State Department of Health has been working on approaches to these problems through the development of a program of health supervision by nurses.

The culmination of these ideas would be to develop a regional or district health department in which a physician health officer supervises physician assistants in several counties and towns, providing medical care to an area which would not otherwise receive such services.

Such a system would allow the physician to emphasize a program of health maintenance. The goal would be to assist the patient in reaching and maintaining a state of positive good health. The focus would be upon prevention and rehabilitation, instead of emphasizing episodic care only when the patient is ill. The emphasis would be upon health rather than sickness.

This program would include the many elements we have discussed, such as health education, new health manpower, regionalization, and lower medical costs. In addition, the patient would benefit because he would be healthier more often and sick less often than he is now.

I want to make one final point. We feel that we have powerful legislative tools and programs on the books operative in our hands now for improving health services and for controlling costs—I won't say reducing costs. And I mean Medicaid (Title 19), Medicare (Title 18), Partnership for Health, Comprehensive Health Planning and block grants for health services, the Regional Medical Programs, the Hill-Burton program and particularly the *new* Hill-Burton program and the McClellan Infant Care, that is Title 5. Among these six we feel that there is sufficient legislation on the books—that with adequate financing and with federal requirements tying these programs together we could construct an effective health care system. But as you know, there is very little relationship or correlation between 18 and 19; between R.M.P. and Comprehensive Health Planning; and Hill-Burton and any of these.

So that each of us, and I'm talking about on a federal and state level, in our bureaus and agencies, we're doing everything we can administratively to maintain things as they are. And we're going to insist that those folks who are responsible for Title 18 continue to run it and those responsible for Title 19 continue to run it. Now we are making some progress in developing a correlation among 18 and 19. And the same progress in health planning and RMP. There is a wonderful opportunity now to tie our health facilities construction under the new Hill-Burton Act and to comprehensive health planning, 18 and 19, and Title 5.

I don't have specific suggestions to make regarding legislation along this line but I feel that states will never be able to correlate among these programs without rather direct federal guidelines that require correlation among these programs if we are to take advantage of federal funds available through them. So I feel that any financing plan must be correlated with systems development among these very important federal legislative acts including prevention and education for health, if we are to construct an effective health care system.

Dr. WALTER ATKINS. Doctor, may I ask if you are going to include among that group of legislative acts Neighborhood Health Centers?

Dr. COLYAR. I think that is very important—the O.E.O. work in health. It has made us look at new ways of doing things.

Senator HARRIS. Thank you very much, Dr. Colyar. I appreciate very much your interesting statement.

NEW YORK'S BLACK COMMUNITY FIGHTS DRUG ABUSE

Mr. JAVITS. Mr. President, I invite the attention of Senators to the aggressive antidrug campaign being waged by radio station WWRL, which is located in Woodside, Queens, and is much a part of the black community of more than 2 million in Greater New York. WWRL's public-spirited efforts to erase the drug problem from the streets of Harlem and other ghetto areas could serve as a model for communities large and small, white and nonwhite, throughout the United States.

In November 1969, WWRL's advisory committee suggested that drugs were the largest problem facing the black community. The station decided to go all out in making the drug campaign its major public service effort for the calendar year 1970.

The station has mounted a massive campaign on a daily, round-the-clock basis, designed to work on three aspects of the problem: prevention, aimed at youth; rehabilitation for those already addicted; and, education to convince citizens to turn in narcotics peddlers to the police.

The backbone of the campaign is a series of 10,000 spot announcements being heard throughout the year which range from expressions of support by prominent people in all fields, to announcements giving a special police department narcotics bureau telephone number which citizens may call anonymously to inform about drug pushers.

In addition, WWRL editorializes on a weekly basis on various aspects of the drug scene in Greater New York. The station's weekly "Tell It Like It Is" telephone talk show, reported to be very popular during its Sunday afternoon time slot, features a special segment each week in which drug addicts call anonymously and "tell it like it really is."

The station is deeply involved in community efforts to help stamp out drug addiction and has participated in rallies in both Washington, D.C., and New York City. An extensive printed advertising campaign was mounted to back up and emphasize the station's dedication to solving this major problem.

By now, 40,000 "Help a Junkie—Bust a Pusher" lapel buttons have been distributed, thousands of special kits aimed at preventing addiction among the young have been placed in various schools, and most encouraging of all, the New York City Police Department reports arrests of suspected pushers made as a direct result of the station's campaign.

WWRL deserves every commendation for its work in combating the mammoth problems of drug pushing and abuse.

Also, I would like to direct the attention of the Congress to an article in the June issue of Ebony magazine, "Blacks Declare War on Dope," which provides a survey of antidrug programs by the black community in the New York metropolitan area, including that of WWRL.

I ask unanimous consent that the text of three WWRL's radio editorials and two of its printed advertisements, as well as the article in Ebony magazine, be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

"JUNKIE'S PRAYER"

Our Editorial today, takes the form of the "Junkie's Prayer". Is it *your* prayer?

King Heroin is my shepherd, I shall always want, he maketh me to lie down in the gutters. He leadeth me beside the troubled waters. He destroyeth my soul. He leadeth me in the paths of wickedness for the effort's sake. Yea, I shall walk through the valley of poverty and will fear all evil for thou, heroin, art with me. Thy needle and capsule try to comfort me. Thou strippest the table of groceries in the presence of my family. Thou robbest my head of reason. My cup of sorrow runneth over. Surely heroin addiction shall stalk me all the days of my life and I will dwell in the house of the damned forever.

IT BECAME A REALITY

Richard Mason, at 24, was a fine actor with a bright future.

His first role, five years ago, was that of a heroin addict in a mobilization for youth street theater play called "DOPE".

Recently, he had a role in the movie "Up the Down Staircase."

Mr. Mason died, the other day, in his upper West Side Apartment. The medical examiner's office said it was the result of an acute reaction of heroin.

Five days earlier, Manuel Vasquez, 19, also died from what was described as the same cause. He, too, had played the addict hero in the Soul And Latin Theater production of "DOPE."

In each case, the tragedy of make-believe became a reality.

WWRL feels that the loss of such talented people points up the urgent need to rout the pushers from our neighborhoods.

As always, we stand ready to do our part.

If you know of a pusher, pick up the telephone and bust him—by calling 344–9430.

Do it in memory of Richard Mason and Manuel Vasquez. Do it for the life of your loved ones, and yourself.

JOINING THE GOOD FIGHT

WWRL is delighted that the Reverend Wyatt Tee Walker, Pastor of the Canaan Baptist Church, In Harlem, has joined the battle to get rid of narcotics pushers in New York City.

We have been in the same struggle for a long while now, although not as long as the Reverend O. D. Dempsey. And we intend to keep hammering away until the battle is won.

The Minister recently preached his sermon through a bullhorn while standing on the trunk of a car, parked at 155 W. 116th Street.

Reverend Walker said that it was common knowledge that there were pushers operating in the neighborhood. He cited the recent death of a 15 year old girl from a drug overdose.

Walker, said, "Let us know the minute you find out the name of a pusher."

He said that he was not afraid to name names and "I am convinced God is concerned about narcotics peddlers on 116th Street."

WWRL urges its listeners to do as Wyatt Walker says and name names. We said this at the White House last Friday, and we continue to hammer this point home. To bust a Pusher, may save your life.

FOR WHOM THE BELL TOLLS

Today as every day, each hour, the mournful peal of funeral bells is heard throughout New York's Black community.

The bells toll on WWRL Radio for still another victim of drug abuse.

200 MURDERS THIS YEAR

Since the first of January, more than 200 New Yorkers have been murdered by pushers.

The weapon: heroin.

And today, as every day, drugs will claim new lives—and WWRL bells toll in sorrow, in anger, and in hope.

Sorrow, for the victims and their families.

Anger, because the death and agony could have been avoided.

And hope, hope that tolling bells will bring home to all New Yorkers the awful magnitude of the drug epidemic and the Black community's determination to fight it.

WAR AGAINST THE PUSHER!

But WWRL does more.

As the station with the largest Black radio audience in the United States, we know that we also have the largest responsibility to help the community fight back.

Since the beginning of the year, we have

waged an intensive air war against heroin and the pusher, with announcements, editorials and "Specials".

We have reason to believe that we have already saved lives and helped addicts via a special WWRL phone number, by which Black New Yorkers can take action and get action.

THE BELL TOLLS FOR THEE

We are doing what we do best in a crisis; amplifying the community's concerned voice, many thousands of times over.

Of course, communications alone can't cure the drug plague or its underlying causes.

But communication is what we've got to give, and we're giving all we can.

We hope that you will, too.

We hope that the Black community's voice will be heard and heeded.

That the death-dealing narcotics traffic will be halted.

That whatever the color of your skin, you come to understand that when the bells toll—they toll for thee.

TODAY'S THE DAY!

Today, we are inviting the entire Black community to join us in a massive communications effort.

Today we are announcing a year-long campaign of 10,000 announcements . . . over $250,000 worth of anti-drug advertising—to establish the Black community as the biggest sponsor of its own most listened-to radio station.

A WWRL OFFER

Representatives of the Black community, who have something to say about drugs, now can say it on WWRL.

Our microphones are open on a first-come, first-served basis, divided equally among all.

Or, if an organization prefers, it can add its name as a sponsor of our "Bust A Pusher" campaign.

We will take the message to approximately a million different listeners every week, and to most all of Black New York every month.

We think there's a lot to be learned and a lot to be gained by all who listen, Black and White.

BOBBIE STOLE $5 ON MONDAY, GAVE A PUSHER $4 ON TUESDAY, WAS BURIED LAST FRIDAY

On Tuesday, his sister gave the same pusher another four dollars. She was a little luckier. She's still alive. He'll probably contact another 35 or 40 kids during the week. Will one of those kids be your sister or daughter?

There's one way to make damn sure it won't be. Bust the Pusher! Call 344-9430. It's a special Narcotics Squad phone number set up with the help of WWRL radio and Bernie McCain. If you don't know about this phone number and what WWRL and Bernie McCain are doing about narcotics in our community, then it's about time you got turned on to it.

Since the beginning of the year, WWRL and Bernie McCain have been running the "Help A Junkie, Bust A Pusher" campaign. Every Sunday between 3:30 and 5:30 p.m., on Bernie McCain's program "Tell It Like It Is," Bernie urges addicts to stop taking dope—to get off the junk. He turns addicts on to why they should stop—then he turns them on to people who can help them stop. The second half of the "Bust A Pusher" campaign is just that. Busting pushers.

Since WWRL started its campaign, the number of calls informing on pushers has risen 22%. Which means a lot of pushers are getting taken off the street. But there are still hundreds who're still on the streets. We need your help. If you know a pusher, have him busted. If you don't know any pushers but still want to help out, contact: Bernie McCain, WWRL, 41-30 58th Street, Woodside, New York.

BLACKS DECLARE WAR ON DOPE

When first heard, the words sound cold and cruel. The speaker is a slight, middle-aged black woman who has just been asked what could be done about the steadily increasing number of young heroin addicts nodding on the street corners of the New York community where she lives. With tears in her eyes and deep bitterness and anger in her voice, she shouts: "You know the best way to deal with the dope problem? Get as many white kids on it as possible! The best news I've heard in a long time is that more white kids are getting hooked on heroin. If I had the money I'd buy it and give it to them free!"

Hard words? Yes. Bitter? Definitely. Justified? The people listening to her think so. They know she is a black mother who has recently discovered that her 18-year-old son is a heroin addict. Mostly women, they know that, despite all her love and concern and care, her only son is now nodding on some corner or in some dark deserted building. They share her pain because most of them have sons or nephews or cousins who are now heroin slaves.

The women are angry. And they are representative of a new mood in New York's black communities. In Harlem, Bedford-Stuyvesant, Brownsville and South Bronx, a black backlash is surfacing—a backlash against the heavy drug traffic in their communities and against all who benefit from it. A black silent majority that long has suffered from the influx of community-destroying killers such as heroin is preparing to confront those distributors—they call them "murderers of our children"—of the deadly poisons that are so readily available to youths on street corners and in innocent-looking candy stores and teen hangouts.

In the forefront of the fight is a year-old group called Mothers Against Drugs (MAD) which urges community people to record the names, addresses and license plate numbers of known traffickers, suppliers and pushers. This information is given to MAD, which then turns it over to the district attorney's office.

Not long ago, the MAD members demonstrated and singled out residences of persons they insist are pushers. MAD skips over local police because they believe that police "simply don't care about drugs in black communities." Some mothers even accuse police of being involved in the drug traffic. N.Y. State Senator Waldaba Stewart insists: "There's now way for so much drug traffic to continue in our communities without support in high places." He has said publicly that "some so-called respectable black people are also heavily involved in the dumping of heroin in black neighborhoods." Sen. Stewart is supporting a group of anti-drug groups in Brooklyn which have banded together as Citizens Protective Organizations. Similar groups in Harlem, organized by John Shabazz, are known as Black Citizens Patrols. The no-nonsense groups have served notice that "we're going to keep the heat on every spot that's well-known as a dope drop." Sen. Stewart explains: "First we document an area as a drug drop. Then we turn our report over to the police. If nothing happens, we next put up posters designating the spot as a drug drop. If this doesn't work we barricade the place to keep people out. Our last step is to have citizen arrests made by our members who are off-duty black policemen." The procedure is justified, says Sen Stewart, by police "apathy and arrogance."

Most community groups agree that their first offensive must be against black pushers and distributors who, as one father of a 19-year-old addict says, "come brazenly into our neighborhoods and murder and cripple our children with that junk." One mother of an 18-year-old daughter who died from an overdose just keeps repeating, "kill the pushers" when asked what steps should be taken. And there are rumors throughout New York that groups of young black men have declared a special kind of war—one in which baseball bats will be used to break the arms and legs of pushers caught in black neighborhoods. It is said that these young blacks believe that, "since narcotic addiction is a weapon to control black youths, it is detrimental to the black Movement. Therefore, anyone who participates in the business of dope is an enemy of black people and the black participants are traitors to their people and should be dealt with as such."

Stokely Carmichael echoes the young activists' ideas. "The flooding of black communities with drugs, especially heroin, is nothing less than a program of genocide against black people," he says. "All revolutionaries have had to deal with this problem. It's a weapon used by oppressors. As our people become more politically aware, more drugs are flooded into our communities and they are particularly aimed for our youth, since they are the potential warriors of the Black Movement. Knowing this, any black person who calls himself revolutionary and who loves his people must be prepared to deal with the drug problem." While not probing as deeply into the political aspects of the problem as Carmichael, many of the community organizations have reached the same conclusion that the easy availability of drugs in their neighborhoods is no accident.

Spurred on by the sight of strung-out teenagers, tired of being fearful of drug-related criminal activity—which is mostly black against black—and fed-up with the failure of sociologists, psychologists, psychiatrists and meager federal, state and city antinarcotic programs, community-based groups and individuals are moving in three areas: (1) education and prevention, (2) treatment and, most importantly, (3) the easy availability of narcotics in their communities.

In education and prevention the stress has been on reaching school-age children and their parents in their schools and organizations. A leader in this area is Bernie McCain, community relations director for black oriented radio station WWRL. Working in cooperation with black student groups in New York high schools, McCain has organized the WWRL Youth Congress. Its job is to produce plays, organize demonstrations, provide speakers and warn young people of the hazards of drugs use, especially heroin and cocaine. McCain, the MAD mothers, the Afro-American Teachers Assn., the National Society of Afro-American Policemen and others instill a fear of drugs and a pride in being black as reasons for children to avoid narcotics. Youths are told that heroin not only kills, it damages the brain and nervous system, and scars the body with abscesses, sores and hepatitis from infected needles. They are told that drug addiction is a form of slavery, that heroin slaves are beneficial only to the enemies of their people, that the survival of their communities depends upon them and that, as proud young black men, and women, they should reject the narcotics cop-out. This approach to youth helps make them understand that drug addiction is no big thing and that the people who indulge in its distribution are not heroes but destroyers.

As another preventive means, some concerned people are pressing the New York City Board of Education to initiate a drug education program in the schools. Also Sen. Stewart is pushing a bill requiring the Board to administer physical examinations to all school children for drug use. If any drug users are discovered the bill directs that the Board must provide treatment for them.

On the matter of treatment for current "drug slaves," concerned groups emphasize that addicts must be helped to break their physical need for the drugs and then pro-

vided psychological alternatives so they can become constructive members of their communities. Sen. Stewart says, "We must treat them as ill persons, with the same degree of understanding that we would extend, as a community, to someone involved in a car accident. There must be a total engagement of the addict population to help dry up the market for drugs. Community youth must reject addicts and pushers as hero symbols." A younger heroin fighter is not so kind-hearted. He feels addicts should be warned that they must seek help "because they are not going to be allowed too much longer to stand around the streets setting bad examples for our young brothers. To me, their disease is contagious and a person with a contagious disease has no choice as to whether he should seek help. No. Society insists that he does."

The MAD mothers want community-based hospitals to establish detoxification units to help addicts overcome their physical need for heroin (they conducted a successful five-day sit-in to force a New York hospital to set up such a unit). Once the physical need is removed, they would be turned over to competent community organizations designed to help them remain drugfree. MAD wants the government to finance such centers. The Rev. Dempsey is pushing for a federally-sponsored system of national health camps where hard-core addicts can be taken and helped with their problems. He takes the very controversial position that "all hard-core, older addicts should be involuntarily removed from the streets. They are completely adjusted to their positions and are provided with drugs, guns and anything else they need to terrorize and destroy people." This has been branded as an extreme position by some and it is opposed for libertarian reasons by the American Civil Liberties Union. Besides his proposal for health camps, the Rev. Dempsey also calls for the building of a large federal hospital to care for the "500,000 addicts in the eastern U.S., with 250,000 being in New York alone."

Most community-based groups appear to believe that breaking the physical need for heroin plus providing strong psychological alternatives will help cure addicts. They cite the example of the Black Muslims who have had a great degree of success with this approach. Also therapeutic communities, such as the Phoenix House Program, use a somewhat similar approach. They put the addict through searing confrontation with house residents. Once he shows that he is serious about breaking the habit, they help him break the physical dependency and give him responsibilities in the house before sending him out into the larger community to work. Phoenix House Co-director Frank Natale, himself an ex-addict, says "our whole approach is designed to help them become self-sufficient persons." Ray Whitfield, who was on heroin for 24 years and who has been off five months, says "though still hesitant to call myself an ex-addict, it was a combination of love and support from my wife and mother, weariness of being arrested and deep impressions made by the youth in the movement, who encouraged me to finally try to break my habit."

One approach to the treatment of heroin addiction, currently being introduced in New York, is meeting resistance from many black groups. It involves the use of the synthetic drug Methadone. Though also addictive, it supposedly does not give the same degree of euphoria and drowsiness as heroin and leaves the user in a position where he can function on a job and in the community.

Dr. John Bolling, who works in the Methadone Program at Bellevue Hospital in New York, says that "it appears from my interviews that black people are afraid of Methadone, regarding it as another gimmick by whites to keep them hooked. But I regard it as the only way to treat hard-core addicts. By the time they become hard-core, they have developed physiological cravings based on the supposition that the heavy use of heroin has created a new enzyme system. Methadone is, as yet, the only effective way to block this craving." The opposition of many black people to this approach is perhaps summed up best by the Rev. Dempsey's blunt statement: "I am not fighting to control addiction, but for its complete elimination."

Meanwhile, a unique therapeutic community has been suggested by Dr. Benny Primm, director of Brooklyn's Addiction Research and Treatment Center. He advocates using the Reserve Fleet, noting that by utilizing these idle vessels as treatment and rehabilitation centers three things can be accomplished: 1) patients can be treated in an atmosphere where it is impossible for pushers to get to them; 2) the ships are tied up at piers, so there can be around the clock treatment, and 3) use of the idle ships will prevent the problem of people protesting against the building of narcotic treatment centers in their neighborhoods. "For the estimated 100,000 hard-core addicts in New York City, it will be a plus," Dr. Primm believes. "Now, only a scant eight per cent of them currently receive any kind of treatment, with that being mainly on an out-patient basis."

About education, prevention and treatment, the various anti-drug organizations may have slight differences of emphasis, but all agree that the best programs devised in these areas will be useless unless something concrete is done about the ready availability of hard drugs in black communities. They also agree that no matter what the authorities do, the onus for dealing with the availability problem is going to fall on the communities themselves. There is more *official* concern about hard drugs now because white youths are using them in much larger numbers than heretofore. But as one MAD mother says, "We have to move now. We can't sit back and wait for them to act."

In New York City last year 224 teen-agers died from overdoses or heroin-related infections. More than 40 have already died this year. Of 1,000 addicts in the Phoenix House Program 335 are minors, and 42 of those are 15 years and younger. Five are 11-year-olds. Congresswoman Shirley Chisholm calls the situation an epidemic "comparable to the bubonic plague." A higher percentage of the criminal activity in black communities is believed to be narcotic-related.

So community groups are now forced to take action. One citizen claims "the value system of the black communities has condoned the use of drugs." Listeners bristle when they hear this, but eventually reluctantly agree that maybe the community hasn't done enough to fight the availability of drugs in their neighborhoods.

While these groups concentrate on blocking narcotics from their local communities, the Rev. Oberia D. Dempsey of Harlem Upper Park Avenue Baptist Church is pressuring the federal government to do a better job of keeping drugs out of the country. A 20-year veteran in the anti-drug fight, he reasons that since the government is responsible for the security of seaports, airports and borders then it must seal the nation against drug smugglers. An estimated 300 tons of illegal drugs were smuggled into the U.S. last year. All are profitable, but the most profitable are the hard drugs, cocaine and heroin. Street sale of heroin is estimated at $1.5 billion yearly. Dempsey wants all the power of the federal government, including the F.B.I. utilized to put a stop to this traffic. He also advocates economic sanctions against countries where the drugs originate, funds to reimburse foreign governments for not producing narcotics and the requirement that people coming in and out of the U.S. sign an affidavit that they are not carrying drugs.

It's still much too soon to measure the effectiveness of the actions being taken and suggested by Rev. Dempsey and others. However, one thing has already become clear. Any strong move against narcotic slavery is going to have to be initiated in local communities, and as drugs move more deeply into white communities some whites will begin to act. Significantly, matronly-looking white mothers from affluent Bergen County, New Jersey, recently joined black mothers in a march against narcotics in Washington, D.C. One woman who has a 23-year-old heroin-hooked son, reveals there are 1,200 white youths registered as addicts in her county and says she believes there are 10 times that many. She is ready to act. There soon may be more like her. But black mothers have made it plain that they can't wait. They fully share Rev. Dempsey's feelings that "with or without their help, we are going to stop the flow of death-dealing drugs into our communities."

FEDERAL REVENUE SHARING

Mr. FANNIN. Mr. President, if we have faith in government that involves the greatest degree of local self-government, then Federal revenue sharing will show the way.

More and more, tax revenues, and with it decisionmaking, have been concentrated in Washington. Decentralization of power will follow the sharing of revenues by redistribution, and it will bolster local responsibility.

No matter the virtues of federalism, no government can remain strong that does not look to the financial health of State-local governments, which, after all, perform the bulk of the essential day-to-day civilian services in the Nation.

Mr. President, I do not need to recite the unrelenting pressure on local governments and local taxpayers in meeting local needs.

Our Federal programs of grants-in-aid, in effect, curb local decisionmaking. Money that communities should be spending on pressing needs are often budgeted to other helpful, but perhaps less critical needs, because there is Federal help on one need but not the other.

Federal revenue sharing will open options to State-local governments, aid them in shouldering their responsibilities, reduce bureaucratic paper and handling costs, increase efficient use of the tax dollar, and put local decisionmaking back in the communities.

I am a cosponsor of the proposed Revenue Sharing Act sent to Congress by President Nixon.

Based on 1968 population and 1967 revenue and income data, and a total nationwide distribution of $5 billion annually when the program is fully implemented, Arizona's total share annually would be $51,420,532, of which the major cities and counties would receive respectively $6,560,618 and $4,350,334.

At my request, the Treasury Department has broken down the amount that would be allotted to the major cities and counties in my State.

Mr. President, I ask unanimous consent that the complete table be printed in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Arizona	
Total Annual Amount to Arizona	$51,420,532
State government share	40,509,580
Local government share	10,910,952
To cities	6,560,618
To counties	4,350,334
Local share to cities	
Flagstaff	$135,587
Glendale	143,873
Mesa	208,066
Phoenix	3,368,236
Scottsdale	345,047
Temple	200,477
Tucson	1,393,894
Yuma	123,508
All other cities	641,930
Total to cities	6,560,618
Local share to counties	
Cochise	$246,473
Coconino	94,083
Gila	161,915
Maricopa	2,026,222
Mohave	121,882
Pima	921,777
Pinal	277,447
Yavapai	149,371
Yuma	153,475
All other counties	197,689
Total to counties	4,350,334

CONSTITUTIONAL AMENDMENT TO LOWER THE VOTING AGE

Mr. BYRD of West Virginia. Mr. President, Congress recently passed a law lowering the voting age to 18. The President, in signing the act, urged that it be given an early court test, and I agree with him. I do not know how the Court will rule, but, in my judgment, the authority to determine the qualifications of voters is a prerogative of the individual States, under the Constitution, not a prerogative of Congress. As a matter of fact, four States have lowered the voting age, while several States have rejected the proposal.

Just in case the Supreme Court should strike down the congressional statute, a Senate subcommittee has today recommended a constitutional amendment to lower the voting age to 18. As a member of that subcommittee, I supported the proposed constitutional amendment, because I do not believe that Congress has the constitutional power to lower the voting age by statute. Such a constitutional amendment requires ratification by three-fourths of the States, but the people should be given an opportunity to decide the question.

THE TEXAS RED WOLF IS NEAR EXTINCTION: A LAST REFUGE, THE BIG THICKET

Mr. YARBOROUGH. Mr. President, the Texas red wolf, one of the 275 mammal species listed by the Bureau of Sport Fisheries and Wildlife as endangered in 1968, is now on the brink of extinction.

Estimates tell us that there are approximately 300 surviving red wolves in the United States—200 in southeastern Texas and perhaps 100 in other States. This once common member of the animal family in the Southwest has now been diminished to the extent that its suspected range of existence spans securely only six counties: Brazoria, Chambers, Jefferson, and Orange Counties, Tex.; and Cameron and Vermilion Parishes, La.

Mr. President, action must be taken now if the red wolf is to survive. The direct and deliberate killing of this fine, unique animal by ranchers, who wrongly consider this wolf to be dangerous to man, continues at an alarming rate. For instance, it was reported that in the period from 1963 to 1966 a single trapper killed over 150 wolves on one large ranch in Jefferson County. This cruel and irresponsible slaughter, for sheer commercial gain or even under the guise of predator control, must be stopped.

Since 1966 I have been fighting to create a national park out of the Big Thicket in Texas, the red wolf's principal home. The plight of this endangered species moves me once again to urge quick action on my bill, S. 4. If we are to save the red wolf and other extraordinary samples of our natural heritage, we must proceed with urgency to preserve such beautiful areas of our wilderness as the Big Thicket.

Mr. President, I ask unanimous consent that Robert M. Nowak's article entitled "Report on the Red Wolf," on page 82 of the spring issue of Defenders of Wildlife News, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ENDANGERED SPECIES: REPORT ON THE RED WOLF

(By Ronald M. Nowak)

BACKGROUND

Within the last decade, much attention has been directed toward the wild canid that once occupied the southeastern quarter of the United States. This animal is now generally known as the red wolf, with the scientific designation being *Canis rufus*. Since that time it was made clear that this species is in grave danger of extinction, there has been a profusion of field work, laboratory studies, conservation reports, and breeding experiments dealing with the red wolf. But despite the fact that *C. rufus* is the rarest mammal in North America, there has been surprisingly little progress in protecting it or even in formulating a definite preservation program. Indeed, there is as yet no completely clear picture of what sort of animal the red wolf was under natural conditions, and what has become of it in recent years.

This last matter involves a question of taxonomy, the science of classifying living things and determining their relationships with one another. The taxonomic issue runs prominently through the story of the red wolf, and is especially important in the conservation effort since before we can protect an animal, we must be able to describe what it is and tell where it exists. There are two main taxonomic problems involving *C. rufus*. The first is whether the red wolf, as it originally existed, was a distinct species, or only a subspecies of one of the other two kinds of *Canis* in North America, the gray wolf, *C. lupus*, and the coyte, *C. latrans*. By distinct species, we mean a group of animals that in nature breeds only within itself, not with other groups, and which thus has developed its own unique set of characteristics that always distinguishes it. A subspecies, on the other hand, is a geographical variant of a species and exhibits characteristics that blend into those of other subspecies where their geographic ranges meet.

The second systematic problem concerns what has happened to the wild canid population of the southeast in the last few decades. It is known that the true red wolf has been all but exterminated. Nevertheless, wild canids currently inhabit much of its former range. For a long time many persons believed that wolves were still present in this area, but it is now realized that most of the animals there represent an invasion of smaller canids from farther west (see McCarley, 1962; Nowak, 1967; Pimlott and Joslin, 1968; Paradiso, 1966, 1968).

Before the twentieth century the canids of the southeast had been given various scientific and common names, but mostly by people who had not closely studied the animals. There was no real attempt to describe and set these creatures apart from the wolves which occupied the rest of North America. Then in 1905, Vernon Bailey, the chief field naturalist of the old U.S. Biological Survey, reported on a detailed study of the fauna of Texas. He found the small red wolf of the south central part of the state to differ so greatly from the huge gray wolf of the plains, just to the west, that the two deserved to be treated as completely distinct species. Later, Edward A. Goldman (Young and Goldman, 1944), senior biologist of the Survey, examined a large number of specimens and found that this Texas red wolf intergraded in characteristics with the canids across the southeastern United States to Florida. While the reddish color, prevalent in parts of Texas, was not particularly common farther east, there was a continuity of key cranial and dental features. Goldman thus referred all of the wolves of the southeast to one species, *C. rufus*. By the time of this study the red wolf had already been exterminated east of Mississippi.

RECENT TAXONOMIC STUDIES

Goldman's description of the original situation remained basically unchallenged until recently when Lawrence and Bossert (1967), two biologists at Harvard, performed a multiple character analysis of North American *Canis*. This study involved carefully making a set of measurements on a series of skulls and then subjecting the figures to numerical analysis by a computer. It was hoped that the computer would show how the different types of specimens were related to each other. Those skulls examined included 20 gray wolves, 20 coyotes, 20 domestic dogs (*C. familiaris*), and a small number of red wolves collected before 1920. The results of their study suggested to Lawrence and Bossert that the red wolf was close enough to the gray wolf to be considered only a subspecies of the latter.

Paradiso (1968), however, felt that Lawrence and Bossert's sample sizes had been too small and did not fully represent the great geographic and individual variation of the canids. He pointed out a number of features in which the red wolf differed from the gray wolf and more closely resembled the coyote. He urged the continued recognition of *C. rufus* as a full species until completion of detailed studies employing larger series of specimens.

On the other side of the issue, some field workers, so struck by the difficulty in telling the red wolf and coyote apart, have expressed doubt that the two are separate species. Much recent study has concentrated on the question of the interrelationships of *C. rufus* and *C. latrans*.

One aspect of the research on the red wolf has involved study of chromosomes, to see if the genetic material of *C. rufus* would be capable of forming a viable cross with that of other species of *Canis*. An examination of specimens from two animals, believed to be true red wolves, was made at the M. D. Anderson Hospital and Tumor Institute of the University of Texas. The karyotype (chromosome number and structure) of these speci-

mens was found to be indistinguishable from those of the gray wolf, coyote, and domestic dog. Hence as far as genetics is concerned, any of the four species could successfully interbreed (Dr. Frances E. Arrighi, pers. comm., 15 August 1969). That the North American canid species did not hybridize under natural conditions is thus apparently due to other factors.

Another new taxonomic method applied to the red wolf question is the biochemical analysis of proteins in the blood. Dr. U. S. Seal of the Metalobic Research Center, Minneapolis Veterans Administration Hospital, has been comparing the blood sera of different canid species. He has received blood samples from recently captured live red wolves, and has found biochemical distinction between these animals and coyotes and gray wolves. Hopefully, refinements of this method will enable us to determine, without killing the animals, whether they are wolves, coyotes, or dogs, and to what degree, if any, they have mixed blood.

One more new approach is comparative brain anatomy. Its advocates argue that because of the complexity of the brain and its intimate association with all aspects of the life history of an animal, it will possess some of the most reliable distinguishing characteristics between species. David L. Atkins, a graduate student at Texas A & M University, has made a study in which the brains of coyotes, dogs, gray wolves, and a few recently killed animals believed to be red wolves, were carefully dissected and compared. He believes that the features of the red wolf brains are distinct enough to warrant designation as a full species.

THE RED WOLF AS A DISTINCT SPECIES

Some of the recently developed taxonomic techniques are limited by their dependence on non-skeletal material and are thus unable to make comparisons with the situation in the past when a large, un-mixed population of red wolves existed in the southeast. The most reliable means of ascertaining the former appearance and distribution of mammalian species is examination of preserved material, especially skulls. Likewise, the only method of determining if and where true red wolves exist today is to compare newly collected skulls with old specimens.

John L. Paradiso and I have begun a new effort to resolve the taxonomic status of the red wolf, mainly through examination of the extensive collections of the Bureau of Sport Fisheries and Wildlife's Bird and Mammal Laboratories at the U.S. National Museum. Our primary objective is to provide criteria by which red wolf populations can be distinguished from other canids for the purposes of conservation efforts. No animals are being killed or captured for our study. Most specimens were previously taken as part of regular predator control operations and deposited in the National Collections.

Our analysis of red wolf characters is based on 213 skulls collected from southern Missouri, Arkansas, and eastern Oklahoma, before 1930, and from Louisiana and extreme southern Texas, before 1944. These specimens were taken at times when the red wolf was still common in these respective areas. The 213 skulls show a strongly consistent set of characteristics indicating that only one species is represented.

Furthermore, when this series was compared with a sample of 336 skulls of known coyotes and 215 skulls of gray wolves, the distinctions of each of the three species were obvious. A few differential characters are as follows:

In comparison with the other two species, the skull of *C. lupus* is largest and heaviest, and suggestive of a powerful animal adapted to prey on big game. The bones roofing the frontal sinuses are notably domed, the zygomata broadly flaring, and the sagittal crest high. The great grasping power of the mouth is best reflected in a high "bite ratio," that being the width across the outer alveoli of the anterior lobes of the upper carnassials, divided by the length of the upper molariform tooth-row.

In *C. latrans* the skull is smallest and lightest, indicating that this species preys mainly on small animals. The bones roofing the frontal sinuses are nearly flat, the zygomata are narrowly spreading, and the sagittal crest is lower. The bite ratio is much smaller, there being no overlap with *C. lupus* in our sample series.

In *C. rufus* the skull is intermediate in size and weight. The frontal and zygomata closely resemble those of the coyote, but the sagittal crest is high. The bite ratio is also intermediate to that of the other two species, but significantly distinct from each when statistically compared.

The canine teeth of most individuals of *C. rufus* are long and thin, and in 97 of the 155 skulls that could be examined for this feature, the canines extended below the anterior mental foramina. The corresponding figures for *C. latrans* are 223 of 250, and for *C. Lupus*, 13 of 112. The molar teeth of the red wolf show a deep sculpturing similar to that of the coyote, and in marked contrast to the condition in the gray wolf. Of 205 red wolf specimens checked, 195 possessed a developed posterior medial cusp on the upper M1. All of 320 coyote skulls, but only 96 of 209 gray wolf specimens shared the feature.

The establishment of each of these three species, with their own sets of characters, could only result from them all having been isolated from one another at some period in their geologic history. A geographical barrier is necessary to break the genetic flow of a population and permit the development of separate species. During the Pleistocene epoch, great glaciers moved over much of North America, creating effective barriers in themselves, and also causing sweeping environmental changes over most of the remainder of the continent. It was then, we believe, that the progenitor of the red wolf, probably closely related to the coyote, became isolated in the southeastern corner of North America and evolved into a separate species. A late Pleistocene (Wisconsin) fossil from Alachua County, Florida, appears to represent an animal transitional between a coyotelike ancestor and the modern red wolf. When environmental conditions permitted, the red wolf extended its range to overlap those of the coyote and gray wolf, but it did not interbreed with them.

If the red wolf had intergraded with the gray wolf we would expect to see our red wolf specimens gradually start to look more like the gray wolf as the ranges of the two approached. But in fact, Missouri red wolf skulls are not significantly different from those of Louisiana. And the Missouri specimens show a sharp contrast with the skulls of gray wolves collected on the Great Plains, just to the west. Presently, of course, the ranges of *C. rufus* and *C. lupus* are separated by perhaps a thousand miles, due to human activity.

The coyote still exists in contact with the red wolf and that is the cause of much of the confusion today. Examination of specimens collected before 1930, however, reveals no tendency for the red wolf and coyote to intergrade in characters over most of the area where their ranges met or overlapped. Although the differences in bone structure are usually sufficient to separate skulls of these two species, the most consistent distinguishing feature is over-all size. Among the thousands of coyote skulls in the U.S. National Museum, we found only two male specimens that had a greatest length exceeding the smallest red wolf skull of the same sex. Normally the red wolf is much larger and this is probably the quickest way of separating series of specimens. Our early red wolf skulls from Missouri, Arkansas, Oklahoma, and southeastern Texas are all large and clearly represent a species distinct from the coyote which existed immediately to the west and even overlapped part of the old range of *C. rufus*.

HYBRIDIZATION AND THE DECLINE OF THE RED WOLF

Until recently the red wolf was considered to be common over much of its former range, but apparently no one looked closely at the situation. In 1959, however, Dr. Howard McCarley claimed that Federal trappers in eastern Texas were incorrectly distinguishing between *E. latrans* and *C. rufus*. In 1962, he theorized that human-caused environmental changes associated with farming and lumbering had created good habitat for the coyote and allowed it to extend its range to the east, while at the same time the red wolf could not adapt to these changes.

I agree with McCarley that habitat disruption reduced the ability of the red wolf to survive, and that it created better conditions for the coyote which prefers more open country. But specimens and records indicate that even as late as 1930 a large, relatively pure red wolf population existed in southern Missouri, eastern Oklahoma, Arkansas, southeastern Texas, and Louisiana. This period followed by about a hundred years the first heavy settlement of the area and was well after intensive lumbering had begun.

The decline of the red wolf can be attributed primarily to direct and deliberate killing by man. Only after concerted efforts had been made to eliminate the red wolf was its population reduced to a level that allowed the massive entry of other canids. It appears that organized predator control programs were largely responsible for the final phase of this reduction. Federal trapping began in eastern Texas in 1915, Oklahoma in 1918, Arkansas in 1918, and Missouri in 1922. Nearly all of the specimens in the National Collections from about the first decade of predator control operations in these areas are large red wolves. But specimens obtained since about 1930 average much smaller, indicating that *C. rufus* had been almost wiped out by the efficient control programs and replaced by other canids. For example, from 1922 to 1925, a heavy trapping effort in southern Missouri destroyed 213 wolves. From this group the skulls of 22 adults were sent to the National Museum, and all are clearly red wolves. After this intensive control effort the red wolf population was apparently unable to continue in existence. We have one more, possibly pure, Missouri *C. rufus* specimen from 1932, and then only much smaller skulls.

Government trapping did not begin in Louisiana until 1938 and all specimens from that state up to 1940 are typical large red wolves. We have no specimens over the next decade, but numerous reports indicate that a fair number of wolves held out in Louisiana until about 1952. Only after the hard-hitting Federal and succeeding state predator control programs had decimated the wolf population was there a large-scale movement of a different, smaller kind of canid into Louisiana (Nowak, 1967).

There has been confusion regarding the identity of the canids that replaced the red wolf. In some areas these animals appear to be typical coyotes. In others, the canid population spans the whole range of variation in size and cranial details between red wolves and coyotes, and it has been suggested that this wide variation results from hybridization between the two species.

Sampson (1961) reported a few intermediate specimens taken in Missouri from 1932 to 1942, but almost all coyotes after that. Apparently in Missouri, and possibly in Oklahoma (Paradiso, 1968), the red wolf was quickly exterminated and replaced by the coyote, without the extensive development of hybridization.

In contrast to the situation farther north,

a large series of canid skulls, collected from 1899 to 1918 in central Texas, already exhibits an intergrading set of characteristics ranging from typical *C. latrans* to typical *C. rufus*. Large, small, and intermediate skulls are scattered throughout the area, with no geographic pattern apparent, and no place to draw a line of distinction between the coyote and red wolf. Paradiso and I believe that these specimens represent the formation of a hybrid swarm between *C. rufus* and *C. latrans*.

In nature, hybrids are often unable to survive long because they are not suited for the habitats of either of their parent species. But when man disrupts the environment, he may create a whole range of unnatural habitat conditions in which hybrids can thrive. A number of cases have been reported, especially regarding birds, in which two formerly separate species were brought into close contact through human disturbance. Eventually such conditions resulted in the formation of whole swarms of hybrids with greatly varying characteristics, intermediate between the parent species (Mayr, 1963).

The Edwards Plateau of central Texas, noted for its varied topography and vegetation, was one area in which the ranges of *C. rufus* and *C. latrans* would have overlapped. Human disruption of the natural habitats here probably led to a breakdown in the behavioral patterns and ecological isolation of the two species, and the development of a swarm of hybrid canids in the late nineteenth century.

These animals adapted to the conditions brought about by man and were actually able to spread eastward in Texas to fill the predator niche left when the large red wolves were exterminated. They appear to have formed a separate population from those red wolves that still existed. Their movement to the east seems to have been a geographical expansion of an animal population, and not merely a gene flow. For instance, in Louisiana we know that during the late 1940's true *C. rufus* was being rapidly eliminated by trapping. But only after the big true red wolf had been drastically reduced in numbers and largely forced back into the eastern and southern lowlands of the state, was there a movement of the separate hybrid group into northwestern Louisiana from eastern Texas (Nowak, 1967).

Paradiso (1968) made a study of the recent situation in eastern Texas. He found that 279 wild canid skulls, collected by Federal trappers in this area since 1962, spanned the entire size range between known samples of coyotes and red wolves. The average size of the skulls, however, was considerably closer to *C. Latrans*. This would be expected since the original coyote population was much greater in numbers. Large, small, and medium sized specimens were scattered throughout eastern Texas. and sometimes occurred together at the same locality. We recently examined 27 other skulls collected in Louisiana from 1963 to 1969, and found a similar variation in size.

We thus now realize that much of the former range of the red wolf has been overrun by a mixed swarm of canids, and there is little chance that pure populations of *C. rufus* survive in the same areas. The mere finding of one specimen that looks like an old red wolf cannot be considered proof of the presence of pure *C. rufus*, because a genetic hybrid may physically resemble one of the original parent species. The animal in McClennan County, Texas, considered by Dr. Etter (1969) to possibly be a red wolf, was almost certainly such a hybrid.

RECOGNITION OF THE PROBLEMS

The taxonomic studies that pointed out the critical status of the red wolf, led to the placing of *C. rufus* on the rare and endangered species list of the U.S. Fish and Wildlife Service in January 1965. State and private agencies also became aware of the problem and some took limited action. The International Union for Conservation of Nature and National Resources added *C. rufus* to its highly regarded *Red Data Book* of endangered wildlife. The American Society of Mammalogists has maintained a steady interest in the problem over the past few years, particularly with regard to the situation in Arkansas. The Society expressed fear (1967) that government trappers there were continuing to operate in areas where the red wolf might exist. At its 1969 meeting, the Society passed a resolution calling for intensive field study of the species.

State governments seem to have been slow in taking measures to save the red wolves within their jurisdiction. However, agents of the Arkansas Game and Fish Commission have cooperated in studies in that state (Wilson, 1967; Sealander and Gipson, 1969). And an official of the Texas Parks and Wildlife Commission (Beezley, 1967) published an article sympathetic to the red wolf. He also provided some information regarding the natural history of the species in the Texas Gulf Coast area.

Various other articles and official statements indicate that the plight of the red wolf now has rather widespread public recognition. This interest was exemplified when on March 2, 1969, the nationally broadcast fictional television program *Gentle Ben* featured a story concerning an attempt to save a pair of red wolves. Unfortunately, the program included a scene in which the wolves were shown to make an unprovoked attack on two humans. There are no actual records of such behavior by *C. rufus*, and this scene probably greatly reduced whatever good the program as a whole might have done for the species.

RED WOLVES IN CAPTIVITY

One means suggested for saving vanishing animal species is the breeding of captive populations. Until quite recently there were surprisingly few animals, identified as red wolves, in captivity anywhere. The Zoological Society of London's 1968 Census of Rare Animals in Captivity listed only three males and four females spread among five zoos, and furthermore stated that these specimens were probably not pure-bred (Lucas, 1969).

Since 1967, Federal workers have live-trapped a number of wild canids from the known red wolf range along the Texas Gulf Coast. Some of these animals died or were kept in the field, but a total of seven males and ten females have now been distributed to various zoos in the eastern United States. The handling of these live specimens is being coordinated by the Wild Animal Propagation Trust which hopes to establish breeding populations in captivity. Careful records of these animals and their progeny are being maintained, and blood samples have been taken from each for use in biochemical taxonomic studies.

SEARCHING FOR RED WOLVES

Fear that the red wolf was nearing extinction inspired field studies to learn if and where the species still existed. One such project, financed by the World Wildlife Fund, was undertaken in 1964–1965 by two Canadian zoologists, Douglas H. Pimlott and Paul W. Joslin of the University of Toronto. The procedures and results of this study have been published in several places (Pimlott, 1965; Pimlott and Joslin, 1968; Rutter and Pimlott, 1967).

The principal method employed by Pimlott and Joslin in searching for wolf populations was developed during research on Canadian wolves. There it was found that wolves often responded vocally to tape recordings of wolf howls and to human imitations. The presence of true wolves could thus be determined since their call differed from those of coyotes and dogs. Pimlott and Joslin also examined a number of skulls, searched for signs, and interviewed local residents.

Of course the howling method, like other new approaches, is limited by its lack of comparative material, in this case recordings of definitely known red wolves. And since *C. rufus* is thought to be specifically distinct from the wolves of Canada, there was no guarantee that its call would be the same, as Pimlott and Joslin apparently assumed. Still, their systematic searching procedures and close coordination with other data have produced some impressive results.

They heard animals which they considered to be red wolves in the Ozark National Forest of Arkansas. The only other wild canids heard during searches in that state were said to be coyotes. A large series of skulls from Arkansas was found to consist almost entirely of coyotes, while a few specimens appeared to be intermediate between *C. latrans* and *C. rufus*.

Using the howling method, Pimlott and Joslin located wolves in several other places. A group of three adults was found in Morehouse Parish in northeastern Louisiana. Groups of adults with young were heard on Davis Island, which is mostly in Mississippi, and on Pitman Island, also in Mississippi, but nearly surrounded on East Carroll Parish, Louisiana. Intensive searches made in a number of other localities in Louisiana revealed no wolves. On the basis of reports, a few wolves were believed to exist in the southwestern part of the state. The skull of an animal killed by a car in St. Landry Parish was identified as *C. rufus*.

For southeastern Texas it was recorded (Pimlott and Joslin, 1968:384): "Joslin spent five weeks in this area in 1965 and located three different packs totalling 14 animals, all of which he considered to be wolves. All were in the area east of Galveston Bay between Highway 73 and the Gulf Coast. He also examined a number of skulls of wolves that had been killed in the area. Coyotes were considered to be rare in the area and Joslin did not hear any howling."

The general picture that emerged from this study was that the red wolf, as a pure species, still existed only in the bottomlands near the Mississippi River, and on the coastal marshes of southern Louisiana and southeastern Texas. Paradiso (1965) provided more evidence for this last location when he reported examining seven canid skulls from the Anahuac National Wildlife Refuge in Chambers County, Texas. All specimens appeared to be true *C. rufus*, and Paradiso thought that the species might be present in some numbers in the area. Pimlott and Joslin estimated the total population of red wolves at not more than 150 individuals, 50–75 of which were in the southeastern Texas area between Anahuac and Beaumont. Further research was believed necessary to document the presence of *C. rufus* in the Ozark section of Arkansas (International Union for Conservation of Nature and Natural Resources, 1967).

Despite the fact that this population estimate was the lowest for any North American mammalian species, Pimlott and Joslin were forced to cancel their study because of a lack of funds. Attempts to obtain continued support from various agencies were unsuccessful.

CONTINUED WORK IN ARKANSAS

Howling searches have been carried on in the Ozark National Forest area by a group under Dr. Henri D. Crawley at Arkansas Polytechnic College. Students have made extended series of trips into the area and systematically played recordings of Canadian wolf howls, orginally supplied by Pimlott. Since October 1966, about twenty of the responses received have been considered at least wolflike (Anonymous, 1967; Bond, 1968; Wilson, 1967; Steve N. Wilson, pers. comm.

22 April 1969). A student has also been doing a statistical study of canid skulls provided by government trappers in Arkansas, in hopes of definitely ascertaining the continued existence of the red wolf in the state.

Another study is currently being made by Philip S. Gipson, a graduate student at the University of Arkansas. The comprehensive objectives of this project include a survey of food habits, range movements, reproductive processes, and taxonomy of all wild canids in Arkansas. State Game and Fish Commission personnel are supplying the remains of trapped animals. From July 1968 until June 1969 a total of 135 specimens, mostly from the western third of the state, were received. Five of these were identified as dogs or coyote-dog hybrids and all others were considered to be coyotes, but it was noted that a few were large and showed characteristics intermediate between *C. latrans* and *C. rufus* (Sealander and Gipson, 1969).

CURRENT STATUS LOUISIANA

The current situation in Louisiana is rather confusing, and many rural residents still believe the wolf to be common, due to the presence of other wild canids. These animals are most abundant in the northwestern part of the state where numerous articles and editorials in the *Shreveport Times* and *Journal* have carried on a running debate over their proper identity and management. The subject has even been touched on in an article in *Life* magazine (Snell, 1969). A large number of skulls from northwestern Louisiana have been supplied by state trappers to Louisiana Polytechnic Institute in Ruston where another taxonomic study is underway (T. E. Harris, pers. comm., 3 May 1969).

The Louisiana Wild Life and Fisheries Commission now refers to the great majority of wild canids in the state as coyotes. It was reported (1968) that the state predator control section trapped 269 coyotes in the period December 1, 1965 to November 30, 1966; and 306 in the period December 1, 1966 to November 15, 1967. Mr. T. E. Harris, predator control supervisor, also said that 383 coyotes were trapped in 1968, mainly in the northwestern part of the state. But the animals are fairly well distributed over Louisiana, except for the southern marsh areas (pers. comm., 3 May 1969).

The Commission thus continues to carry on a rather intensive trapping program. The number of men in the predator control section has varied in recent years, but currently there are about a dozen employees. Caddo Parish, in the extreme northwestern corner of the state, employs its own trapper.

The wolf is still listed as an "outlaw quadruped" in the Louisiana game regulations and thus may be legally killed at any time. However, several years ago predator control agents ceased trying to trap the surviving true red wolves in the state and Harris says that this policy continues.

Little information on the red wolf in Louisiana is available from state government sources. Contact with numerous game officials and trappers provided us with no substantial data more recent than the Pimlott-Joslin study of 1964–1965. No funds have been available to study any animals in the state other than game species. Recently, however, interest in the red wolf problem has increased, and, for one thing, all skulls of wild canids trapped by the predator control section are now being forwarded directly to the Commission's Fish and Game Division offices. There is also a possibility that a field study of the red wolf will be made by Louisiana State University.

One of the more logical places to look for red wolves would seem to be Davis Island where Pimlott and Joslin reported finding a group of two or three adults and two or three pups. I visited the island April 11–13, 1969. The area derives its name from the Confederate President who once had a large plantation there. Although mostly in Warren County, Mississippi, the island is almost encircled by Louisiana. It consists of about fifty square miles and is usually surrounded by segments of the Mississippi River. The land lies 20 to 60 feet above the river for most of the year, and the larger part is covered by dense hardwood forest. Several strips have been cleared for the grazing of cattle and the planting of deer feed. Only about ten persons are said to be permanent residents of the island, although there are several large hunting camps. Deer and other types of wildlife are plentiful. Most persons who frequent the island believe that wolves are present, but their descriptions indicate that other wild canids are also now in the area. Several wolves were reported to have been killed on the island in the 1968 deer season, but no specimens could be located.

Considering the isolation, low human population, and general wilderness character of Davis Island, it would appear to be an excellent place to protect any red wolves that might be present. Such action would depend mostly on achieving cooperation from the major land owners and hunting clubs there. In 1968, Grits Gresham, a noted Louisiana outdoors writer, attempted to initiate a movement to protect wolves on Davis Island (pers. comm., 27 April 1969), but apparently little was accomplished.

Several authorities in Louisiana suggested that the well-known Moore Ranch in the extreme southwestern Parish of Cameron, would be another good place to search for wolves. I also visited this area in April 1969. The ranch lies immediately north of the Sabine National Wildlife Refuge and consists mainly of marsh and flat grazing land. Dense cover is relatively scarce, but deer, rabbits, waterfowl, and other wildlife are abundant. The mounted heads of two canids, killed in the vicinity by state trappers in the period 1963 to 1965, are in the possession of the ranch. They appeared large enough to be true wolves. Mr. R. E. Odom, manager of the ranch, said that large wolves were still present and could be heard howling frequently in the cooler months. The Moore Ranch presented a striking contrast to other areas that were visited. Personnel there were well aware of the rarity of the red wolf and the species is now strictly protected along with all other native forms of wildlife. Mr. Odom said that he has never found evidence of the wolves harming livestock on the ranch.

The presence of the specimens at the Moore Ranch, the *C. rufus* skull identified from St. Landry Parish (Pimlott and Joslin, 1968), and persistent reports from wildlife officials and ranchers, indicate that a small population of true red wolves still exists in southern Louisiana. The range of the species probably includes parts of the vast Atchafalaya swamp region and then extends south to the Gulf Coast and west through Cameron Parish into southeastern Texas. However, little work has been done to definitely delineate the distribution of the red wolf in these parts of Louisiana.

HOPE AND CRISIS IN TEXAS

Much recent field work has been centered in extreme southeastern Texas, just across the border from Louisiana. Because of the evidence of the presence of *C. rufus* there, as gathered by Paradiso (1965) and Pimlott and Joslin (1968), plus continuous reports from field men and ranchers, the U.S. Fish and Wildlife Service initiated a study in the area.

The Federal project was funded by the Bureau of Sports Fisheries and Wildlife's Office of Endangered Species, and administered through the Bureau's Division of Wildlife Services, with field work conducted from the San Antonio offices. Research began on March 13, 1968 under the direction of John L. Steele, Jr., a Federal biologist stationed in Beaumont.

The study area included Brazoria, Galveston, Liberty, Chambers, Jefferson, and Orange counties, Texas. Steele, an ardent friend of the red wolf, was able to obtain much new data on its biology and the factors that threaten it with extinction. He concluded that relatively pure red wolf populations existed throughout most of the study area, but that they were seriously endangered.

Series of skulls sent to the Bird and Mammal Laboratories from this area, and compared with known red wolf specimens, have allowed a closer delineation of the current range of *C. rufus*. One group of 32 skulls, from animals killed by a private hunter, was sent from a locality in Brazoria County, west of the Brazos River. Only a few of these specimens resembled pure red wolves; the others appeared to be coyotelike or intermediate. Thus it is clear that hybrid canids are now established even in western Brazoria County.

The situation to the east of the Brazos River in this county, however, is different and deserves further comment. Brazoria County is actually separated by Galveston Bay from the areas examined earlier by Pimlott and Joslin. But during initial Federal investigations, reports from ranchers and government workers indicated that large red wolves still survived in an area of the eastern part of the county.

In the fall of 1968, Paradiso investigated the region in cooperation with Roy McBride, an experienced field officer of the Bureau of Sport Fisheries and Wildlife. McBride had previously come to the same conclusion reached by Paradiso in his laboratory work—that the wild canids throughout most of eastern Texas formed a highly variable population with characteristics ranging all the way from typical coyote to typical red wolf. However, he also thought that the animals in the coastal marshes of Brazoria County were pure *C. rufus*, and that no other canids had penetrated the region. The ranchers of the area had always known these animals as "wolves" and had hunted them for years. While this section of eastern Brazoria County was restricted in size, the population of wolves was of a relatively high density. This factor, plus continuing suitable habitat conditions, had apparently barred the entry of other canids. Paradiso and I examined a total of eighteen skulls collected in this area since 1964. Each of the specimens has characters within the range shown by our known series of *C. rufus*.

In addition, we have now examined seventeen skulls from Chambers and Jefferson counties, collected since 1963. These also closely resemble our known red wolf sample and show no evidence of coyote admixture.

It is thus apparent that a pure *C. rufus* population now exists from the Brazos River, through Chambers and Jefferson counties, and on into Louisiana. We estimate that perhaps 200 red wolves are present in southeastern Texas, with not more than 100 surviving in other states. There may actually be far fewer. Of critical importance is the fact that the range of *C. rufus* now adjoins that of the swarm of hybrid canids, some of which are capable of breeding with and thus diluting the purity of the red wolf population. The only way to prevent such interbreeding is to maintain the numbers and habitat of *C. rufus*.

It is encouraging that a population of wolves has survived at all on the long settled Gulf Coast. It seems as though this region was bypassed by the mainstream of development and for many years left primarily to marginal agricultural use. Nevertheless, in the last few years human population and activity have greatly increased in the area, and "civilization" has finally caught up with the wolves. More intensive agricultural practices, including regular marsh burning and

drainage, and industrial development, especially in the oil and chemical fields, now endanger the habitat of the species. The rapidly expanding Houston-Galveston area has already effectively split the coastal wolf population into two segments and might overrun much more of the region in a few years. Deer and waterfowl hunters, long considered a major factor in the decline of the wolf in Louisiana, are also a growing problem on the Texas coast.

The greatest immediate threat to the red wolf, however, remains direct and deliberate killing by ranchers who consider the species a danger to livestock, especially calves. Pimlott and Joslin (1968) said that in 1960–1961 a single trapper killed 52 wolves in the southeast Texas counties by means of cyanide guns. And Steele reported that in the period from 1963 to 1966 another trapper killed 151 wolves on one large ranch in Jefferson County. These figures probably represent mostly immature animals.

Recent reports indicate that red wolves are still being slaughtered at a shocking rate by ranchers and others along the Gulf Coast. According to Steele, a total of 265 wild canids was killed in his six county study area from January 1968 to October 1969.

Federal predators control operations within the suspected range of the red wolf were sharply curtailed in 1966 and there were attempts to carefully investigate complaints against the species. Although Steele's project has now ended, limited Federal studies of *C. rufus* are continuing in Texas. Current plans call for more research along with selective trapping of those wolves known to be causing damage. It is hoped that ranchers can be convinced to forego their own control operations which presently include indiscriminate poisoning and shooting. Killing of wolves by private individuals apparently increased after the reduction in government trapping and possibly total Federal withdrawal from the scene would mean a more rapid extermination of *C. rufus* in Texas.

Certainly the livestock interests in the area cannot be ignored. Rightly or wrongly, many Texas cattle ranchers believe that the red wolf is a detrimental factor in their business. Of course, further research might well show that here, as elsewhere, most of the cattle believed killed by wolves actually died due to disease, poisonous plants, malnutrition, drowning, or other factors, and were perhaps then fed on as carrion. Studies to determine the facts are badly needed and could provide friends for the red wolf.

CONCLUSION

In the end the preservation of the red wolf will depend on how much money and effort can be devoted to the problem. Ideal protection could be provided only through the purchase of a large and guarded refuge, within the range of *C. rufus*, to accommodate a viable population of the species in its natural habitat. Current plans for intensive research, sincere efforts at winning local cooperation, and captive breeding might also help, if effectively supported and carried out. Of great benefit would be the passing state laws to prohibit the killing of any wild canids within the known or suspected range of the red wolf. This range currently includes at least the following areas: Brazoria, Chambers, Jefferson, and Orange counties, Texas; and Cameron and Vermilion parishes, Louisiana. Concerted public information programs are also required to let local residents know of the rarity of the species and the need for protection.

Some action should be taken immediately if the red wolf is to survive. Even if the highest current population estimates were to be accepted. *Canis rufus* would still have to be considered the rarest mammal in North America. It is threatened not only by continuing ruthless human persecution, but by the steady deterioration of its habitat and the serious problem of hybridization. Despite the general awareness of the red wolf's plight, no refuges have been provided for it, no laws to protect it, and little money has been spent to help it. The time has now come for a top priority effort to save this unique American species.

ACKNOWLEDGMENTS

I am sincerely grateful to the personnel of the Division of Wildlife Services and the Division of Wildlife Research of the U.S. Bureau of Sport Fisheries and Wildlife for providing detailed information and assistance. Specimens and facilities were made available through the courtesy of the Bird and Mammal Laboratories of the Division of Wildlife Research.

I wish to express my particular gratitude to John L. Paradiso of the Bird and Mammal Laboratories and to thank all of those persons, mentioned and unmentioned in this report, who took the trouble to answer correspondence or who otherwise assisted me in gathering information on the red wolf.

CONCLUSION OF MORNING BUSINESS

Mr. MANSFIELD. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

OFFICE OF EDUCATION APPROPRIATIONS BILL, 1971—CONFERENCE REPORT

Mr. MAGNUSON. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 16916) making appropriations for the Office of Education for the fiscal year ending June 30, 1971, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER (Mr. GRAVEL). The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of July 15, 1970, pp. 24453–24454, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. MAGNUSON. Mr. President, I ask unanimous consent that a summary of the bill as agreed to by the conferees and adopted by both bodies be printed in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

OFFICE OF EDUCATION APPROPRIATION BILL, 1971 (H.R. 16916)

COMPARATIVE STATEMENT OF NEW BUDGET (OBLIGATIONAL) AUTHORITY FOR 1970 AND BUDGET ESTIMATES AND AMOUNTS RECOMMENDED IN THE BILL FOR 1971

[Key: ESEA—Elementary and Secondary Education Act; NDEA—National Defense Education Act; ESEA, 1967—Elementary and Secondary Education Act Amendments of 1967; VEA—Vocational Education Act of 1963]

[All amounts are dollars in the form of definite appropriations unless otherwise indicated]

[1] 1970 appropriations are comparable to the 1971 estimates.
[2] To implement proposed reform legislation now pending in Congress.
[3] Includes $1,010,814,300 appropriated in the 1969 bill.
[4] Includes $7,841,685 for pt. B, incentive grants and $15,453,650 for pt. C, grants for high concentrations of poor.
[5] Department distribution. Key to legislative authorities: ESEA 1970 (Elementary and Secondary Education Act Amendments of 1970).
[6] Provides 10 percent of total for vocational research under pt. C of the basic law.
[7] Earmarks $4,000,000 for curriculum development and $16,000,000 for exemplary programs.
[8] Includes a budget amendment of $9,300,000 (S. Doc. 91–80). Key to legislative authorities: HEA (Higher Education Act); HEFA (Higher Education Facilities Act); EPDA (Education Professions Development Act).
[9] Department distribution.
[10] Tentative distribution.
[11] Includes budget amendment totaling $279,759,000. Includes $425,000,000 to implement impacted area aid legislation; and includes $150,000,000 for 1970 supplemental estimate for emergency school assistance.
[12] Not considered by House. Key to legislative authorities: Economic Opportunity Act of 1964 title II.

Not H. Rept. 91–996, Apr. 9, 1970, passed House Apr. 14, 1970. S. Rept. 91–871, May 15, 1970 passed Senate June 25, 1970. H.J. Res. 1264, continuing resolution, 1971, Public Law 91–294, June 29, 1970.

Mr. MAGNUSON. Mr. President, I have a short statement to make, and I am sure that the distinguished Senator from New Hampshire (Mr. COTTON) will wish to make a statement on the adoption of this very important conference report.

Mr. President, before I move the adoption of the conference report on H.R. 16916, I would like to comment very briefly on several aspects of the bill, as agreed to by the conferees.

First, the total bill, as reported out of conference, is $4,420,145,000, which is under the Senate figure of $4,782,871,000 by minus $362,726,000. The conference figure is over the House amount of $4,127,114,000 by $293,031,000 and over the budget estimate of $3,966,824,000—without advance funding of $1,339,050,000—by $453,321,000. It is under the budget estimate of $5,305,874,000—including advance funding of $1,339,050,000—by $885,729,000. The conference figure is over the fiscal year 1970 comparable appropriation of $3,813,777,650—taking into consideration the 2-percent reduction of the total amount of last year's education appropriation—by $606,367,350.

The House, on July 16, adopted this agreement by a rollcall vote of 357 to 30.

I am hoping the Senate will adopt the conference report by just as impressive a margin as the House so we can send this education bill to the President and have him sign it, and the schools and the students can get their money and we can get on with the business of educating 52,000,000 students.

There has been a little noise down on 1600 Pennsylvania Avenue about the size of appropriations bills being approved by Congress. That four-letter word "veto" keeps cropping up again and again—but let me say that Congress wants this appropriation bill signed into public law. The Senator from New Hampshire, the chairman, the sucbcommittee and the Congress have deliberated on education funds for 1971 long enough and have completed a fairly decent bill, and we are ready to turn our attention to other pressing matters.

Appropriation bills are a composite of the annual budget—the President's budget. And when we finish passing the various component parts of the President's budget, I think he will find that Congress has reduced his budget—not increased it. This is what happened last year, and in many other years, and I predict this will be the final result when we conclude this session.

This is what the taxpayers should be told. This is what they should know between now and November.

Congress also knows that a flow of supplemental requests for more money will begin their march up the Hill from downtown between now and the time we adjourn. The taxpayers should know this, too.

Expenditures for education in this country are running about $70 billion a year at all levels—local, State, and county.

The Federal contribution toward education is about $7.8 billion, or 11.1 percent of the total contribution annually. This bill covers only $4.4 billion of the $7.8 billion Federal outlay.

The States are putting up about $20.9 billion for education, the local governments are investing $23.7 billion in education, and $17.7 billion goes into education from endowments and gifts, and so forth. These private donations run almost three times what the Federal Government contributes to education. And we know what happens when the Federal portion is reduced—State and local taxes go up. And when local bond issues fail and States do not come up with additional tax dollars—education suffers.

Whether the percentage of the Federal contribution goes up or down by one-tenth of a percent has very little, or perhaps nothing, to do with reducing inflation.

Now, let me touch just briefly on some of the particular aspects of this bill.

First, school assistance in federally affected areas—impacted aid—we spent more time on this part of the bill than anything else.

However, the conference figure is $126 million over the administration's submission and $111 million over the House allowance.

The conference agreement provides for the following:

Category	Percent of entitlement	Amount
A students	90	$158,100,000
B students	65	334,100,000
Hardship students	100	8,800,000
Section 6 (mandatory)	100	35,000,000
Subtotal		536,000,000
Construction (Public Law 815)		15,000,000
Total		551,000,000

The Senate last year in adopting the conference report provided equal entitlement for both A and B students. It was 77 percent after the conference.

I know that many Members are disappointed that equal entitlement was not retained for B students. This was in the Senate verision:

Funds required to pay 90 percent

Maintenance and operations (Public Law 874)	$658,800,000
Construction (Public Law 815)	15,000,000
Total	673,800,000

Fund requirements include provision to pay full entitlement for school districts with 25% or more "category A" pupils.

However, let me say that under the conference agreement, B students will receive over $100 million more than was provided in the House version or the Department's proposal. The amount provided this year is the largest amount in the 20-year history of impacted aid.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a tabulation which points the funds that have been provided for impacted aid since 1951.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

Public Law 874 appropriations—School assistance in federally affected areas

1951	$29,080,788
1952	51,570,000
1953	60,500,000
1954	72,350,000
1955	75,000,000
1956	90,000,000
1957	113,050,000
1958	127,000,000
1959	157,362,000
1960	186,300,000
1961	217,300,000
1962	247,000,000
1963	282,322,000
1964	320,670,000
1965	332,000,000
1966	388,000,000
1967	416,200,000
1968	507,165,000
1969	505,900,000
1970[1]	505,400,000
1971	536,000,000

[1] In addition to this total, $2.5 million was reserved for SAFA in Public Law 91-237, signed May 1, 1970.

Mr. MAGNUSON. Mr. President, this, along with other items the Senate comprised, and in some cases receded on, are always disappointing, but we fought hard for what we thought was right for education.

For the record, let me sight some comparisons.

The conference figures exceed the President's budget estimate and House allowance on impacted aid, elementary and secondary education, vocational and adult education, higher education, and community education.

This covers all major portions of the bill in the conference report.

The conference figures also exceed the budget estimate on education of the handicapped. The House and Senate had no disagreement on increasing this amount. Compared to fiscal 1970, this conference report is an overall increase of 16 percent.

So, I think we came out pretty good—and, Mr. President, this is what a conference is all about.

In concluding, may I say that we compromised on the general provisions. The conference bill retains the Whitten amendment and strikes the Jonas amendment.

Not everyone is pleased with this—the chairman included—but whatever way these amendments are resolved—each year—it is to the displeasure of many. I wish they did not exist in this appropriation measure, but they do, and we have to deal with them year after year.

On the President's request for emergency school assistance we split.

The Senate measure carried the request of $150 million and the House had not considered this item. We reached mutual agreement at $75 million.

That, Mr. President, is briefly the substance of the conference agreement.

Mr. President, I move that the Senate adopt the conference report.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. MANSFIELD. Mr. President, I am delighted that the chairman of this par-

ticular subcommittee has made the statement he has and that the ranking minority member of that subcommittee, the distinguished Senator from New Hampshire (Mr. COTTON) is also on the floor at this time.

They will both recall my intense personal interest in what was formerly Glasgow Air Base in Montana which cost the Government of the United States, through the Defense Department, $150 million and which has now been declared vacant as far as defense purposes are concerned.

This is a facility which is the most modern in the United States, bar none. It has everything, including its own water system, hospital, good up-to-date housing, long runways, and everything which an airman would want or need.

The Senator will recall that in connection with the Glasgow matter, among others, consideration was given to a $4 million appropriation that would be used to great advantage in the field of vocational education.

The Senator will recall that the Senate bill included a $4 million earmarking for initial funding of the residential vocational schools program. This activity was first authorized in the Vocational Education Act of 1963 and was extended in the Vocational Education Amendments of 1968. The Senate felt that this program deserved funding on a demonstration basis to see if the concept of residential vocational education has merit. The $4 million would have provided for one or more projects on an experimental basis. I understand the conferees discussed this matter at length and that the Senate conferees reluctantly receded on the amendment as written into the Senate-passed bill, but did work out a compromise to include it in another part of the agreement.

Would the distinguished manager of the bill comment on this?

Mr. MAGNUSON. I would be glad to. We pressed hard in conference for the original amendment but the conferees finally decided that the Secretary should exercise discretion as to distribution of the total research and training appropriation among various activities; and there would be no objection to the use of an additional $4 million under the line item of experimental schools, which is actually what it is; and I hope it will be directed to what the Senator from Montana intends it to be directed for.

Mr. MANSFIELD. Specifically, to what was once the Glasgow Air Force Base.

Mr. MAGNUSON. That is where the problem exists. I am sure that the intent of the conferees in reaching this agreement was an understanding of exactly what it should be used for.

Mr. COTTON. Mr. President, will the Senator yield on that point?

Mr. MAGNUSON. I yield.

Mr. COTTON. The House conferees objected to earmarking this money for Glasgow because they were afraid it would lead to everybody coming in and wanting portions of the funds earmarked.

Mr. MAGNUSON. They said some kind of new program.

Mr. COTTON. But they agreed to add the $4 million to the experimental school. Chairman FLOOD and his associates, and the Senator from Washington and I all agreed it was the intent of the conferees that the $4 million added to the line item of experimental schools should be used for Glasgow.

Mr. MANSFIELD. I am delighted. I thank the Senator.

Mr. MAGNUSON. May I say, we ended up with an agreement with the House that it is perfectly clear this is what we meant.

I said, "Then, if I understand correctly, Secretary Richardson has authority and the necessary funds to initiate a residential vocational training school of an experimental type?" The House Members said that that was the intent—they meant Glasgow.

Mr. MANSFIELD. I am delighted that the Senator from Washington, the chairman, the manager of the bill (Mr. MAGNUSON) and the Senator from New Hampshire (Mr. COTTON) both had anticipated my next question, which I will accordingly forgo.

I am confident that you will agree with me that there is a great need to provide such vocational training to residents of rural America and particularly in those areas of the Upper Great Plains where distances between communities and sparse population often militate against the establishment of adequate schools. I have in mind specifically eastern Montana, the Dakotas, and Wyoming, in addition to surrounding areas. I would hope, therefore, that this administration will follow through with a go-ahead on such a concept to benefit the young people of that area including many Indians—we have 40,000 of them in Montana and a sizable number in both Dakotas—who are disadvantaged to a greater degree than other segments of our population.

Sometimes I think original Americans are the forgotten Americans. If something could be done at Glasgow, it would help in Montana, the Dakotas, and Wyoming to a great degree.

Mr. MAGNUSON. I repeated the same statement to the conferees. There was a thorough understanding that this is what we meant, almost exactly in the words of the Senator from Montana. I am sure the new Secretary of HEW will hear it loud and clear.

Mr. MANSFIELD. And that Glasgow is the place.

Mr. YOUNG of North Dakota. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. YOUNG of North Dakota. Mr. President, as one of the conferees I wish to confirm the discussion which is taking place. There was no question among any of the conferees but that a program like this was necessary not only to help the Indians but others, and the place for it was Glasgow.

Mr. MAGNUSON. I think the House conferees agreed with the Senator from New Hampshire and myself that we were not enunciating a new program but trying to take care of a problem that might involve North Dakota and other areas, but this was a good beginning. Particularly in view of the fact that the Senate and the House increased the vocational educational funds. In other words, the thrust was toward these funds. I do not think there should be any question about it.

Through this colloquy on the floor of of the Senate I again suggest to the new Secretary that I hope he understands what we meant.

Mr. MANSFIELD. I think he is a very understanding gentleman.

Mr. COTTON. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. COTTON. I shall take this statement out of the RECORD. I probably should.

However, in order to make it perfectly clear to the distinguished majority leader and to indicate to him that he has a slight duty to perform, the exact words of the distinguished chairman of the House conferees, Representative FLOOD, were:

> We will add this $4 million. We are not earmarking, but all that MIKE MANSFIELD needs to do is to make one telephone call and he will have it.

Mr. MANSFIELD. Leave it in the RECORD

Mr. MAGNUSON. If the Senator needs two or three telephone calls he will get one from the Senator from Washington, and another from the Senator from New Hampshire, and another from the Senator from North Dakota.

Mr. MANSFIELD. I thank the Senator and Senators. You are all most considerate, most understanding, and very gracious, indeed.

Mr. SPONG. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. SPONG. Mr. President, I shall not seek to delay adoption of the conference report on the education appropriations bill for fiscal 1971. I do, however, strenuously object to one of the provisions in the conference bill—that which provides for the funding of the impacted areas aid program.

The provision for funding of the impacted areas program amounts to legislating in the appropriations process—a procedure of which I disapprove.

In this bill, the conference committee modified the existing impact aid program. It distorted the distinction which now exists in law between children whose parents live and work on Federal property—know as "A" students—and those whose parents only work on Federal property—known as "B" students. In other words, it decided that the difference provided by the legislative committee between the two types of schoolchildren was not enough and provided for further differentiation. Furthermore, it provided for special consideration for those school districts with a particularly large number of children from families who live and work on Federal property.

I do not believe that it is the responsibility of an Appropriations Committee to make this kind of decision. I particularly do not believe that it is the responsibility of an Appropriations Committee to

make this kind of decision when legislative committees in both Houses of Congress are considering legislation to reform the impacted aid program.

I am fully aware of the fact that there are many criticisms of the impact program and that some changes should be made. I do not, however, believe that they should be made in the appropriations process, and I do not believe that a majority of the Senate believe they should be made in the appropriations process. As a matter of fact, the Senate placed itself on record earlier this year as opposing the type of funding which this bill includes when it adopted an amendment I offered providing for equal treatment in the appropriations process for both groups of children.

If the authorizing legislation provided for no distinction between "A" and "B" students, then I could see some reason for the provisions in this bill, but since a distinction now exists in which school districts are reimbursed at twice the rate for "A" children as they are for "B" children, then I believe any further change in the program should emanate from the legislative committee.

As I noted before, the legislative committees in both Houses have under consideration bills to reform the existing program. I approve of this. In fact, I testified before the Senate Education Subcommittee on this matter. However, the impact aid program is a complex program. It is an important program. For some States, it is the single largest source of Federal education funds. For others, it is the second largest source.

At a time when many of our school districts are facing financial crises and when additional burdens are being placed upon them, I think it is unfortunate and unwise to deprive them of the general school aid which the impact program provides.

I know that many relatively wealthy school districts benefit from the impact program. I know, too, however, that some of the less advantaged school districts also benefit. But, under the appropriation proposal, these less advantaged districts must suffer along with the disadvantaged—a situation which the legislative committees might be able to avoid if given the opportunity.

That, however, is not my principal argument, for the impact program was never meant to be an aid program for a disadvantaged district because it was disadvantaged. It was meant to compensate a district for the tax loss suffered because Federal property is not taxable.

Mr. MAGNUSON. Mr. President, will the Senator yield at that point?

Mr. SPONG. I yield.

Mr. MAGNUSON. The impacted aid program is rapidly becoming an in-lieu-of-taxes for local districts, and they must be entitled to that because they have to take care of the education of children. It has no strings attached. That is why it is—well, I should not say "popular," but that is why it is the most important thing the school districts want.

Mr. SPONG. I think it is popular because it has no strings attached. I am delighted the able floor manager of the bill recognizes that fact because, at this point in the RECORD, I ask unanimous consent to insert a chart showing the amount which certain school districts in Virginia received under the impact program for the 1968–69 school year and the amount of taxes which they might have collected had Federal property been taxable. I would also note, at this point, that the amount these districts will receive under the pending bill is less than the amount they received for the 1968–69 school year.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

1968–69 DATA

School district	Impact aid received	Estimated potential revenue if Federal property were taxable
Chesapeake	$835,828	$468,000
Fairfax	10,898,582	7,840,225
Hampton	1,400,000	7,035,867
Newport News	1,058,994	2,603,632
Norfolk	3,972,595	9,450,000
Portsmouth	1,162,000	4,320,000
Prince William	1,677,718	1,130,000
Virginia Beach	2,520,797	8,000,000

Mr. SPONG. Mr. President, as I noted at the beginning of my speech, I shall not seek to delay adoption of this conference report. For a number of years, I have been calling for early or advance funding of education programs. As one who has been closely associated with the education process in my State, I am cognizant of the importance of early funding so that school officials and administrators can plan. For the first time since 1966 we are about to clear an education appropriation before the beginning of the school year. This is still not early enough to permit local school personnel to know precisely how much Federal aid they will receive when they make up their school budgets, but it is a start in the right direction. I want our school personnel to benefit from such a start this year.

In the meantime, I would urge the legislative committees to continue their work on this complex program so that we might have some equitable and reasonable reform and so that the uncertainty and doubt which continually threaten the program may be abolished.

I thank the Senator from Washington for yielding to me.

Mr. COTTON. Mr. President, will the Senator from Washington yield?

Mr. MAGNUSON. I shall yield in just a minute.

I thank the Senator from Virginia for putting that statement in the RECORD, because too few people realize the amount of taxes that might have been achieved if the school district had not been impacted. I may say that I have not known of any Member of the Senate, since the Senator from Virginia came into this body, who has more diligently pursued the matter of payments in lieu of taxes in this area than the Senator from Virginia. Last year, as I recall, he was the prime sponsor of an amendment, which we carried in the Senate, to put in a 90-percent entitlement.

What happened this year, of course, was that we put in—and I want the RECORD to show this—funds in both cases for 90 percent, which would have amounted to $963,800,000. The House put in 45 percent of the entitlement. The Senator from New Hampshire (Mr. COTTON), the Senator from North Dakota (Mr. YOUNG), several other Senators and I finally got the conferees up to 65 percent—with difficulty, may I say.

I know what the Senator from Virginia is thinking about. He wants to know whether this is going to be nonflexible and whether or not it is mandatory if we go this far. It is as far as we are concerned. The Senator from New Hampshire, the Senator from North Dakota, and I would like to have 90 percent of the entitlement. The Senator from Mississippi (Mr. STENNIS) was also there. We think we have achieved a fair compromise on the figure in view of the fact that there might still be trouble on the bill.

However, I am sure that no suggestion will be made by anyone who has studied the problem that 65 percent is not a minimum amount. It should be 90 percent. Otherwise, I suggest they come here and change the bill, if we are not going to do that.

We came up with a bill that provides $100 million more than was provided by the House version and the departmental proposals. This is the largest amount for the impacted aid program in 20 years.

Mr. SPONG. I thank the Senator from Washington. I want him and the Senators from New Hampshire, North Dakota, and Mississippi all to know that I am aware of the problems which presented themselves in the conference. Nevertheless, because I have been insisting that the authorizing committees come up with a reformed program and that we cease legislating on the floor in the appropriations process every year with regard to this program, I felt compelled to make these remarks here this morning.

Mr. MAGNUSON. I think not only should the Senator have felt compelled to make them, but I think what he is talking about most of us in the Senate agree with. But we ha dto have a conference, and I think we came out with a reasonable figure at this time. I still suggest the whole matter of impacted aid has to be reviewed by the legislative committee.

I yield now to the Senator from New Hampshire (Mr. COTTON).

Mr. COTTON. Mr President, the distinguished manager of the bill covered what I wanted to mention. I join him in commending the Senator from Virginia for his statement. He is 100 percent right. This is a matter which must be adjusted legislatively. He is right that it should not be year after year the subject of dickering and horse trading between the Appropriations Committees of the Senate and of the House.

I thought that in the earlier part of his statement the Senator from Virginia made the statement that children in A category were getting twice what the children in B category were getting. They would have received less than that if the House had prevailed on the 90 percent for A and 45 percent for B, but our

determined efforts pushed that up, as the Senator has stated, to 65 percent, which is 100 million more than what it would have been for the B category.

I think the position of the Senator from Virginia is very well taken, but I think he also realizes that we as conferees did our best to bring about the will of the Senate.

Mr. SPONG. I appreciate the efforts of the conferees. What I was referring to was that, regardless of the appropriation percentages, built into the law already is the fact that A children receive twice as much as B children. We start from that. If the Senate conferees had not raised the entitlement from 45 to 65 percent, school districts would have received four times as much for A children as for B.

Mr. BAYH. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. BAYH. I compliment the Senator from Washington and the other members of the conference for the diligent effort they made in behalf of this important legislation. I would just like to clarify one point that is of particular interest to me, because of an amendment that was adopted while this measure was being considered on the floor of the Senate.

When the bill was reported to the Senate, the committee recommended an appropriation of $140,393,000 for title III. Of this amount, the committee indicated it hoped that $20 million was to be used for guidance, counseling, and testing.

When the bill was considered by the Senate, the committee accepted an amendment, of which I was a sponsor and several other Senators were cosponsors, to add $10 million for title III. Of this amount, I indicated I hoped $5.5 million would be used for supplemental services and centers, and $4.5 million would be used for guidance, counseling, and testing.

As I observe the legislative architecture that came about as a result of the diligent efforts of the Senator from Washington and the other conferees, I note that the conference report provides the sum of $143,393,000 for supplementary centers and services under title III.

I would like to ask the Senator from Washington if he would please inform us which title III program this $3 million over and above the Senate committee recommendation was for.

Mr. MAGNUSON. As the Senator from Indiana knows, there is $20 million within the $143 million for guidance and counseling and testing. The House had $17 million, and we, as the Senator pointed out, put in $24.5 million in the Senate, and we ended up, in the conference, with $20 million. There was some dispute in the conference about the relationship between the so-called dropout program and guidance and counseling. The Senator from New Hampshire and I thought the two of them went well together. We added a little more to the House bill and got part of that through the conference for the dropout prevention program. The House had $8 million, and we had $15 million. We ended up with $10 million in conference. We gave a little there to assure that the $20 million was in for guidance and counseling.

We had some very impressive testimony on the lack of guidance and counseling. For instance, there is one counselor, in some cities, for something like 1,000 students. A better figure would be about one for every 300.

So we had to give and take a little on the two programs, but I think the $20 million is a good figure for guidance and counseling. It is over the budget estimate, and $3 million over the House figure.

Mr. BAYH. May I rephrase the question just a bit, to be a little more specific?

Mr. MAGNUSON. Yes.

Mr. BAYH. From talking with some of the committee staff, it was my impression that the additional $3 million as a result of the conferees' effort was to be applied to guidance and counseling, which is so important.

Mr. MAGNUSON. That is right; and I think we made that clear in conference. I wish it could be more, I really do, because I think this is getting down to the key to some of the problems we have in the secondary schools in particular, and also the community colleges. But we did the best we could on this item. Actually, in conference we increased the House figure by $6 million and $3 million of this goes to guidance counseling and testing.

Mr. BAYH. I salute the Senator from Washington for the tenacity with which he pursued this matter, and I concur in his judgment that it would be better if we could invest more of our resources here. We find ourselves in the unfortunate yet realistic position of having to compensate by providing some guidance and counseling for that which does not occur at the home level.

I think this is an investment that is going to result in great dividends, and I appreciate the efforts of the Senator from Washington and the other conferees in this area.

Mr. MAGNUSON. I think the dividend in this area will be great, because if we cannot do this, and prevent the dropping out of the people who do not want to continue, it is just going to cost the body politic more money in the long run. I am sure this item will reap good dividends.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield.

Mr. YARBOROUGH. Mr. President, there are many advances and some setback for education in this conference report. It advances funds available for Federal support of education well beyond the starvation diet for education prescribed in the administration budget. I highly commend the Senator from Washington and all the Senate conferees for that advance, though there are some disappointing setbacks. The conferees have signally increased this appropriation—by $454 million more than the budget, and $600 million more than was available last year. This is badly needed in education, and I commend the Senator. I want the RECORD to show the fact that my remarks on specific items are subsidiary to an over-all commendation of the great work done by the able parliamentarian who is presenting this bill to the Senate. I have had the privilege of serving under the Senator's leadership for 7 years on the conference committee. I know his great legislative expertise, without which we would never have had such a good bill here.

I concur in some of the remarks my colleague from Virginia (Mr. SPONG) has made about the impacted aid. But there again, I commend the conferees, because this $551,068,000 in the conference report is more than we had last year, when we had $520 million, and it is a great deal more than the $425 million the administration recommended for the impacted aid.

Like the Senator, I did not think the distinction ought to be made between the A and B students, for all the reasons the Senator from Virginia stated; I shall not detail them, because they have been discussed at length. Essentially, the basic law already gives A students priority because their entitlement is 100 percent of their cost of education, while the entitlement for B students is only 50 percent. We should not use the appropriation to create a further preference.

I do wish to call the attention of the Senate to one program, in the hope that next year the Senator will try to hold the moneys in the bill for bilingual education.

BILINGUAL EDUCATION

When we passed the Bilingual Education Act in 1967, the Office of Education did not recommend it. They apparently had not thought of it. I introduced in this body, in 1967, the first Bilingual Education Act ever introduced in either House of Congress.

There are in this country 3 million children in non-English-speaking families. Two million of those are in Spanish-speaking homes. They drop out of school, in my State, with more frequency than black children. They are the most educationally deprived group of children in America today. This is the result of the language barrier they encounter.

This bilingual education program was enacted without help from the Office of Education. The Office of Education has continually come in with little token recommendations in this important field.

We authorized $80 million this year. The Senate had provided $31 million, but in the conference, they receded to the House figure of $21 million.

Mr. MAGNUSON. Twenty-five million dollars.

Mr. YARBOROUGH. Twenty-five million dollars. That is slightly more than the $21.75 million appropriated last year, so it is some improvement, but as I say, this is a new program, we have to fight our way every inch of the way against the officials in the Office of Education. I think it shows the value of categorical grants. If Congress ever ceases to insist upon categorical grants, many of the programs we in Congress have found absolutely necessary would be swept under the rug.

I commend the distinguished Senator

for the entire program, but I am hopeful that next year this bilingual education and appropriation can be retained and increased.

Mr. MAGNUSON. Mr. President, will the Senator yield at that point?

Mr. YARBOROUGH. I yield.

Mr. MAGNUSON. I, for one, must confess that I was very surprised—I do not know just why I was surprised, but I was—at the number of children who need bilingual education in this country. If someone had quickly asked me the figure, my estimate would have been 50 percent under the 3 million, or perhaps more.

Mr. YARBOROUGH. It was 3 million 4 years ago.

Mr. MAGNUSON. Yes. And that is why the committee felt that we should enhance this program. Of course, the program itself, at the start, is mainly to get people who are qualified to teach them.

Mr. YARBOROUGH. That is right.

Mr. MAGNUSON. This is the shortage on the job in all fields.

We have in my State a group of people whose youngsters are Spanish speaking, who come up there mainly to work in the fruit crops and things of that kind. Lo and behold, about 3 years ago, I found out that some of the youngsters who could otherwise qualify to drive an automobile could not get a license because they could not read English—you know, stop, go, left turn—it gets down to that level.

We are hopeful of being able to train some teachers to go down in the Senator's country and other places, to do this job. Up around the New York area, and in New Jersey and those places, a great number of Puerto Ricans are involved in this matter. I have suggested a little facetiously that maybe there are some Swedes who need to be taught English. I do not know.

We will perhaps send somebody to Wisconsin to find out about that. But I was surprised at the number of youngsters who need this training in this country.

Mr. YARBOROUGH. The Senator is correct. One problem is the training of teachers. Even though a teacher may be expert in the use of English and Spanish, or whatever other the second language is, he is not necessarily a bilingual teacher. They have to be trained. It takes more time to train them and it costs more money to train them to be bilingual teachers.

As the Senator has stated, the Spanish-speaking people are migrating all over the country. They are looking for jobs, without a governent bonus or loan. They use old cars.

After the great program on television the other night about the tragedy of the migrant worker, Chet Huntley or someone else said, "What is the motivation?" The distinguished Senator from Minnesota (Mr. MONDALE) said:

> What greater motivation can you show, when people in poverty take a car and go thousands of miles in strange country when they hear there is opportunity for their children?

In my State, we have found that they have a great mechanical aptitude. If you train them bilingually so that they can understand a work manual, they can also go on to college. They are bright people, brilliant people. All they need is an opportunity by training them in their own language. Two-thirds of those in non-English-speaking homes in this country speak Spanish. The national language is English. They must learn both if they are to get ahead in this country.

Mr. President, I commend the distinguished Senator from Washington for what has been done for students in the institutions of higher learning.

HIGHER EDUCATION

The conference report does a good job of assuring college students of continued financial aid. For direct loans through the National Defense Student Loan fund, $243 million is appropriated, a substantial boost over the $195.6 million of last year. That has proved to be one of the most successful higher education programs to aid students in the history of this country. It was my privilege to coauthor the original National Education Act, and I have worked on every amendment since that time. I think this is a wise and perceptive action. The chairman of this subcommittee of the Appropriations Committee is doing a job for education of which all the country can be proud.

For work-study, $160 million is provided, and for education opportunity grants, $167.7. For interest subsidies and other expenses of the guaranteed student loan program, $145.4 million is in the conference report, the amount proposed in the budget.

Each of the student-aid programs will receive more Federal support than in fiscal 1970, under this measure.

This is the best appropriation bill for students in these categories that the Senate has yet passed. I commend the Senator from Washington highly for his knowledge of the subject which he has acquired as chairman of this very important subcommittee of the Appropriations Committee. There is no more important subcommittee of the Appropriations Committee than the one of which the distinguished Senator from Washington is chairman, nor is there one that requires more hard work than his subcommittee has to do.

I have been a member of the Education Subcommittee for 13 years; and, having worked on all these education bills for 13 years, I think I can speak with some knowledge of the subject. I know the work that this Appropriations Committee has done. It has produced the best appropriation bill on education that has been before the Senate in my 13 years in the Senate. However, I regret that we do not have more money for college construction.

The institutions of higher learning do not fare as well in the conference report. Funds for construction under the Higher Education Facilities Act are limited to $43 million for community colleges. The Senate added $28 million for construction at 4-year institutions, the same amount provided last year.

This reduction in the conference report back to $43 million will further curtail the construction program in higher education. It is not a true saving: It is only a postponement, which will cost more later.

I also regret we were unsuccessful in holding in conference the initial funds the Senate provided for several higher education activities authorized for years but never activated. These are networks for knowledge, clinical law experience in law schools, public service education, graduate school improvement, and international education.

For library resources, colleges will have $15,325,000, a significant improvement over the mere $9,900,000 that had been budgeted, but still a mere token compared to real needs.

The net total of the bill is $454 million more than the budget, and $600 million more than was available last fiscal year.

I urge adoption of the conference report. I urge the President to sign the bill. The money is needed to keep the American education system current with the personal needs of our people and the economic and military strength of the Nation.

An investment in education is repaid many times and in many ways. A better educated people produce more and pay more taxes. The bill is not inflationary; it is good economics.

Mr. MAGNUSON. I thank the Senator.

I am sure that no other member of the subcommittee appreciates more than I, the guidance that we get from the Health and Education Subcommittees of the Committee on Labor and Public Welfare, of which the distinguished Senator from Texas is chairman. We cannot always give what the Senator's committee authorizes, but we do the best we can, because we all agree that these are worthy projects; and in this day of priorities, we have some problems.

The distinguished Senator from Florida is in the Chamber. He has worked hard and long with us on this committee.

I think that overall we have enhanced the education commitment of the Federal Government to all ranges of education and in these specific fields. In all fairness, the percentage of the budget for these purposes has risen vis-a-vis the defense budget, and this is because we have all sat down and decided that education does have some priorities important in this field. Even with all we are doing, as I pointed out earlier, with all educational funds—that is, Science Foundation, NASA, DOD, Labor, OEO, and the rest—we are contributing only about 11.1 percent to the total bill. I do not suggest that we should go any higher or any lower, but it is not an unusual contribution.

I cannot see how spending money on education, trying to get a dollar's worth for a dollar spent—which we do not always do in a big program—is inflationary. I believe the Senator from Texas will agree with me. I never could understand why educating children is considered inflationary. If you do not train them and give them the opportunity in our schools and take advantage of all the Nation's educational programs, they could become very inflationary.

The Senate committee wanted a little more money in certain items, but I think the House passed a pretty good bill, also. I think this is a good, responsible bill, and I want to underline "responsible."

I thank the Senator from Texas.

Mr. YARBOROUGH. I thank the Senator from Washington for his very kind remarks about my work on the Education and Health Subcommittees of the Committee on Labor and Public Welfare, since I am chairman of the Health Subcommittee and the ranking majority member of the Education Subcommittee.

All our authorizations would go for naught if we did not have the Appropriation Subcommittee with the perception to know that this money is needed. As the distinguished chairman has said, it is not inflationary to educate the youths of the land.

Mr. MAGNUSON. I tell the Senator from Texas, also, that I have served on many appropriation subcommittees in the many years I have been here, and there was absolutely not a tinge of partisanship in this conference. We had arguments about different programs, but there was not a tinge of partisanship in this conference. I am sure that all the conferees would bear that out.

Mr. YARBOROUGH. I think the absence of partisanship is due largely to the legislative expertise of the distinguished chairman. He has been here many years and has worked with all Senators on both sides of the aisle.

Mr. MATHIAS. Mr. President, this is one of the most important conference reports we will consider all year. It represents an investment of over $4.4 billion in American education and the future of America.

I want to congratulate the Senate conferees, particularly the distinguished Senator from Washington (Mr. MAGNUSON) and the distinguished Senator from New Hampshire (Mr. COTTON), for bringing back a generally sound and progressive conference report. They deserve our thanks for the hard work which has produced a relatively generous bill, and enabled us to complete action on education appropriations before the schools open in the fall.

While compromise is inevitable in the appropriations process, there are two areas in which I regret that it was necessary to retreat from the Senate position. The first is grants for the construction of higher education facilities under title I of the Higher Education Facilities Act of 1963. The other body recommended no construction grant funds for either 4-year institutions or community colleges. The Senate, on the other hand, originally approved $28,050,000 for 4-year institutions and $43 million for community colleges. The conference report includes the Senate funds for community colleges but omits any grant-in-aid funds for 4-year colleges.

In expressing my concern about this item, let me note that even the Senate-approved figures were grossly inadequate. It has been estimated that total enrollment in institutions of higher education will reach over 8.4 million in 1971, an increase of 32 percent since 1966. To serve these students will require an investment of over $2.5 billion in academic facilities every year between now and 1977. This investment can be secured only through a combination of generous Federal support, massive State and local effort, and continuing private philanthropy.

Unfortunately, Federal aid for construction has lagged behind for the last few years, while the backlog of unmet construction needs has grown. For fiscal 1970, for example, the Congress provided a total of just over $71 million to meet previously established needs of $582 million—and that $582 million agenda does not include the additional facilities which future enrollment increases will demand. The Maryland backlog alone, a year ago, was $18.5 million.

While the interest-subsidy program enacted 2 years ago is helpful, we certainly cannot rely on it as a substitute for both Federal grants and Federal direct loans. I am heartened by the conferees' approval of $43 million for our fast-growing community colleges, but regret that it was not possible to obtain grant funds for 4-year institutions as well. We cannot afford to let this program die.

The second area of concern to me is student aid. As the costs of higher education continue to soar, it is vital for us to increase all forms of student assistance to keep college doors open to all who seek a higher education. Recognizing this challenge, the Senate originally approved a total of $604.6 million for NDEA student loans, educational opportunity grants, and work-study programs. This total, while still below the need, was $47.9 million above the House figure. Unfortunately, the conferees retreated by $33.9 million from the original Senate position.

Mr. President, our current economic situation makes an increase in student assistance funds even more important than under normal circumstances. Continuing inflation has undermined the ability of students and their families to save money to finance college educations. The guaranteed student loan program has fallen short of expectations. Rising unemployment has cut back opportunities for outside work for students. The alarming deficits in operating budgets, encountered by a growing number of colleges including some in Maryland, reduce the number and amount of scholarships which can be supported from endowment funds.

I know that the choices facing the Senate conferees were difficult. In a larger context, this bill dramatizes the hard choices which we must make in trying to set sound national priorities. But education is a national investment which cannot wait. We have an obligation both to provide adequate funds, and to shape a long-range strategy for meeting the enormous needs of American higher education.

Mr. PEARSON. Mr. President, I wish to commend the chairman of the Subcommittee on Education Appropriations, the distinguished Senator from Washington (Mr. MAGNUSON) and the Senator from New Hampshire (Mr. COTTON) for the outstanding manner in which they handled an extremely complicated task. I also want to note the efforts of the Senator from Delaware (Mr. BOGGS) who worked to preserve some of the most significant programs for improving the library resources of our institutions of higher learning, a problem which I would like to discuss briefly.

Many educators and school administrators were heard during testimony sessions, and the bill that is now before this body after going through a conference fairly represents the thinking of these persons. Of course, most of those heard argued that the Federal share of education costs should be increased, and I hope the day will come soon when this will be possible. In only two areas have the conferees unduly restricted Federal assistance in my opinion, and those were in the fields of higher education and libraries.

I refer particularly to title II of the Higher Education Act of 1965. Under part A of this title—college library resources—the Congress appropriated $25 million in 1969 and $9,816,000 in 1970, following the Presidential veto. In the 1971 bill the Senate had recommended $20.75 million—the same amount as originally approved by the Congress last year—but this was cut to $15,325,000 in the conference.

Parts B and C also ended up considerably below the figures at which they passed this body. Part B—librarian training—received only $3.9 million, as against $8.25 million recommended by the Senate; while part C—Library of Congress cataloging—was cut to $6,613,500 from $7,500,000.

The Senate figure, therefore, did not represent increases over amounts approved in previous years. On the contrary, when one considers that college enrollment will reach an all-time peak this fall, the amounts available per student will be less than in other years.

Part A of title II was designed to improve college libraries and the quality of library service by providing grants for the acquisition of books and other library materials. Part B aids in the training of librarians, research, and demonstration projects, while part C helps the Library of Congress catalog materials, a service which is of great value to all libraries.

There are many urgent needs for college library resources and for librarians. About 60 new junior colleges are being established each year, and all need books and other materials. Community colleges also require job-related materials that are relevant to their curriculums. It is significant that 80 percent of 4-year Negro colleges fall below the accepted national minimum standard of 50,000 volumes per library. Not a single 2-year college with a predominantly black enrollment meets the minimum staffing standards of school, college, and university libraries. Thousands of librarians now working in these institutions need to update their skills. New methods, materials, and technology now developed for use in libraries have great potential for improving services, but many librarians know little of these new techniques.

All of this tends to demonstrate clearly that these are programs which cannot be cut. They are basic at their present level, and any further reduction in funds will cause a severe handicap to thousands

of libraries. It is hoped that additional appropriations will provide the funds needed for these important programs at a later date.

Mr. PELL. Mr. President, some years ago legislation establishing programs on international education, networks for knowledge, education for the public service, strengthening graduate programs, and the improvement of legal education, were authorized. Since their original authorizations, they have never, never been funded.

This year an amendment was accepted on the floor of the Senate to fund these programs in a very modest way. Specifically, at a level of $500,000 for each of the five categories of which I speak. As chairman of the authorizing subcommittee whose amendment this was, I had hoped that this amendment would be held in conference.

I am disappointed at this result of the conference which dropped all funding for these programs.

I am of the opinion that when the Congress authorized programs under titles VIII, IX, X, and XI of the Higher Education Act of 1965 and the International Education Act of 1966, we made a commitment to the higher education community and students in our colleges and universities. When the authorizing legislation was passed, the Congress made a specific finding of need for support of networks for knowledge, education for the public service, strengthening graduate programs, the improvement of legal education, and international studies programs.

In the case of the appropriation for school health and nutrition programs, nobody questions the need for funds. Yet the conferees have been unwilling to agree to even a small appropriation for these very necessary demonstration projects. As chairman of the Education Subcommittee and as the original sponsor of the program, I particularly regret the action of the conferees.

I am also very much concerned about the priorities for funding federally affected school districts in the conference report. Under those priorities, school districts with more than 25 percent "A" children receive 100 percent of their entitlement, other school districts with "A" children will receive 90 percent, and school districts with "B" children will receive the remainder—around 60 percent of entitlement. Indeed, if the language of the House bill had been offered on the Senate floor, I believe it would have been subject to a point of order, since it is inconsistent with the authorizing legislation. I firmly believe that the Senate ought not permit appropriations bills to contain legislation as this conference report does; nor should it permit the other body to disregard the rules of the Senate, as is the case in this instance.

I shall not oppose the conference report. However, it is my belief that the Senate ought to be cognizant of the fact that it has been forced to accept an appropriation bill of far less quality than that of the bill submitted to the conference.

Mr. CASE. Mr. President, there was unanimous agreement among the conferees on all items of disagreement between the two Houses except one. Four of us—all on the Senate side—did not agree with the conference committee's decision to accept the House position by including sections 209 and 210, the so-called "Whitten amendments," in the bill.

I opposed these provisions because they could encourage confusion over the constitutional obligations of schools to desegregate.

But, as several of my colleagues and I pointed out before this bill was sent to conference, sections 209 and 210 would not in any way alter school desegregation requirements under title VI of the Civil Rights Act of 1964. Title VI forbids discrimination in the use of Federal funds.

Sections 209 and 210 prohibit busing of students, abolishment of schools, or assignment of pupils at any school which is desegregated as that term is defined in title IV of the Civil Rights Act. Title IV excludes racial imbalance from the definition of segregation. But it does not limit the responsibility of school districts to eliminate dual school systems root and branch.

This was made clear by the Fourth Circuit Court of Appeals in a decision in Swann against Charlotte-Mecklenburg Board of Education on May 26.

In its decision the Court said that the provisions of title IV "are not limitations on the power of school boards or courts to remedy unconstitutional segregation. They were designed—by Congress—to remove any implication that the Civil Rights Act conferred new jurisdiction on courts to deal with the question of whether school boards were obligated to overcome de facto segregation."

Because the court's decision and the legislative record we have made in the Senate should dispel any real possibility of confusion over sections 209 and 210, I shall not oppose adoption of the conference report. To do so at this point would only serve to delay needed assistance to our schools and students.

EDUCATION APPROPRIATIONS CONFERENCE REPORT SHOULD BE APPROVED

Mr. FONG. Mr. President, the conference version of the education appropriations bill (H.R. 16916) is a most important measure, funding the U.S. Office of Education programs of Federal assistance to education at all levels in America for the current 1971 fiscal year ending next June 30.

Totaling $4,420,145,000, the conference version emphasizes particular areas where conferees representing the House and Senate agreed emphasis is needed, such as student assistance, higher education, library resources and services, vocational and adult education, education professions development, and elementary and secondary education, particularly for deprived children.

As one of the conferees for the Senate, I believe I can say that we conferees sought to improve the quality of education in America's schools and to provide equal educational opportunity for America's children.

As one who knows from personal experience how important a good education is to help overcome barriers of poverty and minority race, I have long been a strong supporter of better schools and facilities, better training and professional advancement for teachers and greater opportunities for young people to obtain the best possible education at the highest level to which they aspire and can master.

I am, therefore, disappointed that the conference version reduced the $800 million provided by the Senate for student assistance. In particular, the conference version disallows the $17,900,000 added by the Senate to the House amount for educational opportunity grants and the $16,000,000 added by the Senate for the college work-study program. On the other hand, the Senate addition of $14,000,000 for National Defense Education Act student loans remains in the final bill.

All in all, the conferees provided $766.6 million for student assistance—24 percent more than the appropriation available in 1970 after the 2-percent reduction required by Congress.

The total includes funds for NDEA and guaranteed student loans, educational opportunity grants, college and vocational work-study programs, cooperative education, and special programs for students from low-income families such as talent search, Upward Bound, and special services in college.

For assistance to areas where school enrollments have mushroomed because of Federal installations and operations, conferees provided $551.1 million, higher by $111.1 million than the House voted earlier this year.

This will fund at 90 percent the entitlement of school districts for category A students—whose parents live and work on Federal property—and at 65 percent of entitlement for category B students—whose parents work on Federal property.

The impacted areas aid is $30,487,000 more than was provided in fiscal year 1970, which just ended June 30.

For elementary and secondary schools to help educationally deprived children, both the House and Senate provided $1.5 billion, $161 million more than in 1970. This is of course the amount in the final bill.

For education of handicapped students, both the House and Senate agreed on $105 million, an increase of $20 million above 1970, and this is the amount in the final bill.

Vocational and adult education also are increased—by $75.2 million over 1970, for a total of $494.2 million. The House had provided $490,446,000, the Senate $497,946,000. The final amount is $54.1 million above the budget estimate. Both the administration and Congress recognize the need for greatly improved vocational education that will equip young men and women with skills to qualify for employment in today's and tomorrow's job markets.

For higher education, we conferees provided a total of $967.9 million, an increase of $116.9 million over 1970.

For education professions development, including Teacher Corps, we conferees allowed $135.8 million. Teacher Corps was increased by $9.1 million to $30.8 million.

For community education, including libraries, we conferees agreed upon $85 million, which is $17.8 million over 1970.

College library resources were increased more than $5.5 million, for a total of $15,325,000 and educational broadcasting facilities were increased $6.7 million over 1970 to $11 million.

Funds for public library services were increased $5.3 million over 1970 to a total of $40,709,000.

We conferees provided $75 million for emergency school assistance to help school districts desegregate for the fall term.

These are but a few of the highlights of this multibillion-dollar education funding bill.

To get additional perspective on this vital measure, let me show what conferees did in terms of percentage increases.

We raised impacted aid for maintenance and operations costs of schools throughout America by 6 percent over 1970; elementary and secondary education by 14 percent; and education for handicapped youngsters by 24 percent.

We raised vocational and adult education by 18 percent and higher education by 14 percent.

We raised education professions development funds by 16 percent and community education including libraries by 26 percent.

Even so, the total provided in the conference version before the Senate today is only $404,488,000 over the amount for the Office of Education in the Labor-Health, Education, and Welfare Appropriation Act for fiscal year 1970, which the President signed.

The total for all programs in the pending conference version is 16 percent above the appropriations available for 1970 after deducting the 2-percent reduction imposed by Congress.

When you consider inflation amounted to almost 6 percent in the past fiscal year, the increase in this bill is just about 10 percent.

This, it seems to me, is a modest increase in view of the needs of America's schools and America's schoolchildren.

I urge my colleagues to support the conference version, which I hope will become law.

FUNDS FOR LAND-GRANT UNIVERSITIES AND COLLEGES

Mr. NELSON. Mr. President, in this conference report on the Office of Education appropriations, there is an item small in amount but immense in significance—the reduction below authorization of instructional funds for the 68 land-grant universities and colleges in the Nation. This is the first time since the passage of the second Morrill Act in 1890 that Congress has failed to appropriate fully the funds authorized by legislation for this purpose.

The administration intended to repeal the existing legislation by recommending no appropriation at all for it. The House provided $8 million. The Senate restored all the money authorized by law—$12.1 million. The conference report compromises at $10.08 million.

Mr. President, I appreciate the difficult problems faced by the House and Senate Appropriations Committees and have no fault to find with their actions under the circumstances. I do not intend to move to return the appropriations bill to conference over this relatively small item in a total of such magnitude. But I do want to say why I oppose any attempt to cut the land-grant teaching funds next year or at any time in the future.

First, this is an appropriation of great historic significance. The first Morrill Act of 1862 provided for the "endowment, support, and maintenance" of at least one land-grant college in each State. The result was called by the Hoover Commission in 1949 "the most successful grant-in-aid ever made by the Federal Government." The second Morrill Act in 1890 provided annual appropriations to supplement the endowment provided by the original act. When the Congress passed the second Morrill Act by unanimous vote of both Houses, it said it was intended to stand as a permanent tribute to Senator Morrill, author of the act and one of the founders of the Republican Party, and to "place these institutions on a firm foundation for as long as this Nation shall live."

Since that time, other acts of Congress have increased the amounts going equally to each of the States and added a factor based on the relative population of the States.

Second, there is at stake a fundamental principle of orderly legislative and administrative procedure. The President did not suggest the repeal of the authorizing legislation; he attempted to nullify it by legislating in his budget. As the distinguished chairman of the Senate Appropriations Subcommittee said in his comments on the Senate version of the appropriations bill:

> To adopt this method of repeal of existing law by lack of appropriations is unconscionable to me. If the President wants to repeal the Bankhead-Jones Act, then suitable legislation should be introduced and acted upon by the appropriate legislative committee.

Senator MAGNUSON also observed that the proposal to eliminate this program was made precipitously, without consultation or warning to the land-grant institutions, or even consultation with the Congress.

I believe the chairman is absolutely right. If the administration wants to eliminate or further reduce these funds for the land-grant institutions, it should submit legislation at an early date for consideration by the committees having jurisdiction—in this case the Committees on Agriculture—so that a full appraisal of the program can be made in open hearings at which all involved may present their views.

Mr. President, the formula under which these funds for further endowment of instruction in the land-grant institutions is provided is based in part on a basic amount going to each State, and in part on the relative population of the various States.

The last appraisal of this program by the Congress resulted in the enactment in 1960 of legislation increasing the total authorizations almost threefold. This action was based on evidence that inflation and increases in total U.S. population had reduced the effective value of the "further endowment" to one-third of that prevailing at the time of its last previous adjustment.

Since 1950 there has been a most substantial further inflation and a most substantial growth in population. The Congress has also passed legislation designating a new land-grant institution—Federal City College in the District of Columbia. The administration has supported, in testimony before both Houses, legislation which would designate colleges in Guam and the Virgin Islands as land-grant institutions. So the land-grant principle is still very much alive and supported by the Executive as well as Congress.

My third point is that these funds are very useful in the support of higher education. The University of Wisconsin, for instance, gets $290,650. This seems like a small amount of money for a large university, but its importance is that the university is relatively unfettered in its use. The money can be put where it is needed most. The trouble with most Federal aid to higher education is that it is strictly earmarked as to how it can be spent.

If this appropriation is important to the University of Wisconsin, think how critical it is to the predominantly black land-grant colleges in the South. Their support from all sources is small. This appropriation is a very large part of the instructional budget in many of these institutions. To lose it would be literally disastrous.

Mr. President, if anyone were to ask why land-grant institutions should get this money and not other colleges and universities, I would say that all institutions of higher education should be similarly supported. I believe that every young American who can benefit from postsecondary education should be able to get it, regardless of his financial status. I support Federal assistance to the economically disadvantaged for that purpose. But the institutions cannot absorb another million students in the next 5 or 6 years—which they must if they are to do their job—without help, especially if they hope to stop the spiraling increases in tuition that make a mockery of equal opportunity.

So the land-grant instruction funds should not be killed. Instead we should use the principle of broad institutional aid which they represent in legislation to assist all colleges and universities in the land.

EDUCATION APPROPRIATIONS AND SCHOOL INTEGRATION

Mr. MONDALE. Mr. President, on behalf of the Senator from Maine (Mr. MUSKIE) and myself, I congratulate the distinguished members of the conference committee for their successes in preserving the safeguard provisos added by the Senate to the President's request for emergency school desegregation funds, and in sustaining the Senate's deletion of the so-called Jonas amendment designed to dismantle title VI of the Civil Rights Act as it applies to racial discrimination in public schools.

WHITTEN AMENDMENTS

I share the disappointment of the distinguished Senator from Washington (Senator MAGNUSON), and three of his colleagues on the conference committee—Senators CASE, FONG, and BOGGS—

that the so-called Whitten amendments, sections 209 and 210 of the Office of Education appropriation, have been retained in the conference report. I am concerned that the confusing language of these provisions may encourage some school districts to futile resistance of school desegregation required by law. However, because the Whitten amendments do not legally limit or dilute school desegregation requirements and because the administration has repeatedly assured us that these provisions will have no effect on Federal enforcement of these requirements, I reluctantly support the conference report in this regard.

I ask unanimous consent that relevant communications from the administration on this subject be printed at this point in my remarks.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF HEALTH,
EDUCATION, AND WELFARE,
Washington, D.C., June 23, 1970.

Hon. CHARLES MCC. MATHIAS, Jr.,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MATHIAS: This is in response to your request for my views on Sections 209, 210 and 211, the school desegregation amendments, in H.R. 16916, the fiscal year 1971 Office of Education Appropriation Bill, as approved by the Senate Appropriations Committtee. I am pleased to respond.

On April 21, my predecessor in this office, former Secretary Robert H. Finch, testified on this matter before the Committee on Appropriations. At the time, he expressed the Administration's opposition to these sections, which are unnecessary and undesirable.

I wish to reaffirm that opposition. While Sections 209 and 210, the so-called Whitten Amendments, would not, if enacted, alter school desegregation requirements under Title VI of the Civil Rights Act of 1964, they would, nevertheless, encourage some people to believe that there has been a change in basic law when there was not, and thus serve to confuse local authorities as to their constitutional responsibility.

Section 211, the so-called Jonas Amendment, would deny vital Federal education aid to many school districts which implement desegregation plans contrary to "freedom of choice." Under this section, school districts would be penalized for carrying out desegregation plans ordered by the Federal courts, in conformity with State law, or in accordance with the Civil Rights Act of 1964. The effect of enacting Section 211, therefore, would be to tie the hands of local officials and encourage defiance of the constitutional obligation to desegregate.

As the President indicated in his comprehensive message on School desegregation, the appropriate role for the Federal Government is to assist school districts in meeting the requirements of the law in this difficult area. Sections 209, 210, and 211 would not serve that purpose. I know that you have been a leading opponent of similar amendments in the past. Your assistance in urging deletion of these sections when the Senate considers H.R. 16916 would be appreciated.

For your information I am enclosing an excerpt from Secretary Finch's testimony of April 21 in reference to the aforementioned sections.

With kind regards, I am
Sincerely,

ELLIOTT RICHARDSON,
Secretary-designate.

THE SECRETARY OF HEALTH,
EDUCATION, AND WELFARE,
Washington, D.C., May 14, 1970.

Hon. CLIFFORD P. CASE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CASE: This is in response to your request for my views on Sections 209, 210 and 211, the school desegregation amendments, in H.R. 16916, the fiscal year 1971 Office of Education Appropriation Bill, as approved by the Senate Labor-HEW Appropriations Subcommittee. I am pleased to respond.

As you know, I testified on this matter before the Subcommittee on April 21. At the time, I expressed the Administration's opposition to these sections, which we regard as unnecessary and undesirable. An excerpt from my testimony is enclosed.

I wish to reaffirm that opposition. While Sections 209 and 210, the so-called Whitten Amendments, would not, if enacted, alter school desegregation requirements under Title VI of the Civil Rights Act of 1964, they would, nevertheless, encourage some people to believe that there has been a change in basic law when there has not, and thus serve to confuse local authorities as to their constitutional responsibility.

Section 211, the so-called Jonas Amendment, would deny vital Federal education aid to many school districts which implement desegregation plans contrary to "freedom of choice." Under this section, school districts would be penalized for carrying out desegregation plans ordered by the Federal courts, in conformity with State law, or in accordance with the Civil Rights Act of 1964. The effect of enacting Section 211, therefore, would be to tie the hands of local officials and encourage defiance of the constitutional obligation to desegregate.

As the President indicated in his comprehensive message on school desegregation, the appropriate role for the Federal Government is to assist school districts in meeting the requirements of the law in this difficult area. Sections 209, 210 and 211 would not serve that purpose.

I would appreciate any assistance you may deem appropriate in urging deletion of these sections during this afternoon's full Committee session.

With kind regards, I am
Sincerely,

BOB FINCH,
Secretary.

APRIL 17, 1970.

Hon. WARREN MAGNUSON,
Chairman, Subcommittee on Departments of Labor and Health, Education and Welfare, and Related Agencies, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR SENATOR MAGNUSON:

* * * * *

DELETION OF "WHITTEN AND JONAS" AMENDMENTS

I am asking the Senate to delete sections 209 and 210—the so-called Whitten Amendments—and section 211—the so-called Jonas Amendment—from the House bill. Although I am convinced that sections 209 and 210 do not change basic law or Federal regulations, my concern is that the enactment of these two provisions would in fact encourage some people to believe that a change has been made in the basic law and thus give rise to much confusion. Further, it is my belief that language which pertains to the enforcement of school desegregation belongs in substantive legislation rather than in an appropriation bill. For these two reasons, I am convinced that sections 209 and 210 should be deleted. Even if they are not, however, I believe everyone should understand my conclusion that a school district that has not completed its Constitutional obligation to achieve a unitary system would not be "desegregated" within the meaning of the proposed sections 209 and 210. Such a district, therefore, would be unaffected by these sections.

Section 211 should be stricken from the bill for several reasons. First, it would prevent the Federal Government and local school officials from carrying out the requirements of the Constitution—requirements which this section does not and cannot remove. What this provision does is to impose a penalty on a school district for carrying out its legal obligation to desegregate. The Department would be put in the position of having to prohibit many school districts from using Federal funds to draw up and implement desegregation plans pursuant to court order. It would thus tie the hands of the Federal Government and of local school officials in dealing with the nondiscrimination requirement of law.

In addition to preventing enforcement officials from carrying out their legal obligations, section 211 would jeopardize the substantial progress made to date in school desegregation, and make more difficult the application of uniform standards in accordance with the Constitution. Furthermore, the amendment directly contravenes the President's March 24 statement on school desegregation in which he pledges to support the recent Supreme Court decisions mandating immediate desegregation. Freedom-of-choice plans, as has been demonstrated time and again, do not do this. Court decisions are unequivocal on this point. Because section 211 is not consistent with court rulings on "freedom-of-choice plans," it could only produce an administrative nightmare for the Department. It should be deleted.

In summary, Mr. Chairman, we are asking that your Committee return to the President's budget with respect to both the increases and decreases enacted by the House and delete from the bill sections 209, 210, and 211 of the general provisions.

In conclusion, I would commend the Committee for the promptness with which it has approached the House bill. I understand that you have already started hearings with outside witnesses. We will do our best to help you in your efforts to complete your work on this important bill.

Sincerely,

BOB FINCH,
Secretary.

SAFEGUARD PROVISIONS

Mr. MONDALE. Mr. President, I am extremely pleased that the House, in approving the President's request for emergency assistance to desegregating school districts, has agreed to the limitations placed by the Senate on use of the funds. These elementary safeguards are essential to help insure that the funds will not be spent in districts which are desegregated in only the most token and misleading ways.

The first limitation prohibits assistance to local educational agencies which transfer, or have unlawfully transferred, property, services, or equipment to nonpublic schools which practice discrimination on the basis of race, color, and national origin.

The second limitation prohibits use of the emergency assistance funds to supplant per pupil expenditures from non-Federal sources reduced as a result of desegregation or of the availability of the emergency assistance. This provision does not, however, prohibit assistance where State assistance calculated on a pre pupil basis declines by operation of existing law, solely because a local education agency contains fewer students

after desegregation than before. Nor does it prohibit assistance where State support of transportation is reduced, by operation of existing law, solely because a local education agency's transportation needs are reduced following desegregation. In these cases, aid has been reduced because of declining enrollment and reduced transportation needs and not because of action taken as a preparation for or consequence of desegregation.

The final safeguard assures that assistance will be made available on a nationwide basis to school districts desegregating under either Federal or State law. I regard this last provision as especially important. Our commitment to school integration must be a national commitment. The leadership of State government is vital to successful public school desegregation. It is, therefore, essential that Federal assistance be made available to desegregating districts in those States, such as California and Pennsylvania, which have required desegregation of schools as a matter of State law, as well as in those States where desegregation is taking place under Federal law.

Mr. KENNEDY. Mr. President, we are considering today one of the most important appropriations bills which Congress will consider this session. For adequate Federal support is vitally necessary to achieve the high quality of education which is fundamental to a vigorous, productive, democratic Nation. The bill before us goes a long way toward providing that Federal support.

Mr. President, I want to commend particularly the chairman of the Appropriations Subcommittee, Senator MAGNUSON, and the ranking minority member, Senator COTTON, for their hard and effective work on this bill. I had the privilege to testify before the subcommittee and to work with these leaders on amendments which I thought were important. I had the opportunity to participate in the debate and discussion of the bill.

I think that in all of their work on this difficult, complicated, important legislation, the Senator from Washington was thorough, knowledgeable, and fair. He is a dedicated leader in the effort to give our Nation's youth the best possible education. The Senator from New Hampshire was equally effective and constructive in connection with the education appropriations.

So, I commend these leaders and the members of the committee for their work on the bill. Of course, there are areas where we might prefer to spend more and areas where we might prefer to spend less. But by and large, this is a balanced and very necessary bill.

Mr. President, I am pleased that in reaching a compromise on education appropriations, the House and the Senate conferees agreed to an increase of $14 million in the national defense student loan program. As you know, this increase was approved by the Senate when it passed the amendment to increase Federal student assistance which I sponsored last month.

This increase brings the new total for direct student loans to $243 million for the coming academic year. The $14 million will help an additional 23,000 students.

My own State of Massachusetts will receive an estimated $594,111 of this increase, giving assistance to close to one thousand additional needy students who might not otherwise be able to attend school this fall. Whereas last year Massachusetts colleges and universities received only 52.6 percent of their approved requests for direct student loans, this year they will receive 62 percent.

And so, Mr. President, this increase represents a substantial improvement. As sponsor of the Senate amendment, I am proud that Congress is partially responding to the need.

However, Mr. President, present Federal spending for student assistance is still inadequate. And this failure to appropriate necessary Federal funds will deny thousands of young Americans in Massachusetts and across the country the opportunity to attend college this fall. Until the Federal Government makes a full and realistic commitment, our Nation's youth—especially those from low-income families—will be the ultimate losers.

The shortage of student aid is staggering. I am sure that every one of my colleagues has received many moving letters from parents and students who cannot find assistance, and in many cases have been forced to drop out or not even start college or vocational school. My own office in Boston receives an average of 40 to 50 telephone calls a week from distraught parents and youngsters who need financial help for their higher education. Yet all I can report to them is that Federal funds have long since run out.

The University of Massachusetts at Amherst has been forced to reject several hundred deserving applicants for national defense student loans this year. They use a nationally developed testing service to determine how much a family can afford to pay. Yet with estimated tuition, room, board, costs and personal spending money of $2,200 for each student, the university must deny aid to any family which can afford $1,700 or more—even though the cost may be as much as $500 more than the family can afford.

One State college in Massachusetts has calculated that the amount it receives for Federal student assistance works out to an average of only $36,28 per student in attendance.

A number of factors have contributed to the severe pressure on families with college-age children.

First, with inflation over 6 percent, the increase in other costs leaves families with less for education. Yet at the same time, rises in tuition, fees, and room and board have raised the price tag of college.

In Massachusetts, Boston College recently announced a tuition increase of $240 effective this coming September. This comes on top of a $400 tuition increase just last year. In addition, room and board costs at Boston College will be raised by $300 at the opening of the fall term.

Even greater increases had been proposed initially, precipitating a strike on campus this spring. The college needs more money, but the students and their families simply cannot afford it.

At another private university in Massachusetts, seniors this fall will pay $915 more in tuition and costs than they paid as freshmen in 1967–68. On the average, tuition and costs in Massachusetts colleges and universities have risen from 30 to 40 percent in the last 5 years.

Second, guaranteed student loans from banks are increasingly difficult to obtain. Last year Congress passed an amendment I offered to reduce discrimination. But a recent study resulting from that amendment revealed that 82 percent of loans still are made to students who are depositors or whose families are depositors in the bank; 67 percent of the lenders indicated that they give preferential consideration to students whose families are depositors. As a result, many citizens in Massachusetts and elsewhere—especially those who cannot afford large deposits in banks as a condition for a loan—are denied aid.

Just last week I received a letter from a father who had been to nine different banks seeking loans for his college-age daughter. So far, he has drawn a complete blank.
